Some gentlemen spoke the other day of the Mexican dollar. I might compare Mexican wages with American wages, and in the same way compare Mexican dollars with American dollars. The power of a people to use money is shown by its products, by the output of its labor, or its wealth; and where a man produces, as the American laboring man does, four or five or ten times the amount that the Mexican laborer produces, he must have the money to exchange his products. His productive power gives power to his money; and the demand for money is felt. This power to hold the two metals at fixed values is the ratio of the wealth produced by his labor to be exchanged for gold and silver at a fixed rate.

According to the report of the royal commission, from which an extract has just been read, France was enabled to maintain bimetallism, because of its productive power, because the property in France was sufficient in amount to effect exchanges with gold and silver at that ratio. Here we are producing more than twice the amount that France did when she was maintaining bimetallism; and yet it is claimed that this country can not maintain substantially the same ratio.

We have heard this question argued from the standpoint of debtor and creditor.

I shall not devote much time to that view of the subject. I simply call attention to the fact again that tariff duties and other taxation, interest on the public debt, etc., are being paid by labor with a contracted currency, so that it requires every year more and more of the products of labor to make these payments. But that is not all nor the most important consideration in connection with this question. All financial writers of modern times have broken away from the theories of Adam Smith and the old economists on this question. There is another question of more importance than that of debtor and creditor; that is the question of the material development of a people.

The gentleman from New York said money was an instrument, and that was correct—the majority of the economists treat it in that light; for when you desire to develop a country or an enterprise of any kind you must have at hand the instrument of development. You can not open a farm, you can not erect a factory, you can not start on foot any enterprise unless you have the instrument, and that instrument is money. And whenever money is unduly contracted, Mr. Speaker, it means a contraction of the enterprise, the energies, and the productive power of the people. It means a contraction and a limitation on the wealth of the people. Where money goes into circulation to swell the volume of legitimate enterprise, it means an increase of the productive power of the people; it means that they have got it to work as one of the agents of progress in the direction of new developments and new enterprises, and the more wealth that is produced the better it is for all classes, because more money is in circulation. But how does that affect the question of debtor and creditor?

Why, of course, sir, the more that is produced necessarily results in a tendency to lower prices and hence creditors are not injured in the manner they are at other times and by other causes. It has been contended by the old economists that if you limit the supply of money you reduce prices, and in that way the men who draw interest, who live on fixed incomes, have more power over labor and its products, and reap a much larger reward. While I admit it is true as far as it goes, that is not the whole of the case; for while you have a sufficient volume of money to set the wheels of progress in motion, and accommodate every legitimate enterprise and do all kinds of work, there is an increased production that in its tendency may cause a reduction of prices, and the creditor gets the same as if it were reduced by contraction or constriction. But, on the other hand, the debtors increase the wealth of the country, and the debtor himself is also relieved in that way by the additional amount of property that is subject to taxation and the payment of all debts.

Where the wealth of the country is increased, both the debtor and creditor obtain the advantage, and neither of them is hurt by the larger prosperity, but, on the contrary, both are benefited. But the economists from New York, the banking institutions and the bond-holding institutions and the men advocating here restriction of money, the demonetization of silver, would decry an increase of the volume of currency. They have an idea that an increased volume of money increases prices so as to work injustice to the creditors. But while that may to a limited extent be the case, the result is finally and eventually that an increased supply of the volume of money increases enterprises, increases the production of wealth, and decreases the prices to the creditor himself in the long run, and experience has shown that all people, all nations are benefited by increased production. Wealth is added to the whole community, and there is a benefit at least from a bimetallic standard and the consequent increased volume of primary money. Debtors have more of wealth with which to pay their debts, and are thus greatly benefited, though prices may be low.

Now, as I said while ago, if it were true that the free coinage of silver would at once demonetize five or six hundred millions of gold in this country and throw six hundred millions of gold on the markets of the world, gold would fall, and very materially; while the demand for that amount of silver to take its place, and more, would at once immensely increase the price of silver, and in that way the two precious metals would meet each other half way; bimetallism would result in the gold falling in value in relation to silver and silver rising in value to meet gold at the common point.

And more than that, Mr. Speaker, you have two bases for the public credit. You have two sources from which to supply the

circulating medium; and a full volume of currency gives an opportunity to other kinds of business, and aids development by giving the instrument so necessary, and of which we can avail ourselves to aid in the development of this great country. But New York does not seem to appreciate the immensity of this great Government of ours and its great people. It does not seem to appreciate that it has 3,000,000 of square miles of territory and 67,000,000 of people. Many of them in our Western country, not thickly populated, it is true, not having the facilities of banks, must have ready cash in the enterprises springing up amongst them and those reaching beyond the Mississippi River that could consume to-day silver enough to take the place of all the gold we would lose.

Why, I have sometimes thought that inasmuch as the Constitution of the United States inhibits the States from making anything but gold and silver a legal tender, the United States ought to coin it for such people. We can take it in the Mississippi Valley and beyond the Mississippi River and utilize it whether you want it here or not. Take your bank notes and gold and give us the silver, and we will be content with our share of the money of the people. We can use the whole of it, and be prosperous while using it.

But gentlemen seem to think that that should be taken in a very Pickwickian sense. I say now, and I wish to remind gentlemen of the fact, that the star of empire long ago took its way to the West. I want to remind gentlemen that that country demands more money. Not money that is not nominated in the Constitution, but the money of the Constitution itself, the gold or silver, and they may deplore it as they please, they may call it sectional or what they please, but no political party can stand against that demand.

We do not propose, sir, to continue in the condition that it is proposed to put us by the repeal of this bill. We do not, Mr. Speaker, insist on having our own way on every question. We want to be harmonious; but we have surrendered many things—more than we ought to have surrendered. Still we are met by the cold refusal on the other side, who tell us, "No; we have sufficient votes to override and trample you down, and we intend to do it." Do it, gentlemen, and we will resent it. Mark it, our people will resent it. It will be Republican, and not Democratic, votes that defeats free coinage.

Now, sir, what is the attitude of some gentlemen on this floor? They propose to vote for free coinage, at a different ratio probably, but when it comes to the great battle here they intend to jump the fence, so to speak, and go over to the enemy. I say, why is this? They vote with us on free coinage, but when we come to this contest, and the battle reaches the main issue, they forsake their friends and join the standard of their enemies.

Now, we know if this bill is voted down we have some opportunity of legislating upon this question. We have some opportunity if this unconditional repeal is rejected of saving silver from the utter destruction to which they would consign it. We know if this bill is voted down that we have no unconditional surrender to the enemies of silver, and at the same time we have an opportunity of exacting terms. But gentlemen propose to leave us at the crucial test and go over to the enemies who have fought every proposition relating to silver, and by their aid finally wipe it out—making an unconditional surrender of the whole question.

I want to send to the Clerk's desk and have read, Mr. Speaker, from the report of the royal commission upon the divergencies between the value of gold and silver.

The Clerk read as follows:

It must be remembered, too, that this country is largely a creditor of debts payable in gold, and any change which entailed a rise in the price of commodities generally—that is to say, a diminution of the purchasing power of gold—would be to our disadvantage.

The interests of our Australian and other gold-producing colonies, at which we have already glanced, must also be considered. Their deposits of gold are one of their principal sources of wealth, and any measure which tended to check gold-mining or to depreciate that metal would, in all probability, injuriously affect the prosperity of the colonies and react upon the trade of the mother country with them.

Mr. BLAND. Mr. Speaker, we understand from this why six of the twelve composing this commission opposed bimetallism for England because England is a creditor nation. Another reason given is that it decreases the value of gold mines of Australia. The gold mining of that country is an important industry, and bimetallism would reduce the value of gold and thus disturb the interests of Australia. They give the two reasons. First, that it is a creditor nation. Secondly, it would decrease the value of the gold mining in Australia and decrease the prosperity of that country and make a reaction upon the mother country.

So it seems that England has some notion of the importance of her mining industries. She produces no silver, but she buys enormous quantities of it. She produces gold, and her policy is to enhance the value of gold and to depreciate the value of silver. So the policy is to increase the value of Australian gold mining and to depreciate the product of four or five States in this Union in order to increase the value of her mine holdings. Because England is a creditor nation, Mr. Speaker, she refuses to agree upon an international plan of bimetallism because of the income classes. It would decrease the values of those holdings.

Why, sir, we are a debtor nation. The same line of argument would indicate to us that bimetallism would relieve this country and be in the interest of debtors, and we are debtors to Europe. But we are asked here to so legislate as to increase the value of gold, and this is to add to the prosperity of England and Australia and to the adversity of our own people, and especially those engaged in the mining industries.

I have heard read, Mr. Speaker, to the House on different occasions, with approval, extracts from the testimony of a monetary writer of great distinction, Mr. Cernuschi, who was before the monetary commission of the United States in 1876, and he gave evidence before that commission on the question of bimetallism and the causes of the decline in silver.

One of the questions asked that gentleman by Mr. Bogy, then a Senator from the State of Missouri, was, by retaining it at 16 here and 15½ there (that is in France)—our metal, of course, would go right to France—would not that compel France to abandon the bimetallic system?

He answered:

The policy of France would be not to coin and to wait.

That is to say that as France coined at a ratio of 15½ to 1, she would not join us on a bimetallic union without we came to her ratio, probably; and what further?

France committed a great mistake when in 1874, after the example given by Belgium, she limited the coinage of silver. It has been a grave mistake. If France had continued to coin silver and silver freely and generally it would have flowed to France, and some of the gold of France would have fled to Germany, but the silver would have maintained everywhere its value relatively to gold. In limiting the mintage a difference has been created between the value of the bullion and the value of the coin.

Now, sir, there is the statement that this gentleman made. That France had made a great mistake in 1874 when she closed her mints at that time or rather at that time limited the amount of silver to be coined at the French mints. Why did she make that mistake? Because it broke the parity between the two metals. Had France continued to coin freely, the silver of Germany would have gone to the French mints and more gold would have gone to Germany, but the parity would have been maintained; and yet it is said in this country that this country can not coin silver and continue the coinage of silver at any ratio whatever. When we introduced the resumption of free coinage in this country what would take place? We would fix the value of bullion silver and bullion gold the world over, because as said by this royal commission—

no matter where a man holds his silver, or in what part of the world it is, if he can get it to this country he can buy as much with 16 ounces of silver as with 1 ounce of gold and that would cause the silver tide and the gold tide to come and go at a fixed ratio, and that is the fixed value the world over.

Silver would come here and so would gold. It would come, however, at the value fixed at the mint. It would be used in the country where it was located at that value also, and much of it would remain to do duty in business transactions, which duty is now fixed upon gold alone. So that bimetallism here would simply fix this country as a place where gold and silver could be exchanged at a particular ratio. No country coins silver freely at any ratio, consequently there is no place where the two metals can meet on equal terms and be exchanged equally, and until such a place is provided silver will be dammed up in every country where it is coined, and the bullion must seek a market in limited quantities. There is no place where it can be exchanged for gold, but here is a country that has the power if it only had the will to do it. How much time have I left, Mr. Speaker?

The SPEAKER. The gentleman has thirty minutes remaining.

Mr. BLAND. Mr. Speaker, upon the question of cornering gold, I will have read from the Clerk's desk an extract from a distinguished author, Mr. Bain.

The Clerk read as follows:

I know they do say bimetallism is not within the sphere of practical politics. Doubtless they do; the mere fact of establishing a monometallic standard makes it all but impossible and certainly progressively harder to change it. The creditors and holders of fixed incomes shrink from bimetallism, because they are afraid that it would decrease very largely their power of purchasing.

They make a bugb ar of silver just as th·ir forefathers made a bugbear of gold.

"Who would believe what strange bugbears
Mankind creates i self, o fears,
That spring l ke fern, that in ect weed,
Equivocally without seed,
And hav no poss ble foundation,
But merely in th' imagination."

The gold the world feared in the fifties was in realty the greatest of blessings to it, and just so the current fear of silver is all a delusion, a phantom of the brain. Silver has fallen in esteem because it has been boycotted; its function as money has been destroyed. Restore it to its legitimate position beside gold, and it will be just what it was before. No one would lose a farthing if silver were restored; the world would gain enormously. But even if it were not so, even if silver tended to make money progreseively cheaper, that would be better for the world than that it should become, as it is now becoming, progressively dearer. Do creditors suppose that they can flourish if trade, commerce, and industry, on which they flourish, go the wall? Short-sighted monopolists, your interests are in reality bound up together. You stand or fall by the same conditions.

Remember the Sybil and her books. She offered you nine in 1846; you refused them; she now offers you six; you refuse them again; she will come back later and demand, not the same, but a heavier price for those that remain. For there is not the least doubt about it; there is not enough gold in the world for us all. The question is not whether silver shall ultimately come back; that is certain; the question is whether the world will restore it in time to save itself from an irreparable series of disasters, or wait till it has to purchase its wisdom by bitter experience. It was the want of a plentiful currency that sapped the original vigor and drained away the life-blood of ancient Rome, and so brought it to the ground; shall it be allowed to count yet another victim, cause yet another imperial catastrophe, force a still mightier civilization than even that of old Rome to wither and fade, by robbing it steadily and surely of its vital juices?

We all know the fable of the man who worshiped an idol, to which he was accustomed to pray zealously that it would send him riches, but all to no purpose; till at length in his exasperation he seized it by the feet and dashed it to pieces, when out flew a treasure, concealed in its body, all over the floor. Thus he attained by the breaking of his idol that wealth which it never bestowed upon him while it was whole.

Shall we break our idol, do you think, Meg? I do not know. These things are on the knees of the gods. Public opinion, with which we began, I find we must end with. She is, after all, the final court of appeal, the lord of the world, stronger than the laws, stronger than party, stronger even than Parliament with its "supremacy;" for public opinion has only to nod and all these must obey.

Mr. BLAND. Mr. Speaker, for the last fifteen years, or at least since 1878, this Government, restoring the silver dollar to coinage, has held out a promise to the American people of bimetallism. It is very true that the enemies of bimetallism have always been powerful enough to put limitations upon the coinage and to exact compromises and concessions, with the ultimate purpose of its overthrow. The ill-advised act of 1890, known as the Sherman law, was the entering wedge of that overthrow.

It is now proposed, Mr. Speaker, to make that, so to speak, the stalking-horse to demonetize silver—to use that law and the weak parts of that law, which we all acknowledge, for the purpose of inducing the American Congress to wipe it out, with no promise whatever of any practical legislation in favor of silver, but, on the contrary, with the purpose distinctly avowed of totally abandoning it. So that, whatever may be said against that law, we know, as the advocates of bimetallism in this country, that the fight centers and rallies around that law as the last bulwark on which we can stand.

And, addressing myself to any gentleman in this House who expects to vote for unconditional repeal and then go home to his constituents and justify his vote, I want to ask him what he expects in the future for bimetallism in this country? He knows, and his constituents know, that if he will vote down this proposition we can get some silver law which will be better. His people know that, and he knows it. He knows more than that—that when he votes to wipe it out he votes to go headlong to gold monometallism and to wipe out silver. There is no dodging this issue.

We know, Mr. Speaker, that if we vote against the unconditional repeal the men on this side of the House who have promised to meet us fairly to bring about some just silver legislation will be compelled to do it, and they will not do it until we compel them to do it; and if there is any Western or Southern Representative who proposes to surrender unconditionally on this question, I commend him to this view of the situation and I ask him and his people to watch this record. Our people at home know, as we know, that we have no prospect on earth for continuing silver as money in this country except by voting down this bill and compelling these people to come to terms. That is well understood.

The people can not be deceived about this matter. Let the RECORD on Monday next show who the friends of silver and bimetallism in this House are, for on the vote against unconditional repeal rests the last hope of the people of this country for bimetallism, except so far as the prospect of relief may come from a political revolution that will wipe out both political parties now existing and place in control in the House and Senate a party favorable to bimetallism. That, Mr. Speaker, is nothing more than a remote possibility. But, sir, unless we do something now the people have no other way of securing what they desire, and so far as I am concerned I am willing to join the people in this fight, even though the present policies of the Democratic party go to the wall.

I yield to the gentleman from Tennessee [Mr. MCMILLIN] all the time he wants.

APPENDIX A.

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Countries.	Monetary system.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited-tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.			
						Full tender.	Limited tender.	Total.		Gold.	Silver.	Paper.	Total.
United States	Gold and silver	1 to 15.98	1 to 14.95	67,000,000	$604,000,000	$538,000,000	$77,000,000	$615,000,000	$412,000,000	$9.01	$9.18	$6.15	$24.34

TREASURY DEPARTMENT, BUREAU OF THE MINT, *August 16, 1893.*

APPENDIX B.

Production of gold and silver in the world, 1792–1892.

Calendar years.	Gold.	Silver (coining value).	Total.
1792-1800	$106,407,000	$328,860,000	$435,267,000
1801-1810	118,152,000	371,677,000	489,829,000
1811-1820	76,063,000	224,786,000	300,849,000
1821-1830	94,479,000	191,444,000	285,923,000
1831-1840	134,841,000	274,930,000	409,771,000
1841-1848	291,144,000	259,520,000	550,664,000
1849	27,100,000	39,000,000	66,100,000
1850	44,450,000	39,000,000	83,450,000
1851	67,600,000	40,000,000	107,600,000
1852	132,750,000	40,600,000	173,350,000
1853	155,450,000	40,600,000	196,050,000
1854	127,450,000	40,600,000	168,050,000
1855	135,075,000	40,600,000	175,675,000
1856	147,600,000	40,650,000	188,250,000

TREASURY DEPARTMENT,
Bureau of the Mint, August 16, 1893.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. PEARSON, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provide for town-site entries to lands in Oklahoma, applicable to the Cherokee Outlet, and to town sites in said Cherokee Outlet; when the Speaker signed the same.

SWEARING IN A MEMBER.

Mr. GEAR. My colleague, Mr. Hull, is now present, and I ask that he be sworn in.

Mr. John A. T. Hull, member-elect from the Seventh district of Iowa, presented himself, and was duly qualified by taking the oath prescribed by law.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

[Mr. McMILLIN withholds his remarks for revision. See Appendix.]

Mr. WILSON of West Virginia. I yield five minutes to the gentleman from Iowa [Mr. GEAR].

Mr. GEAR. Mr. Speaker, I have the honor to represent on this floor a district which employs a larger amount of labor, probably, than any other district in my State. I am also here representing a large proportion of agriculturists, not only in my district, but also in the State—farmers whose lands fairly groan with the crops that have been given to them by a kind Providence this year. There are more cattle, more hogs, more sheep on the farms of Iowa and more grain in the granaries of Iowa than ever before, and yet buyers can not procure money to move these crops to market.

Mr. Speaker, I appreciate the peculiar conditions which surround this special session of Congress. We are called upon to legislate at an extraordinary crisis in the affairs of the country. It is a "condition and not a theory" that we have to meet, but, Mr. Speaker, I do not believe that the President in his proclamation calling us together has stated the real cause of the troubles that have overtaken the country and produced the widespread disaster that exists to-day; but as to this real cause we shall have ample opportunity later on in the session for discussion. We must address ourselves to the present, and we find a most remarkable condition of affairs; and what is that condition?

A country that six months ago was prosperous in the most marked degree, labor well employed at remunerative wages, capital trustful, and abundance of money in circulation, to-day is swept from ocean to ocean with disaster and a lack of confidence unparalleled in the history of the country exists. Thousands, tens of thousands, hundreds of thousands of those who six months ago were employed at remunerative wages are walking our streets clamoring for work and bread; mills that have been in operation for years have closed down indefinitely; the country which has reverberated with the hum of industry has been stricken with blight, and prostration, as it were, in a moment has overtaken the nation; values of all kinds have depreciated and men who but yesterday considered themselves affluent are to-day made poor by this sudden and alarming crisis.

In addition, the startling information comes to us that the revenues of the Government from customs, internal revenue, and post-office receipts have fallen off during the present fiscal year at the rate of nearly six millions per month, or seventy millions for the current year. It is a question with me, if this deficiency continues, if the present Democratic Administration will not have to call on Congress to issue bonds to meet the deficiency, as did the Democratic Administration of James Buchanan. As the barometer indicates the condition of the atmosphere, so do the revenues of a country indicate prosperity or a lack of it among the people of that country, and this is special evidence of the distress that is prevalent to-day throughout the whole country.

This distress is not confined to any one class of people; it is widespread and far reaching, and a general lack of confidence pervades the nation. Banks which yesterday were considered solvent are to-day in the hands of receivers; the same is the case with many railroads, and a general demand comes to Congress to take such action as will relieve the congested condition of financial affairs, and it is, therefore, our bounden duty to do all in our power to restore confidence and credit.

There is more money to-day in circulation than at any time before in the history of the United States, and more than in any other nation in the world, with the possible exception of France, and yet money can not be obtained at any price, for the reason that there is a deep-seated feeling that there is something at fault in the financial policy of the country which requires immediate remedy, coupled with the fact that we may possibly be coming to a silver basis.

It may be well to review for a moment the condition of the finances.

To-day silver dollars and paper dollars are as good as gold dollars, because the Treasury of the United States will pay gold for them, and to-day a man with a paper dollar or a silver dollar can obtain a gold dollar for it if he wishes to do so. I am in favor of maintaining that condition, and it is what both Republicans and Democrats insist on in their national party platforms.

I am, furthermore, in favor of the free coinage of both silver and gold whenever we can be sure that the condition I speak of will not be thereby disturbed.

It was, in my opinion, a mistake to demonetize silver in this country and in Europe in 1873. I believe the two metals are necessary to keep our medium of exchange, our measure of value, steady and unchanging in its purchasing power. I believe that since 1873 gold has been going up in value, because the demand for it has been greater than the supply. I think this works an injustice to debtors and depresses business everywhere.

I am earnestly in favor, therefore, of bimetallism, the use of the two metals, silver and gold, as money. But in dealing with money matters experience teaches us that we must move with caution. The money of a country is its lifeblood; and when you do anything to impair its purity and efficiency you produce in the body politic the same kind of effects as those produced in the human body by a course of living which brings on diseases of the human blood.

It will not do to say that we can do anything we see fit to do about money, any more than that a man can abuse his physical system without suffering for it. The United States, as a nation, is rich, and its credit is high. But if we should make an issue of greenbacks to-morrow and make no promise or provision for redeeming them they would not pass current at par with gold

and silver. The mere fiat of the Government can not make paper into dollars any more than printing "milk tickets makes milk." If there is a promise to redeem, and the people believe in the ability and intention of the promisor to keep the promise, then paper will be as good as dollars and milk tickets will bring the same price as milk, but not otherwise.

Now, what would be thought of a lawmaking body like this Congress of the United States if in times of peace it should issue paper without promise of or provision for redemption, and should call it money and make such paper a legal tender for the payment of debts? Gold and silver in this country would at once go to a premium, or, in other words, this legal-tender paper would be at a discount. But being legal tender, every man would pay his home debts in it.

There are seventeen hundred millions of dollars due from savings banks in the United States to small depositors. Every one of them would be paid in this depreciated legal tender. Every man who earns his living by his day's work would be paid in this currency. Would this be a just and wise measure for this Government to become responsible for? Obviously not.

Now, let us apply the argument to silver dollars instead of paper dollars. In all the great commercial countries, except in Mexico and South America, silver bullion is only merchandise, like iron and copper. It is coined to a limited extent and used more or less as money, but it is not money in the sense that gold is money. If I have gold I can take it to the Mint and have it stamped, but I can not do that with silver. Gold has a fixed value, while silver has not. If I have silver bullion to dispose of I must sell it in the market at the market price. In short, outside of Mexico and South America the coinage of silver is not free, like the coinage of gold.

Now, what is it that certain of our friends here propose? They propose that the United States, acting alone and without any agreement with other nations, shall permit the free coinage of silver in this country. What does this mean? It means that if I own silver bullion I may go to the mint and get what is called $1 for 60 cents' worth of it. Would those dollars pass current with gold dollars, or would gold at once command a premium, or, in other words, the silver dollars be at a discount? The Treasury of the United States could not maintain silver dollars at par under a system of free coinage of silver without straining even the high credit of this country, and gold would just as surely go to a premium as it would in the case of the paper currency and just as it is in Mexico to-day.

The only difference between the paper dollars and the silver dollars would be in the percentage of fiat. In the paper dollars, without promise of redemption, all would be fiat, while in the silver dollars, without promise to redeem them with gold dollars, a large percentage would be fiat. But silver dollars being legal tender in this country, every man would pay his domestic debts with them. Every savings-bank depositor would get about 60 cents instead of a real dollar when he went to draw his money. Every insurance policy would be paid in 60-cent dollars; every day's labor would be paid in the same way. They would be called dollars, but they would only buy 60 cents' worth of bread or meat or clothing.

We are advised by the President that later on in this Congress we are to turn our attention to a revision of the tariff. Of course, this revision of the tariff will be made on Democratic lines, the result of which will be to put the labor of the United States in direct competition with the cheaper labor of Europe. This will bring about one of two results: First, labor engaged to-day at remunerative wages in the factories must accept the lower wages prevalent in Europe; or, second, if not accepting such wages, the industries of the United States must to a large extent come to a standstill and the labor engaged therein be discharged.

What will this labor do in that event? It must, in the nature of things, go on to the farms, and thereby become competitors with those engaged at present in farming. This means an overproduction of farm products, which, of course, means low prices for those products; and it also means, by virtue of the stoppage of our own industries, an influx of foreign merchandise; in other words, instead of being self-dependent on our own manufactories for goods, we are to be dependent upon Europe. It is, therefore, neither fair nor just to the labor of this country to be put in the position of receiving a depreciated dollar for wages and be compelled to go into the markets of the world and pay for such goods as they buy in a depreciated dollar.

Then, as gold would command a premium, the condition I have spoken of as now prevailing, when a man can get a gold dollar for a silver dollar or a paper dollar, would prevail no longer. If the ratio should be made 20 to 1 instead of 16 to 1, then a silver dollar would be worth 80 cents instead of 60, but it would not be a real dollar. It would contain 25 per cent of fiat still.

I can not cast my vote for any measure which will have the effect I have described.

But, besides that effect, there would be another effect perhaps even more serious. When gold goes to a premium it ceases to be money, and becomes a commodity in the market, because no man will pay out as a legal dollar something worth more than the cheapest legal dollar he can find. If the five or six hundred millions of dollars of gold coin in the United States should be forced to a premium, as it would be by the free coinage of silver on any practicable ratio in this country alone, it would retire all gold from circulation, and such a shrinkage in the circulating medium would produce at once a panic compared to which the panic we are now going through would seem like a breeze in summer to a winter blizzard from Montana.

Every gold dollar in the Treasury of the United States would at once be drawn out by the holders of paper notes, and this nation, the richest in the world, would find its Treasury and most of its people bankrupt. I can not regard it as possible that any measure which would produce such results will become a law.

Mr. Speaker, I voted three years ago for the Sherman law. In my judgment that law was a temporary measure and was enacted to prevent a worse measure which our Democratic friends, with a few Republicans from the silver States, sought to pass, to wit, free coinage. We have gone on under that law purchasing month by month a large amount of bullion and issuing therefor legal-tender notes, piling up bullion in the Treasury and paying the notes in gold. If we are to continue that policy, in my judgment, the time must soon come when it will be a physical impossibility for this Government to maintain specie payments for the notes issued under that act.

There is, however, a free coinage of silver which will not have these disastrous effects, and, in my opinion, it is in the power of this country to bring it about. I mean through international agreement.

I do not question nor criticise the motives of the vote of any member on the floor of this House on this or any measure; it is a matter of conscience and judgment for every man to vote on this measure as he deems for the best interests of the whole country, and so believing I feel it my duty, as a step in the right direction of international bimetallism and the enlarged use of silver as money, to vote to stop buying silver under the act of 1890.

And if after we have stopped buying silver this Congress shall strengthen the Treasury in the proper manner, I believe Europe, seeing that we are no longer willing to take upon our shoulders all the silver in the world, and seeing that we really intend, as both of the great political parties have said they do, to keep every American dollar as good as every other American dollar, will come to our terms and agree with us upon international bimetallism. That is what the people of this country want; it is what they have declared for in their political platforms, and it is what they can have if we here in Congress do our duty.

We are all in favor of maintaining the equal value of all American dollars, and we should all, therefore, be in favor of providing the means to do this by strengthening the Treasury to meet the necessities of the case. And when to this is added the fact that such a policy will drive Europe to join us in an agreement for bimetallism, the argument is, to my mind, conclusive and unanswerable.

If all the great commercial nations agree among themselves that silver coinage shall be free at a practicable ratio, the value of silver would be fixed and could be maintained, not only because its actual value would be augmented by reason of this enlarged use, but also because it would cease to be merchandise fluctuating in market price when it became universally recognized as money. But as a quart measure can not hold a gallon of water, no one or two countries can maintain a fixed level of value for silver when in other countries it is merchandise in the market.

I believe that the United States Government, by strengthening its credit, and by selling gold bonds, if necessary, and buying gold, can bring Europe to agree to international bimetallism, and when any plan for accomplishing that object is before us it will receive my earnest and active support.

If this nation should enter into the struggle for gold by the use of its vast credit, we should compel Europe to admit that there is not gold enough to furnish a safe and steady measure of value, and we should in that way bring about the permanent use of silver as money, not only without any suffering, but greatly to our advantage, and, as I believe, to the advantage of the whole civilized world. In my judgment there is no other way to bring about an enlarged use of silver and to make the world's measure of value a more certain and stable one.

I am amazed at the temerity of gentlemen who discuss this great monetary question in a party spirit and appeal to passions

and prejudices. There can not be two kinds of money, one for the banker and another for the farmer, and all attempts to make the people believe otherwise, to stir up sectional strife or party strife over this question, are not only unpatriotic, but to the last degree unwise and dangerous.

This nation is too rich to have any money but the best for the use of all its citizens, and believing as we do that gold and silver taken together at an agreed and practicable ratio make the best money, we should endeavor by all fair and reasonable means to bring the other great commercial nations to our way of thinking. We can never accomplish this by placing ourselves upon the basis of silver monometallism, which we shall do if we attempt to solve the problem single handed.

Some men seem to think that free coinage of silver is the panacea for all the evils that man is heir to. [Laughter.] Sir, I do not so believe; neither do I believe that the "plain people" of this country are in favor of such a policy. The farmers and laboring men whom I represent are in favor of good money. We fought the battle in Iowa in 1878 and 1879 against the craze of "fiat" money and gained a great victory. From that time to this the people of Iowa have always been in favor of good money. Let me call your attention to an extract from a letter from one of my German constituents, a workingman. He says:

No doubt you are engaged in the struggle that is going on in Congress to day to fix the money matters of the country, so if the people are promised a dollar they will get a dollar that is worth a dollar, and confidence and regularity in our business will once more be established and the laboring men will stop crying for work and for bread.

That, Mr. Speaker, covers the whole question in a nutshell, and no sophistical arguments can change the opinion of those people. They believe in a fair day's wage for a fair day's work. This they are entitled to, and by no vote of mine can they be deprived of it.

Many gentlemen hesitate about voting for the repeal of the purchasing clause for fear that Congress will not provide a currency sufficient to meet the constantly increasing wants of our increasing population. Others are afraid that we may reinstate the old "red dog" and "blue pup" currency of my boyhood days. Others are afraid we will reinstate the "wild-cat" currency of 1857-'60, all of which brought great loss to the farmers and laborers of the country. I have no such fear, Mr. Speaker. I believe that this Congress is competent and willing to enact such laws on the financial question as will give to the country the high class of circulating medium that it has enjoyed.

Sir, the national Republican party is the author of all the financial legislation on our statute books for thirty years; it has placed the credit of the nation on the highest plane; each and every dollar issued under that policy has been made as good as the best dollar in the world, and to-day the nation turns as one man to the Republican minority in this House to contribute its share to the maintenance of a stable currency and to see that the nation's currency is to be maintained in the future, as it has in the past, as good as the currency of any country in the world.

While we may differ and do differ on many questions here of party policy, yet on this question, which concerns the common good of all the people, I shall cast my vote on this and all other financial questions in such manner as will meet the just demands of the people in this great crisis, and I earnestly hope that in this critical time Congress will act with that promptitude that the situation demands. [Applause.]

[Mr. WILSON of West Virginia withholds his remarks for revision. See Appendix.]

Mr. MCMILLIN. Mr. Speaker, I ask unanimous consent to have incorporated in the RECORD the amendment I desired, for information.

Mr. DINGLEY. No amendments can be now offered and pending.

The SPEAKER. The gentleman from Tennessee [Mr. MCMILLIN] asks unanimous consent to print in the RECORD the amendment which he has sent up as a part of his remarks.

There was no objection.

The amendment proposed by Mr. MCMILLIN is as follows:

Provided, That there shall be charged and collected for the coinage of any and all silver not mined and owned in the United States the actual cost of coinage, and in addition thereto the difference, if any, between the face value of the silver when coined and the market value of the bullion when presented for coinage.

SEC.—. Any person who tenders or presents for coinage, as United States product, any silver bullion which is not such product, shall be debarred the privilege of ever coining or having coined any silver owned by such person in which he has any interest whatever, and the onus shall be on the party seeking to have silver bullion coined to show that it is the product of the United States and entitled to free coinage.

Mr. SPRINGER. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. SPRINGER. I desire to know what order was made for the time of meeting on Monday next? Was it to meet at 12 o'clock?

The SPEAKER. The House will meet at 12 o'clock on Monday.

Mr. WILSON of West Virginia. Mr. Speaker, the copies of the pending bill in the document room are exhausted. I ask unanimous consent that a new order be made for the publication of the usual number of copies of the bill.

The SPEAKER. Without objection, there will be a reprint of the pending bill. [After a pause.] The Chair hears none. The gentleman from Tennessee [Mr. RICHARDSON] will perform the duties of the Chair this evening, the evening session to be devoted to debate upon the pending bill.

So, the hour of 5 o'clock having arrived, the House was declared in recess.

EVENING SESSION.

The recess having expired, the House was called to order at 8 o'clock p. m. by Mr. RICHARDSON, Speaker *pro tempore*.

SILVER.

Mr. TRACEY was recognized, but yielded a minute to Mr. PICKLER.

Mr. PICKLER. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a couple of amendments that I had read in my time the other day when I addressed the House.

There was no objection, and it was so ordered.

The amendments are as follows:

First. Amend H. R. No. 2, being a bill for the free coinage of silver, and for other purposes, by inserting after the words "silver bullion," in the second line of section 1, the following words: "the product of mines of the United States;" so that said section when so amended shall read as follows:

"SECTION 1. *Be it enacted, etc.*, That from and after the passage of this act all holders of silver bullion, the product of mines of the United States, to the amount of $100 or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act."

Second. That upon Monday, August 28, if the substitute to H. R. 1 and all amendments shall be voted down in the House, and if H. R. 1, known as the Wilson bill, shall pass, that immediately thereafter, without debate or intervening motions, the House shall vote upon H. R. 2, "A bill for the free coinage of silver, and for other purposes," amended as follows: Inserting after the words "silver bullion," in the second line of section 1, the following words: "the product of mines of the United States;" the bill as so amended being for the coinage of the silver bullion product of the mines of the United States at the present ratio.

If this bill fail to carry, the bill as so amended shall be voted on at the ratio of 18 to 1, and if this fail, it shall then, as so amended, be voted on at the ratio of 20 to 1.

Mr. TRACEY. Mr. Speaker, if up to last night any argument for or against the passage of the Wilson bill was overlooked, it would seem that after the eloquent addresses made by the gentlemen who closed the debate to-day nothing is left to be said, and it will be difficult indeed to do more than call attention to statements already so effectively presented to the House.

One hundred and seventy speeches have been made, and we can congratulate ourselves that this body includes as large a proportion of able orators as has been found in any Congress in the history of the country.

We know that under ordinary conditions new members hesitate to address the House until some time after the commencement of a session, but circumstances have now forced our young colleagues to exhibit at the start all the oratorical powers possessed by them, and with satisfactory results, as the attentive listeners are pleased to testify.

Occasions arise in all countries when, by reason of some great danger threatening the welfare of the general public, partisan feeling is temporarily laid aside, and men ordinarily bitter antagonists in politics join hands in a common effort to avert disaster.

Such a situation presents itself before us in this Chamber to-night. The President of the United States has summoned us to assemble in extraordinary session, asserting that the great distress which exists through the land is due to a statute which compels the purchase of 4,500,000 ounces of silver a month, and which we are urged at once to repeal.

I doubt not that the President is correct in his belief that a fear of our being thrown upon a silver basis is the cause of the panic. What other conclusion can be arrived at?

Gradually the receipts of gold at the custom-houses lessened until no more came to us. Foreign holders of our securities threw them upon our market, and the climax came when the gold reserve was cut into. By reason of heavy losses met with by holders of securities, the banks of the country were unable to respond to demands of borrowers, and a few weak financial institutions were the first to succumb. Other failures followed;

then depositors became frightened, generally, and money was withdrawn and hidden away.

One hundred and ninety-three millions of dollars more were taken from national banks than were deposited in them, and it is estimated that at least as much more was withdrawn from savings banks and State banks.

So, Mr. Speaker, as a consequence, to-day we find the country in a condition of panic, and the only check to general ruin the expectation that Congress is to give relief. Indeed, so hopeful are the people of wise action being taken on our part that already a large number of these banks which have suspended have given notice of an intention to resume, and in various quarters of the country manufacturing establishments which were obliged to close down are preparing again to give employment to the laboring classes receiving benefit from them.

Mr. Speaker, in response to these expectations will we give relief? Yes, thanks to the patriotic spirit of the great portion of the Republican members, and to the brave men of our own side who have determined to do their duty, we will give the relief the country demands.

During the progress of this ever to be remembered debate, we have had most ably expounded theories as to the effect of the volume of money on prices; on the necessity of holding sacred the money of the Constitution—gold and silver; on the desire of capitalists to oppress labor; and on the necessity of a double standard. We have listened to the praise of France for maintaining bimetallism; denunciation of the crime of 1873, and explanations of the Democratic platform of 1892.

To give proper attention to all these subjects in a short speech is impossible, and I will not attempt to do it.

It is not easy to determine how much an increase of volume of sound money has to do with prices. It may enter into such a calculation as a factor, but it is overshadowed by the importance of the question of production, of improvements in machinery, of facilities for exchange by use of checks, drafts, etc. Carefully prepared tables go to show that with the fall in the price of silver, or as some have stated it the rise in the price of gold, wheat has become cheaper year by year. This has been met by equally positive evidence that labor is receiving greater remuneration than ever before, and that the rate of interest has fallen the world over.

Respecting the money of the Constitution, we admit that no State can make anything but gold or silver coin a payment of debts, and we have great respect for those honorable metals. Capital and labor should not be opposed to each other, and there would be less conflict between them if legislators would cease being interested in money-making schemes and demagogues were looked upon as common disturbers of the public peace.

To the question of a double standard I will devote a few minutes. Closely connected with it are the statements made relating to the bimetallism of France and the crime of 1873.

The debate on this bill clearly shows that the opponents of repeal desire it to be understood as believing that the double standard, in any country, is to be maintained by throwing open to all comers the mints of the Government to the coining, as legal tender, of any amount of gold or silver, the holder to be given the coin at the established ratio. But then, Mr. Speaker, they confuse this question of double standard with bimetallism.

In 1873 we were put on a gold standard and have been there ever since. The Bland-Allison act of 1878 and the act of July 14, 1890, which we are dealing with at present, are both based on the gold standard. The act of 1873 put us in that position and I doubt that any conspiracy existed or was necessary. Such action was inevitable. Up to that time we had coined but eight million silver dollars because the silver in each was worth more than the gold in a gold dollar.

Silver and gold had in Europe a coinage and a bullion value of 15½ grains of the former to 1 grain of the latter, and our silver dollar bore a ratio of 16 to 1; all our silver dollars disappeared and no silver came to our mints. When, in 1871, Germany, seeing that silver was becoming cheaper, demonetized it, and in 1873 commenced exchanging it in other countries for gold, thus disposing of many millions of silver received from France as indemnity, Italy, France, Belgium, Switzerland, and Greece found it necessary to form what is called the Latin Union, and in 1874 this was done and a limit was put upon the coinage of silver. Then Germany began sending it to the United States, although we received it at a loss to Germany on its coinage value, and if it had not happened that the coinage act of 1873 demonetized silver here, we would undoubtedly have been flooded with it from Europe and would have been forced to legislate to retain our gold.

The statement of the Bank of France in 1873 and the letter of Minister Washburne, written in 1876, go far, I believe, to warrant this conclusion:

[Moniteur Officiel, Paris, 1873.]

Statement by officers of the Bank of France of the form of payment of the indemnity to Germany.

	Francs.
In bank notes of the Bank of France	125,000,000
In French gold coins	273,093,050
In French 5-franc pieces	239,291,875
In German bank notes	105,039,045
Bills of exchange drawn in thalers	2,485,513,729
Bills drawn on Frankfort in florins	235,128,152
Bills drawn on Hamburg in mark-bancs	265,216,990
Bills drawn on Berlin in reichs-marks	79,072,309
Bills drawn on Amsterdam in florins	250,704,546
Bills drawn on London in pounds sterling	637,349,832
Total francs	4,990,860,349

Equal to $998,172,069, the dollars reckoned at 5 francs.

The indemnity from France to Germany after the war of 1870-'71, including interest at 5 per cent per annum, amounted to, at the time of payment in 1872, $1,060,209,015. After crediting France with the value of certain railroads in Alsace and Lorraine, the amount of indemnity due to Germany was $998,172,069.

The patriotic people of France raised the vast sum by a loan in less than six months from the time the Government appealed to them. The money was deposited in the Bank of France, which drew on even the German bankers, the debt was paid, and the interest ceased also. Germany expected for years to draw the rate of interest at 5 per cent per annum.

From the above will be seen that Germany received from France in gold only, francs in French gold	273,093,050
And francs in pounds sterling	637,349,832
Total francs in gold	910,352,882
Or, in gold	$182,070,576.40
Balance, in silver	816,101,493.00
Total paid to Germany	998,172,069.40

Or 18.2 per cent in gold, and 81.8 per cent in silver and paper.

The Franco-German war was fought in 1871 and 1872, while in reality it began in the middle of 1870, and early in January, 1871, William of Germany was proclaimed in Versailles, near Paris, Emperor of Germany, and the war was thus over.

The Reichstag of Germany passed a law demonetizing silver in 1871, but with the proviso that it take effect January 1, 1873. The indemnity was mostly paid in 1871, a small balance comparatively in 1873.

In 1873, when the law demonetizing silver went into effect, she sold silver at a loss of 50,000,000 of marks, or $12,500,000.

[Letter from Minister Washburne.]

LEGATION OF THE UNITED STATES.
Paris, March 27, 1876.

SIR: * * * In fact, at that time (1874) silver, which was then and still is a legal tender in France, Belgium, Italy, and Switzerland, could be coined to any amount in those countries; there was no law to prevent a French, a Belgian, an Italian, or a Swiss citizen from carrying to the mint all the silver which he could obtain; the coining of it could in no case be denied him. It would, therefore, have been an easy matter for Germany to have her florins and thalers, which could not be advantageously disposed of in England or the United States, converted into francs and lires, circulating at par with gold.

France hoped to avert this danger—if there were any danger in the case—by promoting the formation of a monetary league, the object of which was to restrict the liberty of coining. This is what is known as the Latin Monetary Union. It was constituted in 1874 by a convention signed at Paris. These countries bound themselves not to produce during the year 1874 more than 120,000,000 francs of silver coinage. Such an agreement was in reality nothing else than a step toward the adoption of gold as the sole standard, since this measure of precaution was against silver alone, while leaving the coinage of gold completely free.

The results of this measure, however, did not correspond to what its authors expected. The value of silver still declined, and at the end of 1874 it was 5 per cent below par. In 1875 a second conference of the Latin Union fixed the limit of the coinage of silver in the four states at 150,000,000 francs for that year; nevertheless the decline continued. It had reached 8 per cent when the conference held its third meeting, at the beginning of the present year. No other remedy was sought for than that which had been attempted so far, and the amount of silver coinage was still further reduced for 1876. France was allowed to make 5-franc pieces only to the amount of 54,000,000, instead of 75,000,000, which had been authorized in 1875; Italy, 36,000,000, instead of 50,000,000; Belgium, 10,800,000 francs, instead of 15,000,000; Switzerland, 7,200,000 francs, instead of 10,000,000; Greece, which had recently joined the union, was authorized to coin 15,600,000 francs, of which 8,400,000 francs were allowed in the place of old silver specie withdrawn.

* * * * * * *

I have the honor to be, very respectfully, your obedient servant,

E. B. WASHBURNE.

Hon. HAMILTON FISH,
Secretary of State.

It is the opinion of some able financiers that if we had passed no act in 1878, and had remained under the act of 1873, greater prosperity would have been our lot.

I am not going to discuss that question; but in consequence of our legislation we have forced upon ourselves the necessity of a reserve to protect our outstanding paper. This principle was admitted when the $100,000,000 of gold reserve fund was recognized. It stood us well as a protection for the $346,000,000 of greenbacks.

The Sherman act sought to both raise the price of silver and to form a reserve for the Treasury notes by piling up the four hundred and a half million ounces in our vaults. How singularly it failed all admit. The wonder is any one even hoped for benefit to silver or safety to paper from such an act. History will record our action as a wonderful piece of folly. To corner the market in any commodity, the entire product must be locked up, but the stored article stands a menace to come out some day and break the pool. The money is made by those who buy early

and get out before the crash. We are to hold on as a nation to make ourselves the victims. The Windom bill was a project to give the Government a chance, but the Sherman bill was agreeing to suicide.

As a reserve, what use is the silver if to dispose of it is to break its price? Gold will be accepted the world over. It is plain that for reserve purposes, at present, silver is of little value, the existing law practically causing a constant issuance of unsecured paper.

One might have expected that our financiers would have been cautious, being familiar with the results of the English land bank scheme in 1696, the Rhode Island effort in 1786, the John Law Mississippi scheme in France, which collapsed in 1720.

The Argentine Republic in 1884 was in good financial condition, its paper on a par with gold. About the time we took up the Sherman act our consul at Buenos Ayres reported the total financial collapse, owing to too great an issuance of paper money. Now their gold reserve is gone, and gold at 325 premium, yet that is a country which was prosperous and has vast resources.

Why must we occupy time in opposing the Sherman act? It is almost universally condemned, and more than 300 of our 354 members say they want repeal; but, Mr. Speaker, a number of members in both Houses of Congress insist that we must couple with the repeal an amendment.

My honored friend from Missouri [Mr. BLAND] leads this host, and proposes a series of amendments. I congratulate him on the strength of his vote, considering the nature of his proposals. He asserts that the act of July 14, 1890, should be repealed; that a free-coinage measure should be substituted for it; that we are so strong in the United States we can, by legislation, raise the price of silver from 76 cents an ounce to $1.29 an ounce, making the value of 371¼ grains of silver, now worth 58 cents, equal to $1; or, if we can not do that, he proposes to make 62 cents of silver equal to $1; or, if not able to accomplish that, 70 cents' worth equal to $1; or, if failing in that, to make 73 cents' worth equal to $1; or, if not that, he proposes the old Bland act, which would give a larger output of poor money than the present law. And then he states that if all this fails he will be happy on a silver basis.

I firmly believe that no man on earth, but my dear old friend, the chairman of my committee, could rally so many brilliant men under his banner on such propositions. He seems to possess the qualities of a hypnotizer.

But, Mr. Speaker, let any of these amendments pass and the panic already checked by expectation of repeal will break loose again with a force impossible to control. Supposing, by reason of any of these amendments becoming a law or of the repeal failing, we go on a silver basis, what position will we find ourselves in? Prices will undoubtedly advance, nominally, and the man with a mortgage on his house will be better able to pay it off, but the holder of the mortgage will lose a portion of his claim.

This will not be an honest settlement. The laborer receiving $2 a day will not be pleased to find that he can get but $1.20 worth of goods for it. The holder of money in a savings bank will not thank us for receiving only $60 when $100 is turned into gold to send to relations in the old country or in Canada.

The widow's pension, scaled from $12 or $8 per month to $7 or $5 will leave her short to pay the grocer, and in larger transactions in what position will the borrowers who have agreed to pay interest and principal in gold be found?

During the last Congress we saw our Southern friends, ably led by the gentleman from Tennessee [Mr. RICHARDSON], exerting every effort to prevent the passage of the car-coupler act, because the railroads were so poor that they could not stand the expense. How will these same roads meet the demands of their gold bonds when we are on a silver basis?

The Norfolk and Western has many millions of bonds, nearly all payable in gold; the Richmond and Danville, the Savannah and Western, the Alabama roads, the Columbia and Greenville, the East Tennessee and Ohio, have many millions of gold bonds.

The Chesapeake and Ohio has a very large number of gold bonds outstanding. The Pennsylvania many millions, and also the Jacksonville and Tampa, and many others. A silver basis will bring sure ruin to many of them, but that may be no reason for influencing the members who, I suppose, do not like corporations.

The gentleman from Tennessee [Mr. COX] raised some question as to the wording of the Wilson bill. Since replying to his questions I have examined this act carefully, and have advised with others, and the conclusion arrived at is that it needs no alteration.

Mr. VAN VOORHIS of New York. Do you claim that those $119,000,000 are protected as legal-tender dollars under this Wilson act?

Mr. TRACEY. I claim that they are as much protected under the Wilson act as under the existing law.

Mr. VAN VOORHIS of New York. Will you tell me, then, what is the office of the words of the bill, "Provided, nothing in this act shall affect the legal tender of dollars heretofore coined."

Mr. TRACEY. I think that language is superfluous; but I understand that it was put in to appease those who might be timid respecting the legal-tender qualities of the dollars coined under the Bland-Allison act.

Mr. VAN VOORHIS of New York. Is not the inference perfectly plain that while you protect the one class of dollars as legal tender you leave the other class unprotected?

Mr. TRACEY. I do not think so. I do not think that affects anything but the portion of the act that is repealed.

Mr. VAN VOORHIS of New York. Do you not think it is better to save all question by amending the bill?

Mr. TRACEY. If anybody desires to do that I have no objection, but I do not think it at all necessary.

The gentleman from Tennessee [Mr. MCMILLIN] was much concerned lest the passage of this bill would indicate that we intend to coin no more dollars.

I beg to call to his attention the fact that the law provides for coining the $119,000,000 bullion, and the Secretary of the Treasury can commence doing so whenever he deems proper.

I desire to call attention to some figures showing cost of recoining, at new ratios, the stock of silver now on hand.

At 17—the number of grains of pure silver in the dollar would be 394.74, which would add 23¼ grains to each dollar, or, at present price of silver (75 cents an ounce), would cost on 419,332,000 silver dollars $15,397,000.

Pure silver in dollar addition:

At 18—417.96, add 46.7 grains, would cost $30,598,000.

At 19—441.18, add 69.93 grains, would cost $45,818,000.

At 20—464.40, add 93.15 grains, would cost $61,037,000.

Actual weight of the silver dollar (with the copper alloy added) at each ratio:

At 17—438.6 grains, or 16 to the pound (avoirdupois).

At 18—464.4 grains, or 15 to the pound (avoirdupois).

At 19—490.2 grains, or 14 to the pound (avoirdupois).

At 20—516 grains, or 13 to the pound (avoirdupois).

Mr. Speaker, immediate action is absolutely necessary to prevent disaster coming to our beloved land. The time has arrived when the danger point has been reached. We must stop the increase of silver purchase until it can be resumed without danger.

France has often been spoken of as a bimetallic nation during this debate.

Mr. Speaker, when France found itself in danger as we are, it stopped coining silver. I will read an extract from the address made at the Brussels Conference by Monsieur Tirard, the French minister of finance. * * *

For instance, our legislation has aided France to procure a very considerable quantity of money; and I believe that I may state, without fear of contradiction, that France of all the nations of the world is the one which has the largest quantity of money both in gold and silver.

Do you believe, gentlemen, that this situation is the result of chance? No, it is the natural consequence of the manner in which labor is organized with us. In France riches are infinitely divided; real estate is cut up into smaller holdings from day to day, and personal property also. We find the proof in the growing number of real estate sales, and of the subscribers to the public funds, and to investments of every description which at the time installments fall due may be counted by millions.

The governor of the Bank of France said to me recently that during the last few years the number of shareholders of that great establishment, the shares being registered, had noticeably increased.

It is the same with the condition of labor. There are in France, as elsewhere, great workshops and important manufactories; but there is also a multitude of humble artisans who work in their own homes, some singly, others with an apprentice or with one or two journeymen at the most, and who do a very small business, with very small transactions, with an extremely limited capital, which, by its very smallness, imposes upon them an almost daily liquidation of their affairs.

It will be understood that these modest workers can not, like the manufacturers of countries where riches are very centralized, have recourse to payment by bill or check—methods which require not only a deposit of capital, but also bookkeeping and operations out of proportion with the total value of their business. These operations can not be carried on except with currency.

With our agriculture it is the same. The land is so minutely divided in France that the greater part of those who cultivate it can not adopt the conditions of business which are in use in countries with great estates.

For these reasons we have in France that quantity of money which, however considerable it is, incommodes no one and renders, on the contrary, important services to everybody.

And from that, gentlemen, you see the difficulty which France would have in the wide extension of the processes of which Mr. de Rothschild and Sir Rivers Wilson speak. Our honorable colleagues tell us that in England the greater number of transactions are settled in the banks by means of checks. That is true of England, but in France it could not be the same. And given these profound differences which are revealed between these two countries, would there not be some temerity.

* * * * * * *

The silver reserve of the principal banks of issue of Europe amounted in the aggregate some weeks ago to about 2,230,000,000 francs. Of that total figure the Bank of France alone holds as much as all the other banks together. Consequently, I have the right to say that she has quite enough.

In spite of that she would consent perhaps to do what it is asked of her if there was any reciprocity, if those powers also which are wedded to monometallism should decide to adopt the free coinage of silver. But otherwise what would happen? If France and the Latin Union—I believe that for the moment I may speak in its name—should alone open their mints to the free coinage of silver, all the surplus silver of the United States and of Mexico

would go to France, to Italy, to Belgium. And where would these countries be able to use it? Nowhere, since in the rest of Europe none wish to admit it as legal tender.

As a matter of fact, France is still bimetallist.

If we ceased to coin silver, simultaneously with the other States of the Latin Union, it was because we were face to face with a continually increasing volume of silver not only from the growth of its production, but also in consequence of the transformation of the monetary system of Germany. All the silver extracted from the mines or demonetized elsewhere arrived in France and in the mints of the Latin Union, and from this superabundance of metal came its depreciation.

We have ceased to coin it and I think that our course was perfectly right.

From what Monsieur Tirard asserts, it will be seen that conditions in this country are not the same as in France, and that we have no necessity for using so much money per capita. France stopped adding to its supply of silver when it reached $700,000,000. We have now just about the same amount.

After the repeal, what are we to do? Members in conversation ask me what position the President will take regarding the future use of silver. I have replied to them that, without being in the confidence of the President, I have no doubt that he is entirely free from prejudice in the matter, and that, knowing the desire of the silver States to see their favorite metal in use, the President, who has the welfare of the workingman at heart, will gladly accept any legislation which will safely carry us along without danger of our currency being depreciated. It is the hope of many that owing to the scarcity of gold silver will be in demand. Just as soon as that time arrives, the metal will be useful as a reserve, and not until then. The President, while conservative, has no prejudice against silver.

Remove the cause of trouble, and in some way, either by international agreements or by gradual renewal of purchases, silver may come into sharp demand again.

The finances of the country are in good hands. The Secretary of the Treasury, Mr. Carlisle, is recognized the world over as one of America's greatest statesmen. He is known to be much in sympathy with the desires of the South and West, and he has also shown himself proof against yielding to any unsafe suggestions. [Applause.]

The Comptroller of the Currency, Mr. Eckels, who is responsible for the safe conduct of the national banks of the country, has, during these trying times, proved himself capable to meet and solve with exceptional ability the most intricate problems which our banking system can present. [Loud applause.]

Mr. Speaker, surely no Democratic member of this House should hesitate to take the responsibility of following the advice given by the President of the United States. He was nominated by the people in spite of a vigorous resistance from many prominent politicians, and was elected by the people, who knew as well at that time as they do now his views in opposition to any unsafe financial legislation; and any Democratic member of this House who believes that he will curry favor with his constituents by endeavoring to oppose and break down the Administration of this man, who was the people's choice, will, I have no doubt, find that he has misjudged the temper of the voters in his district.

Mr. STONE of Kentucky. Mr. Speaker, representing a constituency that lives almost midway between the two oceans, with the extreme silver sentiment and producers to the west of us, and the people who are strenuous in their advocacy of a single gold standard to the east of us, I have come here and listened for two weeks to the discussion that has gone on in this Hall upon both sides of this question. I have come here, Mr. Speaker, seeking light and knowledge.

I read in the great metropolitan newspapers of the country that a terrible calamity had befallen the people of America. In the dailies that come from the West I saw that a great upheaval of public sentiment was taking place there upon the financial question; but it was from the East, from the financial headquarters, the financial center of America, that the information comes to us through the newspapers and through the people representing the gold-standard advocates, that all this great trouble has arisen from the fact that the Sherman law was upon the statute book.

Well, Mr. Speaker, I was in Congress when the Sherman law was passed. I voted against the Sherman law, and I stand here to-night against the Sherman law, because the Sherman law is an infamy and an outrage against our form of Government. But, sir, I have listened here for reasons to be advanced why that law has caused a panic in this country. Gentlemen tell us it is because the people are afraid of the money issued under it. The gentleman from West Virginia [Mr. WILSON], the father of the bill that we are now considering, says that the trouble has come because the people are afraid of the money that has been issued under the Sherman act.

Mr. Speaker, I challenge the gentleman, and any gentleman here who takes that position, to produce a dollar issued by the American Government, in circulation or that should be in circulation, that has depreciated the smallest fraction of a cent. The people are not afraid of the money. If they were afraid of the money it would not be taken out of the banks and locked up in vaults, and thus be taken out of circulation. The people are not afraid of the money upon which the Government has put its stamp. Then, Mr. Speaker, if this be true, where is the trouble? Where is the cause? To my mind, sir, this trouble began in an effort to force the Government of the United States to issue bonds to be sold for gold.

Those who set on foot that movement found when they reached the Treasury of the United States a man intrenched behind the Secretary's desk of sufficient courage and nerve to say to them that not one dollar of interest-bearing indebtedness should be added to the burdens of the American people while he was Secretary of the Treasury. Then, Mr. Speaker, something else had to be done, and a cry was raised throughout the country that the Government of the United States was scarcely able to meet its obligations.

A panic was thus created in the minds of the people, and they have taken their money and locked it up. Mr. Speaker, I have listened with astonishment to the distinguished gentleman from New York [Mr COCKRAN] who addressed the House to-day, the gifted orator of that State—none brighter or better has it ever been my good fortune to hear. And he announced from his desk in this Hall to-day that the trouble with the people of America is that they have too much money—that there is a redundancy of the currency! Mr. Speaker, in the dead hours of the night, if you will listen, you will hear the tramp of the hungry army of unemployed that march by the thousands in the city that the gentleman in part represents.

Have those people too much money? Is there a redundancy of the currency in New York? If there is, why is it that the unemployed are there by hundreds of thousands? Why is it that hungry men, women, and children stalk through the streets crying for bread? If there is a redundancy of the currency, why is it that in every city of the land the cry for bread is going up?

Mr. Speaker, the trouble is not a redundancy of currency, but it is a lack of confidence, as was said to-day—a lack of a sufficient supply of currency and a lack of confidence in the financial management of the banking institutions of the country, and a lack of confidence as to what may occur in the future; and this lack of confidence has been created by the cry that has gone from one end of the land to the other that there was trouble somewhere.

Mr. Speaker, this reminds me of the days of my boyhood, when I used to go to the negro quarters, about 40 yards from my father's house, and listen to the ghost stories told by the old darkies—stories of the disembodied spirits that haunted the graveyards and stalked about in shady places when the moon was shining. And I would listen to these stories until I got so much afraid that, while I did not lack confidence that my father's house stood just a short distance away, while I did not lack confidence that those old negroes would stand by me until the last drop of blood they had in their veins had been shed—I did not lack confidence in those respects—but I was afraid that on the road between there and the house there was some hobgoblin or "spook." [Laughter.]

Now, these gentlemen succeeded in convincing the people that something was going to happen. And when you come here and listen to the argument, what does it resolve itself into? If you have listened attentively or read attentively you must have discovered that it resolves itself into this—that the most strenuous advocates of the repeal of the Sherman law never give you a reason for its repeal that is a real reason; they never tell you that the Government has as much right to buy corn or wheat or oats or furniture, or any other product of the labor of the muscle of America as to buy silver bullion, and that it has no right to buy and store up either or any of them. But they tell you it is because we want a single standard, we want a gold standard.

Well, Mr. Speaker, I have no fancy for gold. Very little of it ever comes in my way or within reach of the people that I represent. If you want to make a dear foundation for your currency—if you want something that is really costly, why do you not change the basis from gold to diamonds? Then the people down my way would never get any at all. [Laughter.] No, Mr. Speaker, I want a good money, as the Democratic platform says. I want a money that will pay the debts of the people and pay them from their wages; but I do not want a money that is too dear; I do not want a money that costs too much of the American workman's sweat and muscle to get it. If our money is so costly it will never come down where we live, and we shall be found making exchanges in the products of the earth in order to keep up what little commerce we may have.

So I am not wedded to gold. I do not think there is any spark of divinity hedging around the gold-miner or the man who owns gold bullion or gold dollars, that he should be allowed any spe-

cial privileges at the mints of America. I do not think there is any divinity hedging around him or his product. Neither do I think there is any divinity hedging around the mines of silver. Neither am I in favor of silver because the people of Colorado and the Western States say, "If you do not coin it our industry is broken up." I do not believe in class legislation or in granting favors by legislation.

But I am in favor of the coinage of silver and the use of it alongside of gold for this reason: There is no history that has ever been written that gives an account of any paper money ever issued in the world that circulated for twelve months at par unless it had behind it a promise of redemption in something of substantial value. Now, we have not enough of gold and silver, both taken together, to do the business of this country. We must have paper money, and that paper money must be backed by something substantial, or the people are not going to take it. Unless your money has a basis of this kind the people will be afraid of it; they will not be hoarding it in places where it can not be discovered, but they will be turning it loose and trying to get something of substantial value in place of it.

If the combined silver and gold of the world are not a sufficient basis for a circulating medium, then, of course, the world has not enough of gold alone to do the business of the world or to back the circulation that is to do the business of the world. My reason for favoring the coinage of silver is that I want something else added to that which is to be foundation of our currency. I want something that will enable us to carry a volume of currency which will be sufficient to do the business of the country in a liberal, just, fair way as between the producer and the consumer.

But gentlemen say, in speaking of silver, "Oh, no; it is a debased sort of money; it is cheaper than gold." Well, that reminds me of a fellow who was building a house and needed two beams to hold it up. He made up his mind he wanted steel beams, but he had only steel enough to make one beam. The builder said to him, "You can not build your house with one beam; one beam will not hold it up; and you have only steel enough to make one beam. But let me tell you that if you will take solid seasoned white oak you can make another beam just as strong as your steel beam; and these two will hold up the entire structure."

But the fellow says, "No, I won't put any wooden beams in my building, no matter how strong the timber may be. I am going to put all the weight on the steel beam, and there is no use in talking about it," and so he did; and very soon there was a crash all about his head. So it is, Mr. Speaker, with the goldite. They want to put all the muscle, and the sinew, and the brawn, and sweat of the American people upon one string, suspended by a single golden thread, and have somebody in some other place, nobody knows exactly where, who can pull the string whenever he chooses, and the poor laborer, the mechanic, the farmer, and the producer of the country must dance at his will. [Laughter.] That, Mr. Speaker, is why I favor the coinage of silver.

The gentleman from New York [Mr. TRACEY], who has just taken his seat, said that under the free coinage of silver, during the time that we had free and unlimited coinage, there were only about $8,000,000 coined. Since we have had a forced coinage of silver, under the present law, there has been well up toward five hundred millions coined. Is it not true, then, and plain to everybody, judging by the past, that with unlimited coinage of silver, stopping the Government's buying bullion, allowing the producer to have his own bullion coined into money, the amount of bullion coined into silver dollars will be reduced in quantity from the amount now being purchased?

In that event you will have no trouble about the parity. If this was the experience under the former coinage, why will it not be the experience now? Why, the very bill we are discussing guarantees that every dollar of silver already coined and in circulation shall be held at a parity with gold.

Well, Mr. Speaker, if this great Government has got the power to hold this five hundred millions of coined silver dollars at a parity with about six hundred and four millions of coined gold dollars, please tell me what is the matter with the Government that it can not continue to keep up that proportion in the coinage of the two metals hereafter?

No, sir, the President of the United States called us here to take action on the Sherman law. We came here and entered on the discussion of the coinage question without having stopped to consider the Sherman law at all; and we find instead of considering the Sherman law that we have been considering the question of the coinage of silver and the coinage of gold.

We have heard the people who are in favor of the gold standard. Their souls have been wrought up to excruciating pains ever since they have been here about the condition of the foreigners—of foreign people—how far superior they and their governments are to ours, and how certain is ruin if we do not follow in their footsteps. They have been talking of what is done in foreign lands. They have been talking of the people of other countries, and telling us that we must so shape our financial legislation as to please everybody on God's earth save and except the American citizen. [Laughter and applause.]

Mr. Speaker, at some speeches I have heard delivered here my soul almost cried out aloud, Oh, for the spirit of the fathers who went before us, that bared their arms and walked barefooted over these hills in order to declare their independence of foreign powers, and who declared that we were able to take care of ourselves. But here we are, the degenerate sons of worthy sires, getting down on our knees to all of the world outside of our own people, and asking them how we shall regulate our internal affairs.

Why, sir, we have no use or another dollar of gold, so far as foreign nations are concerned, except to settle the balance of trade between us and them. We were told to-day that our business of $119,000,000 had been settled, so far as this balance of trade is concerned, by the exchange of $6,000,000.

But, Mr. Speaker, they tell us further that the silver dollars are dishonest dollars; that they are 54-cent dollars. Well, I will give you 60 cents as far as I have greenbacks to give for all you have got. I would like to invest in any that you have to spare. I have not got much. I am not one of the fellows who has lost confidence: I have not lost confidence in the money, and as an evidence of it it never stays with me very long. I have not got any money locked up and put away carefully because of want of confidence; but if I have any salary due me in the Sergeant-at-Arms office I would like to invest what there is in these 54-cent dollars, and I will give you 60 cents, and even 75 cents, apiece for them.

But they say they are 54-cent dollars, and you agree right in this bill to keep the dollars—these depreciated dollars—right alongside of the gold dollar. But gentlemen will tell us that we must come to that basis in order to have prosperity in the land. Prosperity on a gold basis. Why, we were just now told that we were already on a gold basis. What is the situation? Have we the kind of prosperity to-day that you want?

Have we that prosperity when our wheat is rotting in the granaries, iron mills are shut down, industries of every sort are stopped, men are walking the streets everywhere hunting work, and the people who labor in the fields in this country for 50 and 75 cents a day are being discharged from employment because their employer says that he is not able to get a living price for his products? Is not that a beautiful picture for a gold basis? We have a gold basis to day, and, Mr. Speaker, hunger walks grim-visaged and gaunt up to the cabin doors of many hundreds of thousands of American people in our land. You talk of 1873. Why, in 1873 we had a panic. Silver was demonetized, the industries of the land were prostrated, and the country was thronged with tramps. History is repeating itself. Is the sound of the voice of those who cry for bread pleasant to your ears? What do these hungry people say? Do they say "Too much money?" No. They say give us work and pay us money so we can buy bread. "Too much money." What is that cry resounding throughout every city to day? It is not redundancy of money; but it is for work for money: the money of the Democratic platform, approved by Cleveland and his great Secretary of the Treasury: sound money, honest money; all dollars of equal debt-paying power, and in sufficient volume to do the business of the country in a liberal and fair manner. Not the money of any class nor for any class, but the money of the Constitution, the money of and for the whole people. The gentleman from New York [Mr. COCKRAN] told us that New York stood with one arm reaching out gathering our products. Oh, I beg of him not to squeeze us too hard, and do not make the meshes in the seine too fine through which the money must come back to us.

In 1878, the Bland-Allison act, which was but a makeshift, was passed, and at once new life was put into every single solitary walk of life. Business enterprises sprang up like magic from one end of the land to the other, and the people went on contented and quiet until the tinkering with this money question commenced, and it took you three long years after the Sherman law was passed to get the people to believe there was a panic, and begin to lock up their substance that was represented by money.

But you want a gold basis. A gold basis in this country means hunger. It means famine. It means grim-visaged women. It means children crying for bread. It means children crying for bread. It means prostration of every industry, and it means the building up of those who, by some turn of fortune's wheel, happen to have control of the gold of the country. History can but repeat itself. What has gone on in the past will come in the future; and let me tell you, as you sit here to-night, the people of this country are, by millions of voters, in the majority in favor of the coinage of silver.

They are not in favor of it because it is mined in Colorado and

Montana; they are not in favor of it because they think possibly there is enough of it to do the business of the country. They are in favor of it because we have got it in our hills in an abundance of quantity, and because it has been used as a money metal since the first dawn of civilization. They are in favor of it to-day because they believe it is a metal of substantial value, and of so much precious value that it may be used as one of the stones in the foundation of the great financial structure that must be erected in America.

And I beg of you as Representatives not to let the siren's song of the man who would turn your eyes to Europe, who would carry you across the ocean to France or England or Germany or anywhere else, mislead you about the commercial relations with other countries and dealing in stocks and bonds. Why, what does the man down in your district who is plowing corn to-day and hoeing cotton to-morrow care about the bonds in Europe?

Let us talk about the American workman, the American manufacturer, the American who works in the mill. Let us look at his interest, while they are talking about the men who are able to hold bonds. If you do that, you will do your patriotic duty; turn your eyes inward and look at your home affairs, and let those on the outside take care of themselves a little while, and then they will come over to our way of thinking.

But, Mr. Speaker, they say they want gold for a standard of value. Well, now that is like the wind. That is like the summer zephyr. Why, sir, did you know that the standard of value was made by law? They say you can not have more than one standard of value. Well, that is true; that is the law. The law says so much gold shall be a dollar and so much silver shall be a dollar. The dollar is the standard. But we can have two substances representing that standard, just as we can have two yard sticks of different woods. A yard stick is 3 feet and a dollar is 100 cents. So we have a standard of value, and that standard can be reached by the law of the country with both these metals. We are already to-day at a gold basis.

Now, if you want to continue that sort of process, why, continue it; but let me tell you that I have heard men on this floor announce that they had changed their minds on this question, that some years ago made speeches in favor of the white metal, but recently they had changed their minds and become convinced that they were wrong; and my humble opinion is that when they go back and take hold of the hands of the laboring masses, when they go back to shake the horny hands of the fellows who handle the plow and wield the hammers in manufacturing establishments, they are going to find it mighty hard to explain what sort of an arugment was applied to them in order to induce them to make so sudden a change upon so vital a question.

But, Mr. Speaker, I have only got two minutes more, and I want to devote that to the Sherman law.

Now, as I said, I am opposed to the Sherman law. I am going to vote to repeal the Sherman law, but not because I am in favor of the single gold standard. Upon that part of the question I agree with the great Secretary of the Treasury. His remarks upon this question some years ago have been quoted here by those who oppose him. Mr. Carlisle occupies the same position to-day in regard to the use of the two metals that he occupied when he made that speech. Mr. Carlisle is a bimetallist.

But, Mr. Speaker, we have got a new order of metallists here, and they are "international bimetallists." [Laughter.] They are gentlemen who, I suppose, expect to take many European trips. They are able to buy trip tickets across the ocean, and they want a dollar to carry along with them, so when they get over there they can use without having it recoined.

Now, the unfortunate situation of the American people is that there are very few of us who can take these trips across the ocean. We want money for the American people, and we are able to make a standard and able to maintain it; and whenever you descend from or go around that proposition, you acknowledge your inferiority to other people who have managed their affairs without consulting you, and I tell you that you have disgraced the fathers who won your independence in the days of '76.

But, Mr. Speaker, I am against the Sherman law, as I said awhile ago, because the Sherman law is vicious, because it purchases a commodity. It makes silver a commodity, and buys it and stores it in the Government vaults; and you have no more right to buy and store it than you have to buy wheat and corn, tobacco and cotton, and oats, as my Populist friends want us to do. I am opposed to their position, and being opposed to their position, I can not be anything less than opposed to the Sherman law.

Now, Mr. Speaker, one word more and I am done. I represent an intelligent and enlightened constituency upon this floor. I represent a constituency which is watching this Congress as it has never watched Congress before. I voice the sentiment of that constituency upon this floor. I came here to represent my constituents, and to represent their views upon this question. I coincide with their views, and if the time should arrive when I shall have to change my position without knowing that my people had changed, I would resign my seat upon this floor and ask the people to send a man here who would represent their views. [Loud applause.]

Mr. BOUTELLE. Mr. Speaker, I am willing to lend my humble aid to a Democratic President and a minority of his party in even a tentative effort toward getting on a sound financial basis. In doing so I do not claim to be nonpartisan, because this question does not present itself in a nonpartisan character or in a nonpartisan way. I shall not attempt to step outside of or to rise above my legitimate partisanship, because I have never yet found it necessary to be nonpartisan in order to act or vote in accordance with what I conscientiously believed to be for the best interests of my country.

I am the more willing to lend this aid now, because to-day, with triumphant Democracy intrenched in the White House and in the Capitol, the public welfare depends as absolutely upon Republican patriotism as it has for more than thirty years. [Applause on the Republican side.]

Surely, there has never been a crisis or an issue forced upon the people of the United States of more clearly and unmistakably partisan origin than the present, or one in connection with which the Republican party has had less reason to be afraid to invite the severest scrutiny of its public record. [Applause on the Republican side.]

The maintenance of the public faith in the financial honor of this nation has been a cardinal principle of the Republican party, from which it has never been seduced by the sophistries of selfishness or driven by the organized hosts of demagogism and Democracy. [Applause.]

From the day when it took possession of a bankrupt Treasury on the brink of the most gigantic civil war of modern times, it has never wavered in its purpose to hold the national integrity as sacred as the nation's life. [Applause.]

And, Mr. Speaker, from that day to this, in every battle that it has fought for either, it has been confronted, bayonet to bayonet and foot to foot, by the stubborn lines of the Democratic party. [Loud applause.]

HOW DEMOCRACY FOUGHT RESUMPTION.

In proving this allegation I do not now purpose to look back so far as I might properly do if my time were not so limited. For the purpose of this discussion, I ask you to look back over the history of our country only for the brief space of eighteen years. I ask you to go with me to that period when the Republican party, having carried this Union triumphantly through the Red Sea of civil war, was wrestling with that almost equally momentous problem of lifting up the prostrate credit of the nation.

In 1875, when the Republican party laid the foundation for the most marvelous period of prosperity, by the brave reassertion of that fundamental principle that honesty is the best policy for governments as for individuals, the same battle was on between Republicanism and Democracy; and the issue joined then in that great struggle over the maintenance of the national faith has been going on from time to time, marked by the same distinct party contentions from that day to this.

Oh, how familiarly like echoes of 1875 have been the wails and the lamentations and the predictions of evil that have gone out from this House to the country during the last two weeks by the men who to-day represent the championship of currency inflation and depreciation for which Democracy fought so strenuously less than twenty years ago.

Listen while I recall the action and utterances of Democratic leaders in the Senate and House at the time when the Republican party proposed that the United States of America, having suppressed the rebellion, having restored national unity, having reasserted supremacy over every acre of national domain, should now turn its attention to restoring its credit at home and abroad by redeeming every obligation of the Government and making every one of its financial pledges as good as gold the whole world around.

Let us look at the record, for it is significant. That was an historic episode which has properly a place in the discussion of the present question. In the Senate on December 24, 1874, on the question of the passage of the resumption act, providing for the resumption of specie payments, January 1, 1879, the ayes were 31 Republicans, and Carl Schurz, an Independent; the nays were 14 Democrats and Independents. No Democrat voted to resume specie payment in this country; no Republican voted against resumption.

In the House of Representatives, January 7, 1875, on the same question the ayes were 136, every vote being cast by a Republican Representative and no Democratic Representative from all this wide land recording his vote in favor of uplifting the financial honor of the American people among the nations of the earth.

The nays were 98; 74 Democrats and 24 Republicans, but in justice to some of the gentlemen who voted in the negative it should be stated that they voted against that act because they held that the proper "way to resume was to resume" at once, so that their record stands simply for opposition to delay and not for opposition to the measure.

Let us see, Mr. Speaker, how tenaciously, how persistently, the Democratic party maintained this hostile attitude towards the credit of the nation. Hear that well-known Democratic leader, Gen. Ewing, of Ohio, who said in the House, on the 24th of November, 1877, more than two years after the bill had become a law:

If we were wholly out of debt to Europe; if our foreign commerce floated under our own flag; if there were no system of absenteeism among our wealthy classes, expending their wealth abroad, resumption in gold, or even gold and silver, would be impossible on our present volume of paper currency for many years to come. * * * The national banks, the importers, the gold rings in New York, the desperadoes of Wall street, the money kings of Europe, to whom we are financially enslaved, they will present the greenbacks for redemption and destruction as fast as the gold can be paid over the counters of the Treasury.

And a year later, May 14, 1878, United States Senator COKE, of Texas, voiced the implacable hostility of his party, as follows:

It is better, Mr. President, that we bide our time and turn back from the frightful abyss of ruin which yawns across the pathway to resumption. The experiment must end in failure, and must engulf the country in a lower deep of misery than it has yet fathomed. The bulk of the State, private, and savings banks, with their vast sum of the people's deposits, must go by the board by reason of the insufficiency of their reserves, and many of the national banks must fall from the same cause. In this general crash the whole system, from the Treasury down, must succumb. It is simply a question of time, for this result must occur, and, in my judgment, the time will be very short after the 1st day of January next.

And this Democratic opposition to resuming specie payments was not confined to talk, for we find repeated records of hostile votes.

On January 10, 1876, Mr. HOLMAN moved to suspend the rules and pass a resolution to report a bill to repeal so much of the resumption act as authorized the Secretary of the Treasury to redeem in coin United States notes. It lacked a two-thirds vote, but there were 105 yeas to 96 nays, and of those yeas all but 10 were Democrats.

February 14, 1876, a resolution empowering the Secretary of the Treasury to carry out the provisions of the resumption act was lost—85 yeas, 139 nays; all but 8 of the nays being Democrats.

January 7, 1876, a resolution to repeal the resumption act was lost—yeas 112, nays 158, and 106 of the 112 yeas were Democrats.

August 5, 1876, Mr. Cox reported a bill providing that "the resumption-day clause of the resumption act of 1875" be repealed, and it passed the House—yeas 106, nays 56; all but 9 of the favoring votes being cast by Democrats.

June 17, 1878, Mr. Townshend of Illinois moved to suspend the rules and repeal the provision of the resumption act authorizing the sale of bonds for resumption purposes; it only failed for lack of two-thirds, there being—yeas 115, nays 111; and of the yeas all but 15 were cast by Democrats.

So I might go on, Mr. Speaker, with the record of Democratic hostility to every important measure devised by the Republican party for the purpose of maintaining the plighted faith of this nation, and to give to our currency and our credit, at home and abroad, that stability which was necessary to place us in the rank we were entitled to occupy among the great nations of the earth.

But some gentlemen may say this is ancient history. Ah, yes, my friends, you Democrats are very glad to have your history regarded as ancient the day after it is made. [Laughter.] And you never recognize any sound principle until after we have established it in spite of you.

No more graphic characterization of this trait of the Democratic party has ever come to my knowledge than that which described it as like a man who rode backward in a railway car and therefore could never see anything outside until the train had got past it. [Laughter.] So, you are very glad to swathe your record in the bandages of forgetfulness and to raise the cry of "dead issues" whenever you are recalled to the unwelcome duty of examining the history of the past.

But without following this history in continuous sequence, I make the declaration here, without fear of contradiction, that from the beginning of the rebellion to the present time, upon every occasion when any public measure has been pending involving the financial interests and integrity of the country on the one side, and depreciation, inflation, or repudiation on the other, it has always been made a partisan question by the Democracy, and they have invariably been ranged against the national credit and the Republican party in defense of it.

DEMOCRACY FOR SILVER INFLATION.

Why, take this silver legislation with a phase of which we are now concerning ourselves. Let us go back simply to the passage of the Bland bill, a bill for coining silver dollars of greatly depreciated value until, declamation and fiat eloquence to the contrary notwithstanding, they rate in the markets of the world for only about half the value of their face.

The Bland bill (which I ought to remind you was first vetoed by a Republican President) when passed over the veto of President Hayes, went through the House by a vote of 118 Democrats and 78 Republicans, the Democrats being nearly two to one. The nays were 51 Republicans and 22 Democrats, the Republicans being more than two to one.

THE SO-CALLED SHERMAN ACT.

And this brings us down to the passage of the so-called Sherman act. I am very glad that the clear statements of a number of the gentlemen who have preceded me have rendered it entirely unnecessary that I should go into a history of the passage of that act, to disabuse the minds of any purblind readers of Congressional history who might be confused into the idea that the Republicans were enacting original silver inflation by the passage of the Sherman act.

What were we doing at that time? To-day we are arraigned from the President's message down to the penny-a-liners in the Democratic press of the country as a political party that in the Fifty-first Congress undertook to inaugurate a system of silver depreciation of our currency—financial legislation that was derogatory to the maintenance of the high standard of our public credit.

Now, I was here at that time and took some interest in what transpired, and when I saw these diatribes in the Democratic party organs arraigning my party as false to the high standard of national integrity and a sound currency, I looked back to see if my memory had deceived me. And what did I find? That in the Fifty-first Congress we were confronted with the alternative of a bill for free and unlimited silver coinage which had passed the Senate by the almost solid vote of the Democrats and a very few Republicans, and which was favored by the great majority of Democrats in the House.

The Republicans sought to obtain the best compromise they could, and as an escape from the peril of free coinage the Sherman act was favored by all the most conservative financial influences in the country.

But let the words spoken at the time tell just how that Sherman act was regarded when it was passed. At the close of the long debate Mr. BLAND of Missouri, in a most impassioned speech, rallied his Democratic associates against it for reasons thus stated:

Mr. BLAND. Mr. Speaker, I desire to reply to the gentleman from Maine on one point. He claims that the silver dollar in the Treasury and the bullion are there on the same basis on which money is to be issued under this bill and the present law. The gentleman from Maine will not dispute the point that there is this distinction: That the silver dollar on which the certificate (under the Bland law) is issued is at the ratio of 16 to 1, and the bullion on which these notes are issued (under the Sherman act) is at the market ratio, and not at the legal ratio, and the market ratio is 20 to 1 to-day.

Mr. BLAND evidently did not think the Sherman act was providing a cheaper dollar than that named for him, or that it was tending toward a silver standard, for he emphatically declared:

That is the contention I have been trying to force upon the House, *that under the lead of the gold* standard, and for the purpose of keeping that up, *and to keep an "honest dollar," as they call it*, you have departed from the legal ratio in issuing these notes.

He further insisted that the advocates of the bill had "simply abandoned the legal ratio on which to issue the notes, and *taken the gold ratio to keep up the gold standard.*"

He then closed and condensed his denunciation, as follows:

The whole bill is intended to postpone free coinage at the ratio of 16 to 1.
The whole bill is in the interest of the gold standard.
The whole bill is a murder of silver.
It is giving up the fight for silver at a fixed ratio of 16 to 1, abandoning it and issuing notes that if they are ever presented to be redeemed, *will be redeemed in gold and not in silver*, and gentlemen can not escape the argument. [Applause on the Democratic side, and cries of "Vote!" "Vote!" on the Republican side.]

And under that leadership and for the reasons stated 90 Democrats voted against and 122 Republicans voted in favor of the so-called Sherman act to take the place of the Bland act of 1878.

THE PANIC CAUSED BY DISTRUST OF DEMOCRATIC ADMINISTRATION.

Now, Mr. Speaker, my time is so short that I can only call attention very briefly to the causes which have led up to the situation in which we find ourselves to-day.

Everybody on both sides has agreed that there is a great public apprehension, and that want of confidence in the business and financial situation is abroad. Is there anything strange about that, Mr. Speaker, when the Democratic party from 1861 up to date has been unceasingly, persistently endeavoring to impair confidence in the credit of the United States? And when that political party has been put in full power in the Government why should there not be distrust and apprehension?

Why, Mr. Speaker, for two years past the Democratic press has teemed, Democratic speeches in Congress here have been replete with direct and indirect assaults upon the credit and financial stability of the United States. Only last spring, at the

very close of an expiring Congress, the great fiscal organ of this House, the Ways and Means Committee, by a majority of its members, made an official report which was calculated, if not intended, to carry to every financial center in Europe a feeling of distrust as to the finances of the United States Government.

The gentleman from Illinois [Mr. SPRINGER] and his associates came out with a public document in which they seemed almost gleefully to predict that the Government of the United States would be bankrupt by more than $40,000,000 on the 30th day of June next! Gentlemen may say, "Oh, no one would take seriously such a political document put forth by the gentleman from Illinois." [Laughter.]

Perhaps not in this House nor in this country; but, Mr. Speaker, there are people in other lands who are in the habit of regarding the official statements of the legislative and financial exponents of a great government like ours as entitled to serious consideration, and when the Ways and Means Committee of the House of Representatives issued to the public a solemn declaration, fortified by their estimates and their declared judgment, that the Government of the United States would run short $40,000,000 within the next year, do you wonder that the people abroad concluded that there must be something wrong and began to send our securities home?

The same political party that advertised clamorously to the world that a Republican Congress had looted the national Treasury by ruinously extravagant appropriations proceeded at the next Congress to exceed the expenditures by many millions, and has since taken possession of all branches of the Government. Is it strange that "want of confidence" should be manifested on both sides of the Atlantic?

A PARTY DIVIDED AGAINST ITSELF.

Mr. Speaker, this is an anomalous situation. Oh, what broods of chickens have come home to roost since the ides of last November! Here we have to-day the spectacle of a Democratic President making the first great effort of his Administration a demand for the repeal of the purchase of a limited quantity of silver bullion, and in making that appeal to the political party of which he is the head he finds it with a "free coinage" Secretary of the Treasury, with a Populistic Secretary of State, with a "free coinage" Vice-President of the United States, with a "free coinage" President of the Senate, with a "free coinage" Speaker of the House, with a "free coinage" chairman of the Senate Committee on Finance, and with the apostle of "free and unlimited coinage of silver" chairman of the Committee of Coinage in the House of Representatives, and with a majority of "free coinage" Democrats on both of these committees. [Applause on the Republican side.] Can anomaly go further? Could political stultification be greater?

Ah, Mr. Speaker, the situation is serious indeed when a Democratic President realizes the fact that against the party that was elected on the same ticket with himself, against the party elected on the same platform and now disputing with him what the platform means, the great hope of his Administration in sustaining its first measure has been based upon the unquestioned steadfastness to principle of the Republican party in Congress. [Applause on the Republican side].

REPUBLICANS NOT PERMITTED TO OFFER AMENDMENTS.

The fact of that steadfast bulwark of Republican votes has furnished the President the fulcrum upon which to exert executive influence upon his own party; and whether he and the Administration wing shall be able to win over more or less of those Democrats who have always been for free silver, the attempt to repeal the Sherman silver-purchase act would never have been made but for the reliance upon the substantially solid Republican column in its favor.

That Republican column has stood unwavering in spite of the inexcusable manner in which its opinions and wishes as to methods have been ignored. We have been denied all opportunity of suggesting amendments, while the Administration Democrats have made all the preliminaries matter of partisan conference with their party associates who are fighting for free coinage.

For one, I do not believe that the proposed legislation has been presented in a statesmanlike way, or that the case is managed in a judicious manner. It seems to me, that recognizing the strong hostility in the Democratic ranks to the contraction of the currency, a feeling that is exaggerated by surrounding circumstances, the repeal of the silver-purchase clause should have carried, incorporated with it, provisions for expanding the issue of circulation to the national banks to the par value of the bonds, with repeal of the bank taxes that tend to deter the banks from increasing their note circulation.

I think also it should have carried with it unequivocal authority to issue bonds whenever necessary to maintain the gold reserve, as it is generally believed that such action by the last Congress would have been a great safeguard against the troubles that have ensued if Secretary Carlisle had not prevented its adoption.

Had these provisions been attached to the Administration measure they would have had all the benefit of the pressure exerted for repeal; while, as it is, the hostility of the inflationists to the national banks is more likely to be increased by their defeat on the silver question, and it would be anything but a glorious triumph of policy and legislation if the mismanagement of the Democratic leaders should secure the repeal of the silver-purchase act at the price of opening upon the country the Pandora's box of wild-cat banking recommended by the Democratic national convention.

THE TARIFF THE REAL ISSUE.

Mr. Speaker, I have not time to discuss in any detail the real causes of the widespread business and industrial paralysis in our country. I am glad I am not obliged to do it for the information of the House, for my friend from Michigan [Mr. BURROWS], my friend from New York [Mr. PAYNE], my friend from Iowa [Mr. DOLLIVER], my able colleagues from Maine, and others have put their fingers on the nerve of this whole trouble.

The leaders of the Democratic party, from President Cleveland down, have been engaged for years in a relentless crusade against the economic system upon which the great industries of our country are based and under the operation of which they have developed such a degree of national prosperity as has amazed the people of other lands. On that system the Democratic party has declared war, and the declaration has only failed to create the full measure of alarm and disaster because until now that party has been restrained by Republican possession of some one of the coördinate powers of the Government.

But to-day everybody understands that the party now in unbridled power at the national seat of Government is that which has over and again sworn to deal protection its death blow and to revolutionize our industrial system to a revenue tariff basis.

Senator VEST declared only a few years ago:

> Mr. Cleveland in his message, for which I sincerely honor him, has challenged the protected industry of this country to a fight of extermination. It is a fight to death.

Mr. MILLS, who has since been made a Democratic Senator, summoned the people to drive out the "robber barons" of our manufacturing industries as public enemies, "who had their hands to the elbows in the pockets of the people," and declared that this land "should be dedicated to free men, free labor, and free trade."

The last national platform of the Democratic party was even more radical, as it denounced protection as both "unconstitutional" and a "robbery."

The President tells us in the very message which asks for the silver repeal that the next movement is to carry out the revenue tariff reform, to which he says "every effort of his Administration is pledged." It is doubtful whether he ever realized the tremendous significance of such an assault upon American industrial institutions until he has recently seen the panic created by the mere apprehension of the tariff-smashing crusade.

It promises no more mercy to the American farmer than to the American artisan; and in one of the progressive farming counties in my own district, where the tillers of the soil have subscribed hundreds of thousands of dollars to build a railroad now nearing completion, to furnish access for their American agricultural products to the American consumer, they are confronted by the Democratic party's threat to throw down all the barriers that protect their farms from foreign competition, and to lend the practical aid of the American Government to the Canadian farmer in underselling them in our own markets.

DEMOCRACY MUST BEAT A RETREAT.

What wonder that there is widespread alarm, cessation of enterprise, and wholesale discharge of operatives engaged in making goods that before the season of their sale arrives may be crowded out by cargoes of the handiwork of the cheap labor of Europe.

So, while we Republicans will lend powerful aid in the repeal of the silver-purchasing act, and hope that its importance has been so exaggerated that its repeal may have a good effect on the monetary situation and lead to international agreement for the safe use of silver money, we do not expect to see American industries take on their full activity in the face of the tariff revolution which threatens them. Our greater hope would be that the Administration may be led by the tremendous object lessons of the past few months to abandon the policy that has caused such consternation.

An authoritative announcement from the White House that the free-trade propaganda is to be abandoned would set the blood of prosperity coursing swiftly again through all the arteries of our trade and commerce. Those are not wanting who believe that the Democratic President has already seen enough to convince him that to enact the dogmas which he and his shrewdest friends unsuccessfully tried to throw overboard last year at Chicago must result in overwhelming business disaster.

The gentleman from Nebraska, a few days ago, related in a very dramatic manner an entertaining but mythical story, in which Napoleon, at the battle of Marengo, believing his army defeated, ordered a drummer boy to beat a "retreat." The stripling replied that he had never learned how to beat a "retreat," but said he could beat a soul-stirring "charge," and reminded his great chief of the charges he had beat at Lodi, at Wagram, etc., and begged permission, "Oh, sire, let me beat one more charge!" which was granted, and the battle won. The gentleman then applied the story to his Democratic President, whom he believed to be retreating from the Democratic battle-ground, and begged him, in the name of the victories of the past, to order one more grand "charge" under the banner of free silver and free trade.

Mr. Speaker, the President, as well as the rest of his countrymen, has witnessed an "object-lesson" of the effects of the mere apprehension of a general assault upon the tariff system.

You can not raise the mailed hands of legislation in deadly threats against every productive industry of a great nation without inviting business calamity. The calamity has come. It is at our doors; and I tell you, my young friend from Nebraska [addressing Mr. BRYAN], that if you go to your "Napoleon of politics" now, and undertake to urge, him, like your "drummer boy of Marengo," to let you beat just "one more charge;" when you remind him how you beat "*such* a charge" for free wool that sent all the American sheep scampering to the slaughter-houses and wool down to 10 cents a pound, and beseech him to "let me beat one more" [laughter]; when you remind him, "Sire, we did beat *such* a charge against the wool manufacturers, and see how their factories are toppling all over the land! Oh, sire, we did beat such a charge against the cotton manufacturers, and look how they are closing their doors and turning their army of unemployed workmen out into the streets! Laughter.] Oh, sire, we did beat *such* a charge against the gold standard and monometallism, in favor of free and unlimited coinage of short-weight silver dollars, and look how our securities have come flocking home for redemption, how the banks of New York and all over the country have been brought to the verge of ruin, and idle workmen are being fed in the soup houses. Oh, sire, let us beat one more charge!" [Applause and laughter on the Republican side.]

Mr. Speaker, he won't do it. I tell you, my young friend, that when your quondam chieftain comes back from Gray Gables, while he may applaud, as we all did, the beautiful imagery and fervid eloquence of your splendid speech, brilliant in all except the soundness of its premises and the logic of its conclusions [laughter], he will place his hand on your head and say, "My young friend, that was all very well before election, but we won't have any more charges beat just now." [Laughter and applause]. You just go to work and learn how to beat a first-class retreat. "That is what we shall most stand in need of." For I assure my friend from Nebraska that the "man of destiny" has already observed the omens of the times, and he will whisper in your ear that Marengo is a long way behind, that the victory of 1892 was nothing but a spasmodic return from Elba, that amid the uprising of the allied industries and interests of a deceived people he already hears the ground rumblings of the Waterloo of 1894 [applause on the Republican side], and against the bright sun-burst of Republican restoration in 1896 he sees, grimly looming, Democracy's St. Helena! [Loud and continued applause on the Republican side.]

Mr. FELLOWS obtained the floor and yielded five minutes to Mr. BOATNER.

Mr. BOATNER. Mr. Speaker, I am profoundly grateful to the gentleman from New York for extending me the privilege of again addressing the House upon the important and absorbing question now under consideration.

The advocates of the pending measure have, from the inception of this debate, ignored the real question which underlies it. That the Sherman law is a bad law and ought to be repealed, no one, or very few, deny. Our contention is that the repealing act ought to go farther and extend to the country the relief from existing evils and the reforms in currency legislation sacredly promised in the last campaign and which the people, by their votes at the last election, placed it in our power to extend.

This relief the advocates of unconditional repeal refuse now, and leave us no hope that they will support in the future. The real question, then, to be determined by our votes is not whether the purchasing clause of the Sherman act is to be repealed, but whether the Democratic party is to redeem its pledges made at the polls. The astounding spectacle is presented to the country of a measure of the greatest importance and far-reaching consequences being precipitated on the House under an iron-bound rule which prevents the consideration of any amendments, except those dictated by its supporters, and of forcing members to elect between the duty of standing by what they conceive to be their duty to their constituents or of appearing to array themselves against the distinct policy of the Administration.

Such a course was unnecessary. It was recklessly disregardful of the interests of the Democratic party, and will be destructive of the harmony and unity of purpose absolutely essential to the enactment of the legislation which we pledged to the people, and the failure of which will reflect additional discredit on the Democratic party.

Mr. Speaker, many of the gentlemen who have spoken on this subject, and who were nominated and elected as Democrats, boldly proclaim their opposition to the use of silver as money, and aver that the views of the Democratic nominee for the Presidency and not the platform on which he was nominated and elected should be the guide for our action; with these we have no concern, because they place themselves beyond the pale of our party, and are the mere personal followers of the President. Others maintain that the substitute of the gentleman from Missouri [Mr. BLAND] should be voted down and the original bill passed, because we can at the regular session of Congress enact legislation which will carry the platform into effect and meet the approval of the country.

If the signs of the times did not unmistakably indicate that such hope is absolutely groundless, if it were not known as positively as anything in the future can be known that if the Sherman law is repealed no additional legislation on the subject of silver coinage will be even considered by this Congress, I should concur in the conclusions of the gentleman from West Virginia [Mr. WILSON] and vote for his bill; but I believe, and every other member on this floor who advocates the Bland substitute believes, that such a course is a disguised, but nevertheless an unmistakable abandonment of one of the two most important subjects of legislation promised the people by our platform. I hope I am mistaken; and if I am, no one will be more willing to acknowledge the error. I do not, Mr. Speaker, attack the motives of other members, but if I were to adopt this line of action I should feel that I was attempting to conceal treachery and bad faith with hypocrisy.

Shall we abandon the principle of bimetallism, shall we repudiate the obligations assumed by every member of our political party who holds a seat upon this floor? I fear we shall—so far as this House is concerned, I believe we have practically done so. But this great question, which affects most vitally the interest of every citizen of this broad land; which enters the door of every man who earns his living by labor; which goes with the farmer to his field, with the carpenter to his bench, with the lawyer to his office, and the merchant to his counter, will arise and rearise until the will of the people is crystallized into law, and justice is done to the toiling masses of our country.

It can not be ridiculed into silence; it can not be driven into obscurity by the taunts and jeers of those who stand for discount, interest, and commissions; it will assert itself with renewed strength until success crowns its efforts, or until the classes whose interests it assails have made themselves complete and absolute masters of the country. The opponents of the use of silver as money have been victorious in every contest by chicanery and fraud. With a majority against them always, they have by audacity, by fraud, and adroitness, broken its power and deprived the people of the fruits of every victory won at the polls.

In 1878, with a large free-coinage majority in both branches of Congress, they escaped with a compromise represented by the Bland-Allison act, which accomplished their purpose of leaving silver bullion on the list of commodities.

In 1890, when a similar situation was presented, the genius of the Senator from Ohio again came to their rescue, and they escaped with the act, denounced at Chicago as a "cowardly makeshift." Now, in this Congress, with an unquestioned free-coinage majority in both Houses, the voice of the siren is again heard in her most dulcet tones, and drowsy languor takes the place of the active, aggressive spirit which filled this House with a majority of 84 Democrats.

Sir, the days for subterfuges, deceit, and political legerdemain have passed, and we may as well come out into the open and take the fire of an indignant and outraged people.

When the people call for a volume of constitutional, safe, and honest legal-tender money, which will serve the needs and wants of our own great and growing business, they are denounced as practical repudiators, advocates of cheap money, and their representatives who refuse to betray them, as demagogues. Those who stand for "interest, discount, and commissions" are flattered by the metropolitan press as broad, patriotic statesmen.

When the Bland bill was under consideration the same school of politicians who now pose as the saviors of the country and guardians of the nation's honor loudly proclaimed that under its provisions a depreciated, debased dollar would be issued. They predicted the direst disasters to follow the disappearance of gold from circulation, which they said must surely take place, and appealed to national honor and good faith to prevent the passage

of so iniquitous a law. The appeal was vain. The Presidential veto was overridden, and Congress gave to the people this modicum of the relief which had been promised them.

What was the result? Instead of the disappearance of gold from circulation, so confidently predicted, the volume increased from $300,000,000 to $700,000,000.

Not a dollar issued under the provision of this law has ever been presented for redemption, except when gold was wanted for export, notwithstanding its depreciation to 60 per cent of its face value has been industriously proclaimed throughout the length and breadth of the land.

Of these "debased" dollars there are 308,199,262 in circulation. Not one can be bought for less than 100 cents in gold. No one has complained of them, and the only fault the country finds is that there are not enough of them. The same may be said of the circulation issued under the Sherman law. The certificates are full legal tender—are the obligations of the Government, whose ability to meet them no one disputes and no one questions.

Yet, Mr. Speaker, as against each it was confidently predicted by the gold monomaniacs of the country that their effect would be to put us on a silver basis. All these predictions have proved unfounded, and from these two sources we have drawn more than one-third of all the money now in circulation in the United States.

What would be the condition of the country to-day if the volume of silver circulation now outstanding had never been issued? We would either have only about one billion one hundred millions to do the gigantic business of sixty-five million people, or this money which has paid no toll to the banks would be represented by their paper of similar amount, and would represent to them the enormous profit resulting from a transaction of such magnitude.

Is not this, Mr. Speaker, the real reason of the persistent and unflagging opposition to the use of silver as money. When it is remembered that bank circulation shrunk in about the same proportion as silver was issued under the Bland act, the conclusion is almost irresistible that one displaced the other. We do not want, sir, to coin dishonest dollars or cheap dollars, but enough of honest money to meet the wants of business and revive the flagging industries of the country.

We want to pay our debts in money worth 100 cents to the dollar, but do not want the volume of money so contracted with reference to the growth of business and population that it will be impossible for us to obtain it without a sacrifice of labor and commodities out of all proportion to their value. The gentleman from Mississippi [Mr. CATCHINGS], in the able presentation of the other side of this question, admitted that the effect of the proposed legislation, if unaccompanied by any other, would be to dry up the only source from which circulation can be increased, and to decrease thereby the ability of the debtor classes to meet their obligations; yet if the district he represents is situated like mine, it is literally plastered with mortgages bearing 10 per cent interest, and having from one to ten years to run.

The planters for several years past failed to realize more than the cost of producing their crops. Yet it is proposed to increase the value of the debts they owe and decrease their ability to pay them by increasing the value of money and the difficulty of obtaining it for business purposes. The East, with its immense wealth and plethora of money, is unable to realize the condition of the South. With them 4½ per cent interest is regarded as a fair return for money. With us 8 per cent is the lowest rate, and resources innumerable lie dormant for the want of capital to develop and render them productive.

Is it to be wondered, then, that the South, which for years has struggled with adversity and disaster, should demand at the hands of the party which it has constantly supported with its votes a fulfillment of the pledges it has made? Is it strange that we should desire the extension of our circulation to the point that capital would seek investment in legitimate interprise and business?

That this reasonable request should be denied us has filled us with surprise, consternation, and, I may add, with indignation. Why should the interest of the agriculturist, the mechanic, the laborer, the professional man—in fine, of all those classes who earn their living by producing or handling the necessaries of life—be sacrificed for those who live by lending the money on which all those operations are conducted.

Why should the maxim "that the greatest good to the greatest number" shall be the guiding principle in legislation, be reversed, and the smaller classes be further enriched by legislation distinctively in their favor? I imagine, Mr Speaker, that no satisfactory answers can be given to these questions.

For many years, Mr. Speaker, the gentleman from West Virginia [Mr. WILSON], the gentleman from Indiana [Mr. BYNUM], the gentleman from Arkansas [Mr. BRECKINRIDGE], the gentleman from Illinois [Mr. SPRINGER], the gentleman from Kentucky [Mr. MCCREARY], and the distinguished Secretary of the Treasury have been teaching us that the act of 1873 demonetizing silver was not only a fault, but a crime. With eloquence which aroused our enthusiasm and with arguments that convinced our judgment they taught us and have taught the country that it was possible to maintain in the United States the parity between gold and silver coinage. They have made us believe that the free coinage of silver on equal terms with gold would break the power of the money barons, unlock the doors of enterprise, and breathe new life into the prostrate body of the South; that with the world's supply of bullion to draw from money would flow into the channels of business as long as it would find profitable employment. These sentiments found expression in the platform of principles adopted at Chicago.

Our nominee for the Presidency gave them his indorsement, and the battle cry to the people was, "Give us the power and we will give you the relief." Hardly had the echoes of that contest died away before conservatism took the place of aggression, and a halt was called all along the line.

A remarkable change has come over the spirit of their dreams. Bimetallism, which ten months ago was entirely practicable, has now become impossible without the concurrence of those foreign nations whose interest demands the gold standard.

The volume of circulation, which before the election was insufficient to meet the wants of business, has now b come so redundant that it is necessary to cut off the only source from which it could be supplemented, and no measure providing any other means of accomplishing this purpose can receive their support.

The gentleman from Maine [Mr. REED], regarded as the most formidable man in the Republican party, with his lieutenants from Michigan and Iowa, are called to the support of a measure fathered by a Democratic Administration, and quondam Democrats beam with satisfaction and applaud with rapture arguments in favor of a financial policy advocated and maintained by the Republican party as long as it has had power in the United States.

The distinguished gentleman from West Virginia, the chairman of the Committee on Ways and Means, tells us to-day that, speaking for himself alone, he does not anticipate that it will be necessary to issue bonds to maintain the public credit, but he forgets that no longer than last February a bill was reported from the Committee on Banking and Currency exactly similar to the bill now under consideration, except that it provided for the issuance of a 3 per cent bond.

That was known as the Sherman amendment, and, like the makeshift which bears his name, was the product of his fertile brain. The gentleman from West Virginia supported that bill, and, if I am not mistaken, supported a resolution ordering cloture on it. He was supported then, as he is now, by all the monometal Democrats on this floor and by about one half the Republicans, with the gentleman from Maine [Mr. REED] at their head.

It failed of passage because of the strenuous opposition of those who insist the party must execute its pledges. It may be that we will not be forced to an issue of bonds, and I hope, in the providence of God, that we will not be; but the strong probabilities are that we will be.

There are now in circulation about $850,000,000 of demand obligations in the United States redeemable in gold at the Treasury.

They serve all the purposes of money—in fact, are money—and bear no interest; but if the bill now pending in the Senate authorizing national banks to issue circulation up to the par value of bonds deposited, how will it be possible to prevent the funding of the entire greenback and silver circulation into bonds? If presented for redemption, this Government must buy gold for that purpose, and it can only do so with bonds.

The process then will be simple; the banks will present this class of circulation for redemption; this will force the issue of bonds, which they will buy. These, on being deposited with the Treasury, will authorize a circulation equal in amount, and the banks will have made an investment to draw interest at both ends of the line—on the bonds from the Government and on the money from the people, the one in fact representing the other.

That any such result is now contemplated or intended I do not charge, but that it will be the inevitable effect of the legislation if enacted I confidently believe.

Mr. Speaker, it is with a deep sense of responsibility to those whom I represent that I withhold my support from a measure which it is understood is approved, nay, recommended, by the President, but in the exercise of a solemn public duty I can not yield my convictions for any consideration whatever.

This unfortunate division in the party is in my judgment wholly unnecessary. A coinage act which would provide for an increase of circulation to the point considered necessary is all that we ask.

We are ready to safeguard it with any legislation necessary which will recognize silver as a money metal, and thereby increase its market value to its coinage value.

We are ready to stand squarely on the platform of our party, and will support no legislation that does not make every dollar bearing the stamp of the Government equal to every other dollar of the same kind. But we are not content to accept the dictum of those gentlemen who say this can not be done, and we shall not try the experiment.

Mr. FELLOWS withholds his remarks for revision. See Appendix.

Mr. FITHIAN. Mr. Speaker, we are asked by gentlemen who advocate the repeal of the purchasing clause of the Sherman act, which, without amendment, means placing this country on a single gold standard, to act the part of patriots and sustain the Administration. Congress is a coördinate branch of the Government. It is the duty of Congress, as the legislative branch of the Government, to make laws, and it is the duty of the Executive to enforce the law.

It is commendable in all gentlemen to act the part of patriots, but if it is necessary in order to be a patriot in the estimation of gentlemen who want to force the country upon a single gold standard to sacrifice principle and vote against what I regard to be the interests of my constituents, I must lay myself open to their criticism of being unpatriotic. The gentleman from New York [Gen. TRACEY] has said this evening:

Any Democratic member of this House who believes that he will curry favor with his constituents by endeavoring to oppose and break down the Administration of this man who was the people's choice will, I have no doubt, find that he has misjudged the temper of his people.

I do not misjudge the temper of my people when I stand here and insist that the Democratic platform shall be fulfilled and not repudiated by the Democratic majority of this Congress, although I may be unpatriotic, from the gold-bug standpoint. I learned my Democracy from the gentleman who now fills the exalted position of Secretary of the Treasury under this Administration, and I read with pleasure what he said in 1878:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject, the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

Mr. COOPER of Indiana. Will the gentleman allow me to ask him a question there?

The SPEAKER *pro tempore*. Does the gentleman from Illinois [Mr. FITHIAN] yield to the gentleman from Indiana [Mr. COOPER]?

Mr. FITHIAN. Yes, sir.

Mr. COOPER of Indiana. I would like to ask the gentleman if he has read the whole text of the speech of Mr. Carlisle that he has quoted?

Mr. FITHIAN. I have not read it to-night, but nothing in the speech could change or modify the meaning of that part which I have just read.

Mr. COOPER of Indiana. I would like to state, Mr. Speaker, if the gentleman will allow me, that that speech has been misquoted.

Mr. FITHIAN. That part which I have read is correctly quoted. I have only twenty minutes. I decline to yield further.

Mr. COOPER of Indiana. I wanted to state to the gentleman that I do not think he desires to misrepresent Mr. Carlisle.

Mr. FITHIAN. I do not misrepresent him. I learned my lesson too well then to unlearn it now in this trying period in our nation's history.

As a Democratic member of this House I am unable to support the Administration in its effort to force the unconditional repeal of the so-called Sherman law. It is my desire to support Mr. Cleveland by my vote upon every question in which I believe he is in accord with the platform of the last national Democratic convention. I do not believe that the message of the President to this Congress is in accord with the Democratic platform. I do not believe that the President's message recognizes the principles of bimetallism, but that, on the contrary, his message ignores bimetallism totally. The platform declares that:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters as well as its author anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

The President in his letter of acceptance said:

The people are entitled to sound and honest money, abundantly sufficient in volume to supply their honest needs. But whatever may be the form of the people's currency, national or State—whether gold, silver or paper—it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized, upon equal terms, in the adjustment of our currency.

Again the President said in response to the committee of notification:

I find much relief in the reflection that I have been selected merely to stand for the principles and purposes to which my party is pledged, and for the enforcement and supremacy of which all who have any right to claim Democratic fellowship must constantly and persistently labor.

In this speech the President placed himself upon the platform of the party by saying that he "had been selected merely to stand for the principles and purposes to which his party was pledged."

What were the principles to which the Democratic party was pledged? I turn again to the platform for the answer:

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage.

And for the enforcement and supremacy of which—

Said Mr. Cleveland—

all who have any right to claim Democratic fellowship must constantly and persistently labor.

Again I quote from the President in response to the committee of notification:

True to its history and its creed, our party will respond to the wants of the people within safe lines, and guided by enlightened statesmanship. To the troubled and impatient within our membership we commend continued, unswerving allegiance to the party whose principles in all times past have been found sufficient for them, and whose aggregate wisdom and patriotism, their experience teaches, can always be trusted.

The President commended "the troubled and impatient within our membership" to "unswerving allegiance to the party."

Now, Mr. Speaker, what has produced the "troubled and impatient" within the membership of the Democratic party? The silver question. That there were troubled and impatient within our party every Democratic member of this House who represents an agricultural district knows, and it was only by the assurance of Democratic leaders that the party would be faithful to its pledges that the "troubled and impatient" of our party were quieted and again brought back to "unswerving allegiance to the party."

By the last national platform the party is pledged to the coinage both of gold and silver into money. This platform was the last declaration of the party in national convention upon this great, important question. He who is a good Democrat must honestly and faithfully keep the pledge. He is not a good Democrat who repudiates it. Bimetallism is therein so explicitly and plainly declared for that no tortured construction can cloud its meaning. This is the platform upon which the Democracy won before the people last November. This is the platform upon which Grover Cleveland accepted the Democratic nomination for President. This is the platform and these are the principles upon which the national Democracy fought the battle.

Did we mean it then? If we did, and we are faithful to our pledges, each and every Democratic member of this House is pledged to the people to keep the faith. If we refuse to do it we will forfeit the confidence of the people who by their votes placed the Democratic party in control of both the executive and legislative branches of the Government. I, for one, meant it. I expect to keep the faith. As a Democrat I will not be blindly led into casting my vote in the direction of placing this country upon a single gold standard. Upon this question I, for myself, must take such independent action as I believe to be in accord with the principles of the party, and in accord with the sentiments of the great masses of the Democratic party.

Bimetallism has been a cardinal principle of Democratic faith from the foundation of the party to the present time. I defy the single gold standard men to point out a single platform to any Democratic national convention, where the party declared upon the subject, where the principle of bimetallism has not been recognized in unmistakable terms. Ninety per cent of the party to-day believes in it, and if I should repudiate it, ignore it, and trample it under foot, I would be false to the teachings of Democracy and a traitor to its principles.

The President said that "True to its history and its creed, our party will respond to the wants of the people."

The great masses of the people of this country, irrespective of party, favor the use of gold and silver as money. The people are unalterably opposed to placing the country on a single gold standard, and a party pledged to a gold standard would meet ignominious defeat at the polls in a national contest. The Demo-

cratic party will never be committed to that policy. In the last Presidential election all parties favored silver. The platform of the last Republican national convention on silver is as follows:

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver, as standard money, with restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper shall be at all times equal. The interests of the producers of the country, its farmers, and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

How many Republican members of this House will vote to continue "the use of both gold and silver as standard money," and how many will vote to wipe from the statute books all legislation for further coinage of silver? The record vote will tell. It seems to me that there is a combined effort on the part of Republicans and some Democrats to repudiate both platforms of the Republican and Democratic parties on this question.

The present financial disturbance is more artificial than real. The present condition of affairs has been precipitated upon the country by the money-lenders and stock-jobbing, bondholding Shylocks of Wall street to force an issue of Government bonds. A scarcity of money makes dear money. The money-loaning and bondholding class seek to exclude silver from use as money in order to make money dear and make correspondingly cheap the product of every farm in the land.

Much talk is indulged in by the single gold standard advocates about the 60-cent dollar, the dishonest dollar, and putting a dollar's worth of silver in a dollar. Silver has been depreciated by unfriendly legislation, and gold has been appreciated by favorable legislation. It is the money use that gives to either metal its chief value.

If silver was scarce and gold plenty, the enemies of silver would soon renounce their faith in gold and become strong advocates of silver. There is not sufficient gold in the world to supply the necessary coin for the world's wants, which are daily increasing with the advance of population and wealth. The supply of gold being limited, the creditor classes seek to make it the sole money metal of the world, that they may thereby add untold millions to their wealth.

Up to the time that silver was demonetized by the act of 1873 anyone had the right to take gold or silver bullion to the mints of the United States and have it coined into standard money of full legal-tender quality. No public demand was made for the demonetization act of 1873. There was no honest reason for it. It was done by stealth, and the motives behind it were little less creditable to those concerned in it than highway robbery. It was a fraud upon the people. It changed every contract involving the payment of a dollar. It increased the public debt, and by making money scarcer added increased burdens to every obligation that every debtor had to discharge by the payment of money. It was in the interest of the creditor and bondholding classes, and enabled these Shylocks to extort from their unfortunate victims more than their pound of flesh.

We are reminded that "the very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil." This sounds well. All classes of people want a sound currency, and silver would be a sound currency had it not been debased by mischievous legislation. Who are the people that demand unconditional repeal and the placing of this country on a single gold standard? Not the farmer, not the mechanic, not the laborer, nor none of the men who earn their "daily bread by their daily toil." The bank presidents and stock-gambling influences of Wall street are the "sons of toil" who demand unconditional repeal.

This is what the New York Evening Post of the 15th instant has to say:

It is most fortunate for the metropolis that the bankers of New York have so excellent a Representative in the House as Congressman HENDRIX, whose maiden speech on the silver question last Saturday was such a clear and forcible presentation of the sound-money side. There is no surer way of overcoming the unreasonable prejudice of so many Southern and Western men against the "gold bug" than to have a man appear on the floor who fairly represents the banking interests of New York.

The Post is a gold paper. It demands the unconditional repeal of the purchasing clause of the Sherman law. It wants the country placed on a single gold standard. The speech of the gentleman from New York [Mr. HENDRIX] is highly commended by this paper because he "fairly represents the banking interests of New York." Why do these New York bankers need a special champion here on the floor of this House? Are they not yet satisfied? For the last thirty years they have been fed upon the fat of the land, while the masses of the people had to be contented with the crumbs that fell from their tables. How long is this to continue? These bankers of New York, whose interests no doubt will be "fairly represented" on the floor of this House, not alone by the gentleman from New York [Mr. HENDRIX], have not been known to suffer for want of legislation in their interests.

When gold was at an enormous premium during the war they bought the bonds of the United States, redeemable in the money of the country, for an average of about 50 cents on the dollar, and then by being "fairly represented" in Congress had the contract changed, making these bonds payable in gold. I should be sorry, indeed, if these much-abused, unfortunate, and friendless bankers of New York should wake up some morning and find themselves without representation in Congress.

I am compelled to take the course I do because nowhere in the message of the President to this Congress can I see the least ray of hope for the continuance of bimetallism. On the contrary, I see in the message a fixed and unalterable determination to place this country on a single gold standard alone, which, in my judgment, means ruin and destruction to the agricultural interests of the people that I represent. I am strengthened in the position that I take in regard to the meaning of the President's message by the declaration of the gentleman from New York, Mr. COCKRAN, who is leading the forces for unconditional repeal, in an article in the North American Review, in which he said:

The recent utterances of the President * * * however, appear to settle the question that the present Administration is determined to use all the means at its command to maintain a gold standard. The question of free coinage of silver by the United States may be excluded from consideration, as nobody deems the passage of such a law within the limits of possibility during the present Administration.

If that be the meaning of the recent utterances of the President, the advocates of silver can have no hope of future legislation in behalf of silver if the Sherman law is unconditionally repealed. It is so plain to my mind that "he who runs may read," and the member of this Congress who votes for the unconditional repeal of the Sherman law deliberately does so with the full knowledge that when he so casts his vote he is casting it in favor of placing this country upon a single gold standard. Let the members who desire to do so take the responsibility of such a course.

This is not the first time that the principles of Democracy have been assailed by its foes within its councils. The time was when the same struggle that is now going on was made by the true friends of Democracy to relegate to the rear the so-called Democrats who wanted to commit the party to the theories of protection. The men who then stood out boldly for tariff reform, and who fought the battles of the party in Congress upon this great question upon which the party is now practically a unit, were defeated by coalition with Republicans; they saw tariff reform smothered in the House of Representatives, but to their satisfaction to-day the phrase "unnecessary taxation is unjust taxation" has become a Democratic watchword.

The Democratic party is great enough to purify and purge itself of its enemies and foes who now forget its promises and repudiate its national platform, and it will do so in the settlement of this great financial question as it did in settling the principles of the Democratic party on the tariff issue.

Under the Democratic platform we should so adjust the ratio between the two metals as to maintain a parity, and coin both freely "without discriminating against either metal or charge for mintage." When the pledge is fulfilled no free-coinage Democrat will refuse to vote for the repeal of the Sherman law. I shall vote for each and every amendment fixing a ratio between the two metals, beginning with 16 to 1 and ending with 20 to 1. If all shall be defeated I shall vote to restore the Bland act, and if that should be voted down I will feel it my duty to cast my vote against the unconditional repeal of the purchasing clause of the Sherman law. The platform of the Democratic party must be fulfilled in whole and not in part. [Loud applause.]

Mr. HUDSON. Mr. Speaker, this Congress will go down to history as the money-changers' Congress.

No man voting for the unconditional repeal of the Sherman act will ever be President of the United States, because he has failed to yield to the demands of the American people or to comprehend their wishes and growth.

At their last national convention the Democratic party indicted the Republican party for the passage of the Sherman act. That act was passed by Republican votes exclusively in both the Senate and House. And the Republicans in this House and by their votes next Monday will confess that indictment and enter a plea of guilty.

The Democratic party promised both gold and silver as the currency of this country in its last national platform, and the first step it takes after coming into power is to repudiate that promise.

Men stand on this floor and say that they are for bimetallism; that they want free silver; and yet they propose to vote away the

last vestige of silver coinage existing on our statute books, without condition. They ask us to surrender the last redoubt at a time which they well know we can not have any silver legislation during the Presidency of Mr. Cleveland, and for at least one year thereafter.

They say surrender the fort, and we will help you take it again, when they know that it can not be retaken.

The gentlemen from Maine [Mr. REED] and New York [Mr. COCKRAN] both express great love for the laborers of this country; they give us many fine words, words, only words; and standing behind them in the interest of the workingmen, I presume, are two hundred or more of bankers and brokers and financial agents of money-lenders from various Eastern cities, now haunting every crypt and corner of the Capitol.

Not a laboring man is found here; no one here to hold up the hands of the representatives of the producers.

Oh, sir, this love of the money-lenders for the producers and laborers is touching in the extreme; it is wonderful to behold! We are told, sir, that all these men are here for the express purpose of preventing Congress from taking $50,000,000 of the people's money and giving it to the lenders. Christ once said, "Oh, ye Pharisees, hypocrites!" Gentlemen, my time is up, but I want to admonish you that if you force that gold standard on the American people the place that knows you now will know you on more forever. [Great applause.]

We have listened to many splendid periods denouncing silver and predicting dire calamity if we obeyed the people and gave them free coinage.

Some of the ablest men in this nation have denounced free coinage. Eloquence, oratory, invective, prophecy, all have been invoked, and yet not one logical reason, not one historic fact, not one moral suggestion has been given for this bitter opposition to silver.

Forty centuries has silver stood as the money of all intelligent people everywhere, and all the learning of the opposition has been exhausted without giving an instance where any people, state, or nation, in any age, suffered from silver, or was lost, decayed, dishonored, or died from silver. Sir, it has ever been the money of the common people; gold never has been and never can be. [Applause.]

My people, in common with the great mass of Americans, want free silver; nay, more—they demand it. And come what may, I propose to stand by their wishes, not only because it is their wish, but because their wishes are just, honest, and patriotic. [Loud applause.]

Mr. CAPEHART. Mr. Speaker, I believe that the people of my State are opposed to the demonetization of silver. I know of no one in West Virginia who is willing to say that we can dispense with silver as legal-tender money.

I know that our people are not demanding the unconditional repeal of the Sherman law, but there is a general feeling that its repeal should be coupled with a measure that will mean something more than a mere declaration in favor of bimetallism.

I am here as a member of this House under instructions to vote for the free coinage of silver. The convention which nominated me less than a year ago declared almost unanimously for silver, I would be recreant to my trust and fall short of my duty if I did not carry out the wishes of those who sent me here.

We should not allow ourselves nor the country to be deceived as to the real issue which, as I see it, is nothing more or less than an effort of the money-lending world, and those having fixed incomes—in short, those who live upon the savings of others, to increase the value of debts already in existence, and incomes of all sorts, by making them payable in a money that is made dearer and harder to procure than the money in existence at the time of their creation.

It seems to me that this is the true situation, and I can but believe that such a policy will bring ultimate disaster to the whole country. I believe that we who are counted as friends of silver are in the minority here, and I also believe that the unconditional repeal will prevail; not because the people desire it, but because the whole money power of the world demands it; because the President demands it, and because power, honors, and rewards are on that side.

It is proposed now to unconditionally repeal the Sherman law, and this means the demonetization of silver and the abandonment of our country to the tender mercies of the owners of gold; all that we are to have is a promise of something in the future—a promise that will not bind anyone, a promise that is the kiss of Judas. Power that can make, and is making, the fortunes of men is more potent than the distant voice of the people. I favor the repeal of the Sherman law; it is universally and justly condemned, but can it be that any of the friends of silver are so confiding or so credulous as to believe that after Congress has demonetized silver we can then enact some legislation that may restore silver to its true place as legal-tender money? It is a vain hope. The power that is now working a change of heart in this Congress will be irresistible when it has wrested from our hands our only means of defense.

The friends of silver, the people of the whole country, have been deceived, have been betrayed into the support of men who pretended to stand on the Democratic platform of bimetallism and who now forsake this trust shamelessly, at the command of the Administration and of the gold owners of the financial world.

Had the question of the demonetization of silver been made an issue in the campaign of 1892, how many of those Representatives west of the Alleghanies who are now falling over each other in their eagerness to destroy silver, that they may be in line with the Administration—I say how many of these men would now be here? No speaker in either House has had the hardihood to declare that the people of this country are ready for the demonetization of silver.

All know that the people do not desire it. From the great cities with their rich bankers, boards of trade, and chambers of commerce, Congress has been deluged with arrogant demands for the destruction of one-half of our metallic money, but who has heard from the farmer, already impoverished by unjust legislation and now again to be made the victim of that greed for gold which knows no mercy, which seems destined to grind him into the earth through the action of laws made by the men he trusted to protect him? In the apparent triumph of tariff reform last fall, he thought that he saw the dawn of a better day, but not only is that prospect now obscured, but another and a darker cloud covers the horizon of his hopes and he sees reaching out from the great money centers of the Old as well as the New World that same hand, which through all the ages has maintained the right of the privileged few to live upon the labor and earnings of others; he sees that power, which is the power of gold, closing its grasp upon his own Government and in the future he can discern nothing but the eking out of a bare existence upon the pittance which may be allowed him by the tax gatherer. The head of the greatest labor organization in the world has declared for free coinage; the farmers' organizations everywhere demand it, but their voices are scarcely heard in the nation's Capitol where none can have the ear of power but those who come with the glitter of gold upon them.

Mr. COOPER of Indiana. Mr. Speaker, a few moments ago I endeavored to obtain from my friend from Illinois [Mr. FITHIAN], who then had the floor, an opportunity to set him right upon a quotation which he had made from a speech made by Hon. John G. Carlisle, now Secretary of the Treasury, but then a member of the House. I had heard that quotation made so frequently upon the floor during the course of this discussion that I took occasion to look up the speech and read it through. I do not think the gentleman intended to misquote the distinguished gentleman from Kentucky, the present Secretary of the Treasury.

Mr. FITHIAN. Was my quotation incorrect?

Mr. COOPER of Indiana. The quotation was correct in language, but, being only a small part of the speech, which was of some length, it does not convey the full meaning of the speaker. The speech was made in 1878, at the time of the consideration of what is now known as the Bland-Allison law. That law first passed this House as a free-coinage measure. It was passed under a suspension of the rules, when no opportunity was given for discussion. It received the vote of Mr. Carlisle. It went to the Senate and was amended by that body.

It was afterwards passed with a limitation put upon coinage, which we all know gave the distinctive feature to the Bland-Allison law; and after it returned to the House Mr. Carlisle then took the floor, and in an elaborate speech, the very meat of which has been used in many of the speeches upon this floor in this discussion gave a full expression of his views upon the whole subject. Speaking of the amendment which limited the coinage he said this, which I will read:

> This is the amendment which fills the minds of some of our friends with such gloomy forebodings and excites such a fierce and determined spirit of opposition that there is a disposition among some of them to defeat the whole measure rather than accept this as a part of it. Now, sir, while this amendment is objectionable to me in some respects, I am constrained to say that it is not so on account of its repudiation of the free-coinage provision of the original bill; and I will state as briefly as possible the reasons which compel me to take this view of the subject.

The distinguished Democrat, now Secretary of the Treasury, expressly stated in the language which I have read that he did not object to the limitation put upon coinage, but that he favored it. He said in the course of that speech, further, that he was opposed to the free coinage of both gold and silver, and said that he was in favor of a charge for the expense of minting of a sufficient sum to defray the expense and to cover the difference, whatever it might be, between the bullion value of the metal

and the coinage value when it was coined, and I read that for the edification of gentlemen and to correct them before the country:

> The overloaded taxpayers of this country, already staggering and sinking under the burdens imposed upon them by unwise legislation, would have been subjected by that provision to a new exaction of several millions of dollars annually to pay for coining the bullion of capitalists at home and abroad. I can not become the advocate of such a system, either as to gold or silver, and, although my vote was given for the bill as it passed the House under a suspension of the rules, with this feature in it I did not approve of it, and then hoped that it would be amended in the Senate.
>
> The mints of the United States are operated at the expense of the whole people, and therefore they should be operated for the benefit of the whole people. If on account of a difference between the market value of the bullion and the legal value of the coin, there is a seigniorage or gain in the process of coining, the Government should have the benefit of it; and if, as in the case of gold at the present time, there is no such difference, the holder of the bullion who wants it converted into coin should be required to pay at least enough to defray the expenses of the operation. The great mass of the people neither own bullion nor metal requiring recoinage, so that the provision of the House bill was not a provision for their benefit, but for the exclusive benefit of a few bullion dealers and mining companies.

I commend that language to the gentlemen who have, with so much unction, quoted extracts from this speech. He expressly states that if there is any profit in the transaction growing out of the difference between the value of the bullion and the value of the coin, it should go to the Government.

Mr. BRYAN. Is it not true that the gentleman from Kentucky [Mr. Carlisle] said in the course of that speech that he was in favor of unlimited coinage of both metals, but not free coinage.

Mr. COOPER of Indiana. Yes, sir; in such connection as to show that he favored that coinage only under such conditions as would secure the currency against depreciation. I believe he expressed the opinion here, and that opinion seemed to prevail then, that under the operation of that law the commercial ratio of silver would become equivalent to its legal ratio.

He in no way expressed an opinion or views to the contrary; and what he said also with reference to striking down one-half of the metal money of the world, which I believe the gentleman from Nebraska [Mr. BRYAN] quoted in his speech, referred to the act of 1873, which struck down the legal tender quality of the silver dollar; and it was because the legal tender quality of the silver dollar was stricken down that one-half the money was stricken down. That speech was made upon a different set of facts from those presented here. It was made fifteen years ago upon another question and under far different conditions.

No proposition to strike down one-half of the metal money of the country to-day is pending in this Congress or before the country; no proposition to destroy the silver money; but only a proposition to limit the coinage in order that the money now in circulation may be maintained at par. The Wilson bill expressly maintains the legal-tender quality of the silver dollar, and guarantees its perfect equality with every other dollar issued by the Government. What he then said was in the interest of the Government and the people and against the owners of silver bullion and those who speculate upon the people's money.

Mr. BRYAN. May I ask the gentleman another question?

Mr. COOPER of Indiana. Certainly.

Mr. BRYAN. The gentleman has said that Mr. Carlisle's denunciation was aimed at the act of 1873, which took away the legal-tender quality of silver. Does not the gentleman remember that the legal-tender quality of silver was not taken away until 1874?

Mr. COOPER of Indiana. No, sir; my recollection is that the act of 1873 dropped the silver dollar from the coinage, and that that act in naming the coins which should be legal tender also omitted the silver dollar. I think the act of 1874 restored some legal-tender quality to the silver dollar in small payments, perhaps in sums of five dollars or less. But whether the legal-tender quality of silver was taken away by the act of 1873 or by the the act of 1874, Mr. Carlisle's denunciation was directed against the act which took it away, and not against any limitation upon coinage for the good of the coinage.

Mr. BRYAN. The gentleman, I think, will find that, while the law of 1873 dropped out of the coinage the standard silver dollars, the standard silver dollars in circulation remained a legal tender until the act of 1874, which limited their legal tender quality.

Mr. COOPER of Indiana. Very good. If the gentleman is right as to that point, then Mr. Carlisle's denunciation applies to the act of 1874, but I think the gentleman is in error.

Mr. WILLIAMS of Mississippi. Mr. Speaker, I wish to ask the gentleman from Indiana a question, if he will permit me.

Mr. COOPER of Indiana. With pleasure.

Mr. WILLIAMS of Mississippi. Is it not a fact that, in the sense in which you are speaking, there never was free coinage of either gold or silver in the United States; that always there has been a certain amount taken out of the pure gold or the pure silver and converted to the uses of the Government, that amount being replaced by the alloy in the metal? Then in that connection let me ask another question so that the gentleman may answer both together. Is not that entire speech of Mr. Carlisle's in favor of the coinage of both gold and silver, without discrimination against either metal?

Mr. COOPER of Indiana. Gold coinage was made free by the act of 1875, commonly known as the resumption law. There may be some expense for the assay of bullion, or for converting it into bars, but there is now no charge for the coinage of gold. I have already answered the other question.

And Mr. Carlisle went further—and I commend that speech as a whole to the Democrats in this House—Mr. Carlisle in that speech goes further and shows a disposition to meet the other nations of the world in conference, and enter into an agreement with them to maintain the parity of both metals. He was then, as he is to-day, in favor of a sound and stable currency composed of both gold and silver in sufficient volume to transact the business of the country; and in my humble judgment there is nothing in that speech, when taken as a whole and interpreted in the light of all the facts, which in any way indicates any change of views, except to meet the changed conditions which confront us.

Mr. KIEFER. Mr. Speaker, as we are nearing the day when a vote is to be taken upon a question in which the people of our country is more deeply interested than in any other public question since the war, congratulations may, perhaps, not be out of order at this time.

An anxious, eager, and I have no doubt a very tired, populace in the grandest country and the best government on earth have been watching and waiting upon our action here with more faith than fortitude, more courage than cash.

Let us congratulate our distressed business men, our unemployed mechanics and factory workers, and our hungry laborers that the hour is near when this body of Representatives, called here in extra session nearly four weeks ago, is about to take some action in this pressing emergency.

Sir, I believe that a decided majority of the members of this House, regardless of party ties, past, present, or future, will, on Monday next, vote for the repeal of an act whereby this Government contracts to purchase a given amount of a certain commodity, which it obligates itself to pay for in gold. The President convoked this extra session in the midsummer season because there was a general demand for such action. He could not resist the appeals of the people who, by petitions and otherwise, came surging down upon the Executive Mansion during last June like a cyclone.

Nor has the cry abated since we have been here; and it has been a surprise to me why nearly a month should have been taken up in discussion upon a question that is so well and clearly understood by every member upon this floor.

But I can not refrain from adding, in as few words as possible, my attitude concerning the repeal of the purchase clause in the act of 1890, and the substitute proposed by the gentleman of Missouri.

While we have listened to much eloquence, philosophy, and sound logic from our colleagues, who have grown gray in official life, in my judgment had the five-minute rule been adopted at the start, and the time of debate limited to three days, that part of the bill which will be repealed on Monday next, so far as this body can repeal it, would have been repealed two weeks ago. The people expected early action of us. They had a right to expect it.

In the district which I have the honor to represent at least four-fifths of the people demand the repeal of the Sherman purchasing law. That district, Mr. Speaker, in point of commercial and industrial development, is second to none in the country. The queen city of the Northwest, at the head of the Father of Waters, has been known for half a century as a financial Gibraltar. It has withstood every financial flurry, every depression, every panic, during that period, and its commercial status has been as firmly established as that of any city of the Union; but for weeks business men of St. Paul, jobbers, wholesale manufacturers, and bankers have been fighting valiantly against this financial blight, which threatens to leave a path of ruin in a land overflowing with plenty. The Northwest, Mr. Speaker, has an abundant crop, and right on the eve of what should be a most successful season's business the business organizations are endeavoring to evolve some plan whereby they may move the product of our fertile fields to the seaboard.

The farmer, the laborer, the railroads, and the banker are all deeply concerned in this important question.

I shall not inquire into the cause of the present depression.

It is enough for me to know that it exists. The great business interests of this country hold the silver-purchase act responsible. Neither shall I inquire what next.

I know that the continued purchase of fluctuating and depre-

ciating commodity with the gold reserve in the United States Treasury will eventually result in gold going to premium.

I regret that the majority of this House saw fit to adopt a rule whereby no amendments could be offered to either of the pending bills.

For I believe that an honest silver dollar can be coined by this country, and that, too, without international agreement. But the character of the dollar and the ratios proposed by the substitute offered by the gentleman from Missouri does not, in my judgment, meet the existing necessity for an increased circulation of our currency.

It is, I believe, our solemn duty to act quick, wisely, and well.

Mr. Speaker, our fair land to-day under existing conditions is perishing in the midst of plenty.

Let us unloosen the strings that hold the hoarded millions withdrawn from banks; let us stop buying depreciated silver; let us repeal the purchase clause by such a majority in this House that will cause a great cyclone of joy and relief to converge at the other end of this building; let us do that first and then spend a week or two in receiving the congratulations from our people.

LEAVE TO PRINT.

Mr. MAGUIRE. Mr. Speaker, I rise simply to ask permission to insert in the RECORD, as a supplement to my argument of Wednesday last, some information recently obtained with reference to certain legislation in the colony of New Zealand.

The SPEAKER *pro tempore* (Mr. BAILEY). The gentleman has the right under the general leave already granted.

Mr. MAGUIRE. I suppose so, Mr. Speaker; but as I desire not to attach this matter to my speech, but to print it as a supplement, I have thought proper to make the request.

There was no objection.

SILVER.

Mr. HENDRIX. Mr. Speaker, In addressing this House early in this debate I sought to give relevancy to some statements by saying that I was a banker—the president of a national bank. But in doing so I did not desire to convey the impression that I represented a district of bankers, or that I was elected by their votes. I am not in any sense their representative, or a bearer of dispatches from them. In urging upon this House their common faith in honest finance and their earnest desire that this great country shall not be forced into calamities like the present one through unwise financial legislation, I am as the Lacedæmonian ambassador, who, when he knocked at the gates of Athens and was asked in whose name he had come, replied: "In the name of the state if I succeed; in my own name if I fail."

The debate in this House turns upon monometallism, and the only question is whether it shall be of gold or silver. Bimetallism has been abandoned, except as a very thin mask, and it is clear that those who propose the amendments to the bill repealing the purchasing clause of the Sherman act are intent upon shunting this Republic upon a silver basis. Those who favor the stoppage of silver purchases do not ask for any further change in our currency laws now. They leave them as they are. They leave all of the silver in use just as it is. They do not alter the legal-tender quality of a single dollar. They do not contract the currency by a single cent. They do not demonetize silver. They do not change the standard of value. They do not alter the relation of debtor to creditor. They do not violate existing contracts.

Every silver dollar issued is to be kept alive and active in the channels of circulation. Not one is lost or destroyed. We simply propose to stop purchasing with gold money silver bullion, which we do not need, and storing it in Treasury vaults, an unavailable asset. We thereby give notice to all the world that every dollar we have issued is as good as a gold dollar, and that the national honor and credit are pledged to keep it so. We thus restore confidence at home and merit it abroad. As by the sweep of a magic wand we banish from our sky the evil genius now hovering over us and beckon back the better angels that keep watch and ward in days of peace and prosperity. It is true that we will be a gold standard country. We are that now, and have been since 1834. We will simply cease to dig under the foundations of that standard.

The initial point of this panic was the fear of the debasement of our currency. By every dollar of depreciated silver we have put out we have destroyed hundreds of dollars in that exchange of credit which is so important in modern business. Give to the people of this country and of the world confidence in our currency, and commerce will cure where legislation can not reach. It is certain, Mr. Speaker, that we can not be prosperous if there is abroad a spirit of repudiation which hits upon the device of fiat money upon a metallic basis as a new way to pay old debts, and tries to get it into our statutes.

The stubborn truth, which will not be evaded and always lifts itself in our path to convict our conscience and to convince our judgment, is that we must maintain good faith. Honesty presses upon us as a policy because it is economy and means prosperity. Law and environment both command us to be honest. Logic forces us to keep to our honored course as a nation. We can not hide behind the "dollar of the daddies" and keep the respect of the world any more than we can revert to the spinning wheel, the flintlock, the tinder box, and the mail coach.

Fiat metallic money is even worse than fiat paper money, for the former, when once issued from the mints, becomes the money of ultimate redemption, while the latter is but a promise to pay an honest dollar. The debasement of metallic money is the oldest, most insidious, and most corrupting form of national theft, and its use increases the evils it is designed to cure. This obstinate delirium, so deaf to every sense of justice, right, and common safety, has had its course before. It has run amuck only to perish by its own madness, and it injures most those who expect most from it.

Mr. Speaker, so long as we have gold-standard neighbors they will get the benefits of our attempt at bimetallism, if we seek to make it alone, and we will get the disadvantages of it. Gold and silver will not remain and perform the functions of a stable currency in any single country trading with monometallic nations. No bimetallist outside of this country has ever been so confident as to assert the contrary. The bimetallism of France served as England's clearing house with India for a long period, and England obtained untold benefit from it. It acted as a safeguard against the depreciation of currency in India.

This debate has proved a vent for many financial notions, which have been threshed out, I think, to general satisfaction; but one of the persistent hallucinations that attend the closing words of the speakers for free silver is the capacity of the American banker to cause a panic like this and to take infinite delight in locking up money. For a half century of legislation the American banker has been pilloried in Congressional debates. Every time foolish laws come home, like chickens to roost, the statesman goes for the banker. It seems, however, that in this panic he is the only man in sight to get the blame, and he has got it all.

But, Mr. Speaker, the pages of the RECORD would be less of a transcript of the time if it did not appear here that the American banker has played a role in these exciting times which has won for him distinction in the thought of his reasoning fellow citizens. This panic has affected more people, greater wealth, more diverse industries, has extended over a greater area, has run a longer course in distance and in time than any we have experienced before; but despite the heavy loss of deposits, the widespread hoarding of money, and the senseless fear of the multitude, the banking system of our Republic comes out of it with its machinery unbroken, and it will not stop one moment for repairs.

The men who have so bravely encountered disaster to conquer it and have faced panic to shame it down will not be forgotten by the business men they have befriended and the depositors they have protected. It is true some timid bankers have closed the doors when their banks were solvent, but they are opening them again. Other banks have been frank enough to say that as they were drained of their cash, they must ask for indulgence, and their customers met them as frankly and said, "We will stand by you."

There were weak banks that failed, and some vicious banking has come to grief, but the general deportment of bankers throughout the land, in holding things together, keeping business men on their feet, helping out honest enterprises at great sacrifice, and in endeavoring to allay this panic, which, by their very survival, they prove to be due to causes independent of their business, has commanded the highest respect from the American public.

To stop panics men have stood in the highway pledging their personal fortunes. To stop runs, rich directors have gone along the excited line of men and women and offered to guarantee deposits. To keep money active men who did not need to borrow have pledged their property to bring out from its hiding place hoarded money to redeposit it in banks for the use of their neighbors. To supply common business needs investors have left their money on deposit when they might be doubling their fortunes in the security market.

Banks combined their assets and pledged to each other all their resources in cities to give extensions of credits to country banks. The choicest property has been sent to the auction block to get cash to replace in common channels that which had been withdrawn through fright. Sleepless nights, anxious days, little acts of kindness like those from generous American hearts in times of pestilence, self-sacrifice as heroic as ever gave a soldier fame on a battlefield—these things show character. I appeal to them against caricature. Business men have cried, "Help me, or I sink," and bank experts and skilled financiers have gone with them over their affairs and helped them to stem the adverse tide.

Banks are not owned by millionaires. They belong to men of smaller fortune, to estates, to widows, to clergymen, to lawyers, doctors, college professors, investors whose money follows lines of faith in men rather than speculation and calculation. Bank shares are more subdivided than any other form of personal security. When a bank goes down the rich suffer less than the poor. The banker stands on neutral ground between the creditor and debtor classes, which have so often been mentioned here, for he is both creditor and debtor. He is a partner with every borrower, and is not only a creditor but is guarantor of the debtor's debt. Whatever may injure the creditor injures the banker and he shares equally the lot of the debtor. He is in no sense a partisan of either class if there is ever a clash of interests between debtors and creditors.

The money he handles chiefly belongs to those of small means. His debts are due chiefly to the middle class and the poor. Rich men know how to do their own banking, and they are rich and remain so because they keep but little money idle. The accumulations of the poor in the savings banks pass through the banks of deposit and discount before investment. The money of a community is mobilized and distributed through the nerves and arteries of business by the banker's skill.

The corn in a railroad crib, the cotton plant growing on the plantation, the waving field of ripening wheat, the stored tobacco, the grazing herd, the sheep on the mountain side, the fattening pigs, the dairy by the spring, the machinery of the farm, the piano in the parlor, the carpet on the floor, the floating logs in the river, the reservoirs of water irrigating a rich soil and making a desert bloom, the rushing locomotive, the grain-laden barge on the lake, the turning mill-wheel—every witness of enterprise, industry, and thrift is related either to the debts which the banker owes or the debts which he has guaranteed. He gives a potency and volume to circulating money that is beyond the force of legislation, and instead of controlling the movements of money and the extension of credits, he is controlled by the conditions about him. When his debtors restrict their credits to him, he is obliged to restrict his credits to others.

It is his first interest, therefore, to maintain such faith in national finance that the humblest may feel secure that their deposits will remain at their full value in money; that general business will not be shocked or disturbed; that the farmer may raise good crops and get good prices, the laborer receive good wages, and the manufacturer prosper. There is no flood that destroys wealth, no pestilence that dulls or checks the producing power of the people, no blight that decimates the flock, no drought that causes the crops to fail, and no calamity or misfortune of any kind or degree that does not register itself through some vital nerve leading from the injured to the banker's box. He prospers with your prosperity; he suffers with your misfortune. He is at the nerve-center of all your enterprises, and he feels the first thrill of a change in your condition.

Is it any wonder then that he is always on the side of good order, peace, upright living, honest dealing, public faith, a sound moral, legal, and social code, and of good financial laws? Is it any wonder that he is against repudiation in any form, against financial experiments condemned by human experience, against coin clipping or debt clipping, against demagogy that stirs the passions, the prejudices, and the malice of the unthinking poor, and against the abuse of legislative power in the selfish interest of any class? He is held fast in his position by high civilization. He disappears when social disorder runs mad.

If I know the American banker, he is modest in his way of life, prudent in his affairs, exemplary in his conduct, faithful in his line of work, friendly in spirit, helpful to the thrifty, and sincerely devoted to the prosperity of the town, village, city, or State, wherever he may be found, and customarily a man of such honor and pride of character that he would "coin his blood into drachmas" rather than disappoint the humblest man who called for the payment of his deposit.

Yet through this debate and in these printed pages the American banker has been hunted with the rifle shots of speech. He is put into this literature like a dragon in a fable, a villain in a play, or a vampire in old wives' gossip. His office is a public offense, his high trust is the enemy of the producer, his caution in dealing with the money of others the avarice of a Shylock, and his determination to keep ready to discharge his own debts the bloodless deed of a miser.

So he is represented here as hoarding money to create a panic, as conspiring to put currency at a premium, as desiring to make money scarce and its volume small. To effect a repeal of the Sherman law he is pictured here as a shark in Wall street; a gold bug east of the Alleghanies; a vulture in Lombard street, and the incarnation of the rest of the odious part of the animal kingdom in the various market places of the world. A banker who locks up money to create a panic does not pay 12 per cent for rediscounts to help the farmer move his crops. A banker who hoards money to repeal a bad law does not pay 6 per cent for clearing-house certificates to help his country correspondent help the farmer. A banker who locks up all of the money of the people does not fall below his reserve and call down Senatorial wrath for being a lawbreaker.

Is it not about time in our civilization for statesmanship to get above the level whereon the American banker is distorted and misrepresented to the view of the unthinking? His brave conduct in the panic of 1893 is proof both of his competency and the soundness of his business, and public esteem will inevitably register its appreciation of his patriotic service in straining every nerve and taxing every resource for the common good.

Do the gentlemen who so vigorously denounced bankers want first to put this country on the level of nations which use only silver for currency and then drop it to the level of countries which use no banks? Deposits are not required by statute, and it is not against the law to refuse to borrow money of banks. In a fortnight the people of this country could abolish banking without the aid of Congress. It is because our people can transact their business better with banks than without them that they use them so freely and stand by them so loyally. The gentlemen who say that the banks have refused to pay out currency are right. Why? They did not have it to pay. What is the reason? They have let it out to do service in moving and paying for the crops, and those who got it hoarded it. The national banks of this country lost $196,578,450 in deposits in the year ending July 12, 1893. This was a loan to them—a loan on demand—and when it was called for it was paid.

In the same time these banks curtailed their loans $107,273,521. Is there not to be found in the difference a tribute to the resource of the American banker in helping his neighbors in a trying time?

Since this panic began the national banks have lost $40,000,000 of gold, $34,500,000 of legal-tenders, and $2,400,000 of silver. In the year ending with the date of the beginning of this extraordinary session of Congress the banks in the city of New York had to pay debts to depositors amounting to $153,000,000. They cut down their loans $80,000,000. They lost over $71,000,000 of cash.

If they were hoarding money why do their sworn statements show such wholesale withdrawals? Does it please the farmer to hear bankers covered with abuse? Does he cease to use them? My friends, the farmer will not do away with railroads, and go to the markets in his wagon over bad roads, because they are abused. He prefers to improve upon the old ways and make more money. It is to his interest to use banks, and his representatives would earn his respect and his warmer support if they would get into closer touch with his everyday common sense.

There are petitions from nearly thirteen thousand bankers in the hands of different members here which register the sentiment against the foolishness of our silver-supporting policy. The wave of popular opinion has reached this House. It betokens a revolution in the American mind. We are not to fool any longer with a depreciated and a rejected money metal, and try to bear alone a burden which civilized nations should share in common. The silver problem will, after our action, remain in the world, and on the world, but not on this country alone. We can take care of the forty cents of credit in our silver dollar. We can keep all of our large stock in free circulation on a parity with gold, and the banks will take care to keep in such position as to meet the demands for foreign exchanges.

The House then, on motion of Mr. FITHIAN (at 11 o'clock and 10 minutes p. m.), adjourned.

SENATE.

MONDAY, *August 28, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

JOHN T. MORGAN, a Senator from the State of Alabama, appeared in his seat to-day.

The Journal of the proceedings of Friday last was read and approved.

COURT OF CLAIMS REPORT.

The VICE-PRESIDENT laid before the Senate a communication from the clerk of the Court of Claims, transmitting the findings of fact by that court in the case of Randolph & Stark *vs.* The United States; which, with the accompanying papers, was referred to the Committee on Claims, and ordered to be printed.

ENROLLED BILL SIGNED.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the Speaker of the House had signed the joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for town-

site entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the "Cherokee Outlet," and to make the provisions of said act applicable to town sites in the "Cherokee Outlet;" and it was thereupon signed by the Vice-President.

PROPOSED FINANCIAL LEGISLATION.

Mr. SHERMAN. I desire to give notice that, if it is the pleasure of the Senate, on Wednesday morning, after the usual routine business, I shall be glad to address the Senate.

Mr. WOLCOTT. I give notice that on Thursday, after the conclusion of the routine business, I shall ask the recognition of the Chair for the purpose of addressing the Senate briefly on Senate bill 570, reported from the Finance Committee.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the Federation of Labor of the District of Columbia, praying for the construction of a new building in the city of Washington for the Government Printing Office; which was referred to the Committee on Printing.

Mr. SHERMAN presented a petition of business men, merchants, and other citizens of Troy, Ohio, praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

He also presented a petition of the Phœnix Assembly, Knights of Labor, of Columbus, Ohio, praying for the use of both gold and silver as money; which was ordered to lie on the table.

Mr. CULLOM. I present the petition of a large number of citizens of Chicago, praying for the repeal of the so-called Sherman act; that no substitute of any kind whatever be enacted at the present session, and that an expert commission be appointed to consider and recommend a scientific plan of currency based on the experience of other countries and adequate to the requirements of a great commercial nation. I move that the petition lie on the table.

The motion was agreed to.

Mr. CULLOM presented two petitions of sundry bankers and business men of Chicago, Ill., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. HUNTON presented a petition of citizens of Roanoke, Va., praying for the passage of legislation providing for the unconditional repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. HARRIS. I present the petition of a large number of citizens of the counties of Dyer, Obion, and Lake, in the State of Tennessee, and of the county of Fulton, in the State of Kentucky, praying that a levee be constructed on the east bank of the Mississippi River, from Hickman, Ky., down to or near Island No. 10, in Tennessee, and assigning reasons therefore. I move that the petition be referred to the Committee on Commerce.

The motion was agreed to.

Mr. VANCE presented memorials of the Farmers' Alliances of Dallas and Goldsboro, in the State of North Carolina, remonstrating against the repeal of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. McPHERSON presented petitions of the Woodstock Company of Jersey City, N. J., of George La Monte and 32 other citizens of Bound Brook, N. J., and of R. F. Rabe and other citizens of Hoboken and Jersey City, N. J., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

Mr. WALTHALL. I present a petition signed by a large number of bankers, merchants, and other business men of Meridian, Miss., praying for the unconditional repeal of the purchasing clause of the so called Sherman silver act. The petition has a printed memorandum of instructions at the head of it, in these words:

Get signed and send to your Senator or Representative without delay.

I move that the petition lie on the table.

The motion was agreed to.

Mr. WALTHALL presented a petition of the Board of Trade of Meridian, Miss., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. MANDERSON presented a petition of District Assembly Knights of Labor, No. 126, of Omaha and South Omaha, in the State of Nebraska, praying for the free coinage of silver at a ratio of 16 to 1; which was ordered to lie on the table.

Mr. PROCTOR presented seven petitions of sundry citizens of Vermont, praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

Mr. HILL presented a petition of the Local Association of the Advance Labor Club of Brooklyn, N. Y., praying for the suspension of immigration; which was referred to the Committee on Immigration.

He also presented petitions of the Leaf Tobacco Board of Trade, of the Produce Exchange, and of sundry firms, business men, and other citizens of New York City, N. Y., praying for the repeal of the so-called Sherman silver law; which were ordered to lie on the table.

REPORTS OF COMMITTEES.

Mr. PLATT, from the Committee on Patents, to whom was referred the bill (S. 418) referring to the Court of Claims the claim of William E. Woodbridge for compensation for the use by the United States of his invention relating to projectiles, for which letters patent were ordered to issue to him March 25, 1852, reported it without amendment, and submitted a report thereon.

Mr. HARRIS, from the Committee on the District of Columbia, to whom the subject was referred, submitted a report thereon, accompanied by a bill (S. 721) to authorize the Commissioners of the District of Columbia to appoint two additional clerks; which was read twice by its title.

Mr. HILL, from the Committee on the Judiciary, to whom was referred the bill (S. 412) to repeal Title 26 of the Revised Statutes of the United States, known as the Federal election law; reported it without amendment.

ALLOTMENT OF LAND TO CHEROKEES.

Mr. PLATT. I am directed by the Committee on Indian Affairs, to whom was referred the bill (S. 457) authorizing certain Cherokee allottees or claimants to purchase certain tracts held and claimed by them, to report it back favorably, with an amendment; and I am instructed to ask for the present consideration of the bill by the Senate.

The VICE-PRESIDENT. The Senator from Connecticut asks for the present consideration of the bill.

Mr. COCKRELL. We can not consent to its consideration until we hear an explanation of the measure. We will hear the Senator.

Mr. PLATT. I was going to state that I thought if I could have the indulgence of the Senate to make a short explanation the Senate would consider the bill.

In the Cherokee agreement negotiated between the United States and the Cherokees for the cession of the Cherokee Outlet it was agreed that Cherokee Indians, citizens of the nation, who were settled on the Outlet, should to the number of seventy have allotments of land without paying for it. The agreement was ratified and the Outlet is about to be opened. It turns out that a little over two hundred Indians claiming to be residents filed claims for allotments. Of course only seventy could be allowed. The committee which passed on the question has rejected some absolutely in excess of the seventy and has said that the claims of others present equities, but technically they were not within the terms of the agreement or the act which we passed.

This bill provides that if the Secretary of the Interior shall find that there were more than seventy there who made selections and improvements he may allow such as have equities to purchase the land on which they are located, not exceeding 80 acres, paying the same therefor that the white people pay. I think it is right; the committee thinks it is right; and therefore we have reported the bill.

There is a little amendment reported, which makes it clear that none of the Indians except those who have equities shall be admitted, and the matter is left with the Secretary of the Interior.

Mr. COCKRELL. The bill is, I understand, reported favorably from the Committee on Indian Affairs.

Mr. PLATT. It is, and it simply gives the Indians in excess of the seventy the right to take it and pay for it just as the white men are permitted to do. We think that is right.

Mr. JONES of Arkansas. There was appointed, I understand, a committee to decide upon the claims of those who might have a right to this land. That committee, in considering the claims of the different people who presented their cases for consideration, found that sixty came within the letter of the law; that there were not seventy coming within the rule of the law, but that there were a number of others who had equities which would seem to bring them within the spirit but not within the letter of the law.

The intention of the bill is simply to submit to the Secretary of the Interior the right to determine that such of those claimants as presented their claims as he believes come justly and fairly within the meaning of the law, though not within the law, shall be allowed to buy 80 acres of land. It applies only to Cherokee Indians who have made settlements in this Territory and have lived there for some years, and it merely authorizes them to buy land upon the same terms on which the settlers from outside will obtain it. The only advantage the Indians get under the bill is that they would be permitted, if the Secretary thinks they are en-

titled to this consideration, to make their selections before the general rush on the 16th of next month.

Mr. PLATT. And to buy the land on which they are already located, with their improvements.

Mr. JONES of Arkansas. Precisely.

Mr. COCKRELL. I do not understand that the bill gives any of them a right to go and select land on which they have never settled.

Mr. PLATT. Not at all.

Mr. JONES of Arkansas. Not at all. They are to take the land on which they are located, where their improvements are now situated, as I understand the bill.

Mr. PLATT. Yes.

Mr. COCKRELL. Very well.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendment of the Committee on Indian Affairs was, in line 5, before the word "improvements," to strike out the word "had" and insert in lieu thereof:

who prior to the 1st day of November, 1891, had, under circumstances which in the opinion of the Secretary create equities in their favor, made.

So as to make the bill read:

That should the Secretary of the Interior find that there are more than seventy claimants or parties, citizens of the Cherokee Nation, who have made selections and who, prior to the 1st day of November, 1891, had, under circumstances which in the opinion of the Secretary create equities in their favor, made improvements on the land ceded by the Cherokee Nation to the United States, lying west of Arkansas River, conveyed under terms of an act entitled "An act making appropriations for current and contingent expenses and fulfilling treaty stipulations with Indian tribes, for the fiscal year ending June 30, 1894," such claimants or selectors in excess of the seventy provided for in said act may have the privilege of purchasing 80 acres of said land, to include their improvements, provided they have already filed their selections or claims to such tracts, the said claimants paying therefor at the same rate charged white settlers. Any acts or parts of acts in conflict with the foregoing are hereby repealed.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

SENATE FOLDING ROOM.

Mr. WHITE of Louisiana. I am directed by the Committee to Audit and Control the Contingent Expenses of the Senate, to whom was referred the joint resolution (S. R. 17) providing for the erection of a suitable building for the storage of documents for the use of the Senate, to report it favorably without amendment.

Mr. VEST. This joint resolution came from the Committee on Public Buildings and Grounds, and under the rule of the Senate it was referred to the Committee on Contingent Expenses. I stated the other day the absolute and immediate necessity for the passage of this measure. As soon as the joint resolution was brought in the documents stored in the Maltby Building were removed to a warehouse which has been rented by the Sergeant-at-Arms. It was absolutely necessary to do that in order to prevent a permanent injury to the Maltby Building. The joint resolution proposes to appropriate $7,500 out of the contingent fund of the Senate to put up a folding room on the vacant ground next to the Maltby Building, which already belongs to the Government. It is a very small appropriation, and it will do away with the necessity of continuing to rent the building now used as a storeroom. I ask the Senate to now consider the joint resolution.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution. It directs the Sergeant-at-Arms of the Senate of the United States to have erected upon the ground owned by the United States west of the house known as the Maltby House, situated on the southwest corner of New Jersey avenue and B street northwest, a suitable building for the folding and storage of documents for the use of the Senate, on plans and specifications approved by the Committee on Public Buildings and Grounds. But the expense of erecting the building shall not exceed $7,500, which shall be paid from the miscellaneous items of the contingent fund of the Senate upon vouchers to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. HARRIS. I ask the Senator from Missouri if the duty of having the building constructed had not better be imposed on the Architect of the Capitol. It seems to me he would be the proper officer.

Mr. VEST. Plans and specifications for the building have been prepared by the Supervising Architect of the Capitol and approved by Col. Green, who is in charge of the Library Building.

Mr. HARRIS. I shall not object to the joint resolution in its present form, but it seemed to me the other was the proper designation.

Mr. VEST. We thought as our Sergeant-at-Arms is a younger and more active man he could give more attention to it.

Mr. HARRIS. Very well; let it go as it is.

Mr. MCPHERSON. Can the committee inform me whether the erection of a building as proposed by the side of the Maltby Building, facing as it now does, would not shut off the sunlight, the air, and everything from that part of the Maltby Building? In other words, would it not be absolutely destructive of the Maltby Building itself?

Mr. VEST. All that has been considered. There is an alley of 10 feet between the Maltby Building and this proposed structure, which gives plenty of ventilation and light. There is only one aperture of any importance on that side of the Maltby Building.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED.

Mr. MCPHERSON introduced a bill (S. 722) for the relief of George M. Clapp; which was read twice by its title, and referred to the Committee on Claims.

Mr. FAULKNER introduced a bill (S. 723) granting a pension to Daniel Kendall; which was read twice by its title, and referred to the Committee on Pensions.

Mr. HUNTON introduced a bill (S. 724) for the relief of the owners of the Schillinger patents; which was read twice by its title, and referred to the Committee on Patents.

He also introduced a bill (S. 725) for the relief of loyal citizens therein named, of Loudoun County, Va.; which was read twice by its title, and referred to the Committee on Claims.

Mr. GEORGE introduced a bill (S. 726) for the relief of the administrator of the estate of William J. Poitevent, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 727) for the relief of the Protestant Orphan Asylum of Natchez, in the State of Mississippi; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 728) for the relief of John and Sarah Griffin; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. GALLINGER introduced a bill (S. 729) for the better protection of the public service; which was read twice by its title, and referred to the Committee on Civil Service and Retrenchment.

Mr. KYLE introduced a bill (S. 730) making Labor Day a legal holiday; which was read twice by its title, and referred to the Committee on Education and Labor.

Mr. HILL introduced a bill (S. 731) for the relief of Maj. Gen. John C. Robinson, United States Army, retired, and to allow him the full pay of his rank; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 732) for the relief of Charles A. Danolds; which was read twice by its title, and referred to the Committee on Claims.

Mr. MANDERSON introduced the following bills, which were severally read twice by their titles, and referred to the Committee on Public Buildings and Grounds:

A bill (S. 733) providing for the erection of a public building at the city of Norfolk, Nebr.;

A bill (S. 734) to provide for the construction of a public building at Hastings, Nebr.;

A bill (S. 735) to privide for the purchase of a site, and the erection of a public building thereon, at Grand Island, in the State of Nebraska;

A bill (S. 736) to provide for the purchase of a site, and the erection of a public building thereon, at South Omaha, in the State of Nebraska; and,

A bill (S. 737) providing for the erection of a public building at the city of Plattsmouth, Nebr., and for other purposes.

WITHDRAWAL OF PAPERS.

On motion of Mr. GALLINGER it was

Ordered, That Sarah J. Warren have leave to withdraw her petition and papers in pension case from the files of the Senate, subject to the rules.

UNPAID JUDGMENTS.

Mr. STEWART. I submit the following resolution and ask for its present consideration:

Resolved, That the Attorney-General is hereby directed to inform the Senate what is the aggregate amount of judgments against the United States for the payment of which no appropriations have been made by Congress.

Mr. FAULKNER. I suggest to the Senator from Nevada that he also ask that the claims be classified. There are a large number of claims which have not been appropriated for, but which could be very well classified.

Mr. STEWART. I would have no objection to including claims, but it would require more labor. I do not want to put upon the Department any undue amount of labor.

Mr. ALLISON. I do not think it is easy to classify judgments, if they are judgments.

Mr. STEWART. They are judgments; that is all.

Mr. ALLISON. I understand the resolution of the Senator from Nevada to apply to judgments.

Mr. STEWART. All judgments stand on the same level.

Mr. FAULKNER. I did not understand that the resolution referred to judgments, but to claims.

Mr. STEWART. Oh, no.

The VICE-PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. PLATT. How does the Senator from Nevada understand the word "judgments"? Would it include the findings that have been made under the French spoliation claims act?

Mr. STEWART. It would not, but simply judgments for the payment of money straight.

Mr. PLATT. All right.

The resolution was considered by unanimous consent, and agreed to.

APPREHENDED DEFICIENCY OF REVENUES.

Mr. STEWART. I submit the following resolution and ask for its present consideration:

Resolved, That the Secretary of the Treasury is directed to inform the Senate whether there is danger of a deficiency in the revenues of the Government during the current year, and if so, what is the probable amount of such deficiency, and is any legislation necessary to supply such deficiency.

Mr. GORMAN. Let that go over.

Mr. McPHERSON. I should like to ask the Senator from Nevada how it is possible for the Secretary of the Treasury to make such a guess or estimate as his resolution provides for. I understand he asks for information regarding the present year. We are just at the beginning of a new fiscal year. How can the Secretary of the Treasury anticipate what the legislation of Congress may be, what amount of revenue may be received from internal taxes, and how much we are likely to receive from customs? At best, it would be only a guess, and I presume the Senator from Nevada could guess quite as closely as the Secretary of the Treasury. I do not understand how the Secretary of the Treasury could answer such a resolution with any degree of accuracy.

Mr. HARRIS. Did the Chair understand the Senator from Maryland [Mr. GORMAN] as objecting to the resolution?

Mr. McPHERSON. I do not object to it. I simply make an inquiry.

Mr. HARRIS. Being objected to the resolution goes over. It is not subject to debate after it has gone over.

Mr. STEWART. Mr. President——

The VICE-PRESIDENT. The Chair will state to the Senator from Nevada that an objection being interposed, the resolution goes over under the rule, and will be printed.

Mr. McPHERSON. If it is understood that I have offered an objection to the resolution I wish to state that I have not done so.

Mr. HARRIS. The Senator from Maryland [Mr. GORMAN] objected to the consideration of the resolution immediately upon its being read.

The VICE-PRESIDENT. The Chair entertained the objection, but heard the Senator from New Jersey.

Mr. STEWART. I should like to have the indulgence of the Senate to say one word in reply to the Senator from New Jersey.

Mr. McPHERSON. I will state that I was not aware any objection had been made to the resolution, or I should not have proceeded.

Mr. STEWART. We act in these matters of legislation upon the estimates of the Treasury Department. It is rumored that there is likely to be a deficiency.

Mr. HARRIS. Mr. President, I am bound to raise a question of order.

Mr. STEWART. I think we ought to have official information, and that is my reason for offering the resolution.

The VICE-PRESIDENT. The Chair will state that this debate is preceding only by unanimous consent.

Mr. HARRIS. Then I object. Let the matter go over, and it can be debated when it comes up and debate is legitimate.

The VICE-PRESIDENT. The resolution will go over.

REPORT ON HAWKS AND OWLS.

Mr. FAULKNER submitted the following concurrent resolution, which, with the accompanying paper, was referred to the Committee on Printing:

Resolved by the Senate (the House of Representatives concurring), That there be printed 5,000 copies of Bulletin No. 3, of the Department of Agriculture, entitled "The Hawks and Owls of the United States in their Relation to Agriculture"—2,000 copies for the use of members of the Senate, and 3,000 copies for the use of members of the House of Representatives.

SENATOR FROM MONTANA.

The VICE-PRESIDENT. The morning business is closed, and the Calendar is in order.

Mr. PEFFER. The Chair having announced that the Calendar is in order, I desire to ask permission of the Senate to make a very brief statement, personal to myself. It will not occupy more than two minutes and a half or three minutes at most, and is concerning the first order of the business.

The VICE-PRESIDENT. The first bill on the Calendar will be announced.

The SECRETARY. A bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. PEFFER. I was mistaken as to the order. I supposed it was Order of Business No. 1 on the first page of the Calendar.

The VICE-PRESIDENT. The Chair will state that at 2 o'clock the resolution to which the Senator refers will come up as the unfinished business.

Mr. PEFFER. I did not desire to speak to that resolution, but ask unanimous consent that I may be permitted to make a brief personal statement in relation to my connection with the resolution; that is all.

The VICE-PRESIDENT. The Senator from Kansas asks permission to make a personal statement. Is there objection? The Chair hears none, and the Senator from Kansas will proceed.

Mr. PEFFER. Mr. President, in view of the fact that at the last session of the Senate I opposed the admission of Mr. Mantle and the other two gentlemen similarly situated, and in view of the further fact that I expect to vote at this session for their admission, it is due to the Senate and to myself that a brief statement be made showing the reasons which influence my course.

In times of calm when the country is at peace and the people are prospering, all provisions of the Constitution and the laws ought to be strictly construed by officers charged with responsible public duties; but in times of peril, when vital issues are pending and the country is in danger, there is no time to quibble over technicalities.

Everything must be construed in favor of the largest liberty consistent with the safety of the Republic.

When I discussed this subject last spring there was nothing to disturb the quiet of the people. We had nothing before us but the simple letter of the Constitution; and that, as I believed then and believe now, is against the claims of these men. But now we are in extraordinary session, called by the President to consider questions which affect every person in every State, and in every district and Territory in the Union. We meet in the midst of trouble. We are suddenly brought face to face with the gravest problem in our history. From my point of view, the people are confronted with the strongest power known among men, and they will have to contend against an organized vigilance armed with the most powerful weapons which the concentrated money power of the world can bring into use.

I believe the Republic is in danger, and at such a time no State ought to be denied its full representation in the Senate unless the people of that State withdraw their Senators.

The people of these three States—Montana, Wyoming, and Washington—have unanimously indorsed the action of their governors in appointing persons to fill what they regard as vacancies. I have waited for some evidence of disapproval, and none has appeared. We may assume, then, that the people of those States are not only satisfied with the governors' action in the premises, but that they desire the admission of the gentlemen appointed.

In consideration of these two facts, (1) that the country is imperilled by existing conditions, and (2) that the people of the States interested desire the admission of the applicants as their representatives in this body, I deem it to be my duty, while holding the opinions I expressed in argument last April, to temporarily waive my own objections, to the end that no State shall by my vote be without its full representation in the Senate at this critical juncture of public affairs.

INCREASE OF NATIONAL BANK CIRCULATION.

The VICE-PRESIDENT. The Senate resumes the consideration of the unfinished business.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Missouri [Mr. COCKRELL], which will be reported.

The SECRETARY. It is proposed to insert as an additional section the following:

SEC. 2. That upon the delivery and surrender of any of the United States bonds known as the funded loan of 1891, continued at 2 per cent interest and payable at the option of the United States, by the holder and owner thereof, to the Secretary of the Treasury, the Secretary of the Treasury shall receive, cancel, and destroy such bond or bonds, and shall issue and deliver in exchange and payment therefor an amount of United States legal-tender notes, commonly known as greenbacks, in the same form and words of said United

States notes, equal in amount to the face value of such bond or bonds, with the accrued interest thereon.

The VICE-PRESIDENT. The question is on the amendment.

Mr. SHERMAN. I call for the yeas and nays on the amendment.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. GEORGE (when his name was called). I have a general pair with the Senator from Oregon [Mr. DOLPH]. If he were present, I should vote "yea."

Mr. HARRIS (when his name was called). I have a general pair with the Senator from Vermont [Mr. MORRILL]. I do not know how he would vote on this question if present, but I will ask the Senator from Vermont [Mr. PROCTOR] if he knows how his colleague would probably vote upon it. I am inclined to vote "yea," but I am paired with his colleague.

Mr. PROCTOR. I think my colleague, if present, would vote "nay."

Mr. HARRIS. Then I announce my pair with the Senator from Vermont [Mr. MORRILL], and withhold my vote.

Mr. MARTIN (when his name was called). I am paired with the junior Senator from Massachusetts [Mr. LODGE] on this question. I understand, if present, he would vote "nay." I should vote "yea," if at liberty to vote.

Mr. PUGH (when his name was called). I am paired with the Senator from Massachusetts [Mr. HOAR]. If he were present, he would vote "nay," and I should vote "yea."

Mr. RANSOM (when his name was called). I am paired with the senior Senator from Maine [Mr. HALE]. If he were here he would vote "nay," and I should vote "yea."

Mr. MCPHERSON (when Mr. SMITH'S name was called). I wish to state that my colleague [Mr. SMITH] is temporarily absent from the Chamber. He is paired with the Senator from Idaho [Mr. DUBOIS]. If present my colleague would vote "nay."

Mr. VOORHEES (when his name was called). I am paired with the Senator from Oregon [Mr. DOLPH]. Not knowing how he would vote on this question if present, I withhold my vote.

The roll call was concluded.

Mr. DUBOIS (after having voted in the affirmative). I voted inadvertently. I am paired with the junior Senator from New Jersey [Mr. SMITH], and withdraw my vote.

The VICE-PRESIDENT. The Senator from Idaho withdraws his vote.

Mr. BUTLER (after having voted in the affirmative). I have a general pair with the Senator from Pennsylvania [Mr. CAMERON]. I voted inadvertently, and withdraw my vote. I do not know how the Senator from Pennsylvania would vote if present, but I should vote "yea."

Mr. VOORHEES. I have been corrected in regard to my pair with the Senator from Oregon [Mr. DOLPH], and as chairman of the Committe on Finance I feel under instructions on this question, and I vote "nay."

Mr. MANDERSON. I am paired with the Senator from Kentucky [Mr. BLACKBURN]. I do not know how he would vote, and therefore refrain from voting. I should vote "nay" if he were present.

The result was announced—yeas 23, nays 29; as follows:

YEAS—23.

Allen,	Hunton,	Pettigrew,	Vance,
Bate,	Irby,	Power,	Vest,
Berry,	Jones, Ark.	Roach,	Walthall,
Call,	Kyle,	Shoup,	White, Cal.
Cockrell,	Mills,	Squire,	Wolcott.
Coke,	Peffer,	Teller,	

NAYS—29.

Aldrich,	Frye,	McPherson,	Stockbridge,
Allison,	Gallinger,	Mitchell, Wis.	Vilas,
Caffery,	Gray,	Palmer,	Voorhees,
Carey,	Hansbrough,	Pasco,	Washburn.
Cullom,	Hawley,	Perkins,	White, La.
Davis,	Hill,	Platt,	
Dixon,	Lindsay,	Proctor,	
Faulkner,	McMillan,	Sherman,	

NOT VOTING—38.

Blackburn,	Dubois,	Jones, Nev.	Quay,
Brice,	George,	Lodge,	Ransom,
Butler,	Gibson,	Manderson,	Smith,
Camden,	Gordon,	Martin,	Stewart,
Cameron,	Gorman,	Mitchell, Oregon	Turpie,
Chandler,	Hale,	Morgan,	Wilson.
Colquitt,	Harris,	Morrill,	
Daniel,	Higgins,	Murphy,	
Dolph,	Hoar,	Pugh,	

So the amendment was rejected.

Mr. COCKRELL. I offer the amendment which I send to the desk, to be inserted as a separate section.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. It is proposed to insert as a new section:

SEC. 2. That upon any deposit, already or hereafter made, of any of the United States interest-bearing bonds, excepting those of the funded loan of 1891 continued at 2 per cent interest at the option of the United States, by any State bank, private bank, savings bank, loan or trust company, or person, with the Secretary of the Treasury, the Secretary of the Treasury is hereby authorized and required to receive such bond or bonds and to issue and deliver in exchange therefor an amount of United States legal-tender notes in the same language and form of the present United States notes, commonly called greenbacks, equal to the face or par value of such bond or bonds, and to hold and keep such bond or bonds, subject to redemption upon the payment into the Treasury of the United States of an amount of United States legal-tender notes of any issue equal to the face or par value of such bond or bonds, and during the time such bond or bonds are held and kept in the Treasury no interest shall be paid thereon, and upon their redemption as aforesaid the Secretary of the Treasury shall pay the interest accruing thereon during the time so held and kept, less one and one-half of 1 per cent on the face or par value of such bond or bonds for each twelve months or part thereof, and shall cancel and destroy the United States legal-tender notes so received in redemption of such bond or bonds.

The VICE-PRESIDENT. The question is on the amendment of the Senator from Missouri, which has been read.

Mr. ALDRICH. I call for the yeas and nays on the amendment.

Mr. COCKRELL. Mr. President, that amendment simply authorizes any holder of a United States interest-bearing bond to deposit the same in the United States Treasury and receive in exchange therefor United States legal-tender notes equal to the par or face value of such bond or bonds, and the Secretary of the Treasury is to hold the bonds subject to redemption. They are to be redeemed whenever the person or bank who deposited them returns into the Treasury the amount of United States legal tender notes of any issue equal to the amount received, or to their par or face value, and when these notes are returned they are to be destroyed.

During the time the bonds are held no interest is to be paid upon them by the United States, but when the bonds are returned to the holder the United States pays to the holder the amount of interest which accrued during the time the bonds were held, less 1½ per cent for each twelve months or part of twelve months; in other words, the national banks pay 1 per cent upon their circulation, and they pay the incidental expenses connected with the preparation of their notes, amounting to not to exceed 1½ per cent. Any holder of United States bonds, under this provision, may get greenbacks upon the same terms that a bank can get national bank notes. When he surrenders the notes and takes back the bonds then he loses 1½ per cent of interest, making one-fourth of 1 per cent more than the national banks have to pay; in other words, it places the individual citizens of the United States, the state banks, the private banks, the loan and trust companies, and savings institutions at one-quarter of 1 per cent disadvantage compared with the national banks.

The question simply is, whether the people of the United States, the State banks, the savings banks, and the loan and trust companies who hold United States bonds shall have not quite equal rights with the national banks. That is the question pure and simple. Is is the question before the Senate of the United States whether anybody in this great country shall receive money at the hands of the Government upon any kind of deposit, save only the favored national banks; whether Congress shall intrust to the national banks absolute control and dominion over the paper circulation of the United States, and give them the right to take out the circulation or not, just as they choose, and to expand or contract it as they choose. The question before the United States Senate now is, whether anybody else on the face of the soil of the United States, except national banks, has any rights.

We have no objection to the national banks receiving the par value of the bonds in national bank notes. We are not opposing the bill, but we want to improve and better it; we want the Senate of the United States now, once for all, to determine whether anybody else but the national banks shall have any rights or privileges in regard to the currency of this country. We want to know why a State bank holding $50,000 of United States bonds, shall not have the equal privilege with five individual citizens, incorporated under the national banking law, to take its bonds to the Treasury and receive notes just as the five individuals incorporated into a national banking association have a right to do.

Mr. MANDERSON. Will the Senator from Missouri, if he is able to do it—and I presume he has investigated this subject and ought to know—be kind enough to answer a question? We know exactly what will be the amount of the increase by the bill as proposed by the Committee on Finance, some $19,000,000 it is estimated. What would be the amount of the increase of the currency under the proposition the Senator makes?

M. COCKRELL. Whatever amount the people of the United States think can properly be used in the business of the country, and no more.

Mr. MANDERSON. What would be the maximum that could be produced?

Mr. COCKRELL. The maximum amount would be the amount of United States bonds.

Mr. MANDERSON. Five hundred million dollars?

Mr. COCKRELL. Less than the amount the national banks have—three hundred and some odd million dollars.

Mr. PALMER. Will the Senator from Missouri allow me to ask him a question?

Mr. COCKRELL. With pleasure.

Mr. PALMER. Would not the effect of the Senator's amendment be to convert all these outstanding bonds into an immediate demand upon the Treasury? Would not the persons who hold greenbacks have a right to go to the Treasury at once and demand gold on their greenbacks?

Mr. COCKRELL. Under the amendment I propose, the position of the holder of a legal-tender note would be precisely what it now is. Any holder of a United States legal-tender note has a right to go to the Treasury of the United States to-day, and on presenting those notes in sums of $50 or $100—I have forgotten which—to receive coin of the standard value United States gold, 25.8 grains to the dollar, and silver 412½ grains, 9 parts fine, to the dollar, and if they take out every solitary dollar to the equivalent of the bonds not held by the national banks, then the holder of each of these greenbacks will have the same right he has now. If they would put back the gold and silver they would have a right to take them just as they have now, and they will exercise that right just as they have done in the past. They will keep the legal-tender notes in circulation, and they will not present them for redemption. There is no earthly danger of that.

Mr. GEORGE. I should like to ask the Senator a question.

Mr. COCKRELL. Certainly.

Mr. GEORGE. Does the Senator know, or has he ever heard, since the 1st day of January, 1879, when we resumed specie payments, of anybody holding a legal-tender greenback note ever presenting it to the Treasury for redemption?

Mr. COCKRELL. My impression is that there have been a few notes now and then presented to the Treasury for redemption, but it was a mere drop in the bucket—one drop of fresh water dropped into the ocean.

Mr. President, the people of the United States know that the greenbacks are absolutely money so far as anything can be money; they are a legal tender in payment of all debts public and private; they are receivable for customs dues to the Government. The holder of a greenback knows that every year the United States receives in taxes from an overburdened tax-paying people a sum of money greater than all the greenbacks in circulation. The States of this Union every year receive ten times the amount of the entire greenback circulation in the taxes which the people have to pay for State, county, municipal, township, and school purposes. There are billions of indebtedness in the United States. The indebtedness to the national banks and to private banks and other institutions amounts to over $5,000,000,000. Five hundred million dollars change hands every day through the national banks.

Think of it! The national banks every day of the year when they are open transact business equivalent to $500,000,000; and the greenbacks would be just as good to the national banks as gold. I have not taken into account the billions upon billions of transactions between the producers and laborers of this country and the persons to whom they sell their products and from whom they purchase the supplies they need. Here is a demand for billions upon billions of dollars. To-day we see the commerce of the United States pining, stifled, paralyzed. Why? Because there is not money enough in the United States to meet the large demand. That is the only reason, and you can not find any other.

Mr. HILL. Will the Senator from Missouri allow me to ask him a question for information?

Mr. COCKRELL. Certainly.

Mr. HILL. Is the proposition which the Senator is now presenting the same as what is known as the Johnson bill in the House of Representatives?

Mr. COCKRELL. Not at all.

Mr. HILL. In what respect does it differ from that bill?

Mr. COCKRELL. I have not seen the Johnson bill. I have seen what is called Mr. JOHNSON's letter. The letter advocates the issuance of Treasury notes, like the Treasury notes issued under the law of July 14, 1890. That proposition would make the owner of the bond lose all his interest and place him at that much disadvantage compared with the national banks.

I was under the impression that some other people had rights in this country, as well as the national banks. I am willing to give the banks all the rights they ought to have; I am willing to give them the utmost indulgence, but I do not want to stifle the people of the country.

Mr. HILL. Will the Senator allow me further?

Mr. COCKRELL. Certainly.

Mr. HILL. Does the Senator think that the National Government ought to issue as large an amount of greenbacks as would be possibly required under his amendment without any additional gold reserve?

Mr. COCKRELL. Is that all of the Senator's question?

Mr. HILL. Yes, sir.

Mr. COCKRELL. I hold that any honest, just man, and any honest, just government, particularly a government representing all its people, when it is in debt and can do it, and maintain its credit and honor, will keep just as much of its debt in non-interest-bearing obligations, which the people can use as money, as the people will maintain in circulation at par. That is a fundamental principle, a principle of equity, a principle of justice and of eternal right, and I say that the legislative department of this Government, when it prohibits the Government from keeping outstanding just as much of the public debt in noninterest-bearing greenbacks as the people will maintain in circulation, is oppressing and robbing them to the extent of the bonded interest-bearing debt.

Mr. HILL. Will the Senator allow me to put another question?

Mr. COCKRELL. Certainly.

Mr. HILL. Does the Senator think it wise on the part of the Government to maintain any gold reserve at all for the redemption of greenbacks?

Mr. COCKRELL. Oh, yes.

Mr. HILL. The present gold reserve is understood to be $100,000,000.

Mr. COCKRELL. I do not say a gold reserve. I say a coin reserve.

Mr. HILL. As I understand, we have now about $246,000,000 of greenbacks and a gold reserve of about $100,000,000. Does the Senator think that the greenbacks ought to be increased to the very large extent, as proposed by the amendment, without some increase of the gold reserve?

Mr. COCKRELL. That can be very easily increased. Is that the only objection the Senator has to the proposition?

Mr. HILL. That is one objection.

Mr. COCKRELL. If that is the only one, we will talk about it.

Mr. HILL. That is about all there is of it.

Mr. MILLS. The same thing will apply to national-bank notes.

Mr. COCKRELL. As a matter of course. As the Senator from Texas has well said, the same thing will apply to national-bank notes. You propose to issue $19,000,000 without a dollar in the Treasury in gold behind it. Why can not the people have the right to take out money as well as the national banks?

Mr. ALLEN. If this bill should pass without the amendment proposed, what would there be to prevent the exchange of the notes issued under it into coin certificates or greenbacks and the removal of gold from the Treasury by that means?

Mr. COCKRELL. As a matter of course, every Senator knows that if, under this bill, we issue $19,000,000 of national-bank paper, the holders of that paper can the next day demand legal-tender notes or they can demand coin, and they will be entitled to obtain it just as well as the holders of greenbacks.

Mr. HILL. Where do the holders of the national-bank notes demand gold?

Mr. COCKRELL. They demand it of the banks.

Mr. HILL. They have the right to demand it for greenbacks.

Mr. COCKRELL. They have the right to take greenbacks to the Treasury and demand gold for them. As I have heretofore said, it is the difference between tweedle-dum and tweedle-dee.

Mr. HILL. Wait a moment. The national banks issue to them greenbacks, but there is no new issue of greenbacks. That is the point I make.

Mr. COCKRELL. Oh, then, the Senator does not want any more money for the people. The Senator wants a restricted currency, which is unable to meet the demands of the people in this financial crisis. He wants it kept at that, does he?

Mr. McPHERSON. May I ask the Senator a question?

Mr. COCKRELL. Certainly.

Mr. McPHERSON. From whom do the holders of the national-bank notes demand either coin or greenbacks?

Mr. COCKRELL. Of the national banks.

Mr. McPHERSON. Certainly; and if it can not be obtained there the holder may then appeal to the Government. Any national bank which desires to surrender its circulation may take to the Treasury as many dollars in greenbacks as it wishes to retire of its national-bank notes. And with this deposit of greenbacks the notes are retired, so far as it may concern the bank. The national-bank notes may remain in circulation, so also the greenbacks which retired them.

Therefore, you get more circulation to the people by that process than by any other. Before the passage of a law which we passed here last year, it was the practice to retain in the Treasury the greenbacks deposited there to retire national-bank circulation, until the process was completed, but we covered everything into the Treasury by the act to which I have referred.

The process now is that if the banks should go into liquidation, or if they should desire to retire circulation, say $100,000, they deposit in the Treasury $100,000 in greenbacks.

The national-bank notes remain in circulation, and the Treasury puts the greenbacks in circulation. So that standing upon a hundred thousand dollars' worth of national bonds you would find in circulation the national-bank notes, and also the greenbacks which had retired them. Then, again, there is no demand obligation created by such a process upon this Government. The Government bonds are interest-bearing bonds, and they sustain and support the national-bank issues.

The proposed amendment of the Senator proposes to start anew the question of an indiscriminate issue of greenbacks. The Senator from Missouri proposes to inject into this discussion and fix upon this bill a new subject. He now changes his tactics. Yesterday it was silver. He then proposed that we should put silver into circulation, but to-day it is the greenback. When he wishes to defeat a bill his resources are practically without limit.

I do not now know and I could not tell from the reading of the amendment at the desk what further the Senator proposes to do; whether he proposes that the Government—when this circulation is retired by the individual holders, the State banks, and the savings banks, or whoever they may be—is to still continue to keep its greenbacks in circulation.

Mr. COCKRELL. I expressly stated that they are to be canceled.

Mr. MCPHERSON. They are to be canceled. Very well. Then it is simply doing this: It is a sort of pawnshop, in which the individual or the bank pawns the bonds and takes out the currency, to keep it or retire it at his own option.

Mr. COCKRELL. Do I understand the Senator to say that there is no redemption of national-bank notes, and that nobody has a right to present them at a bank?

Mr. MCPHERSON. The Senator did not understand me in any such way. I want to know by what process the banks themselves may go and demand greenbacks for national-bank notes?

Mr. COCKRELL. The Senator did not understand me in any such way. What I want to know is what rights the people who own the greenbacks have? We are dealing with them now.

Mr. MCPHERSON. The national bank notes are not legal tender. Everybody who receives a national bank note receives it at his own option. There is no compulsion upon him to take it. If I go and offer the Senator greenbacks in payment of an obligation he is obliged to take greenbacks in liquidation of my debt, but no national bank note cancels an obligation, unless both the debtor and the creditor are agreed.

Mr. COCKRELL. The national bank notes are outstanding in the hands of the holders and they can go and demand greenbacks, and they have the right to have the greenbacks redeemed in coin.

The VICE-PRESIDENT. The Chair is obliged to state to the Senator that it is impossible for the Reporter to hear.

Mr. COCKRELL. I asked the Senator if the holders of national bank notes had the right to go to the banks and ask for greenbacks or gold, and he said they had. Then I asked what was the difference between the national bank note and the greenback in regard to redemption, the reserve fund?

Mr. MCPHERSON. The Senator will observe the difference. The greenback circulation would not be increased by such a process at all. Of course, a private holder of a bank note has the right to go to the bank and receive from the bank a legal-tender obligation. The responsibility is placed upon the bank itself for maintaining its currency as good as gold, and not upon the Government. The amendment which the Senator from Missouri proposes is to change that whole process, and to place the obligation on the Government itself—a demand obligation with no coin in the Treasury to meet it.

Mr. BUTLER. May I ask the Senator from New Jersey a question, with the permission of the Senator from Missouri?

Mr. COCKRELL. I yield to the Senator from South Carolina, as I did to the Senator from New Jersey.

Mr. BUTLER. I ask the Senator from New Jersey, is there anything in the national bank law, or any other law, which prevents the national banks from reducing their circulation to a minimum at any time they please?

Mr. MCPHERSON. I will state to the Senator my recollection is they can not reduce their circulation below a certain limit.

I wish to say, further, that there is an amendment pending now to this bill which, if I am correctly informed, the honorable chairman of the committee will accept, which provides that a national bank shall not retire its circulation, except with the approval of the Comptroller of the Currency, and that it shall not be reduced below a certain limit each month.

Mr. BUTLER. As the law now stands, I understand that every national bank in the United States may reduce its circulation to the minimum, whatever that may be, at any time it pleases, and thereby so contract the currency as to paralyze the industries of the whole country. That is the point I should like the Senator to answer.

Mr. GRAY. What is the minimum to which the Senator from South Carolina refers, if there is any minimum?

Mr. BUTLER. I do not remember about that.

Mr. GRAY. Can not a national bank surrender its entire circulation?

Mr. BUTLER rose.

The VICE-PRESIDENT. The Chair desires to say to the Senator from South Carolina that it is impossible for the Reporter to hear the debate that is going on.

Mr. BUTLER. I beg the Reporter's pardon.

Mr. VOORHEES. I rise to a question of order. My question of order is, that the rules require Senators to address the Chair. I do not make that point upon the Senator from South Carolina [Mr. BUTLER], nor upon the Senator from Missouri [Mr. COCKRELL], nor upon any other Senator; but this debate has been going on over my head and not addressed to the Chair at all, until I think it well for Senators to be reminded that there is a rule requiring them to address the Chair instead of addressing each other.

The VICE-PRESIDENT. The Chair sustains the point of order of the Senator from Indiana.

Mr. BUTLER. I am much obliged to the Senator from Indiana, and I deserve the rebuke which is implied. I quite sympathize with the Reporter, and know it is all wrong; but still I wanted to submit a question to the Senator from New Jersey [Mr. MCPHERSON]. He has answered it, and the Senator from Delaware [Mr. GRAY] has come to the rescue with the additional information that there is no minimum of national bank circulation, and that a national bank may wipe its circulation out of existence at its own pleasure.

Mr. MCPHERSON. I think upon reflection the Senator from Delaware is exactly correct in that. I had supposed that the national banks were required to keep their circulation up to the minimum which they are required to hold in bonds; but I think the Senator from Delaware is right, that they may retire their whole circulation.

Mr. BUTLER. That is an admission which I am very glad to hear from the Senator from New Jersey.

Mr. ALLEN. With the consent of the Senator from Missouri, I should like to ask a question of the Senator from New Jersey.

Mr. COCKRELL. I yield.

Mr. ALLEN. I ask the Senator from New Jersey what is there in the bill under consideration to prevent an exchange of the national bank notes into coin certificates or other paper money, and by that means deplete the Treasury of its gold reserve?

Mr. MCPHERSON. I will answer the Senator's question in this way: As a matter of course, coin certificates are issued only upon a deposit of coin, and the coin must remain in the Treasury to redeem the certificates.

Mr. ALLEN. One question more, with the permission of the Senator from Missouri. If that be done, as I understand the Senator from New Jersey to admit, what would be the effect of the amendment of the Senator from Missouri, if adopted, on the national bank act?

Mr. MCPHERSON. The committee's bill proceeds on the idea that we shall give to the national banks additional circulation of 10 per cent, which upon the amount of bonds now pledged to redeem circulation would amount to $19,000,000 in round numbers. The amount of circulation which the Senator from Missouri proposes is a circulation amounting, possibly, to the entire bonded debt of the country. He proposes to issue it in greenbacks, while the bill of the committee proposes to issue it in national bank notes.

I have tried to describe the process by which the national bank notes went out of circulation. If the banks wish to retire circulation, the process is to place in the Treasury the same amount of greenbacks that they wish to retire of their own circulation. Under the law we passed last year we placed the responsibility entirely upon the Treasury upon the deposit of United States notes to redeem the outstanding circulation of the banks, and the bank officers have nothing further to do with it.

So far as the banks are concerned the retirement is effected and the Treasury surrenders the bonds and calls in the notes. This fund, instead of being now a reserve fund, is turned into the Treasury, and to-day you will find national bank circulation by the tens of thousands of dollars in this country and the greenbacks deposited there for its redemption all in harmonious circulation.

Therefore, I say that if the Senator from Missouri desires the largest amount of circulation from the smallest deposit of bonds, he gets it by the present system. If, on the other hand, the Senator wishes to make a demand obligation upon the Govern-

ment, at any time by an additional issue of greenbacks, and wishes to maintain their parity and their value equal with gold, he must provide for the deposit also of a corresponding sum in the Treasury to keep up that redemption or resumption fund. That is the difference between the bill and the amendment.

One is a perfectly safe system by old and tried instrumentalities. The other is a new contrivance without restrictions. You simply loan so many greenbacks upon a like deposit of bonds. You give them more powers and privileges than you give to the banks without one particle of the restriction that you place upon the national banks.

Mr. BATE. May I ask the Senator a question?

Mr. COCKRELL. I yield to the Senator from Tennessee.

Mr. BATE. I understand the banks can make a maximum issue of money on their deposit of bonds. There is no minimum. Now, has the maximum issue been reached by the banks?

Mr. McPHERSON. I have already stated that an amendment has been proposed to the bill by the Senator from Maryland [Mr. GORMAN] regulating the withdrawal of circulating notes by national banking associations. I have always been of the opinion that there ought to be some restriction in the national banking act which would not permit a national bank to retire circulation at pleasure. I have always been of that opinion, but unfortunately we have made no such provision. It is now proposed, however, that when this bill becomes a law, if the amendment shall prevail, and I assume it will, the national banks can not then retire circulation except in the manner designated by the amendment, and with the approval of the Comptroller of the Currency. So we shall have a provision that whatever is in circulation now can not be retired except in some way that will be satisfactory to the financial administration of the Government.

Mr. BATE. I desire to know of the Senator if there is any provision to be made that will cause the banks to issue circulation to the maximum?

Mr. McPHERSON. I can only answer the Senator by saying that if he were the president of a national bank, and the Government of the United States should offer to give him 10 per cent more circulation than he had before without any new cost to him, it would seem to me that self-interest would dictate that he should apply for that additional circulation. Moreover, such a provision would have a very beneficial effect upon the volume of currency, which the Senator from Missouri is most anxious to increase. It would induce national banks to deposit new bonds and take out additional circulation.

I have every reason to believe that under this bill the increased circulation will amount to $50,000,000. I believe that with the $19,000,000 which this gives to the banks without any new deposit of bonds, with the addition of the amount already taken out or applied for even before this bill was introduced, by which you will get some $20,000,000 more, it will make nearly $40,000,000, and with the added inducement which this bill will confer it is reasonable to suppose that the currency will be increased to the extent of $50,000,000 or $60,000,000. Further, I am told that the national banks and the savings banks of this country hold to-day more than $100,000,000 of United States bonds. This being so, there is no reason in the world why circulation should not be taken out to the extent of $100,000,000, especially while there is such a demand for currency.

Mr. BATE. As I stated before, it seems that the national banks have a right to go to the maximum in the issue of currency. Have they done so? Is there not a very large margin upon which they have not issued currency which, if they had wanted to increase the volume of the currency, they could have issued?

If they have not come up to the margin heretofore, will they do it now? That is my question.

Mr. McPHERSON. The Senator from Tennessee is perfectly well aware of the fact that on the gold basis, where every dollar issued by the Government is as good as gold, where not only the circulation, but the bonds, are as good as gold, our 4 per cent bonds were selling upon the market a year ago at 128 to 134 upon the par value of the bond. No banking institution can very well pay that premium, paying 1 per cent tax on the circulation, and still maintain a very profitable banking business. At all events, no banking institution could do it with the knowledge before it that in the course of thirteen years—the maturity of the bonds—the 28 to 34 per cent of premium which it pays is to be wiped out absolutely.

The result of all this is simply that it has prevented the taking out of new circulation. The bonds have now gone down to about 108 or 109. I think the last sale I noticed was at 111. The bonds have thirteen years to run and are selling to-day at a premium of 11 above their face value. Give the banks the increased circulation proposed up to the par value of the bonds, the bonds having been cheapened in the market in the last year, and then they will not only take out the circulation provided for, but they will also take out new and other circulation upon a deposit of new bonds.

Mr. BATE. What guarantee has the Senator that they will do it if they are given the right?

Mr. McPHERSON. It will be an additional inducement, surely.

Mr. GRAY. May I answer the question of the Senator from Tennessee?

Mr. COCKRELL. I yield to the Senator from Delaware.

Mr. GRAY. Under the present law a bank buys in the market United States bonds, say $100,000, and pays of course the market value of those bonds, whether it be 113, or 127, as it used to be. For that it gets $90,000 of circulation, or can get it if it chooses to deposit those bonds in the Treasury. But having paid a high price for the bonds, the 90 per cent is not in some cases a sufficient inducement to the bank to take out the circulation. The banks say, "If you will give us more circulation, that is, give us circulation to the full par value of the bonds, or if you were to give it to us for the market value of the bonds, which is still better, we could then afford to issue the circulation." The restriction of 90 per cent is a burden upon the banks, and the nearer you approach to a hundred per cent the nearer you approach to wiping out that restriction entirely.

Suppose the national-banking law had said, "When you deposit $100,000 in bonds you can take out only $50,000 of circulation," I take it no bank would be willing to take out circulation upon those terms. The nearer you approach the $100,000 the easier it will be for them to take out the circulation; that is all.

Mr. GEORGE. Mr. President——

Mr. COCKRELL. I yield to the Senator from Mississippi.

Mr. GEORGE. It has been suggested, even asserted, two or three times in this debate that there is a serious objection to the proposition made by the Senator from Missouri, to issue greenbacks upon the faith of the United States bonds, because those greenbacks constitute a demand obligation upon the Treasury of the United States, which the Treasury of the United States would be unable to meet, and that that objection does not lie against the issuance of additional national-bank notes.

In other words, Mr. President, we are met with the objection to the proposition of the Senator from Missouri that we may allow the national banks to buy every bond of the United States and upon them issue notes to the face value of the bonds, which is the proposition of the bill before the Senate; that that would be an entirely safe operation, because those national-bank notes do not constitute a demand obligation on the part of the Treasury of the United States, whilst the issuance of Treasury notes under the proposition made by the Senator from Missouri would constitute a demand obligation on the United States; and that is held up before us to terrify us from adding to the currency of the country, as we can largely do if the amendment offered by the Senator from Missouri is adopted. We are to be terrified from sustaining that proposition and at the same time we are to be induced to sustain the proposition to allow the national banks to buy bonds to any amount and issue notes upon them, because the notes of the national banks are not demand obligations on the part of the United States.

Mr. President, that is just a mistake in law. That is all there is in it. Every note issued by a national bank under section 5229 of the Revised Statutes constitutes a demand obligation on the Treasury of the United States. It is not, as has been supposed and as has been argued, that the United States, upon the deposit of United States bonds for the issuance of the national-bank notes, constitute themselves as a trustee to dispose of the bonds for the purpose of redeeming United States notes. That is not the law, sir. The deposit of bonds is not a fund out of which by the sale of those bonds the United States can get the money to redeem national-bank notes. On the contrary, every national-bank note that is presented to a national bank and not paid is immediately presentable to the Comptroller of the Currency, and when presented what is it his duty to do? Let us see about that:

> Immediately upon declaring bonds of an association—

That is, a bank—

> forfeited for nonpayment of its notes, the Comptroller shall give notice, in such manner as the Secretary of the Treasury shall, by general rules or otherwise direct, to the holders of the circulating notes of such association to present them for payment at the Treasury of the United States; and the same shall be paid as presented in lawful money of the United States; whereupon the Comptroller may, in his discretion, etc.

Then when he wants to get back the money he has to advertise the bonds for at least thirty days in order to get it. So the hypothesis upon which the proposition of the Senator from Missouri is condemned is an untrue one. The note of every national bank issued in this country is as much a demand obligation upon the Treasury of the United States as the greenback or the Treasury note.

Will the Senator from Missouri allow me another moment or two?

Mr. COCKRELL. Certainly.

Mr. GEORGE. It is said that the United States can not safely upon a deposit or a reserve fund of $100,000,000 in gold increase these demand obligations upon the Government. That is the view presented. Now, let us see whether that is true. That view, recollect, is presented by the same Senators who wish to increase the demand obligations of the national banks; and upon what basis? Let us see. The United States has $100,000,000 of gold for $346,000,000 of greenbacks. That is $1 in gold for $3.50 in greenbacks. Well, how much have the national banks? I believe that they have a deposit of 5 per cent in the Treasury for redemption. That is all. That is $20 for $1. So in the view of those Senators this great Government, which collects and disburses more than $500,000,000 a year, can not safely issue demand obligations upon the Treasury to a larger extent than $3.50 to $1, and at the same time those gentlemen say that the national banks may issue circulation upon a deposit of $1 for $20 of circulation. Now, that looks to me a little unreasonable.

But, further than that, they say that the national banks, it is true, have only 5 per cent in the Treasury to meet redemption; but they have a great many other assets which they can apply to the redemption of their demand notes. Now, let us see how that is. I wish to call attention of Senators, especially those who have such a love for the national banks, to a table issued by the Treasury, found on page 102 of the Coinage Laws. They have 5 per cent deposited in the United States Treasury for redemption. What other demand obligations exist against the national banks—obligations which they are bound by law to pay on the very day that demand is made? They have deposits to what amount to meet that demand obligation, according to this table? They have 16 9-10 per cent, say 17 per cent.

In other words, it is perfectly safe in the opinion of those Senators for the national banks to have $1 for every $20 in circulation for redemption purposes, and it is also perfectly safe for the same banks to have ten other dollars of demand obligations for one in the national banks. That is the position. By that kind of argumentation the very meritorious and necessary provision contained in the amendment offered by the Senator from Missouri is to be voted down.

Now, let us look at it again. We can not issue safely, say they, Treasury notes upon the deposit of bonds, because it largely increases the demand obligations upon the Treasury of the United States; with all the taxing power of this great Government the Treasury of the United States can not stand a demand obligation of more than 3½ to 1, and yet when it comes to a national bank 5 per cent, or 20 to 1, is entirely sufficient, and when it comes to their demand obligations for deposit, then 10 to 1 is sufficient.

Mr. President, I think with that statement there can be no objection to the proposition made by the Senator from Missouri in the mind of any one who is willing to allow the national banks to go on in the way they have been going on, with cash for redemption of only $1 for $20 and with cash for other demand obligations of only $1 for $10.

Mr. CAMDEN. May I ask the Senator from Mississippi a question?

Mr. COCKRELL. I yield to the Senator from West Virginia to ask a question.

Mr. CAMDEN. Does not the law require the national banks to keep 15 per cent against their deposits?

Mr. GEORGE. I do not know what the law is; I know what the fact is.

Mr. CAMDEN. Is it not the fact that they have to keep 15 per cent reserve against deposits? If so, it is not 10 to 1, but 6 to 1.

Mr. GEORGE. Well, put it 6 to 1.

Mr. CAMDEN. And 25 per cent in the case of other banks would be 4 to 1.

Mr. GEORGE. Very well, put it 6 to 1. Ought not the United States to have as good a chance to redeem its demand obligations with 3½ to 1 as the national banks have with 6 to 1?

Mr. MCPHERSON. May I ask the Senator from Mississippi a question?

Mr. GEORGE. Of course.

Mr. MCPHERSON. Is the Senator not also aware that as an additional security for the note-holder and for all the obligations the Government assumes, all the property, all the stock, all the reserve or surplus fund, and everything in a national bank the Government has a first lien upon?

Mr. GEORGE. Oh, Mr. President, I have not been talking about the ultimate security of the national-bank circulation, nor have gentlemen who have objected to the issuance of these notes upon the bonds of the United States objected to the ultimate responsibility of the United States. We are talking about demand obligations which must be met at the very time the demand is made or discredit follows. That is what we are talking about; and gentlemen are now so enamored with some kind of a divinity, I know not what, which seems to hedge about the national banks that they are perfectly content, with all obligations payable on demand, that those institutions shall have only 5 per cent of a redemption fund, 20 to 1, and only 6 to 1 for their other demand obligations.

As the whole national-banking system, notes and everything else, depends upon the bonds of the United States, the credit of the United States, it does seem to me that this great Government with its unlimited taxing power can float demand obligations as well at 6 to 1 as well as a national bank.

Mr. MILLS, rose.

Mr. COCKRELL. Mr. President, I am always very good natured and I yielded gladly to let others answer questions; but I was just about making a calculation about the amount of national-bank notes that have been retired. I doubt not it will be thought I am trying to oppress the national banks, these poor dilapidated institutions, and to deny them some privileges they are struggling for while they are not making a dollar.

Now, I figured up exactly what national banks got for the fiscal year September 1, 1891, to September 1, 1892, just to see if they are really making expenses; if they are entitled to the charitable consideration and favoritism of the greatest Government on earth: if they are such objects of charity and benevolence and patriotism that we should extend to them favors and privileges and pecuniary aid which we would deny to the citizen.

I find that from September 1, 1891, to March 1, 1892, an average of six months, during which they had a capital of $675,356,310, up to that time with that amount of capital they had accumulated a surplus of $234,676,901.27, or a surplus of 34.75 per cent of their entire capital.

Now, their gross earnings for the six months from September 1, 1891, to March 1, 1892, were $75,110,650.89, or 11.12 per cent. Their net earnings during that time were $34,363,090.45, or 5.09 per cent. That was their absolute net earnings.

Now, what was the difference between the net earnings and the gross earnings? I have given the two amounts. The difference was $40,747,560.44. How did that arise? They charged off from the gross earnings the amount of loans and premiums, $11,787,503.64, and all expenses, taxes, etc., amounting to $28,960,056.80. In other words, of the gross earnings they charged off $40,747,560.44. During that time, for six months, they declared dividends of $25,546,853.51, or 3.78 per cent. But their net earnings were 5.09 per cent and they added a portion of it to the surplus fund.

The VICE-PRESIDENT. The Senator from Missouri will please suspend.

Mr. COCKRELL. Certainly.

SENATOR FROM MONTANA.

The VICE-PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which is the resolution reported from the Committee on Privileges and Elections. The resolution will be read.

The Secretary read the resolution reported by Mr. HOAR from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat in the Senate from the State of Montana.

The VICE-PRESIDENT. The amendment proposed by the Senator from North Carolina [Mr. VANCE] will be read.

The SECRETARY. Strike out all after the word "resolved," and add in lieu thereof:

That Hon. Lee Mantle is not entitled to a seat in this body as a Senator from the State of Montana.

The VICE-PRESIDENT. The amendment having been adopted, the Senator from Nebraska [Mr. MANDERSON] moved to reconsider the vote by which it was agreed to. The Senator from North Carolina [Mr. VANCE] moved to lay the motion to reconsider on the table, which is the pending motion before the Senate.

Mr. STEWART. On that, I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. ALDRICH (when his name was called). On this question I am paired with the Senator from Delaware [Mr. HIGGINS], and therefore withhold my vote.

Mr. PASCO (when Mr. ALLEN'S name was called). I wish to announce the pair of the Senator from Nebraska [Mr. ALLEN] with the Senator from Georgia [Mr. COLQUITT].

Mr. BERRY (when his name was called). On this question I am paired with the Senator from Wyoming [Mr. CAREY]. If he were present I should vote "yea" and he would vote "nay."

Mr. GALLINGER (when his name was called). On Thursday last, at my request, I was paired with the junior Senator from

Massachusetts [Mr. LODGE]. My impression is that he considers the pair as still holding, but I have authority to transfer my pair to the junior Senator from Ohio [Mr. BRICE], and I therefore vote. I vote "yea."

Mr. GEORGE (when his name was called). I have a general pair with the Senator from Oregon [Mr. DOLPH], but we agree on this question, as I am assured by his colleague [Mr. MITCHELL of Oregon], and I vote "yea."

Mr. PASCO. The Senator from Oregon [Mr. DOLPH] is paired with the Senator from Wyoming [Mr. CAREY].

Mr. GORMAN (when his name was called). I am paired with the junior Senator from Indiana [Mr. TURPIE]. If he were present he would vote "nay" and I should vote "yea."

Mr. HARRIS (when his name was called). I have a general pair with the Senator from Vermont [Mr. MORRILL]. He and I agreeing upon this question, the Senator from Vermont is paired with the Senator from New Hampshire [Mr. CHANDLER]. If the Senator from Vermont were present, he would vote "yea," and the Senator from New Hampshire would vote "nay." Having been relieved from my pair with the Senator from Vermont by this arrangement, I consented to pair with the Senator from Massachusetts [Mr. HOAR], who, if present, would vote "nay" upon this question, and I should vote "yea."

Mr. LINDSAY (when his name was called). I am paired with the Senator from Virginia [Mr. DANIEL]. If he were here, he would vote "nay," and I should vote "yea."

Mr. MARTIN (when his name was called). I am paired generally with the junior Senator from Massachusetts [Mr. LODGE], but I understand that if he were present, he would vote "nay." As I agree with him upon the question, I will vote. I vote "nay."

Mr. VEST. I should like to have the attention of the Senator from Alabama [Mr. MORGAN]. I received a telegram from the Senator from Pennsylvania [Mr. QUAY], stating that he has a regular pair with the Senator from Alabama [Mr. MORGAN], but they are both on the same side of this question, and the Senator from Pennsylvania asked me to pair with him. My vote would be in the affirmative. Has the Senator from Alabama voted?

Mr. MORGAN (after having voted in the negative). I voted with the understanding that a pair had been arranged between the Senator from Pennsylvania and some other gentleman, which relieves me from my pair.

Mr. VEST. Then I announce my pair with the Senator from Pennsylvania [Mr. QUAY], who would vote "nay" if he were present, and I should vote "yea."

Mr. ALDRICH. Has not a pair been announced between the Senator from Pennsylvania [Mr. QUAY] and the Senator from Oregon (Mr. MITCHELL]?

Mr. VEST. Do I understaud that such a pair has been announced? I should like to ask the Senator from Rhode Island, if I can be heard, whether such a pair has been announced? There are five of us on the floor at once.

Mr. ALDRICH. It seems I was mistaken in supposing the pair had been announced. It was stated by two or three Senators around me that the Senator from Pennsylvania [Mr. QUAY] is paired with the Senator from Oregon [Mr. MITCHELL].

Mr. HANSBROUGH. I understand an arrangement has been made by which the Senator from Pennsylvania [Mr. QUAY] stands paired with the Senator from Oregon [Mr. MITCHELL].

Mr. VEST. Then I will vote. I vote "yea."

The roll-call was concluded.

Mr. LINDSAY. I understand that the Senator from Virginia [Mr. DANIEL] is paired with the Senator from Maryland [Mr. GIBSON]. I will therefore vote. I vote "yea."

Mr. MCPHERSON. Did I understand the Senator from Rhode Island [Mr. ALDRICH] to announce a pair between the Senator from Delaware [Mr. HIGGINS] and myself?

Mr. ALDRICH. No; I announced a pair between myself and the Senator from Delaware [Mr. HIGGINS].

Mr. MCPHERSON. Then I vote "yea."

Mr. ALLISON. I am paired on this question with the Senator from Georgia [Mr. GORDON]. If he were here I should vote "nay." My colleague [Mr. WILSON] is paired on this question with the Senator from Maine [Mr. HALE].

Mr. CAREY. I am paired with the Senator from Oregon [Mr. DOLPH]. I will transfer that pair to the junior Senator from Massachusetts [Mr. LODGE] and vote.

Mr. PASCO. The Senator from Massachusetts [Mr. LODGE] is paired with the Senator from Ohio [Mr. BRICE].

Mr. CAREY. I was wrongly informed.

Mr. HILL. I desire to know who is paired with the Senator from Vermont [Mr. MORRILL].

Mr. HARRIS. The Senator from New Hampshire [Mr. CHANDLER] is paired with the Senator from Vermont [Mr. MORRILL], and I am paired with the Senator from Massachusetts [Mr. HOAR].

Mr. HILL. I thank the Senator for the information which I asked the Chair to give.

Mr. BERRY. The Senator from Wyoming [Mr. CAREY] having announced a pair with the Senator from Oregon [Mr. DOLPH] I vote "yea."

Mr. PASCO. There is so much confusion about the pairs (one or two Senators having been announced as paired with more than one) I ask unanimous consent that the pairs be reported at the desk so that there may be no mistake as to the vote.

The VICE-PRESIDENT. Without objection that will be done.

Mr. TELLER. I wish to announce that the Senator from Oregon [Mr. MITCHELL] is paired with the Senator form Pennsylvania [Mr. QUAY.]

Mr. PASCO. I withdraw my request.

Mr. HILL. I renew it. Let us have the pairs announced so that there may be no sort of mistake about the vote.

The VICE-PRESIDENT. If there be no objection, the pairs will be announced. The Chair asks the attention of the Senate to the reading of the pairs.

The Secretary read as follows:

Mr. ALDRICH with Mr. HIGGINS.
Mr. ALLEN with Mr. COLQUITT.
Mr. DOLPH with Mr. CAREY.
Mr. BRICE with Mr. LODGE.
Mr. GORMAN with Mr. TURPIE.
Mr. MORRILL with Mr. CHANDLER.
Mr. HARRIS with Mr. HOAR.
Mr. GIBSON with Mr. DANIEL.
Mr. MITCHELL of Oregon with Mr. QUAY.
Mr. GORDON with Mr. ALLISON.
Mr. HALE with Mr. WILSON.

The result was announced—yeas 31, nays 28; as follows:

YEAS—31.

Berry,	Gallinger,	Murphy,	Vance,
Caffery,	George,	Palmer,	Vest,
Call,	Gray,	Pasco,	Vilas,
Camden,	Lindsay,	Platt,	Voorhees,
Coke,	McMillan,	Proctor,	Washburn,
Cullom,	McPherson,	Ransom,	White, Cal.
Dixon,	Mills,	Smith,	White, La.
Faulkner,	Mitchell, Wis.	Stockbridge,	

NAYS—28.

Bate,	Hawley,	Morgan,	Sherman,
Butler,	Hill,	Peffer,	Shoup,
Cameron,	Hunton,	Perkins,	Squire,
Davis,	Irby,	Pettigrew,	Stewart,
Dubois,	Jones, Ark.	Power,	Teller,
Frye,	Jones, Nev.	Pugh,	Walthall,
Hansbrough,	Martin,	Roach,	Wolcott.

NOT VOTING—26.

Aldrich,	Cockrell,	Hale,	Mitchell, Oregon
Allen,	Colquitt,	Harris,	Morrill,
Allison,	Daniel,	Higgins,	Quay,
Blackburn,	Dolph,	Hoar,	Turpie,
Brice,	Gibson,	Kyle,	Wilson.
Carey,	Gordon,	Lodge,	
Chandler,	Gorman.	Manderson,	

So the motion to reconsider was laid on the table.

The VICE-PRESIDENT. The question recurs upon the resolution reported by the Senator from Massachusetts [Mr. HOAR], as amended on motion of the Senator from North Carolina [Mr. VANCE]. The resolution as amended will be read.

The Secretary read as follows:

Resolved, That Hon. Lee Mantle is not entitled to a seat in this body as a Senator from the State of Montana.

Mr. GRAY. I rise to a parliamentary inquiry: I ask whether the vote just taken was not to lay on the table the motion for a reconsideration?

The VICE-PRESIDENT. It was.

Mr. GRAY. If that be so, is it not the end of this episode.

The VICE-PRESIDENT. The Chair will state to the Senator from Delaware that it was a motion to reconsider the amendment adopted by the Senate, which was laid on the table. The question now recurs upon the resolution reported by the Senator from Massachusetts, as amended, on motion of the Senator from North Carolina.

Mr. TELLER. On that I ask for the yeas and nays.

Mr. SHERMAN. I ask that the resolution as amended be read. Let the proposition we are now to vote on be read.

The VICE-PRESIDENT. The resolution as amended will be read.

The Secretary read the resolution as amended, as follows:

Resolved, That Hon. Lee Mantle is not entitled to a seat in this body as a Senator from the State of Montana.

The VICE-PRESIDENT. Upon agreeing to the resolution as amended the yeas and nays are demanded.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CAREY (when his name was called). I am paired on this question with the Senator from Oregon [Mr. DOLPH]. If he were present he would vote "yea" and I should vote "nay."

Mr. GALLINGER (when his name was called). I will again announce my pair with the junior Senator from Massachusetts [Mr. LODGE], which I transfer to the Senator from Ohio [Mr. BRICE], and I vote "yea."

Mr. GIBSON (when his name was called). I am paired with the Senator from Virginia [Mr. DANIEL]. Were he present I should vote "yea."

Mr. GORMAN (when his name was called). I announce my pair with the junior Senator from Indiana [Mr. TURPIE].

Mr. HARRIS (when his name was called). Upon this question I am paired with the Senator from Massachusetts [Mr. HOAR]. If he were present I should vote "yea" and he would vote "nay." I also desire to announce that the Senator from Vermont [Mr. MORRILL] is paired with the Senator from New Hampshire [Mr. CHANDLER]. If those Senators were present, the Senator from Vermont would vote "yea" and the Senator from New Hampshire would vote "nay."

The roll call was concluded.

Mr. ALLISON. On this question my colleague [Mr. WILSON] is paired with the Senator from Maine [Mr. HALE]. My colleague would vote "nay" and the Senator from Maine would vote "yea." I am paired with the Senator from Georgia [Mr. GORDON]. I should vote "nay" and he would vote "yea" if present, I understand.

Mr. MARTIN. I am paired with the junior Senator from Massachusetts [Mr. LODGE]. If he were present he would vote "nay," and as I would vote the same way, I vote "nay."

The result was announced—yeas 32, nays 29; as follows:

YEAS—32.

Aldrich,	Faulkner,	Mitchell, Wis.	Stockbridge,
Berry,	Gallinger,	Murphy,	Vance,
Caffery,	George,	Palmer,	Vest,
Call,	Gray,	Pasco,	Vilas,
Camden,	Lindsay,	Platt,	Voorhees,
Coke,	McMillan,	Proctor,	Washburn,
Cullom,	McPherson,	Ransom,	White, Cal.
Dixon,	Mills,	Smith,	White, La.

NAYS—29.

Bate,	Higgins,	Peffer,	Squire,
Butler,	Hill,	Perkins,	Stewart,
Cameron,	Hunton,	Pettigrew,	Teller,
Davis,	Irby,	Power,	Walthall,
Dubois,	Jones, Ark.	Pugh,	Wolcott.
Frye,	Jones, Nev.	Roach,	
Hansbrough,	Martin,	Sherman,	
Hawley,	Morgan,	Shoup,	

NOT VOTING—24.

Allen,	Cockrell,	Gorman,	Manderson,
Allison,	Colquitt,	Hale,	Mitchell, Oregon
Blackburn,	Daniel,	Harris,	Morrill,
Brice,	Dolph,	Hoar,	Quay,
Carey,	Gibson,	Kyle,	Turpie,
Chandler,	Gordon,	Lodge,	Wilson.

So the resolution as amended was agreed to.

SENATOR FROM WASHINGTON.

Mr. VANCE. The case from the State of Washington is pending, and if it is the pleasure of the Senate to take it up, I ask that that be now voted on.

The VICE-PRESIDENT. The resolution will be read.

The Secretary read the resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That John B. Allen is entitled to be admitted to a seat as a Senator from the State of Washington.

Mr. VANCE. I suppose the result can be reached not by offering a substitute, but by taking a direct vote on the report. ["No," "No."]

The VICE-PRESIDENT. The question is on agreeing to the resolution of the committee.

Mr. VANCE. In deference to those who prefer to follow the precedent, I move to amend by inserting the word "not."

The VICE-PRESIDENT. The amendment proposed by the Senator from North Carolina will be stated.

The SECRETARY. After the word "is" in the first line of the resolution insert the word "not;" so as to read:

Resolved, That John B. Allen is not entitled to be admitted to a seat as a Senator from the State of Washington.

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from North Carolina [Mr. VANCE].

Mr. STEWART. I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. ALLISON (when his name was called). On this question I am paired with the Senator from Georgia [Mr. GORDON]. My colleague [Mr. WILSON] is paired with the Senator from Maine [Mr. HALE].

Mr. CAREY (when his name was called). I am paired on this question with the Senator from Oregon [Mr. DOLPH].

Mr. GALLINGER (when his name was called). I again announce the transfer of my pair with the Senator from Massachusetts [Mr. LODGE] to the Senator from Ohio [Mr. BRICE]. I vote "yea."

Mr. HARRIS (when his name was called). I am paired with the Senator from Massachusetts [Mr. HOAR] upon this question. If he were present I should vote "yea" and he would vote "nay." The Senator from Vermont [Mr. MORRILL] is paired with the Senator from New Hampshire [Mr. CHANDLER]. If those Senators were here the Senator from Vermont would vote "yea" and the Senator from New Hampshire would vote "nay."

Mr. MARTIN (when his name was called). I am paired generally with the Senator from Massachusetts [Mr. LODGE], but if he were here he would vote "nay" and I would also vote "nay." I therefore vote. I vote "nay."

The roll call was concluded.

Mr. DUBOIS. I ask that the pairs be announced.

The VICE-PRESIDENT. Without objection, the pairs will be announced.

The Secretary read as follows:

Mr. GORDON with Mr. ALLISON.
Mr. HALE with Mr. WILSON.
Mr. DOLPH with Mr. CAREY.
Mr. BRICE with Mr. LODGE.
Mr. HARRIS with Mr. HOAR.
Mr. MORRILL with Mr. CHANDLER.

Mr. MANDERSON. I desire to announce my pair with the Senator from Kentucky [Mr. BLACKBURN].

The result was announced—yeas 32, nays 29; as follows:

YEAS—32.

Aldrich,	Faulkner,	Mitchell, Wis.	Stockbridge,
Berry,	Gallinger,	Murphy,	Vance,
Caffery,	George,	Palmer,	Vest,
Call,	Gray,	Pasco,	Vilas,
Camden,	Lindsay,	Platt,	Voorhees,
Coke,	McMillan,	Proctor,	Washburn,
Cullom,	McPherson,	Ransom,	White, Cal.
Dixon,	Mills,	Smith,	White, La.

NAYS—29.

Bate,	Higgins,	Peffer,	Squire,
Butler,	Hill,	Perkins,	Stewart,
Cameron,	Hunton,	Pettigrew,	Teller,
Davis,	Irby,	Power,	Walthall,
Dubois,	Jones, Ark.	Pugh,	Wolcott.
Frye,	Jones, Nev.	Roach,	
Hansbrough,	Martin,	Sherman,	
Hawley,	Morgan,	Shoup,	

NOT VOTING—24.

Allen,	Cockrell,	Gorman,	Manderson.
Allison,	Colquitt,	Hale,	Mitchell, Oregon
Blackburn,	Daniel,	Harris,	Morrill,
Brice,	Dolph,	Hoar,	Quay,
Carey,	Gibson,	Kyle,	Turpie,
Chandler,	Gordon,	Lodge,	Wilson.

So the amendment was agreed to.

The VICE-PRESIDENT. The question recurs on agreeing to the resolution as amended.

Several SENATORS. Let it be read.

The resolution as amended was read, as follows:

Resolved, That John B. Allen is not entitled to be admitted to a seat as a Senator from the State of Washington.

The resolution as amended was agreed to.

INCREASE OF NATIONAL-BANK CIRCULATION.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks; the pending question being on the amendment proposed by Mr. COCKRELL.

Mr. COCKRELL. Mr. President——

Mr. VOORHEES. Before the Senator from Missouri proceeds, will he allow me a single word?

Mr. COCKRELL. Certainly.

Mr. VOORHEES. I do not rise, Mr. President, to discuss the merits of any of these amendments. The amendment which we voted on awhile ago, offered by the Senator from Missouri [Mr. COCKRELL] had much to commend it to me, and under different circumstances, and as an independent proposition, I would have voted for it. Standing here, however, charged with a duty by the Committee on Finance, I felt it my duty to protect the bill from amendments as far as possible. For that reason I gave the vote that I did, and for that reason I shall oppose, as I am now advised in my own mind, any amendment with the exception of the one offered by the Senator from Maryland [Mr. GORMAN] in regard to the right of banks to retire their currency. I reserve

my right to vote for that amendment. Otherwise I think the friends of the bill would best advance its passage by opposing all amendments, whether they are good or bad.

There are many most excellent features, I repeat, in the amendmeat offered by the Senator from Missouri; and if I were at liberty to offer amendments I think I could offer more amendments satisfactorily to myself against national banks than any man on this floor. I think I am not misunderstood on that subject. I presume I owe less to them, and always have owed less to them, than any man within the range of my voice at this moment. They have never been supported by me as an institution. If I could I would now supply their place with some other fiscal agency. They are open to vast criticism, to my mind. But they exist at this time and they will continue to exist for some few years yet to come. They have a power under the law of which we can avail ourselves to relieve the country in the present emergency.

This bill was reported and supported in the committee by me because we are in an emergency. I thought if ever there was a time when there would be little or no objection to this measure it would be now. I called to mind when I reported the bill that on three former occasions it had the approval of this great body, practically without opposition at all. I thought inasmuch as there was no question that it would increase the volume of the currency somewhat, it would have little or no opposition at this time.

I do not think I am mistaken when I say that there is an emergency throughout the land. I hear it upon all hands. It may not reach other gentlemen as it has reached me. The processions of unemployed people, the charity that is giving bread to unemployed thousands, reach the very inmost recesses of my heart. If taking the powers of the banks or any other institution, whether they commend themselves to my favor or not, would add employment to those people and help the circulation of the country, I would feel myself criminal not to do it.

I am guided at this time by the highest definition of statesmanship ever given. Edmund Burke said that statesmanship was the science of circumstances, and circumstances should guide us at this time. If I am hereafter to be called to account for votes now given, I shall appeal to circumstances which made it my highest duty, from which I flinched not one moment in endeavoring to mitigate the dreadful surroundings which we behold on all hands.

I did not rise to discuss the merits of amendments. I did not rise even to discuss the merits of the bill from the Finance Committee. Its merits speak for themselves. They may not be numerous; they may not be as extensive as they should be; but in my judgment, there is enough in the bill, if it can be passed, to warrant the efforts we have been making in its behalf.

I say this in all kindness to the Senator from Missouri, but I say another thing here to-day. If it is the purpose not to pass this bill, if it is the purpose to talk it into a condition where there is no hope for it, we shall, after to-morrow, be engaged in other business, and this, as a minor feature of this extraordinary session of Congress, will have to take a subordinate place and give way to the great and major proposition which has brought us here. I intend, however, the country shall understand that I press the bill and ask a vote upon it, and deplore the delays which have taken place; and if it fails it shall not fail at my door.

Mr. COCKRELL. Mr. President, it seems that some point is aimed to be made on the fact that a bill similar to the one pending has been before Congress heretofore. I admit very frankly and will advise my good friend from Indiana, that the identical language of the pending bill was here before. I will read it. It was in the Fifty-first Congress.

SEC. 2. That upon any deposits already or hereafter made of any United States bonds bearing interest, in the manner required by law, any national banking association making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered and countersigned as provided by law, not exceeding in the whole amount the par value of the bonds deposited: *Provided*, That at no time shall the total amount of such notes issued to such association exceed the amount at such time actually paid in of its capital stock.

I moved to strike out that section, and upon the motion the yeas were: Messrs. Barbour, BATE, BERRY, BLACKBURN, BUTLER, CALL, COCKRELL, COKE, DANIEL, Eustis, FAULKNER, Gibson, GORMAN, Hampton, JONES of Arkansas, JONES of Nevada, Kenna, MITCHELL, MORGAN, PASCO, Plumb, PUGH, Reagan, Stanford, TELLER, TURPIE, VANCE, VEST, VOORHEES. My good friend from Indiana and myself voted to strike out this identical clause. We were not consenting to such an enactment at that time.

Mr. VOORHEES. Under the same circumstances I would do it again.

Mr. COCKRELL. I am not disputing that, but here is the point. It is stated that this bill has passed the Senate repeatedly without any opposition. It never has done it, and both times, when it was up in the Fifty-first and Fifty-second Congresses, we substituted for it a bill for the free and unlimited coinage of the standard silver dollar.

I will read from McPherson's Handbook of Politics for 1892 what was done in the Fifty-second Congress. The bill was passed by the House of Representatives and it came over here. I think the House bill was the identical measure, if I am not very much mistaken, that we have before us now. I did not have time to mark the place; but, Mr. President, there never was a time when this bill passed the Senate without opposition.

Mr. BUTLER. I do not remember what Congress it was, but I do remember that perhaps in the Forty-ninth Congress a bill passed similar to this which was known as the McPherson bill. It may have been before the Forty-ninth Congress. I think it was introduced by the Senator from New Jersey [Mr. MCPHERSON].

Mr. COCKRELL. Oh, yes; there was opposition to all of them.

Mr. BUTLER. Will the Senator from Missouri permit me just one interruption?

Mr. COCKRELL. Certainly.

Mr. BUTLER. I have an amendment pending to this bill which I am very anxious to have voted upon, and I am compelled to be absent from the Senate Chamber after to-day until Friday morning. I can scarcely ask the indulgence of the Senate, if the bill is to be pressed immediately, to postpone the vote until that time; but as the Senator from Indiana awhile ago intimated that he will call up the coinage bill reported from the Committee on Finance, I take it that bill will perhaps occupy the remainder of this week. I should be very glad to be heard on my amendment and to press it seriously.

Mr. ALDRICH. Mr. President, Senators on this side of the Chamber can not hear what is going on. Possibly we might be interested.

Mr. BUTLER. I do not think anything I said would be likely to make much impression on the other side of the Chamber, especially with the Senator from Rhode Island. So it does not make a great deal of difference.

Mr. ALDRICH. Possibly it might.

Mr. BUTLER. I was simply stating that I have an amendment pending to this bill upon which I am very anxious, indeed, to have a vote, but I am compelled to be absent from the Senate after to-day until Friday morning. However, I trust no final vote will be taken on the bill until that time. A proposition to repeal the 10 per cent tax on State bank circulation is the amendment to which I refer.

Mr. COCKRELL. Mr. President, I was showing what the national banks were earning for six months, from September 1, 1891, to March 1, 1892. Now, I take the next six months, from March 1, 1892, to September 1, 1892. Their capital then was $679,076,650, and they had up to that time accumulated the very small surplus of $237,761,865.23, or a surplus equal to 35 per cent of their entire capital. Their gross earnings for those six months were $73,448,066.11, or 10.81 per cent upon their capital. Their net earnings for the six months were $32,294,924.82.

That was 4.75 per cent as their net earnings for six months. What was the difference between the gross earnings and the net earnings? The difference between the gross earnings and the net earnings was $41,153,141.29. What became of that difference? They charged it off. That is the language used in the report of the Comptroller of the Currency. They charged off for loans and premiums $11,431,087.57, and then they charged off for expenses and taxes $29,722,053.72, making $41,153,141.29. For those six months they declared a dividend of 3.66 per cent, or $24,853,860.42.

Now, let us summarize the year. At the close of the year—not all gained in that year, but in the previous existence of the bank for twenty years (for the charters run only twenty years)—they had accumulated a net surplus of $237,761,865.23, or 35 per cent upon their entire capital was the surplus accumulated. Then, for the year from September 1, 1891, to September 1, 1892, they made a gross profit of their capital of 21.93 per cent and a net profit of 9.84 per cent, lacking only sixteen one-hundredths of being 10 per cent which they made. All kinds of expenses and charges and salaries and everything that could be devised was deducted out of the gross profits, and yet after everything was paid, after every item of expenditure and tax was considered, they had a net surplus of 9.84 per cent, declared a dividend of 7.44 per cent, and held back a surplus of 35 per cent of their capital.

Mr. President, I do not think that this shows a condition which demands that the Congress of the United States shall suppliantly bend to these corporate monopolies and give them rights and privileges and authorities which we refuse to all other banking corporations and all other individuals. Will any Senator in his seat explain to me why the Congress of the United States should authorize five or six individuals incorporated into

a national banking association and owning $100,000 in United States bonds to bring those bonds into the Treasury and get 100 per cent of their face value, dollar for dollar, in notes of the United States, and for which the United States is responsible, and leave the bonds in the United States Treasury and draw every dollar of interest upon their bonds, and then loan out the $100,000 for the highest rate of interest they can get, and be thereby enabled to make a clear net profit of 9.84 per cent and a gross profit of 21.93 per cent upon their capital?

Why shall this be granted to them and yet the State banks, the savings banks, the loan and trust companies, and the individual holders of the same kind of bonds be not allowed to receive from the Treasury one solitary dollar in exchange for the bonds when they have deposited there? I want some Senator to answer that question. That is the question here before the Senate to-day. I want some Senator to tell me why the Congress of the United States is under any kind of obligation to grant this special favor and privilege to these corporate monopolies, the national banks, and not to any other banks.

Mr. McPHERSON. May I ask the Senator from Missouri a single question?

Mr. COCKRELL. Yes; if I am given time to answer it.

Mr. McPHERSON. Three or four times I have heard the declaration made by the Senator from Missouri that the national banks are monopolies. I had always supposed that a monopoly was some kind of institution or an individual upon whom was conferred a special privilege. I should like to ask the Senator if any five persons in the United States who can raise $50,000 are not equally qualified to possess and become the owners of one of these monopolies in common with the present national banks?

Mr. COCKRELL. Yes.

Mr. McPHERSON. In what way then is it a monopoly?

Mr. COCKRELL. Whenever people take advantage of the law and incorporate themselves into a national banking association and deposit their bonds, then they become the favored monopolies; then they are granted rights and privileges which you refuse to grant to-day to any State bank or to any individual holder of bonds. Therefore I say they are monopolies; that they are to-day controlling the paper circulation of the United States. I say that any institution or corporation which possesses the power of controlling the paper circulation of the United States, or of any other country, is dangerous to the best interests of that country; dangerous to the best interests of the people; dangerous to republican institutions and to the very liberties of the people themselves, and that it will grow beyond the power and control of that people if it is permitted to go on and grow.

Mr. McPHERSON. The Senator is aware of the fact that the great complaint here is that the national banks have retired circulation; they do not seem to enjoy this great privilege which the Senator says made them monopolies.

Mr. COCKRELL. That is exactly what they have done; and they have aided in producing the present panic.

Mr. McPHERSON. There does not seem to be any disposition on their part to issue enough circulation to control absolutely the entire circulation of the country.

Mr. COCKRELL. Why did they not, Mr. President? Let us examine and see. Why, these beneficiaries of the Government, the favored individuals of the Government, bought their 4 per cent bonds at par from the distinguished Senator from Ohio in 1879, when he was telling us that if we passed a free-coinage bill we would prevent him from selling those bonds at par. But inside of one year $600,000,000 of the 4 per cent bonds were issued by the Treasury and sold to the national banks, one national bank, as the Senator may remember, purchasing $60,000,000 of the bonds at one time. They were distributed around at par.

Then it was that they had their bank circulation. They could get circulation then; but what occurred? These were gold bonds. They were coin bonds, but they were considered and interpreted to be gold bonds. The premium began to go up, and finally the premium ran up to 28 per cent. What did the national banks do when the premium ran up so high? They sold their bonds at the highest premium and retired their circulation, regardless of the fact whether it was to the interest of the United States or not.

An individual would do the same thing. I am not saying that the banks have not the right to do this. Certainly they do just as the Bank of England does to-day. It has the legal right to raise the rate of interest, which it has done, from 1 to 5 per cent, and thereby depreciated the selling price of every commodity in England. The inevitable result is an increase of the rate of interest, and this is done for the express purpose of reducing the price of every commodity in England and retaining gold.

The national banks have the right to sell these bonds. They have a right to do just as the Senator or any other man having property of that kind might do. They do not care a continental cent whether or not they benefit the tax-payers and consumers and producers of the United States. It was a financial movement, and it was made for their own benefit. They are not here to-day asking for this $19,000,000 for any patriotic purpose, but to increase their profits; to make the people of the United States pay them additional interest and additional profits upon their capital. It is purely personal.

There is not a particle of it patriotism or philanthropy or disinterestedness or for the purpose of relieving the financial stringency. They can not come here in the name of liberty and patriotism and benevolence and take $19,000,000 and charge 1½ per cent for loaning it out, as the banks are doing now. It is a pure, cold, selfish, heartless proposition to increase the circulation $19,000,000, provided it can be done so as to enable the national banks to realize profit from it. That is what the Senator is contending for, nothing more, nothing less, and nothing else.

Mr. McPHERSON. Will the Senator yield to me for a moment?

Mr. COCKRELL. With pleasure.

Mr. McPHERSON. In view of the amendment the Senator has offered and the argument he is making—which, while very emphatic, is quite amusing—he places in the hands of the holders of these greenbacks which he proposes the Government shall issue, the power and responsibility of returning them to the Treasury, which would make it incumbent upon the Treasury to cancel them. I should like to know how the country could endure, under any condition of circumstances, such a contraction of the currency as would be possible under the Senator's amendment?

Mr. COCKRELL. Oh, my dear good friend, the Senator from New Jersey, knows perfectly well there would not be a dollar of contraction. That is the reason he is fighting it. I hope the Senator will not undertake to get under that kind of cover. The Senator is opposing this proposition because he knows the holders of these bonds will take them to the Treasury and take out greenbacks and never return them for three, four, five, or ten years, and probably not until the bonds mature. There is no danger of any contraction there. He is opposing it because he thinks it will inflate the currency of the country and give us more money.

Mr. McPHERSON. The Senator will do me the justice certainly not to misrepresent me. I am sure he will do that.

Mr. COCKRELL. As a matter of course.

Mr. McPHERSON. I oppose the amendment not upon that ground; but I oppose it upon the ground that the Government bond to-day is a deferred obligation, for which the Senator proposes to substitute a demand obligation, when the Treasury is in no condition to make any such exchange, when the Treasury of the United States is depleted, as it has been, by dissipation, so to speak. I use the word not in its full meaning, but in a restricted sense.

Of course the money that was in the Treasury at the end of Mr. Cleveland's first Administration has been paid out for all sorts of things, the increase of pensions, subsidies, bounties, and things of that kind, until when the present Administration came into power we found that the surplus in the Treasury had been exhausted; we found there was no money in the Treasury, and we had to proceed from day to day to collect and to pay bills, as it were from hand to mouth, to use a common expression.

Therefore, when this pressure came upon the Treasury the Secretary was obliged to encroach upon the reserve fund of $100,000,000, which was placed there to secure the $346,000,000 of greenbacks. Unless the Senator can show some necessity for such a thing, and unless he can show his willingness to place in the Treasury as a further reserve fund a sufficient amount of gold to stand side by side with the gold now in the Treasury, to keep the greenbacks now out and those he proposes to issue on a parity with gold, and redeemable in gold, then he is fixing a situation for this Government which it will be impossible to carry out in practice.

Mr. COCKRELL. Mr. President, the Senator talks about the necessity for additional money. Let us see whether we have money enough in this country or not, and let us see whether the United States Treasury is capable of maintaining $500,000,000 of greenbacks in circulation upon its present reserve of $100,000,000 in gold in addition to the silver in the Treasury. I take the report of the Comptroller of the Currency for September 30, 1892, and I find that there was due to the national banks on loans to individuals $2,153,498,829. I find there was at the same time due to other banks—State banks, private banks, savings banks, loan and trust companies—$2,470,410,287. There was a liability to the banks alone upon loans made by them to individuals of $4,623,909,116.

What did the banks owe? Many of them only had a small capital comparatively, much less than a million dollars. There was due from the national banks on deposits $2,333,630,716, and

there was due from other banks $3,029,129,844, or a total liability of the national banks to individuals of $5,362,760,560.

What are the cash assets of all the banks in the United States to meet all these vast liabilities? The cash assets of all the national banks are $388,615,719, and the cash assets of all other banks $197,789,384; total, $586,405,103.

What per cent was that on their liabilities? Ten and ninety-four one-hundredths per cent in cash of their liabilities. What was the cash per cent of the national banks alone? The national banks alone held 16.66 per cent, or one-sixth of the amount of their liabilities, and all the other banks held 6.53 per cent, or one-sixteenth part of their liabilities—one dollar for every sixteen dollars. To-day there is $100,000,000 of gold alone, not counting the silver in the Treasury for the redemption of greenbacks, 28 per cent, nearly twice as much as all the banks held for their liabilities. If the national banks can maintain their paper with 16.66 per cent, or one-sixth part, the United States can increase theirs to $500,000,000, and then have the same amount of reserve as the banks—one-sixth. There is no trouble about that.

But what is the trouble now? What is the matter with the money—with the silver dollars? The despised 60-cent silver dollar is selling in New York to-day for 1½ per cent premium. Did you ever think of that? The 60-cent dollar, about which we have heard so much here for the last twelve years or more, or the 70-cent dollar, is selling to-day in New York to bankers and gold monometallists at 1½ per cent premium, and the despised silver certificates are selling at the same price. What is the matter? Is there too much currency? Is it because there is too much money? No; it is because there is not enough.

Let Senators look at it. It is a plain proposition. When one-tenth of the depositors in all the banks of the United States draw out their money there is no money left, and the banks can not loan a dollar. Their creditors are owing them and they can not get money to lend; it is not in the country. The whole fabric is one of confidence, faith, hope, and charity. It is not want of confidence on the part of the banks. Oh, no; it is not the bankers who have lost confidence; it is not the moneyed institutions which have lost confidence, but it is the owners of the deposits in these banks who have lost confidence in the banks and have taken their deposits out and paralyzed the industries of the country.

I am sorry they have done it, but the banks have nobody to blame but themselves. I do not say all the banks are to blame, but the bankers in New York, many of whom have no citizenship in the United States, who are foreigners and care no more for the United States than they do for hades, and not as much, for they may care for that [laughter], are the ones who are responsible. They are the ones who have caused the trouble. Why? Because there is not money enough in this country, and when a panic appears, if depositors seek to draw their money out of the banks, everything is paralyzed and confidence is gone.

There is not a banker living who does not know to-day that the silver dollar coined by the United States is just as good as the gold dollar, and every man, woman, and child who has a dollar in the banks and goes for it, will take a silver dollar as quickly as a gold dollar, or a Treasury note as quickly as a gold dollar, and put it in their own pockets, or put it in a savings institution, lay it aside there, and let it lie there until their confidence is restored and strengthened. The depositors, the owners of millions of dollars in this country, are the ones we want to benefit. I do not think the national banks will give me credit for being even fair to them, but I know I am; I know I am just to them, and I want to say to the depositors in the banking institutions of the United States that they have made a great mistake in withdrawing their money from those institutions.

All the banking institutions in the United States to-day are in a better condition than in any other nation in the world outside of France. The banking institutions of this country to-day are in a safe condition; they are sound. If there was money enough in the country they could promptly meet their liabilities. They have available assets of responsible parties who would pay if the money could be obtained; but they can not get the money.

I took some pains to examine, in order to see whether the national banks were really in a good condition, whether there was any real danger, whether the depositors had any real ground for losing confidence in the banks. I know they have lost confidence, and everybody knows it.

Everybody knows the depositors, the actual owners of the money, who do not owe anything, have gone and taken it out of the banks. I wanted to know whether there was any real foundation for the destruction of confidence, and I examined the subject very closely. I have made a statement of the condition of the banks on the 30th day of September, 1892. I will first take the national banks. They had a total of actual assets of $3,038,235,715.22, and their liabilities, outside of capital stock, overplus, and those things which can not be realized upon until deposits are paid—I mean the actual liabilities—amounted to $1,987,528,220.91. That left an overplus of $1,050,707,494.31.

What was that overplus? It was a capital of $686,600,000 in round numbers; it was a net surplus of $238,900,000, undivided profits, $101,600,000; which makes an aggregate of $1,027,100,000. So the national banks have had ample resources, not considering their money at all, not counting the money in their vaults, to meet their liabilities provided there was money enough in circulation. That was the only trouble.

What were their loans? What were their assets? Let us examine the assets for a moment. They had loans to the amount of $2,171,000,000, nearly $600,000 more than their liabilities to depositors; they had United States bonds, not for the purpose of securing circulation, $20,200,000; they had of stocks and bonds $154,500,000; they had in reserve agents $236,400,000; they had owing to them by others than national banks, $32,500,000; they had real estate and mortgages to the amount of $87,900,000; they had of specie $209,100,000; in legal tenders $104,300,000, and in United States deposits $22,200,000.

What were their liabilities? Their liabilities to depositors were $1,779,300,000, and to State banks $178,600,000, and other liabilities $29,600,000, making the total of their liabilities $1,987,500,000, leaving an overplus of $1,050,600,000.

I say frankly that it was exceedingly gratifying to me, when I made these close calculations, to find that the banks of the country were in such a good condition as they are.

Take the savings banks. Their resources were $3,751,649,173. Their aggregate liabilities were not nearly so great as those of the national banks, but greater proportionately. I have given these figures simply to show that there is an absolute necessity for an increase of the paper circulation of the United States, an increase of the money of the United States, and I ask that that currency shall be legal tender. Legal tender is what makes money. Gold without legal tender is not money; silver without legal tender is not money, whether coined or uncoined. It is the legal-tender quality which gives to it value.

Look at this indebtness, billions upon billions of dollars. We ask that the individual holders of bonds may have the rights which the national banks have, only with the disadvantage of one-fourth of 1 per cent; in other words, we want to place the citizen upon an equality with the banker, the State bank upon a comparative equality with the national bank. We want to give them all a chance to get money upon our interest-bearing bonds. We want to give them a fair chance; but it seems from what the distinguished chairman of the Committee on Finance has said that there is to be no chance, that the only money which the oppressed people of the United States shall be permitted to receive must come through the hands of the national banks with whatever rate of interest they may choose to charge; whilst they are receiving the full amount of interest due upon their bonds. This morning a proposition was voted down to authorize $25,000,000 of greenbacks to be issued for $25,000,000 of interest-bearing bonds, which, if carried, would have increased the legal-tender money of this country $25,000,000, would have saved the taxpayers of the United States $500,000 annually, and would have added to the actual surplus in an exhausted Treasury over $20,000,000.

Why? Simply in order that the national banks might get $19,000,000 of additional circulation. Where is the justice, the equity, the fair dealing, the honesty in the Senate of the United States treating all the other banks and all the other holders of United States bonds in this way, and granting this special favor, privilege, and right to the national banks alone?

Mr. President, we have not money enough in this country; and here is a proposition, a fair proposition, a just proposition, in which there is no danger to the United States, which provides for the issue of a legal-tender note, for which we are to hold our own bond as security. No danger can come from it. The people will not take these notes back, surrender them, and thereby contract the volume of the currency.

I appeal to Senators why deny this to the people of this country? Why will you compel the business of the country to be done upon the diminished and insufficient volume of money which exists to-day? Why do you refuse to allow anyone to obtain money unless it comes through the national banks?

This question has to be settled. The Senate of the United States must determine whether the national banks alone, when they hold United States bonds, shall have the right to get the equivalent of the greenback, dollar for dollar; because the national-bank note is simply a greenback, pure and simple—nothing less and nothing more.

I ask that a letter which I have just received from the Acting Director of the Mint and also two circulars from the Treasury Department may be printed as separate documents. They are all three from the Bureau of the Mint. One is "Monetary systems and approximate stocks of money in the aggregate and per

capita in the principal countries of the world." I believe my colleague had that in his speech, but it was not ordered to be printed as a separate document.

I also have the "Production of gold and silver in the world—1792–1892." I see that the Director of the Mint has made some correction of that, and I ask that it may be printed as corrected.

Mr. TELLER. What is the first paper?

Mr. COCKRELL. The first paper which I have is the "Production and coinages of the principal countries of the world for the years 1873–1892."

Mr. TELLER. Has the Senator the statement from the Mint purporting to give the amount of gold and silver in the different countries of the world?

Mr. COCKRELL. I have that as a separate document.

Mr. TELLER. Has the Senator asked to have it printed?

Mr. COCKRELL. Yes.

Mr. TELLER. I should like to say to the Senator that I hardly think it is worth printing, for it is so absolutely erroneous in many particulars that it ought not to be printed as a document.

Mr. COCKRELL. I have not had time to make any examination and comparison of it.

Mr. TELLER. For instance, if the Senator will allow me——

Mr. COCKRELL. Certainly.

Mr. TELLER. The statement is made there that the Government of Russia had $250,000,000 in gold. Is not that the amount given?

Mr. COCKRELL. Yes; $250,000,000.

Mr. TELLER. The Bank of Russia has $100,000,000 more than that, and I suppose the Government of Russia has of its own very nearly if not quite twice that. Of course, part of the amount in the Bank of Russia belongs to the Government. It is claimed, however, by those who ought to know, that the Government of Russia can put its hands on $500,000,000 of money. I am told—and it is somewhat difficult to find that out—that it has more than $250,000,000 of gold on deposit in several banks of western Europe. To say that Russia has only this amount of gold, stated in the papers referred to, is simply deceiving.

Mr. McPHERSON. What was the amount, may I ask the Senator?

Mr. TELLER. Two hundred and fifty million dollars; while in February last the statement of the Bank of Russia showed that they had $330,000,000, and they have been adding to it ever since.

Mr. COCKRELL. The statement I have is of the production and coinages of the principal countries of the world for the years 1873–1892. I want to call the attention of my monometallist friends to the difference between the production of gold—to the fact that every year we consume 50 per cent of the gold production of the world for industrial purposes, and at the same time every year we coin more gold than the world produces.

I ask that the papers I present may be printed as separate documents.

The VICE-PRESIDENT. That order will be made in the absence of objection.

Mr. TELLER. As this subject is before the Senate, having criticised the statement, I wish to make one further criticism.

That statement credits the people of Great Britain with having $550,000,000 of gold. There is no respectable authority worthy of any attention which will sustain that statement. It can not be demonstrated that there is in Great Britain $550,000,000 of gold. Some of the best authorities in that country have asserted that there is not to exceed $400,000,000; some of them have even put it lower; I think no authority has put it higher than $500,000,000.

Mr. CALL. Mr. President, I do not desire at this time to take any part in this discussion, but I have in my hand a letter from one of the most eminent citizens of this country in all industrial enterprises. I think, without expressing any approval or disapproval of the opinion which he expresses in this letter, that the opinions of men who are eminent in the conduct of the great business enterprises of the country should receive respectful consideration. The letter is from Mr. H. B. Plant, the president of an extensive railroad association, and who is largely interested in enterprises of this description in Florida. He gives his own opinion, and also that of another citizen of New York, largely connected with interests in Florida, and engaged in prosecuting great railroad enterprises there.

The letter is pertinent to the amendment offered by the Senator from Missouri, and sustains that amendment in the exhibition to the country of the necessity of a great increase of the currency and of the circulating medium of the country for that purpose. I ask that the paper be read at the desk.

The VICE-PRESIDENT. The paper will be read.

The Secretary read as follows:

THE PLANT INVESTMENT COMPANY,
New York, August 19, 1893.

DEAR SIR: In calling your attention to the present condition of the finances of the country I can not expect to place you in possession of any facts that you are not already more fully informed of than myself, but it seems to me imperative that the Sherman bill should be promptly repealed, and for such strong reasons that it is hardly worth while for me to attempt to enumerate them. The pinch in money has become very severe at the North and West, and if it continues will doubtless be felt equally if not more so throughout the South. So far as Forida is concerned, while it may be said to have escaped thus far, it is certain that in a short while all interests will become as much involved and the whole community affected as badly as in any other section.

I have recently returned from Florida, having passed most of last week there, and found a very general anxiety among the people on this subject, all looking to Congress for the prompt repeal of the Sherman bill as the only feasible remedy. Of course, after it there must come other legislation, but our attention now is drawn especially to the condition of things in the State in which we are so much interested.

I had a few moment's conversation with Mr. Flagler, and learned from him in a semiconfidential manner that it was becoming a very difficult matter for him to provide currency and silver sufficient to pay off the hands now engaged in the construction of the East Shore Road and the work being done at Lake Worth. He is called upon, he says, to pay a premium for money, and unless action by Congress is promptly taken he will feel compelled to suspend operations. As he has several thousand mechanics and laborers employed, we can readily see the result in that State of turning them loose, as well as the evil effect it would have upon others, and I must earnestly urge that you will exercise your great influence towards the pr mpt repeal of the Sherman bill, and subsequently to the enactment of such laws as will tend to restore confidence and prevent as far as possible a collapse in the business of Florida in the immediate future.

I have myself in contemplation some other work which would give employment to a good many people in Florida, but which I shall be compelled to defer while the present condition of financial affairs continues, as with all the credit we can command, it is impossible to get money to pay for the work done.

Respectfully, H. B. PLANT, *President.*

HON. WILKINSON CALL,
United States Senate, Washington, D. C.

Mr. PALMER. Mr. President, I am not prepared to vote on the amendment proposed by the Senator from Missouri [Mr. COCKRELL] because I have not fully understood from his own statement why it has been offered. It certainly proposes a very radical change in our existing financial arrangements. It will surely convert a very large amount of the Government indebtedness, which is now by the terms of the bonds postponed to a future day, into an immediate demand upon the Treasury.

I understand that the Senator proposes that all those bondholders who have already received national bank notes may return them and receive Treasury notes in place of the outstanding bank circulation. The amount of that circulation is understood by the Senate, and I understand that the amendment proposes to issue legal-tender notes for the 10 per cent which has not been allowed to the national banks heretofore.

While I am not prepared to say that the holders of bonds will immediately present them—for I know nothing about that—I mean to say that the effect of the amendment, if adopted, will substantially make all the outstanding bonds due to-morrow, due at once, because, without reference to the time of the maturity of the bonds, the holders may present them at the Treasury; and, whether they are national banks or not, they may obtain legal-tender notes. The spirit and effect of the amendment will be to convert the whole outstanding national bank circulation into immediate demand notes—notes upon which demand may be made to-morrow or any other day, if I correctly understand it.

Mr. COCKRELL. Oh, no; not at all. The amendment only refers to the deposit of bonds by any State bank. Let the amendment be again read.

Mr. PALMER. I ask that the amendment may be read.

The VICE-PRESIDENT. The amendment will be read.

The Secretary read the amendment of Mr. COCKRELL.

Mr. PALMER. Then, Mr. President, I understand the amendment would operate by way of addition to the bill reported by the Committee on Finance, and would not disturb the bill in that respect.

Mr. COCKRELL. Not at all. It would only affect other than national banks.

Mr. PALMER. Leaving the national banks to stand upon the ground they now occupy.

Mr. COCKRELL. That is it.

Mr. PALMER. But as respects any and all the bonds other than those held by the national banks, it would allow the immediate conversion of those bonds, whatever may be the date of their maturity, into demand notes upon the Treasury.

Mr. President, I confess I have never favored national banks, but have always regarded them as I have other organizations under the law. I have always sympathized with my fellow-citizens who are interested in national banks to this extent, at least, that I thought they were entitled to all the fair and just advantage the law gives them; and whatever profits they can gain in obedience to law may be regarded as fairly theirs.

Just what the precise sum may be I am unable to tell, because I do not know about the amount held by national banks, nor do I know but that the national banks may, for a few of the advantages which may or may not be afforded them, surrender their bonds and take up their circulation, and that others may use these bonds for the purposes I am about to indicate.

I infer, therefore, that by the very fair operation of this

amendment a vast amount of national bonds which are yet to mature may be converted into a matured indebtedness, which would give to the holders the right to demand gold at the Treasury.

Mr. President, has the Senator from Missouri considered what might be the effect of that legislation upon the Treasury? It is our misfortune just at this moment that ours is a political currency, that is, that the United States Government has become the very pillar of our credit; all the property of the country substantially depends upon the credit of the United States and its ability and its willingness to redeem and to protect its own circulation. That is our condition to-day.

Is it wise to create these new demands upon the Treasury, which may lead to the complete withdrawal of its resources? Why should it be done? Why expose the Federal Treasury to this new danger? It is admitted now that the Treasury has all the burden it can bear. We are busy devising expedients for the relief of the Treasury. It is staggering under its load. I submit, is it wise in conservative statesmen, conservative legislators, to subject the Treasury to this new peril and to this new responsibility?

Is this the time for a radical change like this, the result of which none of us can foresee? When all the business of the country is laboring under embarrassments, which have been so often partially described—because we can have no full description of them, for human language is incapable of describing the actual condition of the business of the country—is it wise at this time to engage in an experiment which may involve such serious consequences?

It is practically to say to the Secretary of the Treasury, "You have now an amount of public indebtedness outstanding, and the prosperity of the country, the restoration of the business of the country depends upon your ability to recover and maintain the credit of the country and place it beyond doubt, so that there may be no hesitation or fear in respect of what may be the future operation of the Treasury." Is it wise, therefore, to open the Treasury to this new danger? I may magnify the danger in my imagination, but I think I can see the peril of legislation like this.

I do not know what the wisdom, or what the cupidity or the policy of the men who own money in this country may dictate. I can not say that it is true that the legal-tender notes have been held by the people, There has been a very slight demand upon the Treasury for gold in redeeming them; but when this new flood comes, I do not know how much it will amount to. Of course it may be many millions; it may be twenty millions, it may be fifty millions, it may be one hundred millions; I do not know. It is a doubtful experiment.

None of us can see the extent to which it will influence or operate upon the Treasury; yet in view of the peril which surrounds the country, when everything depends upon the ability of the Secretary of the Treasury to maintain the credit of the Government, without consulting the Secretary of the Treasury, without knowing what his plans are, he being supposed to have the most extensive knowledge on this subject, knowing the wants of the Treasury, and being aware of its resources, and the Treasury being the corner stone, the very foundation of national credit, without any precise notion of how this is to eventuate, the Senator from Missouri proposes to open this new flood of demands upon the Treasury, the effect of which none of us can anticipate.

The VICE-PRESIDENT. The Senator from Illinois will please suspend to enable the Senate to receive a message from the House of Representatives.

Mr. PALMER. Certainly.

PURCHASE OF SILVER BULLION.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes;" in which it requested the concurrence of the Senate.

Mr. VOORHEES. I ask that the bill just received from the House of Representatives may be laid before the Senate and referred to the Committee on Finance.

The VICE-PRESIDENT. The Chair lays before the Senate a bill from the House, the title of which will be reported.

The bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes, was read twice by its title, and referred to the Committee on Finance.

Mr. VOORHEES. I desire, with the permission of the Senator from Illinois, to accompany the reference of the bill with a statement, which may be satisfactory to the public. There will be a meeting of the Committee on Finance to-morrow, and there will be very prompt action in connection with this measure and the measure already reported from that committee.

INCREASE OF NATIONAL BANK CIRCULATION.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. PALMER. Mr. President, it was my purpose to occupy the attention of the Senate for a very short time. I am deeply impressed with the necessity for the greatest conservatism now. The passage of the bill by the House of Representatives, which has just been reported, indicates more than before the necessity of conservatism.

I insist that the scheme proposed by the Senator from Missouri is much more far-reaching than—I was about to say, than he supposes; but I will not say that—it is much more far-reaching than I can see. It may have less in it than I imagine; it may have more in it than he imagines. It is a dangerous time to attempt a change so radical as this, whatever its effect may be.

I predict that under his amendment the whole circulation of the national banks may be withdrawn and that the whole circulation of the national banks may take the form of legal-tender Treasury notes, because, while I confess that I suppose in the first instance the national banks might participate in this provision, the methods of evasion are so easy, they so readily occur to ingenious men, that whenever the interests of those who control the present national banks will justify it, or seem to demand it, there will be expedients by which this great change will be made, and, in addition to the increase of Treasury notes which may follow by the action of the State banks and the savings banks, the whole mass of the outstanding indebtedness of the country may be converted into legal-tender notes and may be presented to the Treasury and gold demanded. If that may be the consequence, is it not wise that we pause before we adopt a measure so radical as this?

I want to say here, before I proceed further, that I know nothing more pernicious, nothing more injurious to the national character than these perpetual assertions of the poverty and helplessness of the American people. We have been taught to tremble at the enormous money power of England. That is the favorite invocation to alarm us. I insist that the American people are not mendicants; they are not cowards; they are not ni awe of this tremendous money power, to which allusion is made so very often. They need rational legislation; not for the protection of the poor or the rich, because the rich of to-day may be the poor of to-morrow, as events occurring all around us fully demonstrate. None of us can tell who will constitute the rich or the poor of the next generation.

What we want is conservative and inspiring legislation; not appeals, not denunciations; but we need the inspiration of courage, and our people will pass through this storm as they have passed through others on much more serious occasions. But our people demand conservatism; they demand legislation which has the sanction of experience—legislation which has the sanction, too, of careful regard for the rights of all, not based upon fear of one portion of our countrymen and supplications uttered on this floor in behalf of another. That is not statesmanship. They need conservative, inspiring legislation, and no radical change ought now to be attempted in the financial policy of the Government.

The national banks were organized many years ago to meet conditions which have happily passed away. They are performing their office in our monetary affairs. They have made money beyond all doubt, although many of them have failed! I concede their right to make whatever money they can fairly make under the law; but where we can control them for the public good we should do so with an unsparing hand. But they are at present a part of our financial system. I hope the time will come when they will be unnecessary, for I hope the time will come when our finances will not depend upon the result of every election of members of Congress or President, when there will be stability, when men may hope that the earnings of a lifetime will not be disposed of and crushed out by the result of a Presidential election. I hope for that degree of stability.

I repeat, this is no time for experiments dictated by a policy which may be promising and may look hopeful. We have all seen legislation designed to accomplish one object perverted to another and a different end.

Mr. President, this proposition is practically—I say "practically" because that may be its result—to convert all the indebtedness of the United States into legal-tender promises to pay. The Senator from Missouri—and I certainly sympathize with him in that feeling—speaks of our limitless resources. They are abundant and abounding; we are all proud of them; but it must be recollected that the resources of this country are only based upon the taxing capacity of the people. Because we

can do it, is there any reason why we should throw that burden upon the people, or is it enough to say we can take care of it?

We do not know what the consequences may be if $100,000,000 of gold-demand notes are created by our act to-day and they at once confront the Secretary of the Treasury, with all the load he is now staggering under, and that, too, without consulting with him and without that thorough knowledge of all the matters which are within the knowledge of the chairman of the Committee on Finance, who is the gentleman whose business it is. If we, in obedience to some most laudable motive, suddenly create this mass of new imperative indebtedness what may be the consequences?

The Senator says we have resources to meet the indebtedness. Undoubtedly we have. I have received a letter to-day from a friend, who says the true solution of our troubles is to issue bonds to the amount of $300,000,000, and hold them in the Treasury. We can borrow money to meet even $100,000,000 of new demand notes. Will the Senator say that those new demand notes will not be presented; that that demand upon the Treasury will not be made? The Senator reasons from the past, but does he not know better than I the enormous power of aggregated wealth? Does he not know, too, that all the speculative wealth of the country is in combination for self-advancement? That is a fact.

I conclude by saying that if we place ourselves, by such legislation as the Senator from Missouri proposes, in the power of this much-dreaded money power, in the power of Lombard street and Wall street, of which the Senator from Nevada [Mr. STEWART] so frequently speaks, we simply change the system; we anticipate the payment of debts not yet due, and we invite upon this oppressed people demands which must be met by resources either from taxation or by new loans. I deprecate new loans; I deprecate increased taxation. I desire to reduce taxation wherever it can be done, and so I dread the legislation proposed by the Senator from Missouri. I can see no good that it will produce.

The Senator says let the people have what the banks have. The proposition of the Finance Committee is to allow an issue which would not exceed $20,000,000 probably—I do not know the exact amount——

Mr. COCKRELL. That depends upon the amount of bonds they will buy. They might run it up to thirty, or forty, or fifty million dollars.

Mr. PALMER. Very likely. The Senator is much better instructed on these points than I am; but let it be the worst, $50,000,000. We encounter the possibility of $200,000,000. The $50,000,000 would be of remote liability. We, by the adoption of this amendment, would invite direct liability.

The Senator describes a process by which the holders of national-bank paper may reach the Treasury. It may be so. The Senator makes a direct path; makes a path so short that it may be stepped in a moment, and a bond due twenty years hence, or whenever our bonds are due——

Mr. COCKRELL. Not until 1907.

Mr. PALMER. Under the Senator's proposition a bond not due until 1907 would be suddenly converted into a thousand dollars of legal-demand paper. What the dictates of interest may be I can not tell. I do not want to expose the country to that peril. Where we have an extension, when the time of payment is already fixed at a remote day, let it stand there. Let us not invite immediate demands upon a Treasury which is already staggering under its burden and which must be maintained, because upon the Treasury rests the whole superstructure of national credit.

Mr. ALLEN. I should like to ask the Senator what amount of bonds we have now outstanding for national bank purposes?

Mr. COCKRELL. The amount of bonds outstanding on the 1st of August, 1893, was $25,364,500 4½ per cent bonds, payable at the option of the United States, and $559,605,250 of the funded loan of 1907, bearing 4 per cent interest.

The national banks hold a certain percentage of that, but I am not able to state the exact amount they now hold. I have the statement of the amount that they held in September last. It was then $163,275,300, and the State banks and incorporated companies held $154,025,395, making $317,000,000 in round numbers. The balance was outstanding in the hands of I do not know whom.

Mr. ALDRICH. If the Senator will allow me, I will say that, in addition to those there was also a certain amount of bonds issued in aid of the Pacific railroads, which are available.

Mr. COCKRELL. Yes; $64,623,512 of 6 per cent bonds, which begin to mature in 1895.

Mr. ALLEN. Can the Senator state the amount of bonds which is held by the national banks at this time?

Mr. COCKRELL. I have not the statement up to this time; but the national banks on the 30th of June held $176,588,250 United States bonds of various kinds to secure circulation, and held $15,247,000 to secure deposits.

Mr. ALLEN. Mr. President, I desired this information more especially for the purpose of ascertaining whether the objection made to the amendment of the Senator from Missouri [Mr. COCKRELL] by the Senator from Illinois [Mr. PALMER] was a valid objection. I have no desire to consume unnecessarily the time of the Senate, but if the people of this nation are to be again burdened with an additional indebtedness so far as the national banks are concerned, it is just as well that they should bow their heads now to the yoke as at any other time; but I have heard so many things occurring within the last few days in this Chamber that I can not let the opportunity pass without mentioning some of them.

The Senator from New Jersey [Mr. MCPHERSON] has been constant, in season and out of season, in advocating the adoption of the bill now before the Senate, but whenever the question has been put to him, what advantage has the measure now proposed to be adopted over the issuance of legal-tender notes, he has never yet, in my judgment, succeeded in answering the question. The question has been put to the Senator repeatedly, and has been put to the Senate, what advantage is there in adopting this national bank bill that is not found completely and fully within the amendment offered by the Senator from Missouri?

Certainly the great thing to be accomplished, according to the concession of all Senators, is to relieve the present strained condition of our finances. We are told that we have reached an exceptional period in the history of this nation, and that it calls for all the statesmanship and all the patriotism of Congress to relieve that situation; but yet, when the Senator from Missouri proposes an amendment which not only reaches the evil the nation is afflicted with, but gives the nation more money than this proposed bank bill, that moment the Senators who claim the nation is afflicted with an evil which we should promptly relieve find some fault with it. I do not know whether it is because it does not come through the instrumentality of the national banks or not; but it occurs to me the same objection which is made to the amendment of the Senator from Missouri is valid against the bill proposed by the Finance Committee.

What is that objection? In the first place, it is said that the holders of greenbacks issued under this amendment may deplete and loot the Treasury Department of its gold. That may be true; but the same power exists under the bill now under consideration. Persons holding bank notes issued under this bill can change them for greenbacks or for coin certificates, and go to the Treasury Department and get their gold. So there is no safeguard in the bill under consideration which does not lie in the amendment of the Senator from Missouri.

Then the Senator from New Jersey [Mr. MCPHERSON] and also the Senator from Illinois [Mr. PALMER] make this objection, that the power is limitless under the amendment of the Senator from Missouri, and they claim, I suppose, that the country will be flooded with too much money. The same objection exists to the bill under consideration that exists to the amendment of the Senator from Missouri; for, if it be desirable upon the part of persons holding Government bonds to issue money, can money not be issued to the amount of $400,000,000 or $500,000,000 to-day under the bonded system that we have. If there is money in the transaction, what is to prevent the organization of more national banks all over this country, and swelling the volume of paper money $400,000,000 or $500,000,000?

The same objection that is made to the amendment of the Senator from Missouri lies to the bill itself, except that it gives to the national banks additional power over the industries and the destinies of this nation.

The Senator from Illinois said that he did not like to hear this cry of the masses. I am frank to say that I do not like to hear it; but I know of no reason why the national banks or corporations of any kind should control the destinies of this nation. This is a Government of the people, not of the banks. It has been a Government of the banks too long for the welfare of the masses; and the same privileges which are extended by law to the national-bank organizations of this country ought to be extended to every valid and sound corporation and individual in the nation. There is no reason why they should not be.

The other day, when the Senator from Kansas [Mr. PEFFER] introduced a resolution, which, in my judgment, ought to have passed without an objection, and which was to inquire into the violation of the laws of the nation by certain banking institutions in the country, the Senator from Minnesota [Mr. WASHBURN], the Senator from New Jersey [Mr. MCPHERSON], and the Senator from Iowa [Mr. ALLISON], if I am not mistaken, told us by inference, if not in plain language, that we ought not to say anything about that for fear the people of this country would become aware of the fact. We heard the strange doctrine uttered in the

Senate of the United States that the sovereign people of this nation are not entitled to know what is going on. If we are here legislating for 70,000,000 people, are they not entitled to know what we are doing?

Have they not a right to demand, every man, woman, and child of them, that the Congress of the United States call a halt upon the violation of the laws of this country? The same things that are being done openly and in violation of law in New York will not be tolerated elsewhere in the country. National banks have been closed up in the West, amounting probably to a hundred or more, simply because they suspended for a time honoring their checks, they having ample resources, and yet the banks in the city of New York have been openly violating the law for the last ten days or longer, and the Senate is not even permitted to talk about it or to obtain information from the Treasury Department in regard to it. Why? Because the people, who are our masters, and who send us here to legislate for them, may become alarmed, and favored banks may be precipitated into ruin and into disaster.

Then the Senator from Iowa told us, when the resolution of the Senator from Kansas was before the Senate, that we probably should have to send to New York to find out whether it was true that the banks were violating the law or not. The way the Senator was going to find out was to send some person to the banks and ask them if they had violated the law! A strange doctrine, is it not? If you are going to charge a man with the commission of a crime, if you are going to punish him for the commission of that crime, you must first send someman to him to ask him whether he is guilty of the crime or not!

I have been attentively listening, for the purpose of finding some excuse for the passage of this measure, which did not obtain, so far as the amendment was concerned, but I have been unable to find it. I find, however, that Senators are rising and endeavoring to protect the interests of these banks, telling us that the nation is going to be hurled into ruin, yet the cry of the people in New York, the cry of the men, women, and children who are unemployed does not disturb them.

When throughout the length and breadth of this nation there are thousands and hundreds of thousands of men, women, and children going almost naked and starving, it does not seem to arouse a sympathetic chord in the nature of these gentlemen. The poor may appeal for assistance; they may appeal to the Congress of the United States for relief from the present situation; the great masses who are suffering in consequence of this evil legislation may appeal, and appeal in vain; but the moment the interests of the national banks are touched, the moment the interests of the corporations, which bleed the life out of the people of this country, are touched, Senators undertake to hush us into silence for fear that speaking out loud will cause some of them to go into chaos, and the poor people be ruined.

I have seen no objection to the amendment of the Senator from Missouri which does not equally apply to the bill reported by the Finance Committee.

EXECUTIVE SESSION.

Mr. GORMAN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After forty-five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 5 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, August 29, 1893, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

MONDAY, *August 28, 1893.*

The House met at 12 o'clock m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of Saturday last was read and approved.

Mr. John M. Wever, Representative-elect from the Twenty-third District of New York, presented himself, and was duly qualified by taking the oath prescribed by law.

LEAVE OF ABSENCE.

Mr. GRAHAM, by unanimous consent, obtained leave of absence indefinitely, on account of sickness.

REPRINT OF REPORT ON RULES.

The SPEAKER laid before the House the following request:

Mr. CATCHINGS, from the Committee on Rules, requests a reprint of Miscellaneous Document No. 11 and Report No. 1, copies of the same having become exhausted.

There being no objection, it was ordered accordingly.

SILVER.

The SPEAKER. Upon the pending bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," debate under the order of the House has been exhausted. The Clerk will now read that part of the order relating to the vote.

The Clerk read as follows:

The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fail, on one proposing a ratio of 18 to 1; if that fail, on one proposing a ratio of 19 to 1; if that fail, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

Mr. BAILEY. I rise to a parliamentary inquiry. In the event that the amendments provided for in the special order should be voted down, would it then be in order to move an amendment to the bill itself, the amendment being germane under the rules of the House or under general parliamentary law?

The SPEAKER. As at present advised, the Chair thinks it would not be; but should the question arise the gentleman might be heard upon it. The impression of the Chair at present is that the order of the House prescribes absolutely and exhaustively the amendments which may be offered to the pending bill. The Clerk will report the first amendment.

Mr. BLAND. Mr. Speaker, the bill has not been read. When it has been I will offer an amendment in the form of a proviso to come in at the end of the bill.

The SPEAKER. The Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That so much of the act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371¼ grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

Mr. BLAND. I offer as an amendment a proviso for free coinage of silver at the present ratio, 16 to 1. I ask that it be read.

The Clerk read as follows:

Add to the bill the following:

"*Provided*, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same for coinage at the mints of the United States, and to have the same coined into the legal-tender standard silver dollars of 412½ grains standard silver to the dollar, on same terms and conditions on which gold bullion is now deposited and coined.

"That silver certificates shall be issued on such dollars in the manner now provided by law for the issuing of certificates on standard silver dollars."

Mr. McMILLIN. I rise to a parliamentary inquiry. Is it in order at this time to offer an amendment to the amendment of the gentleman from Missouri?

The SPEAKER. The Chair thinks not.

Mr. McMILLIN. Then I will ask consent to offer the amendment which I send to the desk to be read for information.

Mr. BLAND. I demand the regular order.

The SPEAKER. The gentleman from Missouri demands the regular order, which is equivalent to an objection.

Mr. McMILLIN. Does the gentleman object to having the amendment read?

Mr. BLAND. I understand that the amendment which the gentleman desires to offer provides for free coinage of the American product only, which is not free coinage at all.

Mr. McMILLIN. That is the amendment which I desire to submit.

The SPEAKER. The regular order is demanded.

Mr. TRACEY. I was not able to hear the remarks of the gentleman from Missouri [Mr. BLAND]. I wish simply to inquire of the Chair whether the amendment offered by that gentleman is in accordance with the special rule or order on this subject?

Mr. DINGLEY. Or with the Chicago platform?

The SPEAKER. The Chair understands that the proposition sent to the desk by the gentleman from Missouri is one of the propositions upon which, under the order, the House is to vote.

Mr. REED. Is there any way to have the regular order?

The SPEAKER. The regular order is demanded. The ques-

tion is first upon the amendment offered by the gentleman from Missouri which has just been read.

Mr. BLAND. On that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 125, nays 226, not voting 2; as follows:

NOT VOTING—2.

Graham,	Shell.

So the amendment was rejected.

The following pair was announced:

Mr. SHELL with Mr. GRAHAM. Mr. SHELL would vote for free silver and Mr. GRAHAM for unconditional repeal of the Sherman law.

Mr. BRAWLEY. Mr. Speaker, I wish to state that my colleague [Mr. SHELL] has been detained from the House by serious illness.

The result of the vote was then announced, as above recorded.

Mr. BLAND. Mr. Speaker, I now offer an amendment fixing the coinage at 17 to 1.

The SPEAKER. The amendment will be read.

The Clerk read as follows:

Provided, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing 438.60 grains of standard silver to the dollar on same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

The SPEAKER. This is the amendment fixing the coinage at 17 to 1.

Mr. BLAND. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 101, nays 241, not voting 11; as follows:

YEAS—101.

NOT VOTING—11.

Baker, Kans.	Cooper, Wis.	Hudson,	Shell,
Boen,	Davis,	Kem,	Simpson.
Cannon, Cal.	Graham,	Pence,	

So the amendment was rejected.

After the roll call several members asked to have their names recorded.

Mr. TRACEY. Mr. Speaker, I suppose the ordinary rule will prevail, that gentlemen who were not present when their names were reached on the roll will not be permitted to record their names.

Mr. COCKRAN. Oh, Mr. Speaker, I hope no such rule will prevail. Let every man have a chance to vote on this question.

Mr. SHAW. Mr. Speaker, my colleague [Mr. COOPER] has been summoned by telegram to the bedside of his dying father. I ask that he have indefinite leave of absence, and that this request be entered before the declaration of the result of the vote just taken.

The SPEAKER. If there be no objection the gentleman from Wisconsin will have leave of absence indefinitely.

There was no objection.

The result of the vote was then announced as above recorded.

Mr. BLAND. Mr. Speaker, I offer a further amendment, fixing the ratio at 18 to 1.

The Clerk read as follows:

Provided, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing 464.40 grains of standard silver to the dollar on same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

Mr. TRACEY. This is the ratio of 18 to 1?

The SPEAKER. This is the amendment of the gentleman from Missouri, fixing the ratio at 18 to 1.

Mr. HATCH. Let us have the yeas and nays.

The yeas and nays were ordered.

The question was taken and there were—yeas 103, nays 240, not voting 10; as follows:

YEAS—103.

Abbott,	Cox,	Hutcheson,	Pendleton, Tex.
Aitken,	Crawford,	Ikirt,	Pickler,

NOT VOTING—10.

Allen,	Cooper, Wis.	Hudson,	Simpson.
Baker, Kans.	Davis,	Pence,	
Boen,	Graham,	Shell,	

So the amendment was not agreed to.

The result of the vote was then announced as above recorded.

Mr. BLAND. Mr. Speaker, I offer an amendment providing for free coinage at the ratio of 19 to 1, and on that I demand the yeas and nays.

The SPEAKER. The gentleman from Missouri [Mr. BLAND] submits an amendment, which the Clerk will report.

The Clerk read as follows:

Provided, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing 490.20 grains of standard silver to the dollar on same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

The SPEAKER. This is on amendment for the ratio of 19 to 1, as provided in the order of the House, and on this the gentleman from Missouri [Mr. BLAND] demands the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 104, nays 238, not voting 11; as follows:

YEAS—104.

So the amendment was not agreed to.

The result of the vote was then announced as above recorded.

Mr. BLAND. I offer an amendment for a ratio of 20 to 1.

The SPEAKER. The gentleman from Missouri [Mr. BLAND] submits an amendment, which the Clerk will report.

The Clerk read as follows:

Provided, That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing 516 grains of standard silver to the dollar on same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

The SPEAKER. This is the amendment authorized under the order of the House providing for coinage at the ratio of 20 to 1.

Mr. BLAND. On that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were— yeas 122, nays 222, not voting 9; as follows:

NOT VOTING—9.

Baker, Kans.	Davis,	Hudson,	Shell,
Boen,	Graham,	Pence,	Simpson.
Cooper, Wis.			

So the amendment was not agreed to.

The result of the vote was then announced, as above recorded.

Mr. BLAND. I offer an amendment reviving the Bland-Allison act of 1878.

The SPEAKER. The gentleman from Missouri [Mr. BLAND] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Provided, That the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," requiring the purchase monthly of not less than two million and not more than four million dollars' worth of silver bullion and the coining of the same as fast as purchased into standard silver dollars, be, and the same is hereby, revived and reenacted into full force and effect.

The SPEAKER. This is the amendment, under the order of the House, known as the Bland-Allison amendment. The question is upon agreeing to the amendment.

Mr. BLAND. Upon that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 136, nays 213, not voting 4; as follows:

YEAS—136.

NOT VOTING—4.

Cooper, Wis.	Graham,	Newlands,	Shell,

So the amendment was rejected.

Mr. WHEELER of Illinois. Mr. Speaker, on account of serious illness, I was unable to be present when the previous votes were taken this morning. Had I been present I should have voted in the negative on each of the propositions. I now ask unanimous consent to have my vote so recorded.

The SPEAKER. Is there objection to the request of the gentleman from Illinois? [After a pause.] The Chair hears none, and it is so ordered.

The result was then announced as above recorded.

The SPEAKER. The question now is on the engrossment and third reading of the bill.

Mr. BAILEY. Mr. Speaker, I desire to submit an amendment.

Mr. COCKRAN. I make the point of order that no amendment is in order, under the rule.

Mr. BAILEY. I send the amendment to the Clerk's desk, in order to have it read.

Mr. TRACEY. I raise the point of order against any amendment.

The SPEAKER. The gentleman from Texas submits an amendment, and the gentleman from New York makes the point against any amendment being in order. The Chair will hear the gentleman from Texas on that proposition.

Mr. BLANCHARD. Have the amendment read.

Mr. BAILEY. I will ask to have the amendment read.

The SPEAKER. The Chair will hear the gentleman from Texas on the point of order.

Mr. BAILEY. I will ask the Clerk to read the amendment I have offered.

The Clerk read as follows:

Strike out all after the word "coined" and beginning with the word "and" in line 16 on page 2.

The words proposed to be stricken out are as follows:

"And the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law."

Mr. BAILEY. Mr. Speaker, I submit that the special order which provided for offering certain amendments was intended simply to make those amendments germane and not to exclude the House from the consideration of other amendments that are germane under general parliamentary law. In other words, as I understand it, many of us believed that the propositions upon which we have been voting so far would have been subject to a point of order if offered as amendments to the bill introduced by the gentleman from West Virginia [Mr. WILSON], and in order to make these amendments germane, and thus to eliminate all question as to their pertinency, it was agreed that we should adopt a special order under which they could be considered; but I do not suppose that any intelligent gentleman was willing to agree to an order, or willing to reach a compromise, that denied him the right to offer an amendment to a bill which he had never read. We did not know what the bill contained. Suppose, Mr. Speaker, the gentleman from West Virginia had seen fit to conclude his bill with a proposition expressly authorizing the Secretary of the Treasury to issue gold bonds to make safe the gold reserve in the Treasury; is it to be understood that the gentlemen who are willing and anxious to vote for the repeal of the purchasing clause of the Sherman act should stand committed to its support without an opportunity to strike out the bond provision? While I understand this special order did make these amendments germane, I do not understand it to go so far as to say that other amendments, being germane, would be denied consideration.

This bill does not reënact the language of the law, a portion of which it repeals; it goes further. The language of the act of July 14, 1890, is that "it is the established policy of the Government to maintain the parity of the two metals." This bill "pledges the faith and credit of the United States to maintain the parity," not of the metals, but of the coin.

The words which I have proposed to strike out have no proper place in a bill to repeal the purchasing clause of the Sherman law. If the House is determined upon the unconditional repeal of that part of that act, it ought to stop there, and not insert a provision which effects a radical change in the relation of our gold and silver coin. Each is now a money of ultimate payment, and neither is redeemable in the other. They ought to remain so, at least until it is demonstrated that they can not be kept in circulation on equal terms. That time will never come. With 39,000,000 people and a much smaller volume of business than ours, France easily maintains $700,000,000 of silver money which is not convertible into gold. Our entire stock of silver money, including silver certificates and subsidiary coin, is only about $615,000,000, and it can not be possible that we must make this redeemable in gold in order to keep it from depreciating.

Gentlemen on the other side have complained all through this debate that we were misrepresenting them when we charged that they were attempting to destroy a part of the money of the country. They have declared that they were, in fact, endeavoring to preserve the silver money which we already have by protecting it against a further increase. And yet, sir, their bill not only discontinues the use of silver as a means of enlarging our circulating medium, but it absolutely degrades our silver dollars and our silver certificates into mere credits redeemable in gold.

There is no escape from this conclusion. Whenever one coin is made redeemable in another, the coin to be redeemed ceases to be money in the true sense of that word. Prof. Price defines the difference between paper and coin to be that "coin is a payment, while paper is only a promise to pay," and a coin which is not in itself a money of final payment, but which is a promise to pay in another coin, is nothing more than a paper currency; and if this bill becomes a law, it would be better for us to use paper than silver, because it is both cheaper and more convenient.

Under the last clause of this bill the $330,000,000 silver certificates, the $346,000,000 greenback notes, and the $150,000,000 coin notes issued under the Sherman act are all made redeemable in gold, and it requires no special wisdom to discern that a suitable reserve fund for this more than $800,000,000 liability will be provided by selling gold bonds.

Mr. DINGLEY. I desire to make the point of order that the gentleman is not confining himself to the point of order.

The SPEAKER. The gentleman from Maine makes the point of order that the gentleman from Texas is not discussing the point of order.

Mr. BAILEY. Mr. Speaker, I was striving to show that on account of the great importance of the matter, the utmost liberality should be observed in construing the special order.

The SPEAKER. The Chair hopes the gentleman will confine himself to the point of order.

Mr. BLAND. Mr. Speaker, if the gentleman from Texas will allow me, I will suggest that under the rules and practice of the House the difficulty may be avoided by calling for a separate vote. There are several separate propositions as to the financial policy of the country. One proposition is to repeal the purchasing clause, and the other introduces new matter. You have a right to a separate vote upon each proposition.

Mr. BAILEY. I cordially agree with the gentleman. I thought I would move to strike out the words; and then, if that

motion is not in order, I shall demand a separate vote, as there are two distinct propositions.

Mr. RAYNER. I would like to ask the gentleman what he does with the order of the House which provides that after these amendments——

The SPEAKER. The Chair is ready to decide the question if the gentleman from Texas is through with his argument.

Mr. BAILEY. Then I submit the matter to the Chair. [Cries of "Rule!"]

The SPEAKER. The order adopted by the House seems to the Chair to be very plain upon this question. It first provides for general debate, then for debate under the five-minute rule, then names specifically certain amendments which may be offered and upon which a vote shall be taken, and then makes this provision, which is applicable to the point in the consideration of the bill at which we have arrived. After disposing of the amendment providing for the reënactment of the Bland-Allison act, the order says:

The vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself, if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

We have arrived at the stage now where the vote is to be taken, according to this order, on the engrossment and third reading of the bill. If the previous question had been ordered on the reading and engrossment of the bill it would not be maintained that a separate vote could then be taken on different propositions contained in the bill. Here is the direction of the House as to what shall be done when we reach this stage—that the vote shall be taken. Therefore, the Chair is constrained to overrule the point made by the gentleman from Texas, and to hold that under the special order an amendment is not in order.

Mr. BAILEY. Then, Mr. Speaker, I shall demand a separate vote on the two propositions.

The SPEAKER. The Chair would ask the gentleman from Texas under what rule he would be entitled to a separate vote upon the engrossment and third reading of the bill?

Mr. BAILEY. I am not demanding it now, Mr. Speaker. I simply give notice that on the final passage of the bill I will demand it.

Mr. COCKRAN. Mr. Speaker, I desire to reserve a point of order on that.

The SPEAKER. The question now is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time; and it was accordingly read the third time.

The SPEAKER. The question now is on the final passage of the bill.

Mr. WILSON of West Virginia. Mr. Speaker, on that I call for the yeas and nays.

Mr. BAILEY. Mr. Speaker, I submit that the question is divisible, and I demand a separate vote.

The SPEAKER. The Chair would state to the gentleman from Texas that the rule invoked by him does not apply to a bill at this stage.

Mr. REED. We have no rules, and, under general parliamentary law, there can be no division except by a vote of the House.

The SPEAKER. Even under the usual rules of the House where the previous question is ordered upon the passage of a bill, or upon its engrossment and third reading, it has passed the stage where any division can be demanded.

Mr. BAILEY. But, Mr. Speaker, I do not understand that the previous question has been ordered on this bill.

The SPEAKER. The Chair assumes that the special order is equivalent to the ordering of the previous question, because it says that the vote shall be taken on the final passage of the bill without intervening motions.

Mr. BAILEY. Of course, if the Chair holds that the special order is tantamount to the previous question I will not press the point further.

The SPEAKER. The Chair thinks so. The gentleman from West Virginia [Mr. WILSON] demands the previous question upon the final passage of the bill.

The yeas and nays were ordered.

The question was taken; and there were—yeas 239, nays 108, not voting 6; as follows:

YEAS—239.

NOT VOTING—6.

Boatner,	Cockrell,	Graham,	Shell.
Capehart,	Cooper, Wis.		

So the bill was passed. [Applause on the floor and in the galleries.]

Mr. BLANCHARD. Mr. Speaker, I move that the House do now adjourn.

MESSAGE FROM THE SENATE.

A message from the Senate by Mr. PLATT, one of its clerks, announced that the Senate had passed bills of the following titles; in which the concurrence of the House was requested:

A bill (S. 457) authorizing certain Cherokee allottees or claimants to purchase certain tracts held and claimed by them; and

A joint resolution (S. R. 17) providing for the erection of a suitable building for the storage of documents for the use of the Senate.

CLERKS TO COMMITTEES.

Mr. CATCHINGS. I ask the gentleman to withhold that motion for a moment while I present a resolution which I think ought to be considered at this time.

Mr. BLANCHARD. I will do so.

Mr. CATCHINGS. Mr. Speaker, I offer the resolution which I send to the desk.

The resolution was read, as follows:

Resolved, That the Committee on Accounts is hereby authorized and directed to designate the Committees of the House to which the clerks pro-

vided for by the legislative, executive, and judicial appropriation bill for the fiscal year ending June 30, 1893, should be allowed and assigned for the present Congress, and to report by resolution to the House for action thereon.

The SPEAKER. Is there objection to the present consideration of this resolution?

There was no objection.

The resolution was adopted.

Mr. CATCHINGS. Mr. Speaker, I desire to give notice before the motion to adjourn is put that on to-morrow I will call up for consideration the report of the Committee on Rules.

Mr. BLANCHARD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; and the House accordingly (at 3 o'clock and 30 minutes p. m.) adjourned until 12 o'clock on Tuesday.

SENATE.

TUESDAY, *August 29, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

Mr. BRICE presented petitions of the Central Labor Union of Akron; of the Board of Trade of Chillicothe; of the Central Labor Union of Cleveland; of the Board of Trade of Springfield; of a joint committee of sundry commercial bodies of Cincinnati; of the Chamber of Commerce and the Merchants' Exchange of Cincinnati; of C. A. Russell, president and treasurer of the Carriage Woodwork Company of Toledo, and of Messrs. A. & J. Plant, of Cincinnati, all in the State of Ohio, praying for the immediate repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

He also presented a petition of the Central Labor Union of Cleveland, Ohio, praying for the enactment of legislation for the enlistment of the whole country into an industrial army to be officered by civil engineers and to be paid a minimum of not less than $1 per day and found, etc.; which was referred to the Committee on Education and Labor.

He also presented a petition of the General Assembly of the Presbyterian Church of the United States, praying for the repeal of the so-called Chinese exclusion act; which was referred to the Committee on Foreign Relations.

Mr. KYLE presented a memorial of citizens of South Dakota, remonstrating against the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. WHITE of California presented a petition of the Chamber of Commerce of San Diego, Cal., praying for the enactment of such legislation as will secure the speedy construction of the Nicaragua Canal under the control of the Government; which was referred to the Committee on Foreign Relations.

Mr. BATE presented a memorial of citizens of Gibson County, Tenn., remonstrating against the unconditional repeal of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. TELLER presented a memorial of the Bland Club, of Pueblo, Colo., remonstrating against the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

He also presented a petition of the Granite Cutters' National Union, of Denver, Colo., praying for the establishment of postal savings banks in all cities throughout the country; which was referred to the Committee on Post-Offices and Post-Roads.

Mr. BLACKBURN presented a memorial of citizens of Marion County, Ky., remonstrating against the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

He also presented a petition of merchants of Louisville, Ky., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. HAWLEY presented the petition of Robbins, Burrall & Co., and 11 other representative citizens of Salisbury, Conn., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. DOLPH. I present a petition of the Pendleton (Oregon) Commercial Association, praying for the repeal of the purchasing clause of the so-called Sherman act. I wish to state that Pendleton is the largest town in the eastern portion of my State, and the petition is signed by all the business men of the place. I move that the petition lie on the table.

The motion was agreed to.

REPEAL OF FEDERAL ELECTION LAW.

Mr. PLATT. Yesterday the Senator from New York [Mr. HILL], from the Committee on the Judiciary, reported favorably the bill (S. 412) to repeal Title XXVI of the Revised Statutes of the United States, known as the Federal election law. I suppose I was in the Senate at the time the report was made, though I did not notice it. As I had not been present at the meeting of the Judiciary Committee, having been obliged to attend another committee that morning, I did not know that any such action had been taken in the Judiciary Committee. I desire now to state this fact, and also to say that I do not concur in the report.

PURCHASE OF SILVER BULLION.

Mr. VOORHEES. I am authorized and instructed by the Committee on Finance to report back with an amendment the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes." The amendment is in the nature of a substitute, the substitute being Senate bill No. 570, heretofore reported by the Finance Committee of this body to the Senate.

I ask that the bill be placed on the Calendar, and I give notice that I shall ask the Senate to take it up and consider it immediately after the morning business from this time on until final action is taken. I do this subject, of course, to the notices which have been given by Senators that they will address the Senate. The Senator from Georgia [Mr. GORDON] I understand has given notice of an address to-day, which he can deliver upon the bill as reported. The Senator from Ohio [Mr. SHERMAN] has given notice of an address to-morrow, and the Senator from Colorado [Mr. WOLCOTT] has given notice for the day following. I hope the Senate will agree to take up this bill and make it the order on which Senators may deliver such remarks as they see fit and at such times as may suit them.

Mr. CULLOM. Does the chairman of the committee report the Senate bill back as a substitute for the House bill?

Mr. VOORHEES. Yes, sir; without the change of a word. I will state further, so as to make the position more easily understood, that the bill heretofore reported by the Finance Committee to this body is the same word for word to the point where the repeal of the purchasing clause of the Sherman act is accomplished with the bill passed by the House of Representatives. From that on there is certain matter placed in the substitute that is not in the bill as it passed the other House, and which in my judgment improves it and makes it more acceptable. But of that hereafter.

Mr. TELLER. I did not understand the Senator from Indiana. Does he propose to call up this morning the bill just reported?

Mr. VOORHEES. I of course can not do it if there is a single objection to make it go over.

Mr. TELLER. I shall object to it.

Mr. VOORHEES. Very well; let it go over and be printed; but I will state to the Senator I have a right to call up the bill already before the Senate.

Mr. TELLER. I wish to say to the chairman of the Committee on Finance that the bank bill having been before the Senate some time I have sought for several days to get an opportunity to express my opinion on that measure. I desire to do that to-day after the Senator from Georgia concludes his remarks.

Mr. VOORHEES. I shall certainly take any step which is necessary to accommodate the Senator from Colorado in a matter of that kind.

Mr. SHERMAN. I have no doubt it will be agreeable to the Senator from Colorado that, for the purpose of debate to-day, the Senator from Georgia shall address himself to the bill just reported, and then it can be laid aside and give way to the bank bill.

Mr. TELLER. I have no objection to the Senator from Georgia addressing himself to any bill when he makes his speech. I merely want to address myself to the bank bill particularly.

Mr. VOORHEES. I shall certainly accommodate the Senator from Colorado by moving that the bank bill be taken up in lieu of the coinage bill at the proper time, when he wishes to address the Senate.

Mr. TELLER. The bank bill is up, I understand, and I do not want the bank bill disposed of until I can get a chance to speak upon it.

Mr. VOORHEES. Very well. Then let it be understood that the Senator from Colorado objects to this being made the order to-day. That takes the report which I have just made over until to-morrow.

Mr. HARRIS. It goes over anyway under the rule.

Mr. VOORHEES. It goes over anyway under the rule by an objection. In the mean time the Senator from Georgia and the Senator from Colorado will find no difficulty in making their remarks opportune on the other bills.

Mr. HARRIS. It is perhaps proper I should state that the Senate bill reported from the Committee on Finance was the report of a majority of that committee, and the action this morning in reporting a substitute for the House bill is the action of a majority of that committee, in which the minority did not participate. The minority were present, but did not agree to the report.

Mr. VOORHEES. I had no intention to say that it was a unanimous report, and if I did it was a slip of the tongue.

Mr. HARRIS. I beg to say to the Senator from Indiana that he said nothing which would convey that idea especially, but I choose to put upon the record the fact that it is the action of the majority, and not of the whole committee.

The VICE-PRESIDENT. The bill will be placed on the Calendar.

BILLS INTRODUCED.

Mr. SHERMAN introduced a bill (S. 738) for the relief of Battelle & Evans and their legal representatives; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. McPHERSON introduced a bill (S. 739) extending the provisions of section 1423 of the Revised Statutes of the United States to include commissioned officers of the United States Navy; which was read twice by its title,and referred to the Committee on Naval Affairs.

Mr. BLACKBURN introduced a bill (S. 740) for the relief of Mrs. Mary T. Duncan; which was read twice by its title, and referred to the Committee on Claims.

Mr. DOLPH introduced a bill (S. 741) for the relief of Fannie Ricks Jones and Anne Ricks Willis, heirs of Benjamin S. Ricks, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 742) for the relief of Eli C. Officer; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 743) for the relief of the citizens of the States of Oregon, Idaho, and Washington who served with the United States troops in the war against the Nez Percés and Bannock and Shoshone Indians, and for the relief of the heirs of those killed in such service, and for other purposes; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 744) for the relief of Avery D. Babcock and wife, of Oregon; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 745) making an appropriation to enable the Secretary of the Treasury to enforce the Chinese exclusion acts; which was read twice by its title.

Mr. DOLPH. I desire to make a short statement in regard to the bill, which proposes to make an appropriation to carry out what is known as the Geary act. I had intended to submit some observations concerning this matter the first week of the session, but the adjournment over prevented me. It is a matter that has attracted considerable attention and should receive consideration by Congress; and while I would not obtrude so as to obstruct any more important measure, at the very first opportunity, when I can do so without interfering with some Senator who desires to speak on a financial measure, I shall take occasion to occupy the attention of the Senate for something like half or three-quarters of an hour. I move that the bill be referred to the Committee on Foreign Relations.

The motion was agreed to.

AMENDMENT TO BANK BILL.

Mr. CALL submitted an amendment intended to be proposed by him to the bill (S. 453) to provide for the issue of circulating notes to national banks; which was ordered to be printed.

APPREHENDED DEFICIENCY OF REVENUES.

Mr. PEFFER. If the morning business is concluded, I desire to call up——

The VICE-PRESIDENT. If there be no further morning business, the Chair lays before the Senate a resolution coming over from a previous day, which will be read.

The Secretary read the resolution submitted yesterday by Mr. STEWART, as follows:

Resolved, That the Secretary of the Treasury is directed to inform the Senate whether there is danger of a deficiency in the revenues of the Government during the current year, and if so, what is the probable amount of such deficiency, and is any legislation necessary to supply such deficiency.

The VICE-PRESIDENT. The question is on agreeing to the resolution. [Putting the question.] The noes appear to have it.

Mr. STEWART. I call for a division.

Mr. HARRIS. As a division is called for, I should like to have the resolution read. I do not think any Senator on the floor heard a word of it. I am sure I did not.

The VICE-PRESIDENT. The Senate will be in order. The resolution will be again read.

The Secretary again read the resolution.

Mr. STEWART. Mr. President, I desire this information for a specific purpose. It is rumored at all events that there will be a deficiency in the revenues, and that there is trouble to obtain sufficient money to pay the pensions and other current expenses of the Government. There are $50,000,000 worth of idle silver in the Treasury. It was taken in as the difference between the market price and the coinage value of the bullion purchased under the act of 1890. A part of that bullion has been coined and silver certificates issued thereon. There is no reason why it should not all be utilized and covered into the Treasury, in my opinion.

Whatever disposition is made of silver no one has suggested the destruction of the silver that has already accumulated. I have submitted a proposition to issue silver certificates on the $50,000,000 of silver bullion, to be covered into the Treasury, so far as may be necessary, for current expenses, the balance to be used for the purchase of bonds or any other purposes of the Government. I am anxious to know the condition of the Treasury, to see if there is a necessity for utilizing the $50,000,000 of silver bullion in the Treasury, which has cost the Government nothing. It is the difference between the market price and the coinage value. A part of it has been utilized; and I want to know the condition of the Treasury, so as to see whether there is a necessity for the use of this silver.

That is the object of the resolution. I want the information, not to embarrass the Government, not to take advantage of anyone; but if at this time there is a deficiency, if there is trouble about paying the current expenses, there ought to be some provision made for their payment. I propose to offer my proposition as an amendment to the bank bill, so as to give the Treasury immediate relief. With this explanation, I ask for the adoption of the resolution.

Mr. SHERMAN. So far as I now recall the matter, this is an extraordinary, perhaps an unexampled form of resolution to address to the head of a Department.

Mr. McPHERSON. We can not hear the Senator from Ohio on this side. Will he speak a little louder?

Mr. SHERMAN. This resolution in form and in substance is unexampled, I think. There may have been others like it, but I do not know when we have called upon the head of a Department for his opinion about anything. We may call upon the heads of Departments (and we do it generally too much; we make them repeat themselves very often) for information, for facts; but the heads of Departments are not there to express and to influence us in any way with their opinions.

The Senator from Nevada may be able to cite a case, but I am not aware it has ever occurred where we have called upon the head of a Department for his opinion as to what will occur in the future. If the Senator wants any facts that are in the Department, or if he wants the opinion of the Secretary as to what the facts are up to this time, there is no objection to that, but I do not like to set this example. It seems to me if the Senator from Nevada will either call upon the Secretary in person or write a note he would get this information at once without any trouble, and he could use it just as effectively; but we should not call upon the head of a Department to give his opinion upon what the future is likely to be. That is what this resolution is, I think. It asks him to give his opinion about the future. Let the resolution be read.

The VICE-PRESIDENT. The resolution will be again read.

The Secretary again read the resolution, as follows:

Resolved, That the Secretary of the Treasury is directed to inform the Senate whether there is danger of a deficiency in the revenues of the Government during the current year, and if so, what is the probable amount of such deficiency, and is any legislation necessary to supply such deficiency.

Mr. SHERMAN. That is, the Secretary is called upon to say whether in his opinion there is danger about events that may occur in the future, and if there is such a danger, what would be the result, etc. Mr. President, those are indefinite things to call upon the head of a Department for. I do not want to interpose in any way to prevent the getting of information, but I think it would be better, as an example in the Senate, for the Senator from Nevada to send a note or call in person for this information, and get the opinion of the Secretary in that way, who no doubt would promptly give it. But if the Senator insists upon it, although I think it is a departure from the usage and customs of the Senate, I certainly will not make any objection to the resolution, though I think he ought to obtain the opinion of the Secretary in another way.

Mr. STEWART. For each fiscal year the Secretary of the Treasury makes out an estimate of the probable receipts under existing laws. He keeps his eye on that question and informs Congress annually and semiannually what under the condition

of things the laws will probably produce. We have those estimates constantly. There has been a great panic existing, which is affecting the natural operations of the laws, and I think Congress ought to have at this time an estimate of what the revenues will probably be, so as to know whether we shall have to meet a deficiency, and that it may be provided for in time by legislation. There is no suggestion as to what kind of legislation should be had, but it is a fact that Congress must have this information. It is information upon which legislation is always based in providing revenues and in providing for deficiencies. We must know whether there is need of replenishing the Treasury or not before we can act intelligently. This is not unusual, because we have those estimates constantly.

Mr. VOORHEES. Mr. President, this resolution seems to me to be wholly without precedent. I have no recollection of a case where a Department has been asked to give a conjectural estimate for the future. The estimates come in regularly at the meeting of Congress in December. They can not be made up in the Departments until the latter part of September. This resolution, spering at the Secretary of the Treasury, seems to me to be nothing more than a purpose to embarrass him in the discharge of his duties. To ask him to give an opinion now, to give a guess what the revenues will be or are likely to be, whether they are going to be less or more, or whether there is going to be a deficiency, is a method of public business that ought to have no place here at all. I move that the resolution be referred to the Committee on Finance for its consideration.

Mr. STEWART. Perhaps I can make it satisfactory to the Senator if he will withdraw the motion.

Mr. VOORHEES. I do not think the Senator can.

Mr. STEWART. I will adopt the suggestion of the Senator from Ohio and ask the Secretary of the Treasury to inform the Senate whether there is now a deficiency in the revenues and leave out all conjecture. I will modify the resolution in that way, if it will be satisfactory. Before it is referred I will ask leave to modify the resolution.

Mr. VOORHEES. I will say to the Senator from Nevada that I have confidence in the present Secretary of the Treasury that if there was a deficiency and anything needed on our part to meet the requirements of the Government he would make it known to us. To thrust a resolution of this kind at him is a vote of want of confidence to a very large extent.

Mr. HILL. Mr. President, I have as much confidence in the Secretary of the Treasury as has the distinguished Senator from Indiana [Mr. VOORHEES], and I think I have as high respect for that official as he has. I can see no danger, however, to the interests of the country by the passage of the pending resolution. I can see in this simple resolution no manifestation of any lack of confidence on the part of the Senate in the Secretary of the Treasury.

The resolution is a simple one. It calls upon the Secretary of the Treasury to give us his judgment, at an earlier date than usual it may be true, as to what are to be the revenues of the Government for the ensuing year.

What harm can there be in such a resolution? I have not heard a suggestion made anywhere that this simple resolution is to disturb the business interests of the country. I have not heard it suggested that there is anything to be covered up anywhere which would prevent the passage of the resolution. I have not heard it suggested, except vaguely and indefinitely, that it is an attack upon anyone.

The officers of the Government in charge of their respective Departments ought to be willing to give the legislative branch of the Government all the information in their power, so that we may legislate intelligently. I have no doubt that the honorable Secretary of the Treasury can make a proper reply to the resolution. If, in his judgment, it is too early to give the information, he can so state. If for any reason it is impossible to make an estimate, he can so state. There is no difficulty whatever in regard to that.

For one, I am opposed to the system, which I think is now proposed to be inaugurated, of referring such resolutions to committees—that we can not ask an officer of the Government with reference to the condition of financial affairs without the Committee on Finance being consulted. I take the same position to-day which I took the other day. I think courtesy requires that this resolution should be passed.

I have not been consulted by the Senator from Nevada in regard to the resolution; I know nothing in regard to it; I know nothing in regard to his purposes or objects, except as they are displayed in the resolution itself; but I think when any Senator here in the discharge of his duties offers a resolution asking information in a respectful manner from any official of this Government, it is our duty to pass the resolution. It was conceded the other day that it had been customary, and it was only made an exception in that instance because it was said it would alarm the country; that was the reason given. Certainly there can be nothing in this resolution which will alarm the country. Are we to be so particular about the finances of the country that we can not discuss them here, that we can not anticipate a surplus or anticipate a deficiency?

Sir, what is the situation now? There seems to be some dispute upon the question as to whether we are to legislate upon the tariff at this extraordinary session or not. There seems to be no fixed policy upon the subject. I do not know what the House of Representatives proposes to do; and it is in the House itself where such legislation must originate. I do not know what we propose to do; but if we are to legislate upon the tariff question, if we upon this side are to carry out the pledges of the Chicago platform, the very first thing we want to know before we touch the tariff is what are the expected, the anticipated revenues of the Government.

How can we legislate intelligently unless we have that information? Shall we take the old estimates? Possibly we may be able to legislate in that way; but each Senator is entitled, it seems to me, to this kind of information. I do not believe there has been any reluctance in the past upon the part of the various Departments to give information required. If we are to proceed and make a new tariff bill, if we are to wipe out the infamous McKinley tariff, if we are to revise the tariff, the first thing we ought to know is, what are the anticipated revenues of the Government, in order to determine what legislation is necessary.

I have that confidence in the Secretary of the Treasury that I am ready to believe whatever suggestions he may make in regard to the revenue will probably be adopted by the two Houses of Congress, and I should be pleased to hear from him.

Irrespective of that question, here is a simple resolution asking the fiscal officer of the Government to give us such information as he may have—not that which he has not, not that which he can not get, but such information as he may have in reference to the subject. What possible objection can there be to the resolution? What object is there in referring it to the Finance Committee?

I stand to-day where I stood the other day, where I shall stand to the end, no matter how much the position may be assailed, that any Senator in this body who offers a respectful resolution on a question of this character, asking for information from an officer of the Government, ought, I think, to have it. I can see no valid, no tenable objection to the passage of the resolution, and I shall continue upon that line if it takes all the summer or all the fall.

Mr. MILLS. Mr. President, the Constitution of the United States has not devolved on this body the duty of taking the initiative in questions pertaining to the raising of the revenues of this Government. It is, perhaps, well enough for us to remember that this body has been placed under suspicion by the framers of our Government as not being the proper parties to originate measures affecting the taxation and revenues of the Government. It has been a long struggle with the Anglo-Saxon people, as we all know, whether the House of Lords in England or the Senate of the United States should even have a right to amend bills originating with the representatives of the people in imposing burdens on them. The framers of our Constitution have given to this body the right to amend a bill coming from the House of Representatives, but they have seduously guarded the right to initiate the measure in the House representing the people of the United States.

It is wholly unnecessary, therefore, for us to begin to feel uneasy about the revenue. There is an officer of the Government, placed by the Chief Executive at the head of the Treasury Department, who has the confidence of the people of the United States. He has the confidence of his chief; his chief certainly has the confidence of the people; and if he thinks at any time it is necessary to raise more revenue, either by borrowing money or by the laying of burdens of taxation upon the people of the United States, he will communicate that to the legislative department of the Government, the lawmaking department of the Government, and then it will be a duty imposed by the Constitution on the House of Representatives, and not on us, first, to see how this revenue is to be raised.

Until that time comes and the House shall pass upon the question of constitutional prerogative and constitutional preference, it is almost a case of legislative bad taste for us to be jumping the ditch before we get to it, and propounding conundrums for the Secretary of the Treasury to answer as to what his opinion will be of the financial condition of the country six, eight, ten, or twelve months hence.

I think that the chairman of the Committee on Finance has well moved to refer the resolution to that committee, and in my opinion all such resolutions ought to be referred to committees of this body before they are acted upon by us.

Mr. STEWART. Mr. President, I do not wholly concur with

the views of the Senator from Texas [Mr. MILLS]. It seems to me that if we are here even with the right to amend bills or legislate at all, we ought to have the information and all the information which we can get, before we act on any question with which we are to deal. The fact that the House of Representatives is to deal with it first, is not the question. The question is, Shall we be prepared to deal with it when it reaches us? For that purpose we want the information early, so we can study the finances of the country and the probable necessity for legislation.

I explained that there was a rumor that there is a deficiency now, a difficulty in paying the current expenses. It has been even rumored—I do not attach much importance to it—that the reserve in gold is being paid out for current expenses. I do not suppose that the Senate desires that to be done, provided there are any other means of replenishing the Treasury.

I suggested that there was $50,000,000 of silver bullion in the Treasury which could be utilized if there was a necessity for it. A part of it has been utilized, a part of it has been coined, and silver certificates issued thereon, and covered into the Treasury.

I want to know whether it is necessary to continue that process. I want the information as to whether there is a necessity to go on with it, because we have a bill here pending to which such an amendment would be pertinent.

It has been usual in the Senate to call on the Departments for information which Senators thought it necessary they should possess when acting upon important measures. It is no reflection upon the Department or upon the President for us to call for the information, because resolutions of that kind are passing here every morning. It is a new doctrine that the passing of a resolution calling for information is a vote of want of confidence in an officer. Thousands and thousands of such votes pass at every Congress which convenes, and yet nobody ever thought of such a vote being a vote of censure.

We want the information, and we have the right to call for it. If the doctrine is to be established that information is to be denied to Congress on the ground that the President and his advisers know it all, that Congress has no right to know anything, no right to the ordinary information, then let the Departments be closed. If they are so wise as that, I see very little use of a coördinate department. Why not give them entire charge of the Government? Why not declare a monarchy at once, if it is a vote of want of confidence to ask a question? If the Executive Departments have got so far beyond the people and so far above the other departments of the Government that it involves a want of confidence to ask them a question in the ordinary course of business, we had better abolish Congress at once and let the Executive Departments control the country. It seems to me such action leads legitimately to that conclusion, because there is no equality if we can not call for information as heretofore.

It seems to me that this is setting up a claim for the Administration of an imperial authority never before dreamed of. I did not suppose there would be any objection to this information. I asked for it in good faith and for what I believed to be a legitimate purpose. I did not believe it would embarrass the Administration. The Secretary of the Treasury will inform us that the year is not far enough advanced to enable him to make an estimate, or he will give us such information as will be valuable in the future action of the Senate at this session, because, without originating a revenue bill, or passing the bounds of our authority, we can replenish the Treasury by enabling the Secretary to use the bullion in the Treasury.

The only reason why he can not do it now is because certificates can not be issued on that bullion until it has been coined. I propose to utilize that bullion at once, and coin it all. It does not change the principle. The Secretary has already established the principle that he can cover this bullion into the Treasury. He has only covered a part of it in by coining it, and issuing certificates on it. If there is likely to be a deficiency, why should we not authorize him to do that? It is not raising revenue from the people; it is simply utilizing the resources of the Treasury Department.

I do not know the reason for this sensitiveness; I do not know why this change is sought to be made in the established custom of the Government at this time, or what is the necessity for it. It will not facilitate business to pursue such a plan, and I advise the chairman of the Committee on Finance to let the usual course of procedure prevail.

I offered to modify the resolution at the suggestion of the Senator from Ohio [Mr. SHERMAN], who did not want the Secretary to make an estimate for the future, so as to request him to tell us the present condition, but I will not now modify my resolution. I want the vote of the Senate on it in the shape I offered it, and shall ask when the proper time comes, for a yea and nay vote on it.

Mr. HARRIS. Mr. President, if the resolution simply sought any fact within the keeping of the Treasury Department, I should cheerfully go with the Senator from Nevada in demanding the statement of that fact; but the resolution asks for no fact. It simply asks for a speculative opinion as to future events. All the data necessary to arrive at a conclusion as to future results are as clearly in the possession of the Senator from Nevada and the Senator from New York as they are in the possession of the Secretary of the Treasury. The expenditures of the current fiscal year are fixed by law, and each of those Senators knows what they are. The laws which contribute revenues to the Government are fixed, and the Senator from Nevada and the Senator from New York can speculate as to how much revenue will result from them as well as the Secretary of the Treasury.

Mr. STEWART. I should like to inquire of the Senator why it is that we always receive the estimates of the revenue and the expenditures which are made in the Treasury Department? Is he not aware that that is a clerical work, which can only be done by those familiar with such matters?

Mr. HARRIS. As to the necessity of coming expenditures in any one of the Departments of this Government, the Departments are better judges than the Senator from Nevada or myself, and they should make the estimates. The Senator's resolution, however, refers to the present fiscal year and not to the future. The Senator's resolution simply asks for a speculative opinion, which he is as well qualified to form for himself, without invoking the opinion of the Secretary of the Treasury, as he will be after he has invoked it. It is an idle and a fruitless inquiry, and one which is largely, if not entirely, unprecedented.

The Senator talks about the custom of demanding or requiring information from the Departments as a courtesy between the coördinate departments of the Government. When you want information, yes. Any fact in the keeping of that Department the Senator has a right to demand, and I will join the Senator in demanding it, if he thinks it is useful and desirable, but this thing of passing resolutions every morning, simply requiring speculative opinions about future events, which the Senate is as well qualified to speculate upon as the head of the Treasury Department, so far as I am concerned I shall relieve the Department from answering.

Mr. STEWART. Mr. President, there is not a Senator in this body who has the slightest conception of how the different accounts stand in all the various Departments of the Government, and whether there is money enough in the different accounts to meet the obligations of the Government. The public prints say that there is a deficiency, and it is rumored that the gold reserves are being used to make up that deficiency. No man knows the facts but the Secretary of the Treasury, and he has it in his power to call from the various officers of the Government all the facts and bring them all together, so that we may see whether there is money enough to carry on the Government. He is the only officer of the Government who can give us that information.

No Senator has the means of ascertaining it, or could ascertain it if he had access to all the books of the Treasury, and all the time necessary to do it. It is only the Secretary of the Treasury, who has the whole matter in hand, who can give us the information. It is from his Department that estimates as to the probable revenues and probable expenses are constantly given to Congress, and upon which Congress acts.

It seems to me, if there was ever a time when Congress and the country should be informed in advance of the effect the present panic is having upon the revenues of the country, so that the country may be studying what remedies may be necessary to meet any possible deficiencies, now is the time, so that we may be able to act intelligently.

I believe the present panic is producing a deficiency in the revenues. That appears to be the general understanding. If that be the fact, it is important that we should all know it, study it, and make up our minds as to how that deficiency can be best supplied with the least pressure upon the people. We must know this in advance. Are we to wait until the emergency is upon us, and a bill comes from the Finance Committee, as the Sherman repeal bill has come here, with a demand for immediate action, without securing previously the information necessary for us to act upon it?

We are not to exercise the functions of Senators, we are to abandon all our legislative functions, cease to study the situation of the Treasury, cease to study the finances of the country. That is none of our business. We have an Administration which is perfect, and any study on our part or any inquiry on our part, is a vote of want of confidence in that Administration. When we get an Administration so perfect as that, we can have a monarchy with safety, but not till then.

Mr. McPHERSON. May I ask the Senator a question?

Mr. STEWART. Any question the Senator pleases.

Mr. McPHERSON. Mr. President, the Senator seems to be

unaware of the fact that the Democratic party is in a majority in the Senate, and responsible for legislation. If any deficiency shall arise in the Treasury, provision will be made for it, and the Government will not be left without revenue.

I should like to ask the Senator how it is possible for the Secretary of the Treasury, at the beginning of a fiscal year, when scarcely a month of that year has yet expired, at a time when there is a dislocation of the currency, and when foreign importations have fallen off to a large extent, to know how long this condition of affairs will last, and what will be the probable or possible receipts from imported merchandise by way of duties which enter into the Treasury?

How can the Secretary of the Treasury know so long in advance what action will probably be taken by Congress touching a revision of the tariff, and whether the effect of that legislation, whatever it may be, shall be to increase the revenue or reduce it? All these things are problematical. The Secretary of the Treasury can no more give an answer to such questions than can the Senator from Nevada answer them for himself, and, as the Senator from Tennessee [Mr. HARRIS] has said, it is perfectly fruitless.

Mr. STEWART. I want to answer the Senator's question.

Mr. McPHERSON. I wish to know how the Secretary of the Treasury can better judge of the question presented by the resolution than can the Senator from Nevada?

Mr. STEWART. The first question of the Senator was whether I did not know that the Democratic party was in power in this body. I answer no. I do not know that fact at all. I know the gold party claims to be in power, and that consists of both sides. [Laughter.] I think there are more Administration men on the Republican side than on the Senator's side. [Laughter.] I think that is the condition now at this special session. It is the gold party which claims to be in power. We do not believe they are. That is not the way the lines are drawn here. We have heard more eulogies on the present Administration from the Republican than we have from the Democratic side of the Chamber.

Are you going to confine your exclusion of information to those who do not believe in the single gold standard? I think I have a majority with me who do not believe in the single gold standard. I do not think a majority of the Senate has eulogized the gold views of the President.

It seems to me a little strange, because men do not belong to the Administration party, that they should be denied all information. You will have to enlarge the ring a little outside of the executive officers; you have taken in the worshipers of the Administration. They can have information, but the Senator tells me, "You are not of the Administration party, and, therefore, as a Senator, you have no right to know anything about the finances of this Government, or as to a probable deficiency in the Treasury." You are getting very aristocratic. [Laughter.] You have not yet enlarged the ring enough. Every Senator here has an equal right, and will try to get information, and it can not be denied him unless you have votes enough to deny it.

I want the information which the resolution calls for, not as an Administration Senator, not in opposition to the Administration, but I want it as a Senator of the United States. So far as I can judge, I think if the resolution had come from an Administration Republican there would have been no objection to it. Before this thing is over we shall find that there is some equality here, some general right to have information, whether we belong to the gold party or not.

Now, I think my friend had better let us have the information. He says how can the Secretary of the Treasury give it? It is an ordinary thing. The Secretary can tell us how much in the way of revenue has been received up to this time and what are the prospects as to a deficiency, if the revenue should continue about the same. He can give us a great deal of information. He has it in his power, and can do it in a very few moments. There is no trouble about it. It is a thing he is doing every day, and it is similar to information called for at every session, for our legislation is based upon the estimates of the Secretary of the Treasury as to what will be the probable revenue.

Do not let us reverse the order of things in this way at this time. Let us go on in the ordinary way, and have the resolution passed.

The VICE-PRESIDENT. The question is on the motion of the Senator from Indiana [Mr. VOORHEES] to refer the resolution of the Senator from Nevada [Mr. STEWART] to the Committee on Finance.

Mr. STEWART. I call for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. DAVIS (when his name was called). I am paired with the Senator from Indiana [Mr. TURPIE].

Mr. HARRIS (when his name was called). I have a general pair with the Senator from Vermont [Mr. MORRILL], but being perfectly satisfied that he would vote "yea" if here, I vote "yea."

Mr. JONES of Arkansas (when his name was called). I am paired with the Senator from Delaware [Mr. HIGGINS].

Mr. McMILLAN (when his name was called). I am paired with the Senator from North Carolina [Mr. VANCE].

Mr. PUGH (when his name was called). I am paired with the senior Senator from Massachusetts [Mr. HOAR].

The roll was concluded.

Mr. SQUIRE. I am paired with the Senator from Virginia [Mr. DANIEL], and, as he is not present, I withhold my vote.

The result was announced—yeas 40, nays 16; as follows:

YEAS—40.

Aldrich,	Dixon,	Hunton,	Roach,
Allison,	Dolph,	McPherson,	Sherman,
Bate,	Faulkner,	Manderson,	Smith,
Berry,	Frye,	Mills,	Stockbridge,
Blackburn,	Gallinger,	Palmer,	Vest,
Camden,	Gordon,	Pasco,	Vilas,
Cameron,	Gorman,	Perkins,	Voorhees,
Carey,	Gray,	Platt,	Walthal,
Coke,	Harris,	Proctor,	Washburn,
Cullom,	Hawley,	Ransom,	White, La.

NAYS—16.

Allen,	Hill,	Lindsay,	Stewart,
Call,	Irby,	Peffer,	Teller,
Dubois,	Jones, Nev.	Power,	White, Cal.
Hansbrough,	Kyle,	Shoup,	Wolcott.

NOT VOTING—29.

Brice,	George,	Martin,	Quay.
Butler,	Gibson,	Mitchell, Oregon	Squire,
Caffery,	Hale,	Mitchell, Wis.	Turpie,
Chandler,	Higgins,	Morgan,	Vance.
Cockrell,	Hoar,	Morrill,	Wilson.
Colquitt,	Jones, Ark.	Murphy,	
Daniel,	Lodge,	Pettigrew,	
Davis,	McMillan,	Pugh,	

So the motion was agreed to.

SILVER COINAGE.

Mr. VOORHEES. I desire to call up the bill (S. 570) discontinuing the purchase of silver bullion, on which the Senator from Georgia [Mr. GORDON] has given notice that he will address the Senate.

Mr. TELLER. That, I suppose, is simply to allow the Senator from Georgia to make his speech.

Mr. VOORHEES. Of course.

Mr. TELLER. I have no objection to that.

The VICE-PRESIDENT. The Chair lays before the Senate the bill (S. 570) discontinuing the purchase of silver bullion, on which the Senator from Georgia is entitled to the floor.

Mr. GORDON. Mr. President, there is a crumb of comfort in our present calamities. They emphasize the damage done by Congressional mistakes, and they have fixed in the public mind as never before, perhaps, in our history the responsibility that often attaches to governments for the condition of a people and the responsibility of the people under our form for the policies of their Government. In this long Iliad of financial woes there is heard at least one clearly uttered if not cheering note. That note is the voice of the people calling upon Democrats to redeem their pledges. It is the popular demand for the repeal of the Sherman law, and for the inauguration of a sound and stable but more liberal policy of finance.

To that practical phase of the subject I propose to confine myself mainly in this debate.

As Democrats we made to the people four distinct, emphatic, unequivocal promises, namely, to reform the tariff, to repeal the Sherman law, to place gold and silver upon an equal footing, and to remove the tax upon State banks; and we coupled these promises with but one condition or proviso, and that was that the people would turn out the Republicans and turn over the Government to us. The people believed us. They relied upon our promises. They met our proviso. They turned out the Republicans; they turned the Government over to us; and now with anxious, even agonizing suspense they wait to see what we are going to do with it.

To my thinking, Mr. President, there is but one thing we can honorably do in the premises, and that is to make our performance as straightforward and practical as our pledges were explicit. If those promises were made in good faith, then, sir, we are bound by every consideration of truth and of honor, of political, public, and personal honor, for their faithful fulfillment. If they were not made in good faith, but were a mere pretense for winning votes, then, sir, we have trifled with the voters and perpetrated an inglorious fraud upon a confiding people.

Mr. President, there is no escape from the alternative; we must redeem or repudiate our pledges. If we repudiate now, what defense are we to set up hereafter when arraigned before the bar of public opinion for obtaining votes upon false pretenses?

Sir, there is but one retreat or refuge for us, and that is compliance—faithful compliance. What Democrat can attempt less and retain his self-respect? Can the Democratic party do less and hold power? In this day of progressive thought and independent action, can any party—let me pause before finishing that sentence to make my words stronger, for the thought warrants it—can any party in a government like ours, dependent for its very existence and policies upon the ballots of the people, make pledges to the people, win power upon those pledges, and then turn its back upon the people and convert to ashes the fruits of the people's victory, and yet retain power?

Mr. President, our pledges of tariff reform will doubtless be met in due time, not, as our friends on the other side of the Chamber fear or charge, so as to hamper or cripple the industries of the country, not so as to place obstructions in the pathway of infant or aged manufacturing establishments, but by a better distribution and wiser adjustment, possibly by free raw materials to help manufacturing, to lift the burdens from labor and production and the common people and thus benefit all.

For the sake of the great party to which we on this side of the Chamber belong, I sincerely trust that as much may be truthfully said of our pledges of financial reform. I believe as much may be said. I believe that the party now in power may be relied upon for substantial compliance with every pledge in its platform. I believe this because the men who compose that party are the disciples of the great prophet of popular rights! I believe it because that party has always claimed to be the party of the people, and has held to the faiths inherited from its great founder through decades of discouragement and of defeat with a fidelity never equaled in the history of parties. It can not be that now it will dim the luster and obliterate the glories of its past career by repudiating its pledges made to the people.

But I wish to descend from these generalities to details. What are we going to do with the Sherman law? We promised to repeal it, and with burning anathemas at Chicago we denounced it as a cowardly makeshift, fraught with possibilities of danger. Has it become less dangerous since? Has our experience with it disproved our prophecies about it? Has it suddenly become so helpful to the people, so productive of confidence, so preventive of panic, as to make it necessary to change our plans concerning it in order that we may deal more gently with it?

If Democratic provision condemned its enactment, does not Democratic consistency demand its repeal? Why halt between two opinions? Why hesitate between conditional and unconditional repeal? If the friends of bimetallism (and this Chamber does not contain one more consistent, ardent, and sincere than myself, if the friends of bimetallism are strong enough to impose conditions upon the repealing bill, will not that same strength suffice to enact bimetallism in a separate bill?

But are we burdened with the apprehension that we shall disagree among ourselves as to ratios or plans for parity? Why should there be any greater danger of disagreement among the friends of bimetallism after than before repeal? Sir, I can not share such an apprehension. I do not fear that the cause of bimetallism is to suffer because the Sherman law dies. That law is not the friend, but the insidious foe, of bimetallism. As a true friend of both metals, confident of the ultimate and complete triumph of the bimetallic cause upon a reasonable and rational basis, firmly convinced of its vitalizing influence upon the languishing industries of the country, firmly convinced of its vigor and life—I had almost said of its immortality, for that cause is immortal if this Republic is immortal—reposing with almost a religious faith upon the matchless wisdom of the men who made this unrivaled Government and made bimetallism a cornerstone in its Constitution, thus intrenched in these profound beliefs, I can not share in the apprehension that the life of bimetallism is either to be lost or shortened by the death of that sapper of public confidence called the Sherman law.

Mr. President, as a loyal soldier of the bimetallic cause, enlisted for the war, I had hoped to stand shoulder to shoulder here and elsewhere with the friends of that cause until its ultimate triumph. I had hoped to surrender any convictions of my own as to plans of action and follow the programme marked out by their combined wisdom. But, sir, as the difficulties and perplexities and dangers of this strange and unprecedented condition thicken around us, and as the responsibilities bear more and more heavily upon individual shoulders, each of us must feel that for himself, and not for others, he must answer by his act to his own conscience, his constituency, and the country.

As one in a darkened chamber from which the lights have been suddenly extinguished gropes his way in uncertainty until, the eye becoming more accustomed to the darkness, he begins to see still faintly, but somewhat more clearly, the objects around him, so some of us, struggling to penetrate this dense financial gloom, are stumbling here and there upon facts which ought to modify, and which must modify, our convictions of duty.

Every day by wire and by mail there come to me from my own State increased evidence of the belief that the purchasing clause of the Sherman law is primarily, if not largely, responsible for the present panic. What matters it, sir, whether that be true or not: what matters it whether these beliefs be well or ill founded? Belief in such case is as hurtful as reality. Of all the wild vagaries to which the human intellect is subject, causeless panic is the most unreasonable. An alarm of fire is heard in a theater or a crowded hall. The alarm is false, but the panic is real. "We are flanked," flies along the lines in the fury of the battle, and without a moment's reflection, without a single effort to ascertain the truth, the bravest battalions at times break in wild and senseless panic.

Mr. President, the Sherman law, rightfully or wrongfully, justly or unjustly, in public estimation is the alarming agency which has brought the chill, frozen the currents, and stilled the heart-throbs of trade. Sir, it is perfectly immaterial to the argument whether its effects be reasonable or unreasonable. It is perfectly immaterial to the argument whether they were legitimate or have been systematically procured by designing men, as has been repeatedly charged on this floor. It is immaterial, I say, how it comes. The great fact, the momentous fact, still stands that it is the pernicious agent which has made men who have hitherto loaned money withdraw it and hide it; which has produced the distrust, the rush upon the banks, the deadly paralysis. It is the murderer, guilty of the blood of public confidence, and ought to die.

Mr. President, two plans are suggested for executing this criminal.

Mr. WHITE of Louisiana. Will the Senator allow me to interrupt him for a moment in the magnificent argument he is making?

Mr. GORDON. Certainly.

Mr. WHITE of Louisiana. I desire to call his attention to a fact as a complete illustration of the great force of what he has said. The mere passage yesterday by the House of Representatives of a bill repealing the Sherman act lifted the price of cotton this morning in the markets of the world 14 points.

Mr. GORDON. I thank my friend for the suggestion; I was going to come to that a little later on.

Mr. WHITE of Louisiana. I beg the Senator's pardon.

Mr. GORDON. All right. I am glad of the reminder. I was proceeding to say that there are two methods for executing this criminal. One is by immediate, the other by a lingering death. One is proposed by the Finance Committee, or a majority of it, the other by a minority. To drop the figure, the majority of the committee reports a bill for immediate repeal of the purchasing clause of the Sherman law with bimetallism to follow.

The amendment proposes bimetallism and repeal simultaneously. It is not necessary for me to say, I trust, that I would unhesitatingly support and vastly prefer this amendment, if prompt and favorable action upon it by both Houses of Congress were practicable or possible. But with a majority in the other end of this Capitol uncompromisingly committed to unconditional repeal, what Senator in this Chamber is sanguine enough to promise the country that we can agree upon a coinage bill, or any conditional bill, for weeks or months to come? In the meantime, while we delay, the condition of the whole country grows more and more alarming. In the meantime, while we delay, Southern cotton is seeking a market, with few buyers except foreign houses or their agents, and the price falls far below the cost of production.

In the meantime, while we delay, unhappy growers of that great staple, with hope almost gone and treading on the very verge of bankruptcy and despair, are imploring us to take some action, and without delay. Sir, standing in the deep shadows of these impending and immeasurable disasters, I can not consent to vote for any measure which involves additional delay. The proposed amendment must necessarily cause great delay, because the other branch of Congress is committed against it. I can not, therefore, and for that reason only, support that amendment. The majority bill for repeal means no delay, because the other branch of Congress is for repeal. I therefore, and for that reason, support it.

Mr. President, our friends who oppose unconditional repeal believe that the Sherman law is not wholly or largely responsible for the condition of the country, and that repeal of that law will therefore fail to bring relief; that unconditional repeal under the circumstances is an extreme measure without any or at least sufficient compensating results.

In reply to the last suggestion, I beg to say that considering the certain damage done by this law to bimetallism, and the possible damage done by it in aiding the panic, no adverse action we could take with it could be extreme. But even if repeal be so regarded, the answer is that extreme remedies are often the

essence of conservatism. Let me illustrate by the laws of nature, which are always conservative.

When the forest is uprooted by the storm or shivered by the lightning's bolts, these remedies would be regarded from a human standpoint as extreme; but when we remember that they were needed to stir the deadly calm and to sweep away by the tornado's wing the poisons lurking in the stagnant air, we begin to appreciate their value. Sir, the deadly calm and the stagnation in business are all around us. The Sherman law, in public estimation, is the pernicious agency that has caused the depression. If its removal will start the slightest healthful current it is our duty to apply the remedy. Suppose it be admitted, for the sake of argument, that its repeal will not accomplish all that is needed in order to restore the country to its normal and healthful condition; and I am one of those who believe that it is but the first step toward relief. Are we to refuse to take any step until in the laboratory of Congress we can concoct all the physic which the country needs? If your friend were sinking in the lake too far from shore to be grappled with hooks and drawn to safety, would you wait until you could send miles away for a lifeboat, or would you shove out to him the tiny plank at your feet in order that he might sustain himself until the lifeboat could arrive? If we can not at once rescue the country bodily from the dead sea of distrust in which it is drowning, let us at least lift its head above the waves it it may gather breath and strength for the next struggle.

But we are asked if unconditional repeal will bring relief? I answer that in the opinion of those who usually lend money, but who now hoard and hide it, and I think in the opinion of the great majority of the people, repeal will bring speedy and certain relief. I trust that it will; but I do not know. This, however, I do know: That if this Senate insists upon settling ratios before repeal and the House insists on settling ratios after repeal, the disagreement involves indefinite delay. This we all know, that with the Senate moving in one direction and the House moving in the opposite direction, we shall place the country between the upper and nether millstones of Congressional disagreement and grind it to powder.

But we are told that unconditional repeal leaves this country in the relentless clutch of monometallism. Mr. President, if that were true, we might well stand appalled before so fatal a step. If I believed that to be true, I should turn my back upon the majority bill as being inimical to the highest interest of this country. And if unconditional repeal is passed and Congress should seek to take advantage of the situation in order to establish monometallism as the permanent policy of this Government, it would arouse from sea to sea the indignant people of this Union as they have never been except by the patriotic frenzy of the sixties.

No, Mr. President, repeal does not mean monometallism for this country. Monometallism can never find a resting place in the American Union. However gorgeous its plumage or dulcet its notes to English eyes and ears, our people recognize it as the insatiate vulture which has fattened upon the labor of European peasantry and would drive its bloody beak into the very vitals of American hope and progress.

I repeat, Mr. President, that repeal does not mean monometallism. Repeal is no menace to the double standard; but it does mean to take from the statute books a law which has dishonored silver, which has deprived it of its scepter and power as money; which is the accomplice, in disguise, of the single gold standard; which every friend of silver on this side of the Chamber denounced on its passage and has denounced continually since, and which no Senator on either side of the Chamber will claim has sustained the price of silver or aided in preventing panic. Repeal rids us of that law, but more than that. It disencumbers the cause of bimetallism from this body of death and places that cause upon its own intrinsic, unassailable merits, with its friends no longer separated but united, and rallying to its support every Democrat, every Republican, and every Populist who regards a public pledge to the people as sacred and binding. Sir, if with these indisputable facts before us, to vote for the immediate repeal of such a law be treason to bimetallism, then loyalty is treason and treason is loyalty.

Mr. President. I come now to our next promise to place gold and silver upon the same footing. It is safe to say, I think, that bimetallism was the most popular, if not the most potential, factor in the last campaign. It was the one plank common to all national platforms. It was the one force which made itself felt under all conditions and placed its seal on every party's banner. Like the great Roman before whose proud eagles the world succumbed, bimetallism can proudly boast "veni, vidi, vici," in every national convention. Republicans, Democrats, Populists, and Prohibitionists bowed before its altar and worshiped at the common shrine. Its spirit fell upon hostile camps or opposing conventions, and at once Minneapolis and Chicago and all the rest unite in sounding its praises.

What a political Pentecost was that, Mr. President? Medes, Parthians, Elamites, and the dwellers in India and Mesopotamia, all are found in the same spirit and with one accord speaking the same tongue. Sir, this is the most remarkable spectacle in political history, and it becomes important to inquire into its meaning. We shall not search long, I apprehend, before finding it. It means that bimetallism is a vote-winner. It means that the American people are for it and the political parties knew it. Hence, with a unanimity without a parallel, they protest to the people undeviating loyalty and undying allegiance to both metals.

It is true, sir, that these protestations and promises antedated the election; and it may be interesting hereafter to compare votes in Congress with votes in conventions, or party action in Congress with party promises in platforms. I fear, sir, that the contrast would put to shame the wonder-inspiring patent-medicine advertisement, "Before and after taking."

Mr. President, I wish again to remind the Senate that my object to-day is not to discuss the general subject of finance, except so far as it is necessary in urging compliance with party pledges and in analyzing the excuses for noncompliance. The Chicago platform meant, if it meant anything, that if the people would give us the power we would give them both metals as standard money, placed upon an equal footing, but upon some ratio that would make them interchangeable. This was the interpretation placed upon the platform in Georgia; and but for the belief in the sincerity of these platform pledges, that hitherto steadfast State would have been lost to the Democracy. I believe the same may be affirmed of other Southern States.

I wish now to examine very briefly some of the excuses given for noncompliance with these promises.

It is not true that since we met at Chicago the conditions have so changed as to absolve us from our obligations. With the exception of the closing of the Indian mints, I believe no material change has occurred, and we knew what the policy of England and of Europe was when the platform was made. Neither is it true that the increased production of silver has caused the decline. It is undoubtedly true that great increase of supply in any mere commodity without a corresponding demand will affect the price; but the stubborn facts and an overwhelming array of statistics which might be piled mountain high, but with which I will not again encumber the records, are directly in the teeth of the theory.

I could cite, and others have already cited, I believe, long periods of time in the past, where a vast increase in the supply of one metal as compared with the other has had no appreciable effect on the relative value of each. At some periods when the mines of the world yielded a much larger proportion of one metal, that metal has persisted in advancing in relative value. At others, when the relative supply of the mines of one metal decreased, the relative value of that metal also decreased—thus demonstrating, if facts and statistics can demonstrate anything, that as long as both metals were recognized by governmental statutes as money, and legal tender money, the law of supply and demand, so often appealed to in this debate, has been absolutely impotent in fixing their value. Legislative law, and not the law of supply and demand, is the more important influence upon the price of the metals.

Mr. President, of course the price of silver has fallen. Its great function was to supply money, currency, or a basis for currency. Deprived of this function, dishonored before the law, discredited by the Government, the marvel is not that its price decreases, but that it has not fallen to a much lower point. A greater marvel is that our people still take it and even hoard it; and the greatest marvel of all is that in face of all this adverse legislation here and elsewhere, and in the face of the action of India, the price rallied after a temporary depression in the very citadel of its inveterate foe, with the imperial heel of England upon it. Sir, from prehistoric ages to this unhappy hour no metal or commodity has ever shown under unfriendly conditions such inherent, self-asserting, and self-resurrecting power.

Will the contention be made that the supply and the demand, as of other commodities, fixes the prices of the precious metals, in the face of the indisputable facts that when Peru and Mexico, and the Comstock lode and Idaho, and Australia and California, and our Pacific slopes under the picks and shovels of the old "Forty-niners," poured their steady and swollen currents of both metals into the world's supply, there was no appreciable decline in value of either metal, or change in their relative value one toward the other. Indeed, the only effect was to stimulate the industries, increase the enterprise, and augment the wealth, the comforts, contentment, and happiness of mankind.

If, then, hostile legislation dealt the unjust blow, friendly legislation should make the atonement, and restore to its rightful position this great metal upon which, in the almost unanimous

judgment of the people, so much of their future prosperity depends.

Mr. President, there is another excuse for not complying with our promises which I sincerely regret was ever given. It is, in effect, that platform pledges are but glittering generalities, meaningless catchwords, and therefore not binding. Sir, to those men around me who were reared in the old-fashioned schools of simplicity, and in the artlessness of a plain-speaking and plain-dealing people, where sincerity and frankness and fidelity were synonyms of honesty, honor, and truth, and where duplicity and sham and Jesuitry, however cloaked or covered, were always recognized as fraud and deception and dishonor—I say to those reared with these old-fashioned ideas bred into the very fiber of their being, it will be difficult to rise or descend to such a conception.

Sir, if such doctrine should become the political morality of the future; if deceptions may be practiced upon the people and justified in public councils; if solemn promises made to the people may be transmuted by the magical touch of expediency into meaningless generalities, then, sir, we may well despair, not only of the elevation of our politics, but of the life of the Republic. Distrust of lawmakers is the prolific breeder of lawbreakers; and in a popular government like ours, confidence of the people in the plain honesty and sincerity of those who control the destinies of the Republic is one of the prime essentials of its peace and perpetuity.

Mr. President, I will consume the time of the Senate in answering but one other objection. That objection is serious. It furnishes a substantial and, I think, by far the most forceful argument against bimetallism, as we understand bimetallism. That argument is that we can not maintain parity in this country without the coöperation of other nations.

It is undoubtedly true that the problem would be vastly simplified if other leading powers would concur in the movement; but there are two factors in this problem which have not I think, been fairly considered by those who disbelieve in the ability of the United States to carry bimetallism upon its own shoulders.

The first is the effect which remonetization by this Government would have upon the price of silver the world over.

The second is the marvelous ability of this Government to achieve results which are not possible of attainment by any other people.

Mr. President, a careful survey of the facts will demonstrate that this is no idle or groundless boast.

Let us consider, for instance, the relative positions and power of France and the United States, inasmuch as the experience of France has been repeatedly referred to in the discussion. I wish to say in advance that I do not claim for an instant that France, with closed mints, furnishes any fair evidence to sustain the proposition that parity can be maintained by a single nation. On the other hand, the fact that France has adopted the gold standard is no proof that this country will ever be forced to the same step.

Monometallism in France and Germany is a war measure. Gold is the European money. Gold must supply the sinews of war, and European war is always imminent. This Government is not at war; it is not going to war, or rather no power is going to war with us. Our financial policy, therefore, is to be considered with a view to peace and not war. But were we to go to war, and if the balance of trade should draw from us every dollar of coined gold, and if Jehovah's omnipotent fiat should obliterate every trace of gold in our mines and mountains, who doubts our ability to find the means of defense? Who doubts that this nation without a dollar of gold could, within sixty or ninety days after war was declared, throw around its borders a cordon of defenders invincible by any armies the world could send against us?

Again, the territory of France, I believe, would have to be multiplied about fifteen or twenty times to equal ours, while the comparison in resources can not be measured in figures.

France has England on one side, separated by a narrow channel, and Germany on the other, separated by an imaginary line. She is thus flanked by imperial powers, her natural enemies and the enemies of the double standard, while within she is torn by feuds, her form of government continually threatened, and its very frame-work forever strained by the heaving ground swells of internal commotions. We are isolated by the seas, and almost as much protected as if surrounded, as Jefferson was tempted to wish, by oceans of flame.

But, Mr. President, what is the use of making comparisons between this nation and any other?

We have exceptional advantages in dealing with this problem in almost every direction. We can utilize profitably and intelligently a larger amount of currency, man for man, than any other people, because of our vast territory still undeveloped, with resources still more boundless. In the march of nations our place is at the head of the column. By inheritance, by geographical position, by the character of our people, we are set apart for leadership. My friend, the Senator from Indiana, said a few days ago that, in the wisdom of Providence, it was reserved for this people to discover and unlock the hidden wealth of our Pacific slopes and Western mountains. He might have added, and to pour their fructifying and enriching currents into the world's commerce.

Sir, we are, indeed, a peculiar people—a torch-bearing people. We have led in railroads and in all material development. We have filled the marts of the world with products of our brain and muscle, and amazed Christendom with the wonders of telegraphy and telephones, and the ten thousand products of our inventive genius. But this is not the highest commission given us by Providence. On that loftiest plane of human endeavor, the plane of self-government by a people, we have achieved a success beyond the hopes of the founders. We have demonstrated that all popular rights may be intrusted to popular government. We have taught mankind that a Republic with more than forty coequal republics, acting in concert and unity, resting solely on the loyalty of its citizens and controlled by their free ballots, may change its laws, its chief executive and all its rulers without shock or violence; that the Republic itself may be rent in twain to-day and reunited to-morrow in bonds of stronger and more enduring fraternity.

Mr. President, the day will come—has it not already come—when it will be our duty to lead in broader financial policies? Suppose this country now follows Europe in its contracted gold policy. It requires no gifts of prophecy to foretell the results. With this nation and all the other nations bidding and scrambling for gold, that metal must necessarily appreciate until the products of labor will lose half their value, while debts will be doubled. Sir, some power must be found which can resist the march of this remorseless policy—remorseless in its results—however differently intended by able and honest advocates. I am not here, sir, to impugn the motives or assail the judgment of those who differ with me on this issue of such transcendent moment to the American people. I no more doubt the sincerity of our great cities than I doubt the honest, sturdy yeomanry of the country.

I know that the great throbbing heart of these great American cities would respond with lavish generosity to appeals for needed help, whether that help were intended to alleviate Eastern or Western, Northern or Southern woe. But, sir, it is a characteristic of human intellects, however vast their capabilities, and though their every fiber were strength and honesty, to be more or less receptive of the influences around them. Let us recognize this truth in dealing with this great issue. Let us not indulge in criminations and recriminations. Let us not by speech erect walls of prejudice and passion between sections or classes, but let us recognize the sincerity of all, the patriotism of all, the intelligence of all, and after sifting the arguments and weighing the suggestions of all, determine the best policy for the prosperity of all.

Mr. President, I am profoundly convinced that it would be wiser policy to trust more largely to the States. I am profoundly convinced that properly guarded State banking can be made both safe and effective, and that if at the beginning of the last Congress the prohibitory tax had been removed, this panic would have been impossible. I believe that Georgia, for instance, would by this date have inaugurated a system safe and sufficient for all her purposes; and that this panic could not have invaded our territory, but would have broken at its borders as the waves of the sea on the rock-bound coast. I believe that even now were that tax temporarily suspended it would give temporary and almost instant relief.

Of this subject, however, I hope to have more to say at a future day. I will not tax the Senate with its discussion now. I feel more inclined to apologize to the Senate and the country for having occupied this much time, and should have remained silent had it been possible to secure at once a favorable vote for the repealing bill offered by the Finance Committee. If the Senate would promptly join the House and repeal without delay the purchasing clause of the Sherman bill, we have taken the first step toward relief. We should at least relax the strain and threatening tension upon the country. We should at least lower the heat of the burning plowshares upon which the people are treading. We should break a rift in the clouds above us, and then with more light and more time for deliberation, we will unite in the effort to arm the country with the double strength of its two great metals, and start it once more on a broader road to increased and permanent prosperity.

INCREASE OF NATIONAL-BANK CIRCULATION.

The VICE-PRESIDENT. The Chair lays before the Senate the unfinished business.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

The VICE-PRESIDENT. The pending question is on the amendment proposed by the Senator from Missouri [Mr. COCKRELL], which will be read.

The SECRETARY. It is proposed to add to the bill as an additional section the following:

SEC. 2. That upon any deposit already or hereafter made of any of the United States interest-bearing bonds, excepting those of the funded loan of 1891 continued at 2 per cent interest, at the option of the United States, by any State bank, private bank, savings bank, loan and trust company, or person with the Secretary of the Treasury, the Secretary of the Treasury is hereby authorized and required to receive such bond or bonds, and to issue and deliver in exchange therefor an amount of United States legal-tender notes in the same language and form of the present United States notes commonly called greenbacks, equal to the face or par value of such bond or bonds, and to hold and keep such bond or bonds, subject to redemption upon the payment into the Treasury of the United States of an amount of United States legal-tender notes of any issue equal to the face or par value of such bond or bonds. And during the time such bond or bonds are held and kept in the Treasury no interest shall be paid thereon, and upon their redemption as aforesaid, the Secretary of the Treasury shall pay the interest accruing thereon during the time so held and kept, less 1/4 of 1 per cent on the face or par value of such bond or bonds, for each twelve months or part thereof, and shall cancel and destroy the United States legal-tender notes so received in redemption of such bond or bonds.

Mr. TELLER. Mr. President, I shall endeavor to address myself to the pending bill, however great the temptation may be to digress into a broader and wider field. Ever since Congress assembled, three weeks ago, I think almost without exception everyone who has addressed the Senate has spoken as if there were some great impending calamity hanging over the people of the United States. A stranger stepping into this Chamber and listening to the speeches made here, with two or three exceptions, would suppose that we were on the eve of some catastrophe, that some great disaster was imminent, that some great disaster was about to overtake the entire people of the United States. I wish to enter my protest against these "calamity-howlers" of the Senate. We have complained much on the stump and elsewhere that a class of our people were pessimistic and inclined to see in every movement—political, social and commercal—disaster, and disaster alone; but this is the first time the Senate of the United States has lent itself as a body, or in any considerable number, to that kind of work.

Mr. President, the people of the United States are still alive. The sun still shines. The country is as rich to-day as it was when Congress adjourned in March. There is no reason for any man to stand here and say the signs of the times portend any unusual or extraordinary disaster. We may have, and undoubtedly have, a financial stringency; but is it the first time the people of the United States have faced a financial stringency, or, in common terms, a panic? Is it of longer duration than any other? Is it more frightful in character than panics ordinarily are? I deny it. When did it begin, and who can say how long it is going to last? Compare it with the panic of 1873, with the panic of 1884, or with the panic of 1890, if you do not choose to go back to the earlier panics which some of us are old enough to remember.

Mr. President, there is a disturbed financial condition of unusual character. It would seem to me, as an humble member of this body, that Congress having been called together by the President for the purpose of granting relief, the first thing to do would be to inquire what has brought about this condition. And yet in three weeks I have heard nobody proclaiming as to impending danger even suggest an intelligent reason for the present financial condition. I know that three members of this body on this side declared that they did not think it was the Sherman act, and I know the distinguished Senator from Georgia [Mr. GORDON], who has just taken his seat, has substantially declared that in his opinion it was the Sherman act, and yet nobody has analyzed the question to show whether it is or is not the Sherman act.

I propose to deal with that question for a few moments, but not at any great length. There will be opportunity to touch on the question later when I shall feel more at liberty to go into it in detail, and it would draw me into a discussion that I do not care to-day to engage in. The Sherman act provides for the purchase of 4,500,000 ounces of silver a month, and its conversion at the market rate into Treasury notes payable in coin. Under that provision of law we have purchased $150,000,000 worth of silver, in round numbers, and we have issued against that $150,000,000 of Treasury notes, which by law are payable in coin and by practice payable in gold.

Which is it, Mr. President? Is it the purchase of the 4,500,000 ounces that has disorganized society, that has closed up our banks, and shut up our mills? The man who believes that the Government of the United States can be put in jeopardy by the loss of $4,000,000 a month must have little confidence in it. If we had bought the silver and dumped it in the sea it would have had no influence upon the finances of the world, and before I get through I shall attempt to show that this disturbance is as wide as the world is.

Is it the $150,000,000 of Treasury notes that have been issued which has brought all this distrust, which has put down the price of cotton and wheat, and shut up the mills and turned out a million of men who are without labor or without bread? That is a pretty severe indictment of this law, a law which was put upon the statute books here after very careful deliberation, a law that received on this side of the Chamber the vote of every member, and that received in the other House the vote of every Republican, and had the indorsement of a Republican Executive. I know it is now somewhat popular on this side of the Chamber to say that it was only a truce. When I have more time I shall take up this question in detail; I shall go back to the records, but I will not do that to-day.

The distinguished Senator whose name it bears, if the newspapers are correct in their statements, declares that it was but a truce, and a truce which he was quite willing to abandon the next day after he had made it. The political morality of that kind of a truce I have not time to-day to notice, but I shall speak of it at some other time. That distinguished Senator more than a year after the passage of the act pronounced it a wise act on at least three occasions on this floor. After an interval of many months between the first utterance on the subject and the passage of the act, the Senator still gave his adhesion to the wisdom of the act.

Mr. President, I assert that during the political campaign—and if any Senator chooses to contradict it I shall give way to him for the opportunity either for five minutes or fifty minutes, if he chooses to take my time—I assert that in the political campaign of 1892, save and except as it had been attacked in the Chicago platform, it was not a question in issue before the American people. In many sections of the country the act was defended with vehemence, with enthusiasm, by the men connected with the political party that had passed it. In 1891 nearly every Republican State convention in the United States indorsed the act.

In 1892 more than half of the Republican State conventions specifically indorsed the act. Yet to-day we are asked to accept as an axiom, as a fact which does not need any proof, that all the disasters which have befallen this country are the result of that act. Mr. President, I deny it. I say there has been no logical attempt on this floor, and there will not be any on this floor, to show that the act of 1890 is in fact the root of the evil from which we are now suffering.

What is the general idea? What is the newspaper idea? What is the declaration of the chambers of commerce and boards of trade? It is that the act has brought discredit upon American money; that the people of the United States are afraid of their currency; and that Europe has doubted our ability to maintain our plighted faith and to pay our debts according to contract. The Chamber of Commerce of the city of New York sent out last spring a circular to every other chamber of commerce in the United States with the request that they should adopt substantially the resolutions of that chamber of commerce, attacking the soundness of our currency, and saying that all the disturbances which were threatened—and they were but slight—were the result of a distrust of the American money. I stand here to say—and I will wait for any Senator to contradict the statement I am about to make——

Mr. GEORGE. I should like to interrupt the Senator there. Does the Senator remember that prior to the 1st day of January last any chamber of commerce or board of trade passed any such resolution as that, or any resolution attacking the Sherman law?

Mr. TELLER. No chamber of commerce in the United States to my knowledge had taken any active part in this matter until early last spring, about the time of the change of Administration, on the 4th of March, and from that time on. The trouble does not arise from that act. Will any Senator stand on this floor and tell me, and tell the American people, as an American Senator, as a student of finance, as a man acquainted with monetary science and the practical operation of a people with money, that he believes the American people brought about the present panic because they were afraid of their money? If he does he will be under obligations to at least cite some instance where the American people have exhibited fright and fear of their money. There have been taken from the banks in the United States since early last spring, I suppose it is safe to say, $150,000,000 by men who were dissatisfied with the present condition of things. They took this money and put it away.

Mr. GEORGE. What kind of money, gold or currency?

Mr. TELLER. The Senator from Mississippi asks me a question on a subject I was just approaching. What kind of money did they take? Did they go to the banks with their demands for the money that they had on deposit and demand gold? They took from the banks everything and anything that the banks had in the shape of money.

I challenge the Senate, I challenge the boards of trade, I challenge the banks to show that any man ever went to a bank demanding any particular kind of money. When he wanted his money he wanted it because he proposed to put it where, in his judgment, it would be safer than it was in the bank. The report from the Treasury Department will show that the people who took greenbacks and Treasury notes did not rush to the Treasury for gold, which, if anybody supposes they were in fear of the money, they must admit would have been the money for which they would most naturally call. That is the money of the world; it is the money with which everybody everywhere now is in love. Did they come to the Treasury for it? They did not.

THE BANKS GROW GENEROUS.

Early last spring the reserve in the United States Treasury, consisting of $100,000,000 of gold, or more, there not by law, but by custom and practice of the Department, for the redemption of greenbacks, was gradually dropping down. The banks in New York began to talk about impending disaster, the great metropolitan press of the country began to predict that, if the heavens were not going to fall at least financial disturbances were to follow the slightest infraction of the $100,000,000 of that money. You, Mr. President [the Vice-President in the chair], can remember, and so can Senators and all around me, with what fright the metropolitan press approached this subject. They predicted that if a dollar was taken from the whole $100,000,000 a catastrophe would be the result. Then the banks in New York City, with a generosity which they sometimes exercise when they see that they can make something by it, and rarely unless they do, came to the rescue of the Government, and said they would put in $6,000,000 of gold.

That is the second time they have come to our rescue. They came to our rescue first in 1885. They did put into the Treasury about six millions of gold. Having put that in, they got themselves together and said, "We have gone just as far as it is safe for us to go; we are on the eve of a financial disturbance, in our judgment, occasioned by the Sherman law." There was the inception of the attack upon the Sherman law. They said, "We think the Sherman law is about to bring us to disaster, and we have no more gold which we can give you." This was before Congress adjourned. They said, "You must take some steps to get gold by the sale of bonds; you will need them; you will require them, for your reserve will soon be intrenched upon, and when it is intrenched upon great evils will result, catastrophes will follow—financial catastrophes, at least."

Then the American people demonstrated their belief in the soundness of the currency and in the intelligence and integrity of the Treasury of the United States as administered by the party then in power and as it would be administered by the party coming into power. What did they do? From the city of Denver the bankers telegraphed to the Treasurer of the United States, "We will give you a million of gold for legal-tenders." Almost every town in the West came forward; the towns in the South, the banks in Arkansas, and the banks in other sections of the country said, "We have gold; we prefer paper and silver, and they can be exchanged for gold." Was there any indication in that action that the American people distrusted their money?

Mr. President, I say to any Senator who is familiar with the practical affairs of life, that the condition now existing is an absolute denial of that statement.

There is nothing more certain in monetary science than that when the people distrust the currency of a country they seek to get rid of it. There is nothing better established in monetary science than that a depreciated money means a rise in prices. Will anybody deny that? Will any student of finance or any practical business man in this country deny the assertion that as money, whether it be paper or gold or silver, depreciates, property appreciates. Why not? One measures the other, and it would be as impossible for one end of the scales to go up and the other to remain stationary as it would that money should depreciate and property prices remain as they were.

Mr. President, we are here for the purpose of finding some remedy for the hard times. Shall we find that remedy by deceiving ourselves or attempting to deceive the people? Let us ascertain what the trouble is. If it is that there is a fear of the currency, then we should reform our currency laws. If it is something else, we should address our attention to that.

DISTRUST WITHOUT REASON.

I was in the city of Denver the day four banks, every one of which I believe was as solvent as any bank in the country, closed their doors. I went out upon the street where the crowd was gathered, and I asked of the people on the street, "What is the trouble?" When they replied, they said to me with almost one universal voice, "We do not know what the trouble is; we have been told there is to be a great financial disturbance in this country, and we do not know whether the banks will be able to pay us our money when we want it; so we think the safest thing now to do is to get it."

That is all there was of it. The prognostications of coming evil which were started in New York City by the great banking houses of that city and which were reiterated by the public press of the great city of New York, followed by the smaller papers of the country, none of them being able to tell what was going to happen, upon misrepresentations and false statements, produced a condition of affairs which can be brought about in any country and at any time by such agencies.

Mr. GEORGE. Was it not a distrust on the part of the citizens of the ability of the banks to pay depositors in currency, and not a distrust of the currency, which caused the panic?

Mr. TELLER. It was undoubtedly a distrust of the ability of the banks to pay. Nobody goes to a bank when he is morally certain it will hold his money safe and takes it out, unless he wishes to use it. These are practical things which everybody knows. As business men we know that people who have money in bank leave it there, and especially where it is drawing interest, as in the savings banks, until distrust comes, and then they take it out. It was distrust of the agencies which had charge of the money of the country, and not of the currency itself, which caused the panic.

I repeat, and every bank president will bear me out in the statement, that the people went alike for gold, for silver, for Treasury notes, and for greenbacks, and they took them at the counter with gladness when they thought there was impending danger of the bank closing its doors.

There is more than that which shows that this panic has not arisen from a distrust of the currency. I stated before that when the people are afraid of currency they attempt always to get rid of it; they do not hoard a currency which is falling; they do not hoard a currency which is not likely to be as good to-morrow as it is to-day. Need I go into any argument to show that? I appeal to the practical knowledge of the Senate, and I appeal to the practical knowledge of the country to bear witness that the statement that the people distrust the money of the country is met by an absolute denial when they hold that money and decline to buy anything with it.

A week after the disaster in Denver—for I always regard it as a disaster when public institutions like banks close their doors, because it always brings a great deal of trouble and a great deal of worry, even if it is not accompanied with loss—I went to some of the men who sell retail goods in the city of Denver. I walked into one of the great establishments there, and in that city they are equal to those of any other section of the country, and I said to my friend who had presided over it for a generation, "I suppose you are making many sales now, as the people have an abundance of money."

Let me say here that it was estimated that more than $3,000,000 was taken from the banks of the city of Denver, which was then in the pockets of the depositors. It was not the business men who withdrew their money, but it was the laboring people, the people who do not keep bank accounts to check against in their everyday operations. I said, "You must be selling plenty of goods now." He said, "Mr. TELLER, there are not goods enough sold in this store to pay the current expenses of running it, and there have not been for nearly a month."

Everywhere you find the same condition existing. The people are not buying. The New England mills are full of goods which they can not sell. The Providence mills, which were thriving a year ago, are filled with goods now which they can not sell. I think the Senator from Rhode Island [Mr. ALDRICH] will admit that to be the condition there. They dare not manufacture any more. The Fall River manufactories are in the same condition, if the financial statements of the great New York papers are correct.

It is something besides distrust of currency which has occasioned the trouble. It is probable that it may be impossible to analyze and discover what the trouble is. People who have been familiar with army operations know that sometimes an army will stampede without cause; fright takes possession of men who an hour before were ready to meet their opponents in deadly battle, but somehow and in some way they become frightened and fall back. The human mind is peculiar. A fright might take possession of it when there is no reason for fright. So I do not hold that I am compelled to analyze this subject and determine what the trouble is. It is enough for me to show that the cause which is claimed does not exist; and when I have concluded I shall be curious to see any Senator rise and dispute on this floor any proposition which I have made, or give any reason why he believes the Sherman law, bad as it may be as a monetary law, has brought disaster to this country by frightening the people as to their currency.

THE FOREIGN BONDHOLDERS.

There is another reason given. It is said that the Sherman law has frightened our foreign bond-buyers and our foreign cus-

tomers; it is said that in Europe they have concluded that we are a nation of bankrupts; that they do not believe we can pay our debts as we contracted to pay them; and the only honest way to pay our debts is in exactly the kind of money which we contracted to pay. Mr. President, 90 per cent of all the securities held in Europe are payable in gold. I appeal to Senators who have knowledge of large business transactions if that is not true. Has there been since 1870 in this country, or even for years before that had there been, practically, an issue of any kind of obligations in the nature of bonds which have not been payable in gold?

We did not commence to make securities payable in gold because we thought gold was preferable to silver. We made those securities payable in gold because we wanted the people of Europe to understand that they were not to be paid in a currency which was then worth less than gold. I have had some knowledge of these things for more than twenty-five years. I assert now that 90 per cent of all the securities which have gone abroad since that time have gone abroad payable in gold. The great railroad companies, which before that time had issued their securities in currency, have called them in, and reissued them payable in gold. The Pennsylvania Central Railroad Company and various other companies which I might mention have pursued this course.

Has it come to this, that the financiers of Europe have made up their minds that the American people can not pay their national and their individual indebtedness in the currency in which they contracted to pay it? It is a slander upon the American people to suppose they would not do it, and it is a slander upon the European capitalists to suppose that they have ever entertained for an hour any fear that we would not do it.

Last February in this Chamber I challenged, and, I repeat again, I challenge any Senator or I challenge any banker to show any reasonable amount of distrust of this country on the part of Europe. I stated then that Senators would find in the Senate the files of the great financial papers of London, the Economist and the Statist, and the French Economist, and I think they can also find the German Economist, although I do not read German, and consequently have not examined that; but they can find the French paper and the two great English authorities upon these questions, and I challenge them to point to any respectable authority of Europe which has doubted our solvency.

I will admit that our bonds came from Europe in 1890. I will admit that at all times some bonds have come from Europe; but they come from Europe not because capitalists doubt us, but because they have our securities which they can turn into money when they desire, and to-day Europe has few foreign securities which can be readily cashed, except those issued by the American people.

I have seen in European papers the statement that the Sherman law was a bad law, but I have yet to see any respectable authority for the statement that it was going to prevent us from paying our contracts according to the letter and the spirit thereof.

I state a fact, which can be demonstrated if any Senator chooses to deny it, that in the month of January last $20,000,000 worth of American securities were put upon the European markets. An examination of the market reports of Berlin, within the last thirty days, will show that American securities have been exceptionally strong in that city. There has not been so much buying of American securities of late in Europe. Why? In the first place, going back to 1888 and 1889, the English people became infatuated with the idea that in the Argentine Republic there were great profits to be made. I do not know how much the English investing public put into the Argentine country, I have no means of knowing, but I know that long before the stream of money flowing from England to the Argentine Republic ceased, the minister of the Argentine Republic, at a public dinner in the city of London, declared that the recent investments by the English in his country had been more than $500,000,000.

Although upon that subject I do not profess to be able to speak with absolute confidence, I do not believe it would be out of the way if I should say that the investing public of Great Britain and Germany together had invested a thousand million dollars in the Argentine Republic between 1886 and 1890. It is said by those who ought to know that the absolute losses of Germany on that loan were more than $250,000,000, and that the English losses were more than $500,000,000. Is it any wonder, then, that they do not have a surplus of money and that our securities do not sell as readily as they formerly did?

Then we ought not to lose sight of the fact that the French, the most frugal, the most industrious and careful of all European populations, sunk $300,000,000 in the Panama Canal. It is not singular that England does not run after our securities and that Germany does not buy them with the avidity which they did formerly.

THE CRISIS OF 1890.

We all recollect the condition in Europe in the fall of 1890. I will now go back a little beyond that. When we assembled in the fall of 1889 at this Capitol, there were more or less rumors of impending financial difficulties in this country and in Europe. I shall not now take time to read it, but I have here before me the Comptroller's report for 1891, in which he details the financial condition of this country and the financial condition of Europe.

The Comptroller in his report says that between the 28th of February and the 17th of May, 1890, forty-six national banks in the city of New York lost of their deposits $44,831,356, while the reductions in loans and discounts were less than $10,000,000. He says the national banks, however, were enabled to strengthen their condition during the months of June and July, and that the marked stringency was delayed until August. Then, as we all remember, the Secretary of the Treasury came to the relief of the distressed banks in New York, and the country generally, by putting out the surplus which had accumulated in the Treasury in 1890 during the whole summer by the purchase of United States bonds. So in a few months the purchase of bonds and the currency that went out from the Treasury equalled almost $100,000,000.

The authority which I have read says that the stringency finally culminated in October; another authority says in November. This was the condition of the country in the spring of 1890, when we met here. There was more disturbance in every country in Europe, except France, than there was in the United States.

I assume that Senators who come here to legislate upon these financial questions, involving so much to our people as they do, must keep themselves advised, not only of the financial condition of this country, but of all other countries; otherwise they are not fit to legislate upon this question. I say to them now that the statement I make is absolutely incontrovertible, that there was at that time financial disturbance in every European country, save France.

It was followed in September by the failure of the Barings, the greatest individual banking house in the world, or that was ever established in the world, a house which has stood for two generations and had been practically controlled by the same family, which in public estimation throughout the civilized world was as good as the Bank of England. It was found that that great house was absolutely bankrupt, and would not be able to pay the debts it had incurred. What was the result? An ex-president of the Bank of England, a man who twice presided over the destinies of that bank, and who had a reputation equal to that of any man in the world in financial affairs, learning of this difficulty at midnight, as we are told, spent the whole night in consultation with other people, and finally induced the Bank of England to come to the rescue of the Barings and to agree to take $75,000,000 of their obligations, and put up the money to save the Barings.

Three million pounds came from France; a million and a half pounds came from Russia, and the rest the Bank of England and neighboring banks put up, and took securities which they were to market, as they might market them from time to time, and thus avert what would otherwise have been an international and universal panic.

Mr. President, did this much despised and condemned act, of which the Senator from Ohio appears to have become ashamed, contribute anything to that disaster? It is my firm judgment, and I think it can be demonstrated, that it averted a panic in this country at that time. It is possible that it only postponed it; but at all events it averted a panic then.

Do you remember that in August we had turned out $54,000,000 of currency, which was locked up in the Treasury and which people could not get? Between that time and the 23d day of October we had put into circulation, through the agency of this despised bill, $80,000,000, aside from that which came from the purchase of bonds—$80,000,000 of new money to all practical purposes, because the $54,000,000 which was pledged to the redemption of national-bank notes was as absolutely useless as if it had been in the sea until the passage of this act? This act then tided over that disaster.

WHAT THE SHERMAN LAW HAS DONE.

The honorable Senator from Ohio need not be ashamed of that act. I assert here that it has been most beneficient and valuable to the whole country. I assert here, after, I think, as much study and thought upon the question as to the low price of silver and its probable result, whatever may be said to the contrary, that it saved silver, and that the fall in silver which came in 1893 would have come in 1890 but for that act. It kept silver for a year at $1.07; it brought to my section of the country the prosperity we have had from that time until last June, and gives us the only hope we have that we may stand the disaster which is to be forced upon us, and that we may be enabled to reform our

industrial lines, and live if the repeal bill shall become a law. We have accumulated something by the aid of that act, and we are better prepared, infinitely better prepared, than we should have been but for the passage of that act.

The act was beneficent. It was not founded upon wise economic laws, I admit, because a proper use of silver would have been simply the opening of the mint to its free coinage; but it was a step, as I have said, in the right direction. While it may have defects it has some virtues, and they have been illustrated in the preservation and maintenance of a condition of prosperity in this country which no other part of the world has had, until in an unfortunate moment, owing to our attempts to repeal this act, the Indian government, or rather the English Government, interfered with the monetary affairs of India and practically destroyed the price of silver, reducing it to 60 or 62 cents per ounce.

What was our condition in 1891? Was there then any disaster in this country? We had an incipient panic in 1890, at least we had threatened financial difficulties. It was so stated by the Comptroller of the Currency, it was so stated by the Secretary of the Treasury in 1890 in his report, and so stated by the Secretary in 1891. Nobody can deny it; nobody can gainsay it.

I have not the time to read these reports in detail, but I think I shall call attention just for a moment to what the Secretary of the Treasury said in 1890 on the subject of trouble. Speaking of the national bank system at that time—and I may refer to this in another part of my speech—he complains that there is no elasticity in the system. Then he goes on to say that the financial depression in September last, "which at one time assumed a threatening character," illustrates the truth of this statement. That showed that there was a financial disturbance, of which I do not suppose I need adduce any further proof.

Mr. Foster, who followed, substantially makes the same statement, which I do not see marked, and shall not therefore refer to now.

There can be no question that we were threatened with financial difficulties, and we avoided them. How? Was anything else done, except the passage of the Sherman act and the sale of some bonds? The sale of the bonds had taken place largely in the beginning of the year, and such sales did not entirely satisfy the public mind. Eighteen hundred and ninety-one was a year of at least more than moderate prosperity in this country. When I was more of a politician than I am to-day, and was making some speeches in the fall of 1892, I insisted and attempted to prove, as did thousands of others all over this country, that 1891 and 1892 had been years of wonderful prosperity. Within thirty days the New York Sun has declared that the year 1892 was a year of prosperity unequalled and unparalleled.

In 1891 there was trouble in Europe. We sent out from this country in April, May, and June a large amount of gold. Let me call the attention of the Senate to that, because I shall have occasion to speak of the exports of gold later.

AS TO GOLD EXPORTS.

In January, 1891, the imports of gold were slightly above the exports, about $660,000,000. Then there began a reverse movement. Gold began to go to Europe. In February, 1891, the export was not large, being in round numbers $3,444,000. In March it was a million more. In April it had assumed quite considerable proportions; it was then nearly $14,00),000. (I am now speaking of the net amount.) In May it was $30,368,112. The export of gold was $30,000,000, in round numbers, more than we got from abroad for that month. The next month it was fifteen and a half millions in round numbers. In July it was $5,000,000. So from February 1 to the last of June, we exported more than we imported of gold $73,457,268.

I am a reader of the financial papers of this country, and of the great dailies, and I do not remember that any of them attributed that export of gold to the Sherman law. I know that the dailies in New York were somewhat panicky. They began to talk as if all the gold was fleeing the country, and would never return; but I do not believe it can be found anywhere that any respectable authority attributed to the Sherman law that export of gold in five months of $73,000,000 and upwards.

In August of that same year we imported $1,222,000 more than we exported, and in October we imported $16,000,000 more. In that time we had imported from August to December, $38,000,000 more than we exported; and that was all under the Sherman law. In the first part of the season we lost $73,000,000, and in the last part we gained $38,000,000. Of course, these statements are not by fiscal years, but by calendar years.

Let us now take the fiscal year 1892, ending, of course, on the last day of June of that year. During that time we imported under this law $50,000,000 in gold and a fraction above. And we exported $50,000,000 and a fraction above. When you strike the balance, according to one statement, it is four hundred and some odd thousand dollars, and according to another statement made by the Department, two hundred thousand and some odd dollars. We lost either $450,000 that year, or we lost $250,000, a difference in statements made by two different branches of the Government, which it seems to be impossible to reconcile so as to determine exactly what we did lose. That was under the Sherman law.

Did anybody, when $50,000,000 of gold was going out, as it went out at the rate of half a million a day, suggest that it was going out because of the Sherman law? No; that was an afterthought. It came later.

When did the gold export commence? I have the authority of the officials of the United States that this extraordinary export of gold began in this country in 1888. So says the Director of the Mint, so say all the other officials, and so say the statistics. The Sherman law had not yet been enacted.

Take the fiscal year 1889. Then our net loss by export was more than $49,000,000.

Mr. GEORGE. Ending June 30?

Mr. TELLER. Ending June 30, 1889. There has been in the spring of every year a large export of gold to Europe. In 1889, in three months, in April, May, and June, the net export of gold to Europe was $32,532,609; in 1891 it was $49,000,000; in 1892 it was $27,000,000; and yet we have seen that the net loss during that year, 1892, was in the nighborhood of a quarter of a million dollars. In 1893 the export of gold during the months of April, May, and June was $35,000,000, or less in 1893 than it had been in other years.

There was a large export of gold for the fiscal year 1893. It amounted to $87,000,000, which was less than it had been in other years, at least in one year, when we had no Sherman law. The export is large, and yet not as large at any time as it was in the few months of 1891 when $73,000,000 of gold went abroad.

Since the great export of gold in the early part of the season, at least since the 1st of July, it has been coming this way. I have the authority of a financial circular that $43,000,000 has been received since the tide turned toward this country. I do not know whether that figure is correct or not; but it is not very much out of the way. Since the 1st of July we must have received at least $40,000,000 of gold imports in excess of our exports. All business men know that the fluctuations in exports and imports of gold have been occurring for many years, but it is quite impossible to always determine why gold goes or why it comes. Take the export of 1891. We have the authority of the Secretary of the Treasury that every dollar except $9,300,000 went out at a premium; in other words, more was paid for it in the city of New York than could be got for it at the Bank of England or at the British mint, and the cost of export must be added to the premium.

The gold which has been exported to Europe this winter has gone universally when the rates of exchange did not justify it; it has gone there at a loss to the man on this side who sent it, unless he could sell it in Europe for more than its mint value or for more than the Bank of England by law is compelled to pay.

Why has the gold gone to Europe? It has gone there because of the disturbed finances of that Continent; because there is a scramble for gold going on throughout the world; and there is not a man doing business in the city of New York, who is capable of managing a bank with a capital of $50,000, who did not know, when it was going, that it was going upon a legitimate demand, which was being made upon us to pay our debts or because the people of the countries of Europe had to have gold. Where did the gold go? An examination of where the $87,000,000 of gold has gone will show that almost all of it went to Germany, to France, and to countries with whom we are not in close commercial relations; and it can be demonstrated that it went there because there was a struggle in Russia, in Germany, in Austria, and in France for gold.

Mr. President, we must not lose sight of the fact that in the last year we sent $87,000,000 more of gold abroad than we received, and we bought of Europe $93,000,000 of merchandise more than we sold.

It will not do to lose sight of the fact that we sent to Europe during that fiscal year $69,000,000 less of cotton than we sold the year before. Senators must not lose sight of the fact that Europe took during that year $99,000,000 less of our breadstuffs than it had taken the year before.

Do these things have anything to do with the present financial difficulties? Would it not be the part of wisdom for us to address ourselves to those questions, and see if we can not find whether there is not some other reason besides the so-called Sherman act which has brought about the present financial stringency?

The agricultural people of the United States sold in Europe $200,000,000 worth less of their products in 1893 than they sold in 1892. That is why there is a balance of trade against us; that is why we have been compelled to export more or less gold, so

as to pay our debts. Does anybody suppose that we are sending gold abroad as a present to Europe? Does anyone suppose that we are transmitting our gold there for safe-keeping? It goes there either to pay the debts that we have contracted, or because they send us our securities in exchange for our gold.

Why do they want gold in Europe? I have had occasion to speak of it, and I shall speak of it again. There is locked up to-day in the five or six great banks of Europe more than half of the gold of the world which has been in circulation. There is not less than $1,500,000,000 of gold locked up by the Bank of England, the Bank of Germany, the Bank of Austria-Hungary, and the Bank of Russia. There is where the gold is. At a later day and at some other time I shall have occasion to refer to this matter at greater length. I am going to speak about it, but not to-night. I am not now going to talk about thenotion, wh ich seems to prevail in this country, that we can enter into a scramble with Europe for gold.

The late Chief Executive of the United States suggested that a way to bring Europe to a realizing sense of the necessity for the use of silver was to appropriate their gold. When the proper time comes, I propose to have something to say on that proposition, but not now.

THE BANK CIRCULATION.

Mr. President, I started out to discuss—and what I have said is but preliminary—the propositions to increase the circulation of the national banks. If we could determine what the difficulty was that occasioned the disturbance we might find a remedy. In other words, if we knew the cause we could address ourselves to removing that, and the effect would take care of itself.

But we are proceeding upon a false idea; we are proceeding upon the theory that, because the public believe that a certain condition of affairs exists, we shall do our whole duty to the people when we shall legislate in that direction, and in that alone.

Why, we are here to determine what the evil is; and when we have determined that, we are to remove it if we can. If it can be demonstrated here that any statute on the statute book has brought about the evil which now exists, you can get my vote to take it off. But I will not take the say-so of a New York banker; I will not take the interested statements of the people who desire to be put in a position where they can command all the industries of this country, as they could do if they could command the money of the country.

Since I have been in public life I have had fixed and determined views as to the right of the General Government in reference to the issue of its money. I hold, as I have on this floor many times stated, that the control of money is the prerogative of nationality and sovereignty; that no government is justified in surrendering it; not justified in surrendering it even for the most patriotic and most intelligent and helpful of all the men who could be selected; but it can not be safely intrusted in the hands of corporations. It must be controlled by the General Government in the main. Therefore, I have always given my vote against the continuation of the national banks as banks of issue. I believe as banks of deposit they have had some value, but as banks of issue none.

Why are banks instituted? Not for the benefit of the banker. They are quasi-public concerns, instituted for the benefit of the public. Banks have three great functions: First, to receive the money of the people and keep it safely until they call for it; secondly, to pay it out when the people demand it. These two functions, to receive and pay back, should possibly be regarded as one. Another function is to transmit the money by bills of exchange from one part of the country to another. I think, perhaps, I should properly say there are but two functions of the banks, because the receiving and the payment may be said to be one.

Those are the functions of a bank. How have they discharged their functions? When a bank takes money and puts it in its coffers, unless the depositor makes a contract otherwise, it is payable on demand. To-day, in the greatest city on the continent, no matter how much or how little money a man has on deposit, he is absolutely debarred by the rules of forty-six or forty-eight different banks of that city from drawing it. He is told, with an impudence which has never before been exercised even by banks, that he can not have it.

Mr. GEORGE. What do the banks do with the money?

Mr. TELLER. I understand that when a man goes to a bank and draws his check and says, "I want my funds which were deposited with you, say last winter or last spring," the officers of the bank say to him, "We will give you an account, we will certify a check, we will say that some time [no time being fixed] we will pay you, but we will not pay you now." If that is not an act of insolvency, no bank ever committed one.

One hundred and forty banks in other parts of the country within the last three months have closed their doors because they were compelled to say that to their creditors; and yet the great banks of the great city of New York, with an impudence and effrontery almost unheard of, have declared that they will not recognize the right of a depositor to claim his money on demand.

NEW YORK AND THE OUTSIDE BANKS.

The banks have another function, which is to transmit money from one bank to another. Commerce can scarcely be carried on unless that function is in active force. Business can not be done between New Orleans and Chicago and New Orleans and New York, and all around, unless bills of exchange can be used. They are the agencies of commerce.

Have these banks fulfilled that function? For more than six weeks the banks of the city of New York, and other cities which I might mention, have simply declined to pay drafts drawn on them by outside banks for the money that those banks have on deposit. Between a city that is entered by at least six railroad trains a day, and can be reached in twenty-four hours, and the city of New York, the rates of exchange have been $3 on the hundred; and between the city of New York and the city of Philadelphia there has been an absolute refusal on the part of the banks of Philadelphia to pay drafts on the city of New York in any kind of money.

I have in my drawer here a letter from a Western banker, who tells me that through his bank he had a draft of $7,000 on a Philadelphia bank, which he sent to a bank in the city of New York, and the bank there returned it to him saying, "We will present no draft to the banks of Philadelphia, because they decline to pay." Then, through other agencies, this banker sent his draft to Philadelphia for money admitted to belong to the drawer, and the banks of Philadelphia simply said "We can not afford to pay this, and we will not pay it."

The other morning, when the Senator from Kansas [Mr. PEFFER] introduced a resolution here making an inquiry concerning the banks, there was fright in this Chamber, and we were told that we were going to disturb the banks. Mr. President, there is not a bank boy or a page who runs the errands of a bank in Chicago who does not know that the banks of New York have suspended; there is not such a boy in the city of New Orleans who does not know that the banks of New York have suspended. It is public talk everywhere. You can not frighten the people any more than they have been frightened by that kind of conduct.

These banks have abandoned their functions as banks of deposit; they have declined to perform the functions imposed upon them by law, with the money in their tills. They have broken down as banks of exchange. They have declined to keep the business of the country in motion. Is it any wonder, then, that there is stagnation in commercial circles when men who own the money can not draw it from the banks where they have deposited it, and men who owe debts can not transmit the money wherewith to pay in such a way as that they will be sure it will reach their customers?

This may be an attack upon banks. I shall hear to-morrow from the public press of New York that we are attacking the banks. If these facts were unknown it might possibly be said that it was not worth while, in an excited state of affairs, to talk about them. But everybody is aware of them.

Mr. GEORGE. What do the banks do with the money which they refuse to pay out?

Mr. TELLER. The Senator from Mississippi asks me what the banks do with the money they do not pay out. I do not know, but I know that when they get their hands on it they keep it; but before I get through I shall tell why the keep it, in my judgment.

I again call the attention of the Senate to the conduct of the banks in the early part of the spring just before the adjournment of Congress, when they began to "hold up," if I may use a Western phrase, the Treasury Department in order to compel it to issue bonds. They then stated to the Department, "We will give you a little money"—and they gave it; "you can not have any more, and if you touch the reserve, if you get below the amount which has been held in the Treasury, there will be a financial panic and convulsion, and you dare not do that."

The $100,000,000 reserve ran down to $90,000,000, but the world did not come to an end. Business was infinitely better than it was a few days ago when the reserve was over $100,000,000. They did not succeed in securing from Congress $200,000,000 of gold bonds, or any other kind of bonds upon which they could bank.

A MEMORABLE INTERVIEW.

About that time the Secretary of the Treasury went over to New York. When I come to speak of the Secretary of the Treasury, I do so with some reluctance. He was a member of this body for some time and for many years a member of the other branch of Congress. During all that time my relations with him were most pleasant, and I trust they are so to-day.

I have great regard for his integrity and his uprightness, and

nothing that I shall say shall reflect upon his honor; but, like every other Secretary who has been at the head of the Treasury Department since I have been in public life, now seventeen years, he believes it to be his duty—and he religiously follows what he thinks is his duty—to submit his financial policy to the wise men of Wall street.

So, early last spring the Secretary went over to New York and had a conference with the bankers. The New York bankers complained to him and to the country at that time that they were carrying on the business of the country. They said that they were paying out a large sum of money, which was going West, and they were keeping the Western bankers alive. I was in California when I saw that statement, and I saw on the day after, or perhaps the same day, the statement of the interview of the Secretary with the bankers.

I said then, "If the national banks of New York are sending money out to the West it is money belonging to the West; it is not theirs." New York is a great reserve city, and all the banks in the West, little and big, are compelled by law to keep their reserve, if not there, somewhere; and so it is safe to say that every bank from the Alleghanies west, including those in the cities of Chicago, Minneapolis, St. Paul, Denver, and San Francisco, have at all times more or less money in the city of New York. So it happened that, when hard times were threatening, the Western bankers began to send for their money. The New York bankers complained about it, and said in substance, it was their money, or tried to have the people so believe, and they did not send it. There are many banks in the West, and some that I know of, which shut their doors because they could not draw the money that they had on deposit in the city of New York.

But I return to the interview between the Secretary of the Treasury and the bankers, which I will read. When it appeared in the public press I was in the State of California. I read it in the Examiner and I took it from that newspaper, but I find the same thing appeared at the same time in the New York Sun, a Democratic paper.

I ask the attention of the Senate to this interview. It is a most remarkable interview; and it will go far to support the charges, which I am not going to make upon my own authority, but which I am going to make upon the authority of others, that this panic is a bankers' panic, brought about by the action of the New York banks, and brought about for distinct purposes, which purposes were practically avowed on the 27th of April. The same things have been reiterated by the financial papers, and the policy is still continued up to the present hour. It had two objects in view. One was to secure from the United States a large issue of bonds, and the other to secure the repeal of the much-abused Sherman law.

This interview has been published and republished, and it has never been denied that I am aware of. If any Senator knows that it has been, I shall be very glad to have him say so. It is in the form of a special dispatch to the Examiner, a great paper in San Francisco, published by a Democrat, and I believe to be in every respect reliable. Even if I had not found it supported by an article in the New York Sun, I should have had no reason to doubt its correctness. I read:

NEW YORK, *April 27*.

Secretary Carlisle this evening met a number of bankers at the residence of George L. Williams, president of the Chemical Bank. The following gentlemen were there to greet the Secretary: Mr. Jordan, Mr. Cauda, President Perkins of the Importers and Traders, President Sherman of the Bank of Commerce, President Cannon of the Chase, President Ives of the Western, President Tappen of the Gallatin, President Coe of the American Exchange, and President Wood of the Hanover.

Mr. President, these are gentlemen who are well known to everybody who keeps any kind of a run of financial affairs in the city of New York. They are beyond question the great representative bankers of the associated banks of that city, and what they said undoubtedly reflected the entire sentiment of the banking circles of that city, if not the banking circles of the United States.

The conference lasted somewhat over an hour. There was the utmost good feeling displayed, and the Secretary said he was there to make a frank and open statement of what he believed to be the financial policy of the Government. In the first place, the Secretary said that an issue of bonds just at this time might be an effective remedy, but that it would be only temporary and that it would be followed by disturbances in the money market and would in the end retard the determination of the Administration to repeal the Sherman silver law. The Secretary positively thought there would be no bond issue except as a last resort.

He held it out to them that the great object of this Administration, the purpose for which the country was overturned last fall and all the disturbance that would arise from the change of the Administration, was to repeal the Sherman law. It is possible that hereafter bonds might be issued at the demand of these gentlemen, but not now. It might be a hindrance. Then the article goes on:

As Carlisle outlined the policy of the Government, it was shown that nothing would be done that would in anyway retard or check the determination of Cleveland's Administration concerning the repeal of the Sherman law. The Secretary went over the currency laws of the country and said they were in bad shape and needed revision. He said the revision should start with the Sherman law.

There is a determination also to show—

This is a part of the conference:

There is a determination also to show the miners of silver the evils of the Sherman law on their fortunes. President Cleveland's advisers have told him that the only way to induce the Western and Southwestern Congressmen and Senators to consent to a repeal of the Sherman law is to demonstrate to their constituents that they are losing every day this law remains in effect.

Mr. GEORGE. Whose statement is that?

Mr. TELLER. This is an article reporting what is supposed to have occurred at this conference.

This work in that direction has been started by a number of the bankers in the solid communities of the East. They are daily refusing credits to the South, Southwest, and West, fearing the effects of the Sherman law. The Chicago banks, it was said, are carrying out the same line of policy.

Secretary Carlisle, in his talk with the bankers, made his stand very clear. It is to be heroic treatment all the way through of the Sherman law, and possibly by the next session of Congress the silver-mine owners and adherents of silver in the Senate and House will be ready to consent to a repeal of the law. The bank presidents, replying to Secretary Carlisle, cordially informed him that they would be ready at all times to cooperate with him. Everybody shook hands, and there was harmony all round. In the meantime the Secretary continues to receive offers of gold from unexpected sources.

THE OBJECT LESSON.

That was followed by a purported interview with the Chief Magistrate of the United States. I was in the West when that was made public. I said to the gentlemen who were around me, "It can not be possible that that is a truthful interview." Mr. President, it has never been denied by any friend of the President from that hour to this. What was it? The purport of it was that he would not call Congress; early that the people of the United States needed an object lesson, and they were going to get it. What was that but saying, "I trust that this financial difficulty that is threatening is coming, and I will not avert it by calling Congress together; I will let it go on; I will let the industries of this country be paralyzed; I will let banks break and people wander around the land wanting bread; I will teach these silver lunatics that they can not afford to fool with me."

For the credit of the American people I hoped this interview might be denied. It never has been denied. The President said later, possibly in the same interview, "I will not call Congress together before September, unless the panic that is threatened should become general, and, if so, I shall call Congress sooner."

Later he issued the call for the present session, and when he did so every citizen of the United States was justified in saying, "The President of the United States believes there is to be a panic."

There is where the panic began, and there is where the trouble came from. From that hour this country has been suffering the blight of distrust. From that hour the people began going to the banks for their money. Before that time they had not gone in any considerable number.

Then we had the action of the banks in New York heretofore adverted to. Was it a part of this same proceeding in New York that the President of the United States and the administration of public affairs should lend themselves to the disturbance of the finances of the country to accomplish a purpose which they were bent upon, it seems, as the chief work of their administration?

Mr. President, I would not make these charges unsupported by evidence. I would not make them if I did not believe them, and I would not have made the charge upon a single statement such as I have read. Had there been nothing else, I should have assumed that there might be error, but there is more. I have a statement here from the Inter-Ocean, a reputable newspaper published in Chicago. It can not be called a "silver" paper, although it has not been as hostile to silver as some of the papers of that city. It is owned and controlled by a man, I understand, of large business interests in the city of Chicago, whom I do not personally know, but who, I am told, is a man of character and respectability. The editor of the paper I do know, and I have known him for years. While he has not been in sympathy with us in our great contest for silver, I believe him to be an honest and upright man, and he would not have made the statement which I am about to read if he had not believed it. The article appeared in the Inter-Ocean of the 20th of August, and is entitled, "Reaping the Whirlwind." It is as follows:

THE NEW YORK BANKS.

When the future historian tells the world of the great financial panic of 1893 he will say: "In the winter and spring months of that year the New York bankers and financiers sowed the wind, and during the summer months reaped the whirlwind." We know no arrangement of words that can more graphically describe the action of New York financiers and the results of that action. Col. Ingersoll, early in the season of disturbance, properly called this "a bankers' panic." Nor are the New York bankers alone to blame. Those of Boston and Philadelphia come in for their share. They were only excelled by the New Yorkers because of the greater importance and opportunity of the latter.

There was, perhaps, no organized conspiracy against the West in the great financial centers of the East, but there was a general understanding all along the line that the West should be forced into line to help the East accomplish what it had long desired. Early in the winter a bank president, conversing with a Chicago man of business, said to him: "Mr. Jones, we are going to make the West pay up this summer." "But, why should you press your Western creditors this summer?" asked Mr. Jones. The reply was: "Well, we think it would make you a little more thoughtful about currency matters, and drive you from your foolish ideas about silver." It is unnecessary to repeat the conversation that followed. The initial question and answer are only given to indicate the intention and object the Eastern financiers had in view.

The Boston bank president was not making an idle remark suggested merely by his own thoughts. Both the matter and the manner of the remark indicated that it was the result of consultation, and that it meant concerted action all along the Eastern shore. Politics and finance were combined in the scheme. The great money powers of the East had secured the election of Mr. Cleveland.

I will stop here to say, in justice to my Democratic friends, that I do not believe it would have been any better if Mr. Harrison had been elected.

They first spent a large sum to secure his nomination, and second, a much larger sum to secure his election. They knew he was in full sympathy with their views, and they felt that now if ever must they make the fight for gold monometallism. Knowing that Cleveland was heartily with them, they desired to create such public sentiment as would make his triumph with Congress easy. First they were to press the West for a settlement of indebtedness, and next they were to start the scare over the export of gold.

The movement of gold abroad began early in the year. It was undoubtedly accelerated, and every effort made to magnify its importance, by New York financiers. The telegraph wires were daily loaded, not merely with the various amounts that were going abroad, but with interviews with New York men as to what the effect would be, and as to what was the cause, etc. There was apparently a systematic effort to impress upon the people of the whole country that other nations were frightened on account of our silver legislation and were determined to secure all their indebtedness at once in gold. The strongest influences were brought to bear on President Harrison and Secretary of the Treasury Foster to get them to issue bonds for the purpose of calling our gold back. It is said that Secretary Foster succumbed to their influence and was willing to issue the bonds, which so greatly encouraged the New Yorkers that they formed a syndicate for the purpose of handling them.

I am credibly informed that that statement was correct. I am further informed that the bonds were printed and ready to be issued if Congress had given the authority.

A gentleman of this city assures the Inter Ocean that he knows some of the members of said syndicate. President Harrison's firmness, however, thwarted their efforts; and when President Cleveland was inaugurated he refused to do what his predecessor had so firmly and positively declined. When it was found that President Cleveland would neither issue the bonds nor call an immediate session of Congress to wipe out silver legislation, the export of gold continued to increase rather than decrease, and the wise financiers of the East began to see that the movement they had started was one they could not control. The fulfillment of their prophecies of evil began to look them full in the face, and they became worse frightened than those whom in the beginning they had intended to frighten.

They could not conceal their apprehension, and though they were much less demonstrative than they were when trying to frighten the rest of the nation, their influence was so depressing to enterprise and prosperity that the panic spread all over the country. A general distrust of banks and financial institutions seized the whole people, and an unexampled hoarding of currency of all kinds began in all parts of the country. The result is that the nation is now undergoing a financial stringency such as was never seen here before, and, as if ordered by retributive justice, the severest sufferers of all are the financiers of the Atlantic cities who inaugurated and created the panic.

Then the editor speaks of the treatment of Chicago banks by the banks of New York. He says:

The great banks of New York, Boston, and Philadelphia have practically suspended, and the work of furnishing currency to those who have workmen to pay is relegated to brokers who sell it at a premium. Chicago is the only great city of the nation where the banks honor all checks, and pay every depositor currency as asked for.

That I understand to be absolutely correct.

Mr. SHERMAN. I wish in justice to the banks of two other cities to say that not only in Chicago, but in St. Louis and Cincinnati the same practice obtains, and they are paying currency to depositors.

Mr. GEORGE. Are those all?

Mr. SHERMAN. So far as I know. There may be smaller cities, and many of them, in which that is the case.

Mr. GEORGE. Of the great cities, those are the only two?

Mr. SHERMAN. The only three I can name.

Mr. TELLER. The Senator from Ohio is correct as to those cities, and he might have mentioned several others.

Mr. SHERMAN. I have no doubt of it. I have no doubt that there are a great many others.

Mr. TELLER. The great cities referred to are, I suppose, Chicago, New York, Brooklyn, Philadelphia, and Boston.

Mr. SHERMAN. Those three are depositary cities, as they are called, and they are commonly called the great cities because they are depositaries of public money; and I am assured by the president of one of the leading banks in Cincinnati that in those cities they have paid constantly every check that has been brought to the banks.

Mr. COCKRELL. St. Louis has done it and St. Joseph, Mo., has done so.

Mr. TELLER. So has the city of Denver, except as to the closed b nks.

Mr. ALLISON. I wish to add, if the Senator from Colorado will allow me a moment, that all the banks which have survived in the State in which I live pay currency for all their checks. I believe three of them have closed, but all the others pay currency upon the checks drawn by depositors. So I think that is the rule in the West.

Mr. CULLOM. Will the Senator from Colorado allow me to make a statement?

Mr. TELLER. Certainly.

Mr. CULLOM. I simply desire to say that as far as the banks of Illinois are concerned it is the rule with them. I wish to add that I had a letter yesterday from the president of one of the Illinois banks, a country bank, in which he stated that he had attempted to get the money that belonged to his bank out of a bank in New York, and he could not do so without paying 3½ per cent interest, which he declined to pay, and therefore they declined to give him the money.

Mr. GEORGE. Did the bank charge that much?

Mr. CULLOM. The bank in New York asked 3½ per cent, and the bank in Illinois declined to give it.

Mr. ALLEN. I desire to say that so far as the State I have the honor to represent in part is concerned the banks are paying their depositors without any expense whatever.

Mr. SQUIRE. I should like to ask if that is not the rule generally outside of the cities of Boston, New York, and Philadelphia?

Mr. TELLER. I suppose this paper and the people who live in Chicago do not recognize St. Louis as a great city, nor Cincinnati or St. Paul. They assume that the great cities of this country are Boston, New York, Philadelphia, Brooklyn, and Chicago. I believe the statement made by the Senator from Ohio and others is correct as to all banks outside of the cities mentioned, Boston, Philadelphia, New York, and Brooklyn.

Mr. GEORGE. How about New Orleans?

Mr. TELLER. I believe, when I come to think of it, New Orleans may be in the same position. The Senators from Louisiana may know how that is. I have heard something of that kind, but know so little about it I would not want to charge it. However, I think the banks in the country generally, with the exception of those which have closed their doors, are still honoring their checks, and I think if the banks in any other portion of the country except these great cities had made this blunder or committed this crime, whichever you choose to call it, they would have been called to very summary account.

Now, I wish to call attention to one or two more things in the articles from which I have been reading:

The New York City banks have now some $37,000,000 of clearing-house certificates which are a species of currency, unknown to the law, that is good between the banks themselves. Checks and drafts on Boston, New York, and Philadelphia are selling in Chicago at from $15 to $30 per $1,000 discount, and go begging at that. Over $25,000,000 of gold has been imported since the 1st of July, but still these great banks are not able to resume their old relation with the banks of the country. They undertook to teach the West a lesson and require them to pay up, but they have found that the West is the great source of the wealth of the country, and that from the West come the exports to foreign countries, and that the money of the foreign countries must come West in order to secure those exports. They have found, too, that the West is full of able and independent business men, who do not find it necessary simply to imitate their brothers of the East.

These great financiers of the East undertook to teach the nation a lesson, showing the folly of bimetallism, and have simply demonstrated their own inefficiency as business men, and worked irreparable injury to the whole country. The gold that they aided to get away to Europe is returning, but it comes to pay for the exports of the West. The same men and their allies undertook to make things easy for Mr. Cleveland, but have only succeeded in rousing animosities that will make the success of his Administration more difficult and make monometallism more hated than ever. Whatever the actual result of present contentions, there is a lesson in the present situation to all those who would have the whole country pay them tribute.

Mr. GEORGE. What is the date of that article?

Mr. TELLER. August 20 of this year.

Mr. COCKRELL. Will the Senator from Colorado permit me to read in the same line an extract from a Missouri paper?

Mr. TELLER. I will.

Mr. COCKRELL. I read from the Springfield (Mo.) Democrat, a paper edited by a very worthy gentleman, who is also a banker:

A COWARDLY COURSE.

In their desperate determination to secure the demonetization of silver the leaders of the gold-standard movement, by their own endeavors and through their allies, inaugurated a campaign of intimidation several months ago. The great banking and financial concerns of New York, with a business directory of the United States at their command, flooded the country with elaborately prepared circulars setting forth the disaster in store for the people unless the Sherman act was unconditionally repealed, and breathing love, sympathy, and interest for the agricultural and laboring classes in whom these Wall street philanthropists have at all times manifested such marked solicitude. The territory in which Springfield is embraced was evidently assigned to Henry Clews and the Fisks, and no business firm, however remote, failed to receive one of these imploring circulars in which all argument was summed in the request that the recipient appeal to Senators COCKRELL and VEST and to Representative HEARD in behalf of the plan of campaign marked out by Wall street.

Ninety-nine per cent of these missives were consigned to the waste basket, and that plan of reaching and influencing Congress through the business interests having failed in this section, at least, another method of applying the screws has been adopted. Wholesale houses in St. Louis which have an extended trade in this portion of the State have been brought into action.

and, through their traveling salesmen, are endeavoring to accomplish that in which the Wall street circulars failed. These houses have sorely pressed creditors throughout the Southwest, and instructions to their salesmen are that these retail dealers must be impressed with the necessity of calling upon Missouri Senators and Representatives for the unconditional repeal of the Sherman act—this being done in connection with suggestions of the necessity of close collections and a curtailment of credit.

It is a deliberate and cowardly attempt to intimidate the business men of the Southwest into expressions foreign to their convictions, and will, of course, in some quarters, have its weight. The Democrat's advice to its readers thus approached is that they request these emissaries to attend strictly to their business, which is that of selling goods; and an alleged sentiment that is the outcome of such a Draconian method of proselyting will cut a sorry figure as a lever of influence when our Representatives in Congress are apprised of the nature of its origin.

I hold in my hand the circular issued by the Hargadine-McKittrick Dry Goods Company, and doubtless others issued the same kind of circular and sent them broadcast to every merchant and everybody else in the State that they could reach.

Mr. GRAY. In what city?

Mr. COCKRELL. In St. Louis, the Hargadine-McKittrick Dry Goods Company. They were dragged in by these Wall streeters to follow in their train, sneaking along behind them and doing their bidding. This is the letter.

Our opinion is, in common with practically the entire business and financial community—

What a wonderful power—

Our opinion is, in common with practically the entire business and financial community, that the immediate repeal of the silver-purchasing clause of the Sherman law is an absolute necessity to the business interests of the United States.

That is the argument and that is the reason they give to business men, the men who are indebted to them, why they should write here to their Senators and Representatives for the purpose of trying to influence them to vote in a certain way. It speaks well for business men and financial interests and communities!

Mr. GRAY. Are those reputable people?

Mr. COCKRELL. Yes; my brother-in-law is a member of the firm. [Laughter.]

Mr. WHITE of Louisiana. Will the Senator from Missouri give us the date of that communication?

Mr. COCKRELL. This circular is not dated. I have one, however, that is dated. It was sent out only a few weeks ago.

Mr. WHITE of Louisiana. Will the Senator from Missouri give us the date of the editorial which he read.

Mr. COCKRELL. The date of the paper is August 13, 1893.

Mr. ALLEN. Allow me to ask a question. Is it not true that every little country merchant and country bank has been flooded with letters or circulars of that kind for the last three or four months throughout the South and Southwest?

Mr. COCKRELL. That is my information from Missouri. I believe, however, one banker from Missouri has written me favoring the repeal of the act, and the rest of them are protesting against it. I will state, for the information of this firm, that probably about twenty of their debtors have written to me that they think it would be a good thing to repeal the Sherman law; that it might restore confidence. I should be very glad to furnish the firm with the names of those who have been so subservient to their will.

Mr. STEWART. Will the Senator from Colorado allow me to read a circular which has been circulated very generally?

The PRESIDING OFFICER (Mr. BERRY in the chair). Does the Senator from Colorado yield to the Senator from Nevada?

Mr. TELLER. Certainly.

Mr. STEWART. It is as follows:

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
NEW YORK, *August 18, 1893.*

To the members of the Chamber of Commerce:

The special committee of the Chamber earnestly requests you to write once more and immediately to your correspondents, south and west of New York State, urging them to do their utmost, by letter, by telegram, and by personal effort, to induce their Senators and Representatives to act speedily in favor of the repeal of the silver-purchasing clause of the Sherman act. It is of the utmost importance that a large majority for repeal should be had in the House of Representatives when a vote is taken on August 28. A large majority in the House would do much towards insuring prompt action by the Senate.

JOHN CLAFLIN, *Chairman.*

Mr. WHITE of Louisiana. May I ask the Senator from Nevada a question? How many circulars does he know to have been issued all through the country by business men and merchants in the West and elsewhere in favor of free coinage at a ratio of 16 to 1 in the last three months, asking their Senators and Representatives to vote that way, and stating that in their opinion it meant the salvation of the country?

Mr. STEWART. I know of none now, but I have received repeated letters from men who begged of me not to give their names, stating that there have been on bank counters petitions which they were requested to sign when they went to the bank and asked for favors, for the extension of their loans, and stating that that had been a common condition imposed upon them. I have received many letters from men who said that petitions for the repeal of the Sherman act were presented to them under such circumstances to sign.

Mr. GRAY. That does not answer the question of the Senator from Louisiana.

Mr. STEWART. I have answered it. I said I knew of none. Then, let me add, those circulars were not on bank counters to be presented to persons asking for accommodation at the bank, while such petitions as I have described have, according to my information, been on the counters of the national banks throughout the country for the last six months. That is the kind of pressure that is brought to bear. And on the 12th of this month they are to appear here to intimidate the Senate; but of that I shall have occasion to speak hereafter.

Mr. KYLE. I should like to interrupt the Senator from Colorado at this point to continue these ramifications just one degree further. I have known it to be the fact that circulars were sent from New York, Boston, and the East in general to our wholesale houses in the West saying that they could not accommodate them further, and the wholesale houses in turn sent their instructions down to the small retail farmers throughout the vast West where I live. I traveled during the past summer amongst the citizens of a certain county and talked with the farmers and asked them in regard to the accommodations which they were getting from the local retail stores, and this is what I heard:

I conversed with a dozen different farmers who said that they did not receive one dollar of credit now at the retail stores, and the reason was that they in turn were not accommodated by the wholesale stores of Minneapolis, St. Paul, and Chicago. As I talked with some of the members of a family one little girl said: "We have no money except butter and eggs." That was the common money used by the stores in satisfying the debts; and the farmers then began to ask questions. They wanted to know whether it was not true that it was the best thing possible to repeal the Sherman law if that was the cause of all trouble which is now appearing in the community.

Mr. GRAY. I hope the Senator from South Dakota told them it was the cause.

Mr. KYLE. Thus the pressure is brought to bear through these same parties in the smallest villages and in the country upon members of Congress.

THE BANKERS AND THE SENATE.

Mr. TELLER. In addition to what I have read I have the financial statement of the Philadelphia Press of August 24. The Philadelphia Press is a great newspaper, controlled at least if not owned—I do not know about that—by a former public official of the party to which I belong. It is a respectable paper, a paper of influence and character and standing. I wish to read what is here given out as an authority as to the methods being pursued by these same parties. I will read a little that is not of very much importance because it brings up the question a little better than to commence at the point at once. This is the report for the business of the 23d. The issue is of the 24th:

There was very little business done in the stock market yesterday. The fluctuations were less violent than usual. General Electric and Chicago Gas were sold with some effect, but no impression of importance was made on the general list. There was considerable trading in Northern Pacific common, and the consolidated 5s sold below 25. There is evidently heavy liquidation in these securities, probably for the account of the North American Company. The borrowing demand for stocks is good. The changes in the prices of most stocks as compared with the close of the previous day were fractional. The total sales in New York were but 107,275 listed and 11,422 unlisted shares. Money was rather stiffer on call at 6 per cent. It is said trust companies in New York and in this city called loans yesterday. The resolution of Senator PEFFER of Kansas, calling on the Secretary of the Treasury for information as to whether the banks of this city, Boston, and New York had violated the law in refusing to pay checks, attracted a good deal of attention. The subject is a dangerous one, and it is well that the resolution went over under the rules.

I do not know to whom it is dangerous, whether to the Senator from Kansas or the banks.

Silver is exceedingly strong at 76 cents bid and 77 cents asked. The Treasury refused to buy at considerably lower figures.

That is not surprising to us. Now I come to the part to which I wish to attract the attention of the Senate:

The money market in New York is unchanged. There is plenty of call money, but it is almost impossible to make time loans. On Monday a loan of $100,000 on gilt-edge collateral was made for four months at 18 per cent.

If that loan was made by any national bank it was in violation of the law, which requires that these banks shall not take any more interest than the State interest.

Mr. COCKRELL. That could be evaded by loaning it through another party.

Mr. TELLER. They could evade it, but I do not think they would take that trouble.

The banks are refusing to pay out currency in large sums to anybody, and their patrons accept the situation with great good humor and patient acquiescence.

The poor unfortunates, I suppose, have to do it. There is not anything else for them to do but to acquiesce. The banks are masters of the situation.

Just at the moment the political situation is largely affecting the money markets.

Here is the gist of this article:

The New York banks for several days have been endeavoring to bring a home influence on United States Senators to induce them to vote for the repeal of the July silver law.

Otherwise known as the Sherman law:

To this end correspondents of the New York banks in the West and South have been told that they need not expect to get money from New York until the purchasing clause was repealed, and the Southern and Western bankers have been strongly urged to write to their Senators and to insist that they work and vote for immediate repeal. This movement has given rise to the recent feeling in New York that the silver majority in the Senate could be overcome, as the influence of the banks of the metropolis, when concentrated on any object, is regarded as invincible. There is a feeling that the strain is not as great as it was, and improvement is hoped for. Some anxiety exists as to the action of savings-bank depositors when the thirty and sixty day limit expires next month. The requirements of money for the crops will also be a potent factor, but no one is disposed to contemplate future conditions, especially if they are likely to be unpleasant.

The remainder of the article is largely devoted to the speech of the chairman of the Committee on Finance, which, in his absence, I do not think I ought to read, but apparently the worst thing the paper could say was that "the arguments he used were simply the arguments of STEWART, TELLER, and WOLCOTT."

Mr. FAULKNER. The Senator from Colorado has been speaking for some time, and the room is quite warm. If agreeable to him I will move an executive session.

Mr. TELLER. It will be perfectly agreeable to me.

EXECUTIVE SESSION.

Mr. FAULKNER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After one hour spent in executive session the doors were reopened, and (at 5 o'clock and 18 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, August 30, 1893, at 12 o'clock meridian.

NOMINATIONS.

Executive nominations received by the Senate August 29, 1893.

ASSAYER, BOISE CITY, IDAHO.

Frank F. Church, of Idaho, to be assayer of the United States assay office at Boise City, in the State of Idaho, to succeed John W. Cunningham, resigned.

COLLECTORS OF INTERNAL REVENUE.

Alexander M. Davezac, of Kentucky, to be collector of internal revenue for the sixth district of Kentucky, to succeed David N. Comingore, resigned.

James L. Doggett, of Texas, to be collector of internal revenue for the fourth district of Texas, to succeed James W. Hearne, resigned.

Kope Elias, of North Carolina, to be collector of internal revenue for the fifth district of North Carolina, to succeed W. W. Rollins, resigned.

Edwin Myers Gilkeson, of West Virginia, to be collector of internal revenue for the district of West Virginia, to succeed Albert B. White, resigned.

William Ryan, of Virginia, to be collector of internal revenue for the second district of Virginia, to succeed James Brady, resigned.

Charles M. Shannon, of New Mexico, to be collector of internal revenue for the district of New Mexico, to succeed L. A. Hughes, removed.

Thomas H. Shelby, of Kentucky, to be collector of internal revenue for the seventh district of Kentucky, to succeed Thomas C. McDowell, resigned.

Hambleton Shepperd, of Virginia, to be collector of internal revenue for the sixth district of Virginia, to succeed Patrick H. McCaull, resigned.

COLLECTOR OF CUSTOMS.

George P. Finlay, of Texas, to be collector of customs for the district of Galveston, in the State of Texas, to succeed N. Wright Cuney, removed.

RECEIVER OF PUBLIC MONEYS.

Leslie P. Ross, of Norman, Oklahoma, to be receiver of public moneys at Oklahoma, in Oklahoma Territory, vice John C. Delaney, resigned.

HOUSE OF REPRESENTATIVES.

TUESDAY, *August 29, 1893.*

The House met at 12 o'clock m. Prayer by the Rev. ISAAC W. CANTER, of Washington, D. C.

The Journal of the proceedings of yesterday was read, corrected, and approved.

DIFICIENCY APPROPRIATIONS, CIVIL SERVICE.

The SPEAKER laid before the House a letter from the acting president of the Civil Service Commission, transmitting an estimate of deficiency appropriations for salaries required for the period from September 15 next to the end of the fiscal year 1894; which was referred to the Committee on Appropriations, and ordered to be printed.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted, as follows:

To Mr. SOMERS, for ten days, on account of sickness in his family.

To Mr. ELLIS of Kentucky, for thirty days, on account of important business.

To Mr. MARSH, for two weeks, on account of important business.

To Mr. HEINER, for two weeks, on account of important business.

PRINTING FOR APPROPRIATIONS COMMITTEE.

Mr. SAYERS. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution I send to the desk.

The SPEAKER. The resolution will be read subject to objection.

The Clerk read as follows:

Resolved, That the Committee on Appropriations be authorized to have printed and bound all documents for the use of said committee that it may deem necessary in connection with subjects in relation to appropriations being considered, or to be considered, by the said committee during the Fifty-third Congress.

There being no objection, the resolution was considered and agreed to.

PREPARATION OF APPROPRIATION BILLS.

Mr. SAYERS. Mr. Speaker, I have another resolution which I wish to offer.

The SPEAKER. The resolution will be read subject to objection.

The Clerk read as follows:

Resolved, That the Committee on Appropriations shall have power to send for persons and papers and administer oaths in pursuing inquiries touching any matters of legislation referred to it by the House, and shall have leave to sit during the sessions of the House during the Fifty-third Congress.

There being no objection, the resolution was considered and agreed to.

FORD THEATER ACCIDENT.

Mr. AITKEN. Mr. Speaker, I ask unanimous consent for the present consideration of a resolution.

The SPEAKER. The resolution will be read subject to objection.

The Clerk read as follows:

Resolved, That a special committee of five be appointed by the Speaker to investigate and inquire into the accident at the Ford Theater building, and what provision should be made in behalf of those injured by the fall of such building, with power to report by bill or otherwise.

Mr. DOCKERY. That resolution, I think, ought to go to the Committee on Rules.

The SPEAKER. Objection is made to its present consideration.

Mr. AITKEN. I ask, then, that it go to the Committee on Rules.

There being no objection, the resolution was so referred.

CONTESTED ELECTION CASE, FIFTH MICHIGAN DISTRICT.

Mr. BURROWS. Mr. Speaker, some two weeks ago I made a motion to have the matter of the contest between Belknap and Richardson sent to the Committee on Elections to inquire into the merits of the controversy. That was before the Committee on Elections was appointed. I now desire to modify my motion, and move that the resolution be referred to the Committee on Elections. I have conferred with the gentleman from Virginia, the chairman of the Committee on Elections, and that seems to be his view.

The SPEAKER. Without objection, the resolution will be referred to the Committee on Elections.

There was no objection, and it was so ordered.

RULES OF THE HOUSE.

Mr. CATCHINGS. I desire to call up for consideration the report of the Committee on Rules.

Mr. REED. I hope the gentleman will not call up this matter until members of the House have had an opportunity to examine

the report. I do not think we are now prepared to pass upon so important a question as that of the rules.

Mr. CATCHINGS. These rules have been printed and at the command of members of the House for several days. The changes from the rules of the House of the last Congress are not numerous; and I think the House is prepared now to consider the matter fairly and intelligently. I trust my friend from Maine will not interpose an objection.

Mr. REED. If an objection would be effectual, I should do so; but I do not see how I can. [Laughter.] If the gentleman will instruct me how to interpose an objection which will be effectual, I will endeavor to do so. I appeal to him, however, not to press this matter at present, because this does not appear to me to be a suitable time.

Mr. CATCHINGS. I think we had better proceed to adopt the rules of the House, so that the committees can organize and proceed to the transaction of business without further delay.

Mr. McCREARY of Kentucky. How long is it since these proposed rules were reported to the House?

Mr. CATCHINGS. I do not know exactly how long, but they were reported several days ago.

The SPEAKER. The gentleman from Mississippi [Mr. CATCHINGS] calls up for consideration the report of the Committee on Rules. The Chair suggests that the reading of the proposed rules be proceeded with, and that as each section or paragraph is read any gentleman desiring to offer an amendment may do so. In this way the amendments will be considered in appropriate order. If there be no objection——

Mr. REED. It is not my desire to consume the time of the House unnecessarily in any way, but as a matter of convenience to members, I think the proposed rules ought first to be read as a whole, afterward they can be read for amendment. I must say that I am not at present familiar enough with the propositions embraced in this report to be able to discuss them without hearing them read as a whole.

The SPEAKER. The Clerk will then first read the report as a whole.

Mr. CATCHINGS. Before the reading is commenced I wish to state that, upon inspecting the report submitted by the Committee on Rules in connection with these proposed rules, I find that we omitted to call the attention of the House to the fact that Rule XXVIII has been so amended as to dispense with the one day's notice which has heretofore been required for a proposed amendment to the rules of the House.

Mr. KILGORE. Mr. Speaker, we can not hear what is going on.

The SPEAKER. The House will please be in order.

Mr. CATCHINGS. I simply make this statement so that the House may understand that this omission was accidental.

The SPEAKER. The Clerk will read the report.

Mr. BURROWS. It was impossible to hear what the gentleman from Mississippi [Mr. CATCHINGS] said had been omitted.

Mr. CATCHINGS. My friend from Michigan will recollect that under Rule XXVIII of the last Congress it was provided that—

No standing rule or order of the House shall be rescinded or changed without one day's notice of the motion therefor.

We have omitted in these proposed rules the requirement of one day's notice; and I wished the House to understand that a reference to this change had been accidentally omitted in the report of the committee.

Mr. REED. Do I understand, then, that the Committee on Rules will be able to report any change in the rules without notice?

Mr. CATCHINGS. At this time I am only calling attention to the fact that in our report we accidentally omitted to mention that such a change is here proposed.

Mr. HOOKER of Mississippi. Mr. Speaker, there are many new members of the House who have had no opportunity to familiarize themselves with the rules under which the House has heretofore acted, and therefore, in order that the present report may be intelligently considered and the proposed changes understood, it seems to me necessary that the rules of the last House should be read, and that then the different paragraphs should be taken up separately for the consideration of such amendments as may be proposed by the Committee on Rules or by individual members of the House.

Mr. CATCHINGS. I shall object to the reading of the rules of the last House.

The SPEAKER. The Chair will state to the gentleman from Mississippi [Mr. HOOKER]——

Mr. HOOKER of Mississippi. Do I understand my colleague [Mr. CATCHINGS] to object to my proposition?

Mr. CATCHINGS. I do.

The SPEAKER. Every member of the House has before him in the Digest and Manual, the rules of the last House, and can refer to them.

Mr. HOOKER of Mississippi. Is there objection to those rules being read?

The SPEAKER. This is a report of the Committee on Rules of the proposed rules for the present House.

Mr. HOOKER of Mississippi. I know that; but this report can not be intelligently considered without a knowledge of the rules under which we have acted heretofore.

The SPEAKER. The Clerk will read the proposed rules reported by the Committee on Rules.

Mr. McMILLIN. I wish to ask the gentleman from Mississippi [Mr. CATCHINGS] one question. In consequence of the confusion I was unable to hear his statement as to the effect of the proposed change in Rule XXVIII.

Mr. CATCHINGS. I was not undertaking at this time to discuss the effect of the proposed amendment, but was merely stating to the House that in the report accompanying the proposed rules we had inadvertently omitted to call attention to this proposed change.

Mr. McMILLIN. What is the change to which you omitted to call attention?

Mr. CATCHINGS. If my friend will turn to Rule XXVIII of the last House he will find it provided that—

No standing rule or order of the House shall be rescinded or changed without one day's notice of the motion therefor.

We simply propose to omit the words—

Without one day's notice of the motion therefor.

Mr. McMILLIN. And fix it so that it can be changed instanter.

Mr. CATCHINGS. So that the Committee on Rules, if they choose to do so, to meet any emergency which may arise—which we hope, however, will not arise—can have a meeting pending the session of the House and make a report instanter.

Mr. REED. A little tyrannical, but correct.

The SPEAKER. The Clerk will now read the rules as reported by the committee.

The Clerk proceeded to read the rules at length.

During the reading

Mr. SPRINGER said: I desire to ask the gentleman from Mississippi [Mr. CATCHINGS] whether he will consent that the Clerk may announce the changes which have been made by the Committee on Rules, as the various rules are reached which are proposed to be changed. There is nothing in this pamphlet copy of the rules to indicate the changes.

Mr. CATCHINGS. The report which was submitted at the same time the rules were submitted shows the changes.

Mr. KILGORE. I would like to make a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. KILGORE. Is it understood that during this reading of the rules amendments may be presented?

The SPEAKER. It is understood that during this reading amendments shall not be presented. This is merely the first reading of the report.

Mr. SPRINGER. And after that each rule will be taken up separately for consideration?

The SPEAKER. That is the request of the gentleman from Mississippi [Mr. CATCHINGS].

When Rule X was reached

The SPEAKER said: Rule X, relating to the appointment of committees, having already been adopted, the Clerk, unless there is objection, will omit the reading of that rule.

There was no objection.

The Clerk then resumed, and completed the reading of the rules.

The SPEAKER. This completes the reading of the report; and now the Chair would like to have some agreement as to the consideration of it. The Chair will suggest that if general debate is desired it may be had, and then the rules might be read by paragraphs, under what is known as the five-minute rule. That can be done if there is no objection.

Mr. CATCHINGS. I think that is the best method.

Mr. REED. I would like to have some general debate. I suppose the gentleman from Mississippi [Mr. CATCHINGS] does not desire to make any limitation upon that?

Mr. CATCHINGS. Yes, I do. Does the gentleman from Maine want general debate?

Mr. REED. Certainly.

Mr. CATCHINGS. How much?

Mr. REED. Well, I do not know how much time I want. I want just enough to explain this thing, after the gentleman from Mississippi [Mr. CATCHINGS] has explained it from his point of view.

Mr. CATCHINGS. I think we had better proceed under the five-minute rule. If the gentleman from Maine [Mr. REED] should desire more time than five minutes I am sure he will have no difficulty in obtaining it; but I think we should proceed under the five-minute rule.

Mr. REED. I object to that.

Mr. CATCHINGS. Well, will half an hour of general debate suit the gentleman from Maine?

Mr. REED. Why, no.

Mr. CATCHINGS. One hour?

Mr. REED. I do not know how much it will take. I do not think there is any particular business pressing upon us to prevent us from making a full examination of this question. I sincerely trust that nothing will be done in the nature of stifling debate in a Democratic assembly.

Mr. CATCHINGS. Mr. Speaker, of course the gentleman from Maine [Mr. REED] understands that nobody wants to stifle debate, and certainly not on these rules. If the gentleman is serious in stating that he does desire general debate, and if he will indicate the time he desires——

Mr. GROSVENOR. Mr. Speaker, this may all be very important, but we can not hear a word of it. I make the point of order that it is impossible to hear what is being said.

The SPEAKER. The House will be in order.

Mr. REED. This is not a matter in which people are divided into parties. It is a matter concerning which the House ought to be allowed opportunity for discussion, and we can come to some conclusion about limiting debate at any proper time, I imagine. I do not think this is an occasion when we need to limit debate beforehand. I regret to see a growing disposition started thus early to shut off proper consideration of measures brought before us.

Mr. CATCHINGS. I would like to make a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. CATCHINGS. If no agreement is reached as to general debate, what will be the order of procedure—if the House makes no agreement at all?

The SPEAKER. If there is no agreement as to general debate or consideration under the five-minute rule, the Chair proposes to recognize the gentleman from Mississippi [Mr. CATCHINGS], who presents the report, and then will recognize the minority; and the gentleman from Mississippi [Mr. CATCHINGS] can demand the previous question on the whole rules whenever he desires, so that they need not be read again by paragraphs at all.

Mr. CATCHINGS. I move that the House enter upon the consideration of these rules by paragraphs, and that debate upon each paragraph, except by unanimous consent, shall be limited to five minutes.

Mr. REED. I raise the point of order that that is not permissible.

The SPEAKER. Will the gentleman state under what rule he makes that point of order?

Mr. REED. I know of no rule that limits us to five minutes debate before general debate.

The SPEAKER. But suppose the House should make a rule?

Mr. REED. The House would have the right to make an incidental rule to pass upon an incidental motion of that kind to regulate the duration of debate. That is unquestionably general parliamentary law.

Mr. CATCHINGS. That is the motion I have made.

The SPEAKER. The gentleman moves that the House proceed to consider the report under what is known as the five-minute rule.

Mr. REED. Nothing is known of a five-minute rule in general parliamentary law.

Mr. CATCHINGS. I made no allusion, if the gentleman will permit me, to the five-minute rule; but my motion was that the House proceed to consider these rules, limiting debate upon each amendment offered or each paragraph to five minutes, unless the House itself by unanimous consent, should extend the time.

The SPEAKER. The gentleman from Mississippi proposes that the House proceed to the consideration of this report by paragraphs, and that in the consideration thereof five minutes be allowed on each side on each paragraph or amendment thereto. Is that the proposition?

Mr. CATCHINGS. Yes, sir.

Mr. McMILLIN. A parliamentary inquiry, or rather a question I wish to ask the gentleman from Mississippi. I wish to know whether it is his purpose to have five minutes pro and con on each paragraph and amendment, or whether each member is entitled to five minutes when recognized on an amendment? I suppose there are some of these rules and amendments on which the gentleman would hardly want to cut off debate in five minutes?

Mr. CATCHINGS. Oh, no; I do not intend to do anything of the kind. If this motion is agreed to, so far as I can control it, I intend to give fair debate on every question.

Mr. McMILLIN. The question I wanted to understand was whether the motion put by the Speaker, for five minutes for or against a paragraph or amendment, would limit the debate to that amount of debate on each paragraph?

Mr. CATCHINGS. The purpose of the motion is to limit speeches to five minutes, so that after debate has run along I could demand the previous question. If the House agrees to this motion it is not my purpose to deprive any gentleman of such debate as may be desired.

Mr. REED. I do not think the House ought to agree to any such proposition as this. It is utterly unusual. I never heard of such a proposition; but of course this appeals to the good sense of every individual. I am not going to indulge in any such language as we often heard when I was in your place [addressing the Speaker] with regard to the outrages of cutting off debate, and if this House should pass this resolution and deprive members of the right to debate and of opportunities of getting light on the subject there is nothing on earth to prevent it, and there is nothing on earth that ought to prevent it. I only want to point out the outrageous nature of the proposition and the right of the House to do it. I do not dream of denying its right to stop all debate. It has the right to order the previous question without a word of explanation.

The gentleman has the right to demand the previous question without a word of explanation one way or another. But the object and purpose of debate is to enlighten some one who may need enlightenment and who may not be enlightened by the views of the gentleman from Mississippi or any other gentleman who undertakes to enlighten. It seems to me that the proposition is entirely unsatisfactory, and perhaps I might give point to my observation by saying that it seems a shade inconsistent.

Mr. CATCHINGS. I undertook to make an agreement for general debate. Failing in that, I will call for the previous question.

Mr. REED. There can be no previous question on that. The previous question is, Shall the main question now be put? That is clearly parliamentary law.

Mr. CATCHINGS. This is the main question.

The SPEAKER. The House in the absence of rules, can make such a provision as it pleases for the consideration of a proposition that comes before it. The gentleman from Mississippi now submits a resolution as to the method by which the House will consider the matter before the House.

Mr. REED. I want to say, in addition, that it is certainly not customary in any body governed by parliamentary law to undertake to limit debate before debate has been entered upon, or to call on the other side to see how long a time they desired for general debate before. How do we know how much general debate we desire until members see how much they know and how much they do not know?

Mr. CATCHINGS. The gentleman from Maine knows as well as any member of this House that it is always customary, where general debate is had at all, to limit the debate before the debate is entered into, unless by consent general debate has been suffered to go along without any limitation. I have not seen once, but many times, before any debate is had at all, that this House has by agreement on one side and the other fixed the limit to debate.

Mr. HOPKINS of Illinois. Mr. Speaker, can we have the resolution read by the Clerk, so that we may know exactly what it is that the gentleman from Mississippi [Mr. CATCHINGS] wants us to vote on?

The SPEAKER. The gentleman from Mississippi will reduce his resolution to writing.

Mr. CATCHINGS having written the resolution, it was read, as follows:

Resolved, That the House proceed to the consideration of the report of the Committee on Rules; that the rules proposed by the committee shall be read by paragraphs; that any member shall be allowed five minutes to explain any amendment he may offer, after which the member who shall first obtain the floor shall be allowed to speak five minutes in opposition to it, and there shall be no further debate thereon.

Mr. CATCHINGS. Mr. Speaker, I ask the previous question.

Mr. REED. Under general parliamentary law there can be no previous question on that. There is no occasion for demanding the previous question, and it could not be demanded if there was. His is a mere incidental motion and has to be decided without debate of itself; consequently to have the previous question upon it would be to gild refined gold.

The SPEAKER. The question is on the resolution offered by the gentleman from Mississippi.

Mr. McMILLIN. Mr. Speaker, I would suggest to the gentleman from Mississippi that in the haste of writing his resolution he has failed, I think, to make it convey the idea which a few minutes ago I understood him to say he intended to convey. Under the resolution, as I understand it, there can be but five minutes' debate on each side of each proposition. I can not suppose that the gentleman from Mississippi would want to cut off

everybody in the House from speaking upon any proposition except two members and to limit them to five minutes each.

Mr. CATCHINGS. I will state to the gentleman from Tennessee that the resolution which I have sent to the desk embodies precisely the language of section 5 of Rule XXIII of the old rules, which covers what is commonly known as the five-minute rule.

Mr. McMILLIN. That is true, but that five-minute rule was intended to be applied only after there had been deliberate debate.

Mr. CATCHINGS. Nevertheless, under the rule as I have written it, there may be unlimited debate under the five-minute rule, unless where it is cut off by the previous question.

Mr. McMILLIN. I am not complaining of the course which the gentleman takes, but am merely suggesting that his resolution does not embody the same proposition that he first submitted to the House, which was to allow more than five minutes' debate on each side of each proposition.

Mr. CATCHINGS. And I am simply replying that I have copied the language of the old rule.

Mr. HOOKER of Mississippi. Mr. Speaker, will my colleague permit me to make a suggestion?

Mr. CATCHINGS. Certainly.

Mr. HOOKER of Mississippi. Mr. Speaker, that resolution, as I understand it, proposes to limit all debate on every one of these rules to five minutes on the part of the gentleman who proposes an amendment, and five minutes on the part of some gentleman who opposes it. Now, there are many of these rules that will probably be adopted without any debate, and to limit debate on the important rules which propose to fix the methods of procedure in the House to five minutes on each side, is to confine the argument on each proposition solely to two members, one in favor of it and one in opposition, thus leaving 352 men with their mouths closed, unable to have a voice in a matter on which they have a right to be heard.

Mr. REED. And in addition to that, Mr. Speaker, it gives no opportunity to any man to explain these rules as a whole, because it is simply impossible that that can be done in five minutes.

Mr. SNODGRASS. I want to ask the gentleman from Mississippi [Mr. HOOKER] whether he does not think that three hundred and odd men can take care of themselves by voting down any proposition that is offered to them if they do not like it?

Mr. BURROWS. Mr. Speaker, I suggest to the gentleman from Mississippi [Mr. CATCHINGS] that he withdraw his resolution and allow general debate to go on at least to-day, leaving the question of limitation to be settled later. That was the course adopted in the Fifty-first Congress, when what are known as the Reed rules were adopted. The gentleman from Illinois [Mr. CANNON] had charge of the report of the Committee on Rules, and the gentleman from Kentucky [Mr. Carlisle] who with Samuel J. Randall represented the minority of that committee, and on the question of limiting debate this colloquy occurred in relation thereto:

Mr. CANNON. Now, Mr. Speaker, I would like to have the attention of the gentleman from Kentucky [Mr. Carlisle] for a moment. I desire to ask the gentleman from Kentucky if he is now ready to indicate a proposition under which the rules can be considered?

Mr. CARLISLE. I am not yet ready to agree to the proposition made by the gentleman from Illinois this morning; though I think that if the House will go on now with the discussion, with the understanding between us this morning that it shall be under the hour rule, I hope to-morrow morning we will be able to make some agreement; in any event, the gentleman has control of his own report, and can take such a course as he thinks best.

Mr. CANNON. Then the understanding is that we go on under the hour rule to-day?

Mr. CARLISLE. Under the hour rule.

Mr. CANNON. I will proceed, and by to-morrow morning I think we may be able to agree with the gentleman from Kentucky touching the closing of debate and a vote on the code.

So I think that now the gentleman from Mississippi will save time if he will allow the general debate to proceed to-day. I have no doubt that by to-morrow we shall be ready to proceed under the five-minute rule, and it will be following the course adopted in the Fifty-first Congress.

Mr. CATCHINGS. I wish merely to state that I have no objection whatever to general debate. On the contrary, I opened these proceedings with an endeavor to reach an agreement by which we could have a limited amount of general debate. I failed, however, to secure an agreement; and nothing was left to me but to suggest to the House the motion that occurred to me as the next best course of procedure.

I am perfectly content that we shall have general debate. I never entertained the slightest desire to prevent the fullest and freest discussion of these rules. Gentlemen will remember that during the consideration of the rules in the last Congress I was extremely liberal, and suffered the debate to run along for a period of two or three weeks. Nor have I any desire now to prevent any member on this floor from expressing any views he may entertain in regard to any of these rules. But no one has expressed a wish for general debate except the gentleman from Maine; and he failed to suggest any desire as to the limitation of it. Therefore I was driven to make the motion I have submitted.

Mr. REED. It so happens that I have taken precisely the same ground which Mr. Carlisle, then a member from Kentucky, took in the Fifty-first Congress. I asked that the general debate might proceed without any limitation. I have not the slightest idea that this general debate need take all this afternoon. I do not know that it will take an hour. But we can not tell as to that until we get into the debate. It very often happens that where everybody understands something as to what the actual limitations of time are, some agreement is entered into at the beginning as to the amount of time to be occupied. But when there is no particular occasion for that—when there is no special stress of business and no reason to suspect that anybody is going to prolong debate unnecessarily—it seems to me that the position taken by Mr. Carlisle in the Fifty-first Congress and the position which I now take is a reasonable and sensible one.

In response to the suggestion which I made, the gentleman from Mississippi proposes we shall be limited to five minutes on a side on each item, giving no opportunity to discuss the rules as a whole, no opportunity to give the House the information which it should get from debate if it is of a reasonable character.

Mr. CATCHINGS. Nobody suspects that our committee has ever had any purpose to prevent full and free debate. When I sent up my resolution, I accompanied it with a statement that so far as I might control the matter, every member, notwithstanding the adoption of this resolution, should have the fullest opportunity to express his objection to any of these rules. In view, however, of what has occurred I will ask leave to withdraw my resolution and that the general debate be allowed to continue during to-day unless it should meanwhile exhaust itself.

Mr. REED. I think if the gentleman from Mississippi will leave this matter open there will not be any trouble; for I have no idea any one wants to occupy any great amount of time. It seems to me that general debate may properly be allowed to proceed without limitation.

Mr. SPRINGER. Does the gentleman from Maine desire to occupy any time now in general debate?

Mr. REED. I should be very glad if the gentleman from Mississippi [Mr. CATCHINGS] would in the first place fully advise us as to the particulars of this report. I wish this done because we have had no consultation in committee owing to the press of other business. I do not make any complaint in this respect, for I consented to the report. I did everything I could to facilitate the presentation of the report, although it is, in some respects, contrary to my idea of the correct method of doing business here. I would like the gentleman from Mississippi to submit some explanation, because I may not be informed as to all the points which deserve attention.

Mr. CATCHINGS. I will make a very brief statement in regard to the alterations suggested by the Committee on Rules.

Mr. JOHNSON of Indiana. I hope the gentleman from Mississippi will speak in a louder tone. It has been impossible to hear in this part of the hall what he has been saying.

Mr. CATCHINGS. Mr. Speaker, the rules which are now proposed for adoption are in the main, as members doubtless understand, those which were adopted by the House in the last Congress. The alterations suggested are not numerous. The first alteration applies to clause 1 of Rule VIII, which, as it prevailed in the last Congress, provided that—

Every member shall be present within the hall of the House during its sittings, unless excused or necessarily prevented; and shall vote on each question put, unless, on motion made before division or the commencement of the roll call, and decided without debate, he shall be excused, or unless he has a direct personal or pecuniary interest in the event of such question.

We now propose to strike out the words "on motion made before division, or the commencement of the roll call, and decided without debate, he shall be excused, or unless." The object of the proposed change is to avoid the motion which might be made under the old rule to excuse a member from voting. If the change which we suggest be made, a member will be left to determine for himself whether he has such a direct personal or pecuniary interest in the question before the House as to relieve him from the duty of voting. I think this amendment will commend itself to the judgment of all gentlemen.

Mr. REED. It has also another advantage: it checks one filibustering weapon in the hands of ill-disposed persons.

Mr. CATCHINGS. It does, as suggested by the gentleman from Maine, have that effect.

The next alteration, Mr. Speaker, is to be found in Rule X. The committees on the Columbian Exposition and on the Eleventh Census have been dropped from the list of committees, inasmuch as the Committee on Rules thought there was no necessity for further continuing them. The Eleventh Census has been completed and the Columbian Exposition will soon be a thing of the past. As those committees had been raised for

special purposes, to take charge of matters relating to the Exposition and in connection with the Eleventh Census, and have fulfilled their object, we recommend that they be dropped from the list of committees of the House. We also by this same Rule X make certain select committees standing committees of the House. This rule, however, has already been adopted by the House on a former report.

The next amendment, Mr. Speaker, proposed by the Committee on Rules will be found in the fifty-second clause of Rule XI of the old rules. The effect of the proposed amendment is to permit the Committee on Rules to sit during the sessions of the House.

But my attention has just been called to the fact that a further amendment to section 3 of Rule X should also be explained. I took occasion, however, to explain the object of it when the rule was adopted a few days since by the House. It will be remembered that the House adopted as a part of the rules a report from the Committee on Rules with reference to this Rule X, which authorized the Speaker to appoint certain committees; and when I presented the partial report I explained the amendment suggested, the effect of the change being that no matter how a vacancy may occur in the chairmanship of a committee the member next in rank would become chairman, unless the committee itself otherwise ordered. Under the old rule that was not the case, except where the chairman of the committee died.

But there seemed to the Committee on Rules to be no reason for a distinction between the vacancy in the chairmanship of a committee occasioned by the death of the chairman, by his resignation, or from any other cause; and we therefore amended the rule to provide that no matter how the vacancy occurred the next member in rank on the committee should become chairman, unless the committee should otherwise direct.

Let us recur again to the fifty-second clause of Rule XI. That rule is amended so as to permit the Committee on Rules to sit during the sessions of the House. It was believed to be desirable that this committee should have that power. It is not an unusual thing for the House to grant permission to any committee to sit during the sessions of the House. It is, on the contrary, an everyday matter for the chairman of a committee to rise in the House and ask unanimous consent that his committee be permitted to hold its sessions during the sittings of the House.

By this means the business of the House is expedited, and the Committee on Rules believe that this committee, which largely takes the initiative in suggesting legislation, or the order of business in the House, should have this right.

We further propose to drop from the rules clause 2 of Rule XIII, which was in these words:

2. The question of reference of any proposition, other than that reported from a committee, shall be decided without debate, in the following order, viz: A standing committee, a select committee; but the reference of a proposition reported by a committee, when demanded, shall be decided according to its character, without debate, in the following order, viz: House Calendar, Committee of the Whole House on the state of the Union, Committee of the Whole House, a standing committee, a select committee.

That rule has become obsolete in view of the fact that bills of all sorts are now introduced by simply handing them in; those of a public character to the Speaker to be referred by him, and those of a private character to the Clerk to be referred by him. So there is nothing for the clause to operate upon, and we suggest that it be dropped.

We also, Mr. Speaker, amend Rule XVII by simply transposing a part of the third clause of Rule XXVIII, which relates to the operation of the previous question. That clause contained a provision that where the previous question had been ordered, and there had been no debate before it was ordered, there should be thirty minutes debate allowed on each proposition. We transposed part of Rule XXVIII, and make it a part of Rule XVII, where it seems properly to belong. There is no alteration in the substance of the rule itself; it is simply a transposition of that part.

We amend Rule XIX, or rather we suggest that it shall be amended, so that amendments to titles of bills of resolutions shall not be in order until after they are finally passed, and that they shall then be determined without debate. Gentlemen will remember that under the old rule an opportunity for delay was afforded after a bill had been passed. This permission or provision of the old rule was availed of for the purpose of delay by taking technical advantage of the right to debate any proposition which might be presented for an hour on the part of the mover thereof. We amend that rule so as to provide that there shall be no debate on the amendment of the title of the bill or the resolution.

Mr. REED. That is also a limitation on the sacred right of deliberation.

Mr. CATCHINGS. Yes, sir; we propose to that extent, at least, to invade the sacred right of deliberation; and we suggest, as I have already said, that where an amendment is offered to the title of a bill or resolution after it is finally passed, the amendment shall be disposed of without debate.

Mr. TRACEY. Was not that a provision of the present rules?

Mr. CATCHINGS. No, sir.

The next amendment is proposed to clause 3 of Rule XXII, which is:

3. All other bills, memorials, and resolutions, may in like manner be delivered, indorsed with the names of members introducing them, to the Speaker, to be by him referred, and the titles and reference thereof shall be entered on the Journal and printed in the RECORD of the next day, and correction in case of error of reference may be made by the House in accordance with Rule XI within three days immediately after the reading of the Journal, by unanimous consent, or on motion of a committee claiming jurisdiction, or on the report of the committee to which the bill has been erroneously referred.

The amendment proposed is simply to prohibit debate on questions of reference. It was deemed by the Committee on Rules inadvisable that a simple proposition to refer a bill to one committee or another should be made the subject of debate, the House being quite competent, upon a mere suggestion to it, to decide as to which committee a reference should be made.

We also amend that rule by making, as its fourth clause, Rule XLVII of the last Congress. That is another simple matter of transposition. The rule transposed is:

When a bill, resolution, or memorial is introduced "by request," these words shall be entered upon the Journal and printed in the RECORD.

That was Rule XLVII of the last Congress. We simply omit that as an independent rule and make it clause 4 of Rule XXII.

The next amendment suggested is in paragraph 2 of Rule XXIII, the purpose of which is to make 100 members a quorum in the Committee of the Whole. It is believed by the committee that if this amendment is adopted great expedition of the public business will result.

Mr. KILGORE. Will the gentleman allow me to ask him a question?

Mr. CATCHINGS. Yes.

Mr. KILGORE. Has it not been the rule, from the beginning of the Government, with one exception, that a quorum of the House and a quorum of the Committee of the Whole are the same?

Mr. REED. Yes; this breaks the precedents of 104 years—all except two.

Mr. KILGORE. Except during the Reed Congress. The Reed people had a different rule.

Mr. REED. You are doing me too much honor.

Mr. CATCHINGS. As far as my knowledge goes, the gentleman from Texas [Mr. KILGORE] fairly states the case. So far as my knowledge goes, up to the Fifty-first Congress, a majority of the whole House was required to constitute a quorum of the Committee of the Whole.

Mr. KILGORE. Well, now, Mr. Speaker, in the Fifty-first Congress a quorum of the House was 167 members. In the present Congress a quorum is 179 members. So in proportion to the size of the House you have actually reduced the number that is necessary to constitute a quorum below what it was in the Reed Congress in the Committee of the Whole.

Mr. CATCHINGS. Mr. Speaker, those of us who served in the Fifty-first Congress must frankly admit that the operation of the rule then adopted, and which we now propose, was highly beneficial. Gentlemen who are familiar with the manner in which the business of this House is conducted all understand and admit that when the House has before it the consideration of one of the great appropriation bills it is a simple impossibility to keep present here on this floor a majority of the whole membership of the House.

There is nothing in the Constitution, as was formerly suggested by some members, which forbids this change. While the House designates this committee as a Committee of the Whole House, it is under no obligation to make it in fact a Committee of the Whole House so far as its quorum is concerned. It is a Committee of the Whole House in the sense that every member of the House is also a member of the committee, and can take part in its deliberations, and can address himself to the business before the committee. But I repeat, there is nothing in the Constitution which forbids this House from making 100, or any other number of members, a quorum in its proceedings in Committee of the Whole.

Now, Mr. Speaker, I have many times, as other gentlemen have, seen the business of this House obstructed for hours at a time because some gentleman was disappointed in securing the adoption of some amendment proposed by him to some appropriation bill. In a fit of temper or otherwise we have, under these circumstances, seen the point made that no quorum was present. Pages have been sent out and messengers sent out by the Sergeant-at-Arms, searching the committee rooms and the hotels and the Departments to drum up enough members to constitute a majority of the House.

I have seen hours lost frequently in securing the presence of a quorum to act upon an amendment which nobody but the man

who offered it would ever dream would be accepted, and then we have seen the same thing repeated the same day and the next day until the final passage of the bill; for no sooner would a quorum appear and vote down the amendment and remove the obstruction so that business could go on than some other gentleman, because he could not get an amendment agreed to, would make the point that there was no quorum present, and, in the meantime, the members had gone, had dispersed, and so hours of valuable time were consumed in again getting a quorum present. I believe I can say, Mr. Speaker, that I have not talked with a single member of this House on either side who has not expressed satisfaction to me that the committee had suggested this amendment.

Mr. HENDERSON of Iowa. This amendment, as I understand it, is in the language of the rule of the Fifty-first Congress.

Mr. CATCHINGS. Substantially; possibly the exact language.

Mr. HOPKINS of Illinois. It worked very satisfactorily in that Congress.

Mr. REED. Oh, everything worked satisfactorily there. [Laughter.]

Mr. CATCHINGS. Another amendment proposed in these rules is that the Committee of the Whole House, at any time after the five minutes debate has begun, may itself close debate; and we thought that that would contribute greatly to the expedition of business. Gentlemen understand that under the old rules the Committee of the Whole House had no power to close debate. Although it might have had a surfeit of debate, it was impotent to close debate, and nothing was left to it except to go through the farcical performance of rising, having the House organize itself as the House, and having taken that dual capacity direct that debate in the Committee of the Whole House should close, whereupon the House would again go through the farcical performance of resolving itself into Committee of the Whole.

Mr. REED. And in addition, if the gentleman from Mississippi will allow me, the further suggestion that while you have a quorum of a hundred there may be a very grave difficulty in getting a quorum consisting of 179 members.

Mr. CATCHINGS. That is a very pertinent suggestion of the gentleman from Maine, and I have seen difficulty arising on the very question of the committee rising; for of course it would require a quorum; and so without the presence of a majority of the total membership the committee was powerless to rise or to do anything.

It will be observed, however, Mr. Speaker, that we only propose to confer upon the Committee of the Whole House the right to close debate after five minutes debate has begun; so that all questions as to general debate will be settled in the House as they have heretofore been.

The next amendment suggested is in paragraph 4 of Rule XXIV. I will read the rule which we propose to amend. The old rule was as follows:

After the morning hour shall have been devoted to reports from committees (or the call completed) the Speaker shall again call the committees in regular order for one hour, upon which call each committee on being named shall have the right to call up for consideration any bill reported by it on the previous day on either the House or Union Calendar.

We suggest that this rule be amended so that the House during the morning hour may consider bills on any one of these calendars, and not merely those on the House or Union Calendar.

Mr. HOPKINS of Illinois. That would allow you to take up private bills.

Mr. CATCHINGS. Any bill you chose to take up.

Mr. HENDERSON of Iowa. If the gentleman will permit me, does he not think that inasmuch as Friday is devoted to the Private Calender, that we ought not to have an amendment in that shape, adding that business to the morning hour? The real effect of this will be to enable the morning hour to be devoted to the consideration of claims, of war claims and all those matters, whereas they now have a full day that can be devoted to that purpose.

Mr. HOOKER of Mississippi. That is, have had it in a Pickwickian sense.

Mr. BOATNER. I would suggest to the gentleman from Iowa that not a single private bill was considered in the last Congress.

Mr. HENDERSON of Iowa. It was not because they had not a day for it. They had a very large calendar.

Mr. BOATNER. Three Fridays out of every month were taken up by other committees, to the exclusion of business reported by the Committee on Claims.

Mr. HENDERSON of Iowa. We do not want to take up the morning hour with the consideration of that business.

Mr. OUTHWAITE. No committee will be likely to take up its time with the consideration of business on the Private Calendar.

Mr. REED. Anything that comes in the morning hour can be killed. That is only another method of killing private bills.

Mr. CATCHINGS. I doubt the value of the suggestion of my friend from Iowa. I think it can safely be left to the committees to decide for themselves what bills they will call up in the morning hour, and as the time is so limited, I think it need not be anticipated that during that hour any bill will be suggested to the House which will be likely to excite much discussion or provoke much opposition.

Mr. McMILLIN. Does the rule change the method of consideration in this respect: Where a committee brings up a bill which makes an appropriation, or which would ordinarily have to be considered in Committee of the Whole, does that measure still have to be considered in Committee of the Whole?

Mr. CATCHINGS. No alteration is made in that particular.

Mr. HERMANN. I wish to ask the gentleman from Mississippi a question in that connection. As to the consideration of pension claims, for instance, can they be called up at any time, or are they to be confined to the usual Friday night sessions?

Mr. CATCHINGS. They can be called up like other bills.

Mr. HERMANN. Under the rule to which the gentleman has just referred?

Mr. CATCHINGS. Certainly. Now, Mr. Speaker, the next amendment suggested is in Rule XXVI, clause 2, which was as follows:

The second and fourth Mondays in each month shall, when claimed by the Committee of the District of Columbia, be set apart for the consideration of such business as may be presented by said committee.

The Committee on Rules propose to substitute for that what I now read:

The second and fourth Mondays in each month shall be set apart for the consideration of such business as shall have been previously reported from the Committee on the District of Columbia, unless otherwise determined by the House.

The amendment, if adopted, will have the effect of placing what are known as District days upon the same footing precisely with the Fridays of each week, which are known as Private Calendar days. I will explain to members who have not had an opportunity of witnessing the operation of the old rule, that it was not within the power of the House to determine, as a general proposition, on District days whether it would consider business reported from the Committee on the District of Columbia or not; whereas it has always been within the power of the House, when Friday comes, to say by a vote that it will dispense with the Private Calendar and proceed to general business.

The only method by which the House on District day could refuse to consider business reported from the Committee on the District of Columbia was by having the question of consideration raised against each bill presented by that committee; and the effect was, so far as my observation goes, that the day was generally lost both to the Committee on the District of Columbia and the House. When this House desires to consider business reported from the Committee on the District of Columbia it will do so, and when it does not desire to do so no rules you can adopt can compel it to do so.

The effect, therefore, was that hour after hour was spent in having a bill presented by the Committee on the District of Columbia, having the question of consideration raised against it and sustained; then having another bill called up by that committee, the question of consideration again raised and again sustained; and so on until the whole day was wasted in the struggle between the House trying on the one hand to rid itself of that business, and the committee on the other hand trying to compel the House to consider its business.

The Committee on Rules would suggest to the House whether it would not be wise to put these District days upon the same footing with Friday, which is Private Calendar day; so that if, from any cause satisfactory to itself, the House should not desire to enter upon the consideration of measures reported from the Committee on the District of Columbia, it could by a single vote so decide, and pass on to the consideration of general business.

Mr. RICHARDSON of Tennessee. Mr. Speaker, I would like to ask the gentleman from Mississippi whether the effect of the new rule as proposed, if adopted, will not be to make it much more difficult for the Committee on the District of Columbia to have its business attended to on District days? In other words, will it not be easier to dispense with District business under the new rule than it was under the old?

Mr. CATCHINGS. That is a matter of speculation, Mr. Speaker, and the gentleman's question is one to which, of course, no definite or conclusive answer can be given. My own opinion, however, is that the effect of this rule will be to expedite the consideration of bona fide measures, or those of at least a quasi public nature, which may come from that committee.

Mr. RICHARDSON of Tennessee. I will ask the gentleman another question which his long experience in this House will enable him to answer. I wish to ask him whether, in view of the great and growing importance of the business pertaining to the District of Columbia, he thinks that two days in each month is more time than it ought to be allowed for the transaction of that business?

Mr. CATCHINGS. Mr. Speaker, I might admit the truth of what the gentleman implies in that question, and still contend that this would be a wise rule. I may also suggest that one day in the week for the consideration of private bills is utterly insufficient to give any sort of consideration to measures of that kind which Congress has to pass upon; but, in the very nature of things, we can not give as many days to the consideration of either private bills or the business of the District as perhaps they should have.

Mr. RICHARDSON of Tennessee. Is the object of this new rule to make it easier to do away with District business on District days?

Mr. CATCHINGS. The object is to enable this House, when it is determined not to consider business reported from the District Committee, to say so by a single vote, and pass on to general business, instead of wasting the whole day in voting down one bill after another presented from that committee.

Mr. HEARD. I will ask the gentleman whether it is not the object of this rule, and whether the effect of it will not be to invite the very opposition to the consideration of District business which is relied upon to set that business aside in the interest of other business?

Mr. CATCHINGS. I do not think this amendment can be regarded as an invitation to obstruction, because, as I have said, there are times when this House will not consider business reported from the Committee on the District of Columbia——

Mr. HEARD. Or from any other.

Mr. CATCHINGS. Old members have seen that repeatedly. They have seen the efforts of that committee to obtain consideration for its business, and have seen them fail repeatedly. If the House wishes to consider the business reported from that committee it will do so, and if it does not I think it ought to have a right to say so, to put it aside, and proceed to the consideration of other business.

Mr. HOPKINS of Illinois. Will not this proposed rule, if adopted, have a tendency to cause the Committee on the District of Columbia to bring forward only meritorious measures—such as they can satisfy the House have merit in them?

Mr. CATCHINGS. I have no doubt that this rule would have the effect at all events of causing that committee to put at least in the front rank those measures of the greatest general importance to the District of Columbia.

The next amendment will be found in Rule XXVIII, clause 3, which we propose to amend by striking out so much pertaining to the operation of the previous question as (according to the explanation already given) has been transposed and made a part of Rule XVII.

We amend Rule XXXIV so that the Secretary of the Smithsonian Institution shall have a right to come upon the floor of this House—a right which is given to various other public officers of high rank or degree who are specified in the old rule.

Mr. McMILLIN. Will the gentleman state what are the duties of this officer which make it proper that he should come on the floor, rather than others who are still excluded?

Mr. CATCHINGS. I can only say to my friend from Tennessee that, as he knows, various officers named in our rule—the President, the Vice-President, the judges of the Supreme Court, etc., have not had this privilege extended to them on the supposition that they had business with members of the House; but this privilege was simply intended to confer upon these officers some honor by reason of the high positions which they occupy.

Mr. McMILLIN. Then you propose to confer this privilege upon this officer merely as a matter of honor?

Mr. CATCHINGS. As a matter of honor.

Mr. McMILLIN. I did not know of any duty which he had to perform which would make it necessary for him to be admitted to the floor.

Mr. CATCHINGS. We propose another amendment to Rule XXXIV. The old rule, in designating those persons who are to enjoy the privilege of the floor, specifies "ex-members of the House of Representatives who are not interested in any claim or bill pending before Congress." We suggest an amendment which will admit to the privilege of the floor only such ex-members of Congress as are not interested either as party, agent, or attorney in any claim or bill pending before Congress.

We saw no reason why the party himself who is interested in pending legislation should be excluded from the floor, while at the same time his attorney is allowed to have access to the floor. Hence, after much consideration and after consultation with members of the House, we thought it best that this rule should be amended so as to admit ex-members of Congress except those who are interested, either as party, agent, or attorney, in any claim or bill pending before Congress.

Mr. WEADOCK. Who is to determine whether a particular ex-member has not a claim before Congress?

Mr. CATCHINGS. If this amendment should be agreed to and become a part of the rules of the House it will be the duty of our Doorkeeper to enforce it, and take such measures as seem to him wise and proper for that purpose.

Mr. McMILLIN. I suggest to the gentleman from Mississippi that the Doorkeeper might enforce this rule by providing a register and requiring ex-members to sign it, as has been done in former Congresses.

Mr. CATCHINGS. It is still done. I was about to observe that, without any specific terms defining the manner in which this rule should be enforced, the Doorkeepers of successive Houses have adopted rules for themselves and have required that ex-members of Congress, unless known to the officer to be such, should register themselves and receive a card of admission. And it will be a very simple matter for the officer to require any ex-member desiring admission to the floor to make a statement that he has no such interest as the rule specifies, which statement, as a matter of course, would be accepted.

Mr. WEADOCK. I wish to inquire whether, as a matter of fact, ex-members have not heretofore decided that matter for themselves, and come in here without any restriction whatever?

Mr. CATCHINGS. Yes, sir; that has been largely done in the nature of things; but if it should come to the knowledge of the House or of the Doorkeeper, acting on his best judgment, that any ex-member admitted to the floor was offending against this provision the House could take action for his exclusion.

Mr. McMILLIN. It is probably well to have as a contemporaneous construction of this rule some expression from the gentleman on another point. I do not suppose it is the purpose of the rule to exclude the attorneys of contestants in election cases.

Mr. CATCHINGS. Oh, no.

Mr. McMILLIN. They ought not to be excluded, of course.

Mr. CATCHINGS. Certainly not.

Mr. McMILLIN. And I do not suppose the rule could be construed so as to exclude them. Contestants themselves are admitted; and I presume their attorneys would be as a matter of course.

Mr. CATCHINGS. In a case of that sort it is more than likely that this right would be enjoyed by virtue of the Constitution, because when trying a contested-election case we sit as a court; and when a court is hearing a case the party interested has a right to be present in person or by his counsel, at all suitable opportunities.

But however that may be, it is very certain that ex-members of Congress who may be employed to represent either party in a contest for a seat before this House would not come within the operation of this rule.

We propose also an amendment to Rule XXXVI, the object of which is to permit members of the press to enter the lobby in the rear of the Speaker's chair during the sessions of the House, for the purpose of seeing a member of the House under such regulations as the Speaker shall prescribe. I will say to gentlemen that this proposition has been pressed on the House for quite a number of years. Just such a rule has prevailed for a very long time in the Senate, and it is believed that it has resulted in the convenience both of the members of the Senate and the members of the press who desire to consult with Senators at any time during the sessions of that body.

As now, in the House, if a member of the press sends a card to a gentleman on the floor, the only place where he can see him is in the corridors, where there is no privacy, where he is probably surrounded by a surging crowd many times, and hence it is deemed for the interest both of the members of the House and of the members of the press that we should adopt some method by which the convenience of each will be consulted in that regard. The effect of this change, if adopted, will be that a gentleman receiving a card from a member of the press, and desiring to see him, will simply notify him, possibly through the messenger who brought the card, that he would meet him in the lobby, at some time fixed, for the interview sought.

Mr. HEARD. Will the gentleman permit an inquiry?

Mr. CATCHINGS. Certainly.

Mr. HEARD. Does it not occur to the gentleman from Mississippi that it might effectually serve the convenience of the House generally if the change that he proposes in the rules of the House, to admit members of the press to the lobby in the rear of the Speaker's chair, should be extended still further, so that a member, if called upon by anyone, whether a member of the press or not, would be enabled to see him in this lobby and talk to him there, instead of going into the corridors for that purpose?

In the Senate a visitor sending a card to a Senator is invited into the Marble Room, corresponding to our lobby here in the rear of the Speaker's seat, where the Senator goes to meet him, without having to stand out in the corridor, with a crowd around, or in a draft of wind, to confer with him. I submit, while I am

in favor of what the gentleman suggests, I think it would be well to let it go still further and have some provision in our rule corresponding to that part of the Senate rule.

Mr. CATCHINGS. It would certainly be a very great convenience if we had some suitable room in which to invite such persons as desire to confer with members; but I am hardly willing to say that I would favor a proposition to permit members to take into the lobby all persons who might simply desire to call upon them.

There is a great difference between this House and the Senate. We have 356 members of the House. The Senate is a much smaller body, and I think it will be found that the extension suggested by the gentleman from Missouri would result in this, that the lobby, designed in the main for the recreation of gentlemen who wish to retire temporarily from this Hall, would be crowded almost constantly with visitors, making it very inconvenient for the members generally, if not practically excluding them.

The next amendment, Mr. Speaker, that the Committee on Rules proposes, consists in the abrogation of Rule XLVII and its transposition so as to constitute paragraph 4 of Rule XXII.

I believe I have now invited the attention of the House to every amendment suggested by the Committee on Rules.

Mr. PICKLER. Will the gentleman please explain, before taking his seat, the method of the introduction of bills and their reference?

Mr. CATCHINGS. The rules of the House in the last Congress are adhered to in that regard.

Mr. PICKLER. There is no change?

Mr. CATCHINGS. They remain precisely the same.

Mr. DOCKERY. Will the gentleman from Mississippi permit me to ask him a question as to the suggestion of the Committee on Rules with reference to allowing members of the press to enter the lobby back of the Speaker's seat? Is it contemplated that this will involve an additional force of doorkeepers?

Mr. CATCHINGS. Not at all; because, as it is now, cards are sent in and delivered to us from members of the press. They would be still sent in and delivered in the same manner. The only difference is that the member receiving such card, instead of going out into the corridor, would probably go with the messenger himself, and himself invite the member of the press into the lobby; or, if not, he would send word by the messenger indicating at what time he would see the member of the press in the lobby. I do not see that it would involve any change in that regard.

Mr. RICHARDSON of Tennessee. I do not want to be understood as opposing this provision for the accommodation of the members of the press, but I would like to ask the gentleman from Mississippi what is there to keep the members of the press from coming into these four open doors into the Hall of the House unless a doorkeeper is stationed there?

Mr. CATCHINGS. Simply because they have not the right under the rules of the House to come upon the floor. The Doorkeeper of the House will enforce the rule excluding all persons not entitled to enter the Hall.

Mr. RICHARDSON of Tennessee. It is not designed, then, to put doorkeepers at each of these doors?

Mr. CATCHINGS. No, sir.

Mr. MILLIKEN. This provision of the rule would allow members of the press in the lobby only on invitation of a member of the House. Or do you propose to give them the right of access to that lobby at any time?

Mr. CATCHINGS. No, sir; only on invitation of a member. But this matter is left to be fixed, as to its details, by the Speaker of the House. My understanding is, of course, that no member of the press will have the right to enter the lobby except on invitation of a member of the House. And moreover, when he has finished the interview to which he has been invited, he will at once retire from that lobby.

Mr. EVERETT. Mr. Speaker, will the gentleman from Mississippi [Mr. CATCHINGS] allow me to ask him a question?

Mr. CATCHINGS. Certainly.

Mr. EVERETT. A joint resolution, passed in the last Congress, recognizes the status of the clerks employed by members of Congress as they had not previously been recognized, and puts them upon a quasi public instead of a private footing. Did the Committee on Rules consider whether it would be practicable to admit to the lobby the clerks who may be employed by members of Congress under that resolution?

Mr. CATCHINGS. I will say to my distinguished friend that we considered that it was not practicable to admit them; that there are enough people on and about the floor of the House now, and that it would crowd the House too much.

Mr. EVERETT. I do not refer to admitting them to the floor of the House, but simply to the lobby in the rear of the Speaker's desk.

Mr. CATCHINGS. We have not deemed it wise to do that. We have thought it best to adhere to the rule which excludes from this floor all persons except those specially designated. I think if we should admit the clerks of members to that lobby, it would be crowded from the hour of the meeting of this House to its adjournment, and the main use for which it is designed would be destroyed. That is to say, it is meant to be a place to which we can retire when we have become fatigued from sitting in this Hall, for rest or consultation.

Now, Mr. Speaker, having reviewed these rules in a succinct manner——

Mr. BLACK of Illinois. I would like to have the gentleman from Mississippi state, before he takes his seat, whether he has taken any steps to determine the number of persons who would be admitted to the lobby if this proposed change is adopted?

Mr. CATCHINGS. The persons entitled to admission to the floor are designated under the rules. There are certain high officials designated, and all ex-members of Congress except those who are interested in some pending measure. Of course it would be impossible to make any statement of the number of ex-members of Congress who are now living.

As a matter of fact, as we all know, we have visitations from very few of them. Quite a number of ex-members of Congress have made this city their home. They are the ones who chiefly come here. Occasionally some ex-member passing through the city comes up to the scene of his former labors, to meet old associates, or for some other purpose, but after all, there are very few of them who come to this House.

Mr. BLACK of Illinois. I wanted to get from the gentleman a statement as to whether or not the committee had determined the number of press representatives who would be admitted to the lobby under the provision of the new rule?

Mr. CATCHINGS. No, sir; we have not, and I can not see, I confess, that it matters very much.

Mr. COGSWELL. You can not tell how many of them will call upon us.

Mr. CATCHINGS. I can not say how great a number of press representatives may be embraced within the operations of this rule. It simply puts it within the power of a member of the House, when he receives a card from a member of the press, to invite him into the lobby to receive him.

Mr. BLACK of Illinois. Then, Mr. Speaker, what objection would there be to a member receiving a card from his private clerk, and meeting him where he would meet one of these press representatives?

Mr. CATCHINGS. Mr. Speaker, that opens up rather too wide a range of discussion, I think. Gentlemen will understand that relations have grown up within the last twenty years between public officials and members of the press. It is through their intercourse with members of this House, and with other public officials, that in the main they derive the information which they send out through the Associated Press and private telegrams to papers all over this country, keeping the American people advised of the progress of business here. So that the proposition rests upon a very high principle, I think; but when it comes to a mere matter of private convenience, I think it is a different thing entirely, and I do not think we should suffer the private clerks of members of this House to have access to the lobby.

Mr. DOCKERY. Mr. Speaker, I am quite in accord with the proposition to admit members of the press to the lobby in the rear of the Hall, but I desire to know whether that privilege is restricted to members of the press who are entitled to admission to the reporters' gallery?

Mr. CATCHINGS. That is a matter that would be arranged by the Speaker himself. I do not know what would be his ruling upon that. Of course, he would adopt such safeguards as would insure this proposition being carried out in a decent and satisfactory manner.

Now, Mr. Speaker, I have stated all that I care to say, and I will very gladly yield to any gentleman.

The SPEAKER. The Chair will recognize the gentleman from Maine [Mr. REED].

Mr. REED. I do not address the House this afternoon with any very great hope that what I say will lead to the success of the views I entertain; nevertheless, I purpose to give myself before the end of this session the same satisfaction which I received by the end of the last Congress, of having a great many Democratic members, enough to have perfected righteousness if they had known how early enough to come to me and say, Had I known what this thing really was you would have had my vote in favor of the adoption of the system adopted by the Fifty-first Congress. We are, unfortunately, those of us who believe in a sound system of rules, laboring under two disadvantages: first, we have to convince the old Democratic members; and second, we have to convince the new.

The difficulty with the old member is that he understands the value of the veto power; he understands the value of the rule of

a single individual, and the fact that he could prevent more public business than he could expedite. The difficulty with the new member, who comes here fresh from that well-spring of public virtue, the people, who is desirous of having righteousness here, and having it done by others, will be so unfortunate as not to know what goodness is, and will not recognize it even when he sees it before him. Nevertheless, I have a desire to present what seems to me to have been quite a successful system, so that the House may have an opportunity to reject it with more knowledge of what it is, and consequently have it on their consciences for a short time, in the hope of a possible amelioration of mankind in the future.

I confess I am very much encouraged by what occurs in the report of the Committee on Rules. In the last Congress, when the Halls still vibrated with the outcries of the Democratic minority of the Fifty-first Congress, one could hardly expect any very great advance; and yet we had a great deal of advance even in that Congress; for that Congress, instead of leaving everybody, according to the old Democratic system, to the mercy of any citizen who might by some providence of God have been chosen a member of Congress [laughter], they left the House to the tender mercy of the Speaker and two assistants appointed by himself, whereby the Speaker had the power, which is a great thing, and also another great thing, the advantage of exercising it in private.

By the assistance of the Committee on Rules, helped out by a decision of the Speaker in which he overruled all of his predecessors, the Committee on Rules were enabled to control the House more or less, and in cases where they did not absolutely control they hung threatening over, so that their moral influence was very great, as it will be in this Congress, buttressed up and supported as they are by this proposed new improvement in the rules.

Of course I congratulate the House that the committee now, after a lapse of four years, are able to give a denial, in the report of the Committee on Rules, to the statement of Samuel J. Randall and the present Secretary of the Treasury that the use of a quorum of a hundred in the Committee of the Whole is an advantageous thing. Those two distinguished gentlemen, when they occupied simply a prophetic position, were quite sure that great danger would happen to the country on that account. I am glad to see that statesmen with more experience have come to the conclusion that the wisdom of the Republican party, which was anticipatory wisdom, has been justified by the facts.

But I want to call the attention of the House to the addition which has been made to the power of the Committee on Rules. It will make a wonderful extension of its system. In the first place, the Committee on Rules in the last Congress had power to meet together and to determine when the power of the filibusterer should be lifted from any bill. The filisbusterer ranged over it all until he was hunted down by the Committee on Rules. He had complete control over your concerns all to himself, but when he came within the purview of the Committee on Rules, then he could be overthrown.

Now, that system was found to work in two ways. First, the committee could do it, and in the second place they could threaten it. One was direct influence, and the other was what would be called moral influence. Both means somewhat controlled, but not in your case or in mine; not in the business in which your constituents or mine were interested, but in those in which a majority of the Committee on Rules thought some action ought to be taken. Then the filibusterer could be suppressed.

In other words, a majority of this House could rule when it was supplemented by the gentleman who was honored by the position of Speaker and two other gentlemen appointed by him. That is progress, I admit. I admit the majority plus the Speaker and his two assistants controlling the House is better than a majority plus them both absolutely powerless, which was the original Democratic plan and system. [Laughter.] That much I will admit.

The progress is slow, but it is progress. In four years we have got the Democratic party, with its representatives, up to the principle of the bill, although they have brought in a number of unsatisfactory and vicious details. But the Committee on Rules now are going to be in a very fine position. First, they can meet at any time when the House is in session; they can meet when the filibusterer is in midcareer [laughter]; they can meet when he is deploying his skirmishers or when he is bringing in his main body.

That is one good thing. Next, they can report a rule without the provision that they shall not be listened to until the next day; that is, they can operate instantly, and whenever the filibusterer appears in this House there are the members of the Committee on Rules ready to disappear through the corridor to the Speaker's room and to come back with something that will cover his mouth completely over. [Laughter.]

Now, I say that is a good thing. Only what I object to is this: Do you not think, gentlemen on the other side, it is a little pitiful, after declaiming so much against interference with the rights of the individual member, standing upon his sole leather and his conscience, to stop the business of the House, that you should now depute three gentlemen to put an end to him so abruptly? [Laughter.] You know you have been contending always that that could not be done; that it was wicked for even the entire House to undertake to do it.

Now, do you not think, really, as between man and man, and confidentially—[laughter]—do you not think it would have been a more straightforward thing for you to have said that in every event a majority of the House of Representatives shall control; that the majority of this House shall be supreme as against the minority? And let me say one other thing to you. In my judgment, when the doctrine is once accepted of the entire power and right of the majority to rule and control the proceedings of this body, then you and I will have freedom of debate to an extent that has been hitherto unknown in this House.

Why, here to-day the gentleman from Mississippi [Mr. CATCHINGS], a gentleman as thoroughly high minded, as thoroughly sensitive, as thoroughly kindly and reasonable as any man in this House—I make no exception—that gentleman, influenced by a sort of fear lest we were going to make him some undefined trouble, the nature of which he could not understand; that we were going to bother him in some way that he could not get over under parliamentary law, fearing some trouble all the more terrible because it was vague, indefinite, and unknown, absolutely proposed that this great question should be disposed of under five minutes of debate on each side, and for a time was absolutely pressing that proposition here! He did not find me opposing the will of the majority when he proposed to declare it. He found me assisting him in every way and backing up the opinion of the Speaker that the House had a right to do it if it chose.

The House has a right to refuse all debate—to say that it will listen to no man. Whether that is a sensible thing or not, depends upon the occasion. [Laughter.] And the doctrine once established and understood that the majority of the House has the right to rule, then under that rule, which is capable of enforcement at any moment, the widest latitude that is proper and suitable will always be allowed, and the proper course of proceeding, instead of leading to the suppression of debate, will lead to a more suitable and satisfactory debate, a kind of debate where a man knows enough about the subject to be able to tell it without writing it down [laughter], where a man is ready when he begins to say what he knows.

Now, look at the system that is proposed to be retained here in other matters. Under the system of the Fifty-first Congress you had a method of doing business. You were not building rifle-pits all along the course of the passage of a bill, so that some fellow could jump into one of them, and with his single little gun stop the measure on its way. You had a system by which the morning hour was not to be a sixty-minute hour, but, if the House got possession of a bill and wanted to consider it, it could enlarge the period of the morning hour and close up the business. For that plan you substituted in the last Congress a proposition that a committee might call up a bill under an hour rule, an hour limited to sixty minutes, and then if, at the end of two days, the gentleman in charge of the bill had not got it through, it was hung up, to be disposed of together with other unfinished business.

"Unfinished business" of that sort was in the nature of the Greek kalends. All you had to do was to filibuster through two days, fill the time with three roll calls, and away went the bill, even though nine-tenths of the members of the House might have desired to pass it.

The order of business which is proposed here leaves important matters, all except revenue and appropriation matters, under the control of the Committee on Rules. The system of the Fifty-first Congress administered equal justice to every measure. Every measure that came forward was entitled to be disposed of by the House directly, and until it was disposed of it was before the House. Now you have all sorts of means provided for shunting bills aside. I tell you, gentlemen, it is a course of that sort, pursued for a century, that has made this House come to be regarded, as I have said of it elsewhere, as the coward center of the United States. [Laughter.] You get into the habit of dodging propositions instead of meeting them.

What is the use of going on in this way? Why not adopt a system of rules which will give the majority of the House control and which will take away from the filibusterer his right to stop business. Why, sir, we deliberately incorporate into the rules a proposition that a motion to adjourn, a motion to take a recess, and a motion to fix the time to which the House shall adjourn shall always be in order; and two of these motions are amendable *ad libitum;* and upon each there may be a roll call, consuming three-quarters of an hour. We deliberately estab-

lish the principle of filibustering, and then by interpretation we give the Committee on Rules a power over filibustering.

Why? I say that it is a great deal better to have a great power like this (and it is an immense power) exercised publicly by the Speaker of the House as the representative of the body, in the full sunlight of publicity, than to have it exercised in the quiet of a committee room. The true way to exercise authority is to exercise it openly, to exercise it where it can be the subject of open and legitimate criticism. I do not wonder that any Speaker is undesirous, as an individual, of exercising such power. I do not wonder that he shrinks from it and from the criticism which may result. Nevertheless, speaking from the point of view of the advantage of the House, the true system is to have a great power like this exercised in public.

I am going to give the House an opportunity (if I am permitted to do so) to vote upon substituting the rules of the Fifty-first Congress for those now proposed, and also to vote upon an amendment to these rules giving the majority of the House the power to bring members here and to record them as present if they do not vote. With this system the House will have complete control over its deliberations; will have ample power to do its work, and the responsibility is on us in either event. [Loud applause on the Republican side.]

Mr. CRISP (Mr. RICHARDSON of Tennessee in the chair). Mr. Speaker, the criticism of the gentleman from Maine upon the rules now proposed for adoption by the Committee on Rules and his laudation of that system of rules under which the Fifty-first Congress, to use the language of that hour, "did business," require some reply. There are provisions in this report now before the House which are taken from the rules of the Fifty-first Congress or are substantially provisions embraced in those rules.

Neither myself nor any member of the Committee on Rules would refrain from reporting to this House in favor of any proposition simply because it was a part of the rules of the Fifty-first Congress. Very much of those rules, perhaps, is to be commended; very much of them has been by the country absolutely condemned. [Applause on the Democratic side.] The gentleman from Maine—and this is a hobby with him—when he stands up before the country and speaks of the rules of the Fifty-first Congress nearly always omits, or fails to refer to, the practices in the Fifty-first Congress which were so odious to its members and which were so odious to the country. [Applause.]

The first action in the Fifty-first Congress which excited the indignation of the country and of the Representatives on this floor was not taken under the rules (which were subsequently adopted), but it was an arbitrary, high-handed action on the part of the Speaker, without authority from the Committee on Rules or anybody else. [Applause on the Democratic side.]

Mr. Speaker, when you come to make up the charges that were entered against the Fifty-first Congress, let no man forget that the first great charge was that the Speaker of the House, without being authorized so to do by the House, without being authorized so to do by the Committee on Rules, without any authority, and in opposition to the uniform usage of the House—in the exercise of a power not granted him by any rule—chose to count members not voting as present to constitute a quorum. That question afterward went to the Supreme Court, but that court never justified the action to which I have just referred. I have heard the gentleman from Maine on several occasions on this floor congratulate himself, take satisfaction as he says, from the fact that the Supreme Court of the United States had justified that course.

Mr. OATES. The gentleman will allow me to call his attention to the fact that the decision of the Supreme Court was made upon action taken after the adoption of the rules.

Mr. CRISP. Of course. The Supreme Court did not touch the question upon which we arraigned the gentleman from Maine on the floor of this House. The Supreme Court said that this House had the power to make rules for its own government, and as a part of those rules it might provide for ascertaining the presence of a quorum by counting gentlemen who were present and not voting; but it never said that the Speaker might do so without rules.

The Constitution of the United States confers upon the House the power to make rules; and the Supreme Court said that in the exercise of this power a rule had been made which permitted the ascertainment of a quorum by counting members who were present. This rule thus adopted was declared to be lawful and constitutional. But the Supreme Court never said that the Speaker himself could make a rule in the absence of authority from the House, by which he might so ascertain the presence of a quorum.

Mr. Speaker, the gentleman from Maine has referred to the power lodged in the Committee on Rules under the system now proposed. Let me call attention for a moment to the distinction which exists between the policy or the theory of the gentleman from Maine and that of the majority of the Committee on Rules as now constituted. The gentleman from Maine believes that the power should be lodged in the Speaker absolutely, without any reference of the question at all to the House, to decide what is a dilatory motion, and he believes the rules ought to provide that no dilatory motion shall be entertained. Under his system the Speaker may decide that any motion submitted is a dilatory motion, and when you appeal from the decision of the Chair he may decide that your appeal is dilatory. The result is that the ruling of the Speaker is absolutely conclusive upon the House, made so by the rules which the House itself has adopted.

Now, what is this theory of the report presented? The theory of this system is that motions which cause delay, which have been a part of the rules of the House for years and years, shall remain there. There may be differences of opinion among our friends as to the propriety of their remaining in the rules. Some argue that they should be removed. Others argue that they aid legislation by calling the attention of the country to pending matters under consideration in Congress, and admit of time for reflection. The system adopted in the Fifty-second Congress, and which is proposed to be adopted now, is one that seeks to obtain as to the propriety of forbidding dilatory motions, not the individual judgment of the Speaker, but the judgment of the majority of the members of the House.

The gentleman from Maine says that the majority of the House ought to rule. I submit to him and to the House that the system proposed by us is the only system which permits the majority of the House itself to determine whether dilatory motions shall or shall not be permitted. The system of the gentleman from Maine permits the Speaker to determine that question, although he may determine it contrary to the wishes of the majority of the House. The system recommended by the Committee on Rules leaves it absolutely to the majority of the House to determine for itself. The Speaker of the House is not granted the authority under this system; the Committee on Rules is not granted that authority, but the majority of the House alone is clothed with authority to determine.

Now, I ask you which rule is more in the nature of a majority rule, the one proposed here by the Committee on Rules or the one the gentleman from Maine recommends, where that power is lodged absolutely in the hands of the Speaker to decide whether or not a motion is dilatory. Under this system whenever it is the desire of the House that all dilatory motions shall be avoided and prevented, the House has the power to reach that result through a report from the Committee on Rules.

The gentleman speaks of the great power lodged in that committee. The power lodged in that committee, Mr. Speaker, is simply a power to report to the House a proposition for its action. They can not adopt cloture; they can not fix an order of business; but where, in the progress of business before the House, it appears to the Committee on Rules that it is in the interest of the country that something should be done to stop contention in the House, resulting in nothing but delay, the committee can bring in a report, and if the majority of the House desire to stop the delay and avoid filibustering, they adopt the report of the committee, and if they do not so desire it they can vote it down. So that the control is absolutely vested in the majority, and not in the Speaker or in the Committee on Rules.

Now, sir, there is a change and only one change made in the rules from those of the Fifty-second Congress of importance, and that is the change which constitutes 100 members a majority of what is nominally called the Committee of the Whole House on the state of the Union.

There is no constitutional requirement that there should be a Committee of the Whole. It is a mere creature of the rules of the House. There are certain committees charged with the consideration primarily of bills that are to come before the House. The Committee on Appropriations, for instance, is charged with the preparation of bills for the appropriation of the public revenues. When that committee reports a bill it goes to the Committee of the Whole. It is not before the House.

Such bill, then, has to pass the scrutiny of what is known as the "Committee of the Whole," and from that committee it is reported to the House. Up to the Fifty-first Congress a quorum in the Committee of the Whole was a majority of the members of the House. That was a custom that was ancient, and perhaps universal; but there was no constitutional reason why the experiment should not have been tried of constituting the Committee of the Whole of less than a majority of all the members of the House.

The action of such committee is not final. After an appropriation bill has passed the scrutiny of the Committee on Appropriations, and goes on the Calendar, it must pass the scrutiny of the Committee of the Whole; and that does not pass it. The Committee of the Whole when they consider a measure and ap-

prove it in all of its parts, report it back to the House, and there the Constitution says a majority of the House shall constitute a quorum; so that when the bill is finally passed on and becomes a law of this body and goes to the other House for its sanction, it has passed the scrutiny of a majority of the House, a quorum of its members being present and participating in its deliberations.

While it is true that this committee is called a Committee of the Whole House, it might as well be denominated a committee of one hundred; and the only reason it might not be so denominated is that while a hundred may constitute a quorum of the committee, yet every member of the House is of right a member of that committee, and he has the right to attend its sessions and the privilege of voting on every question presented before it. It is the same system as is found in a number of other bodies in this country and abroad, where less than a majority of the whole constitutes a quorum for the transaction of business. That can not be the case, however, in the House, because our Constitution provides that a quorum shall consist of a majority of it members.

But there is no such provision as to the Committee of the Whole. It is merely a creature of the rules. Every member may go into the committee and participate in its deliberations, make motions, take part in the debate, may vote on all questions presented, and this rule simply provides that if one hundred members are present it shall constitute a quorm for the transaction of business. Your great appropriation bills, or your tariff bill, or other great public measures, are to go before the Committee of the Whole, and I can not, for my own part, see any reason, in the light of what I saw of the operation of this rule in the Fifty-first Congress, why, in a body so large as this, it might not be and would not be right and proper to make a hundred a quorum of that committee. Representatives, I think, will find that it will greatly facilitate the transaction of the public business, and at the same time deprive no member here of any right that he possesses as a member of this body.

Every man ought to be here and every man may attend the sessions of that committee, but if because of sickness or for other reasons some do not attend, yet if a hundred are found here to transact that business the business goes on as though there were 170 or 180 members present.

Now, Mr. Speaker, that is the only substantial change that is made in this report. The gentleman from Maine [Mr. REED] criticises to some extent the power of the committee to meet at any time and the power lodged in the committee. There is a provision in the rules of the House that no committee shall sit during the sessions of the House without permission. Nearly always committees of the House have obtained leave to sit during sessions of the House.

Only this morning the gentleman from Texas [Mr. SAYERS], chairman of the Committee on Appropriations, obtained leave from the House for that committee to sit during its sessions. That is all that is asked for the Committee on Rules in this code of rules. The House unanimously granted leave to the committee of which the gentleman from Texas [Mr. SAYERS] is chairman. Why was this provision put there as to the Committee on Rules? You know well enough that in the progress of business at times there comes a condition of affairs in this House when the majority of it want to move forward, but when a minority are resisting that progress.

Now, this code leaves it to the majority of the House, when they want to move forward, to do so upon a report from this committee, which is their committee. Therefore, we thought it was right and proper that this committee should be permitted to meet at any time, this afternoon, for instance, if in the progress of this debate—if the rules had been adopted—we should come to what is known as a deadlock, and could not proceed. We thought the chairman of this committee ought to have the power to call the committee together and adopt a resolution and bring it into the House, and give the majority of the House the power and the right to solve the difficulty for themselves, if they desire to do it. Now, that is all there is about that.

I do not recall any other change of the rules of the House of the Fifty-second Congress which is vital.

And now, Mr. Speaker, just a word in regard to the rules of the Fifty-second Congress. That Congress assembled immediately succeeding the administration of the gentleman from Maine [Mr. REED] as Speaker of the Fifty-first Congress. There was throughout the country—parts of it at least—very determined opposition to the system and methods that had prevailed in the Fifty-first Congress. That Congress had been repudiated by the country, about 150 Democratic majority having been returned to the next House.

Rules had to be adopted. Instead of following the old rules, under which there was absolutely no method of preventing what is commonly known as filibustering, and instead of lodging in the Speaker the power to determine absolutely what was a dilatory motion, the Committee on Rules of the Fifty-second Congress pursued a middle course, which was approved by the House. They made that provision in the rules, which is identical with the provision we now report, by which the House itself might determine the question as to when dilatory motions should cease. The Fifty-second Congress has passed away and its acts have gone into history; and I hope you will pardon me if, as an humble member of that Congress, I say that to me it is an infinite source of pleasure and delight that after a thorough review of the acts of that Congress the people returned to this House nearly 100 Democratic majority. [Applause on the Democratic side.]

Now, whatever theories of individuals may be as to who should rule in this country, the party of which you, Mr. Speaker, and I are members, and of which gentlemen on this side are members, believe that the people should rule. We do not believe that one man who is sent here as a Representative should become their master. We do not believe that any one man should assume to dictate to them what is right; and to demonstrate that the Democratic idea on this subject is the people's idea, for the last twenty years, whenever the Republicans have obtained power in this House, their lease of power has been short, very short—just one term. Mr. Keifer was Speaker of the Forty-seventh Congress, but at the next election his party was repudiated by the country.

My friend from Maine [Mr. REED] was Speaker of the Fifty-first Congress, but at the next election his party was repudiated by the country. [Applause on the Democratic side.] So far as I am concerned, I prefer the plaudits of the people I represent and the people with whom I politically affiliate in the House—I prefer their plaudits and their approval to the approval of any man or set of men who believe they have the right in this House to exercise all power, and claim, forsooth, that in doing it they are permitting the majority to rule.

Mr. Speaker, this is all I wanted to say. Perhaps I should not have said so much; and yet, for a good while in certain quarters the methods and practices of the Fifty-second Congress have been assailed and ridiculed, and those of the Fifty-first Congress have been applauded upon the floor of this House, and I have had no opportunity to say anything in reply. What I have said now has been provoked by the arrogant assertion that the Fifty-first Congress, in its rules and in its methods, was an example which should be followed by all Congresses which should come after. Against that proposition I desire to enter a protest, and I now and here enter a protest and say, so far as I am concerned, taking the methods and practices and rules as a whole, I feel exactly as felt the people at the first election after its organization, that it was destructive of the rights of the people and ought to be repudiated and condemned. [Prolonged applause on the Democratic side.]

Mr. REED. Mr. Speaker, it is so unusual for the presiding officer of this body to leave his exalted position and participate in debate upon the floor, that it has even been questioned by the judicious whether he ought to do it at all. But of that I make no question. He alone is the judge of the propriety of bringing the power of his great office upon the floor of the House. In a time of great emergency, when he felt perhaps that those gentlemen whom he had associated with him on the Committee on Rules were not entirely adequate to the discussion as it proceeded, it was for him to decide whether his powerful aid should be thrown into the balance. [Applause on the Republican side.]

I deeply regret that he has seen fit to do so; not only for general reasons, but because he has introduced into a question which has nothing in it of party, a certain amount of partisan feeling, showing that while the rest of this House have survived the memories of the Fifty-first Congress the Speaker unfortunately has not.

I do not, for my part, intend to make any reply to what has been said in regard to me personally; for I will not permit this debate to degenerate into a personal question. [Applause on the Republican side.] It is a question of public duty and of public policy; and as such I shall treat it.

The action of the Fifty-first Congress has received the approval of the Supreme Court of the United States, and of every supreme court of every State that has passed upon the question [applause on the Republican side]; and, backed by that support, I can do without that of any individual who sees fit to head the opposition. He says that we ought not to commit to the Speaker the right to decide what is a dilatory motion; and yet in these very rules which he has helped to make, and which this House is about to adopt, it is declared in two separate cases that no dilatory motion shall be entertained. [Applause on the Republican side].

The last paragraph of section 57, Rule XI, is in this language:

It shall always be in order to call up for consideration a report from the Committee on Rules, and pending the consideration thereof the Speaker may

entertain one motion that the House adjourn; but after the result is announced, he shall not entertain any other dilatory motion until the said report shall have been fully disposed of.

The eighth section of Rule XVI, reads as follows:

Pending a motion to suspend the rules the Speaker may entertain one motion that the House adjourn; but after the result thereon is announced he shall not entertain any other dilatory motion till the vote is taken on suspension.

The Speaker himself, sitting there in the chair, under these rules, largely of his own making, must pass upon the question of whether a motion is a dilatory one or not; and yet he says that the Speaker is not to be intrusted with that power, the very power he intrusts himself with. Why, the touchstone must always be the Chair; and when the Chair receives, as I did, the support of the House of Representatives upon appeal taken immediately after, what stronger sanction could I have; and when that is followed by the Supreme Court of the United States, it seems to me that it is above question. [Loud applause on the Republican side.]

Mr. CUMMINGS. If the gentleman will permit me——

Mr. REED. Must you get in? [Laughter.]

Mr. CUMMINGS. If you could have had the sanction of the people, that would have been higher.

Mr. REED. If I could have had the sanction of the people! I did. I went back to my district and was returned by the largest majority that any man ever did receive. [Cheers on the Republican side.] Why! did you make me the issue in the campaign? I thought it was the tariff. [Laughter.] I thought it was the Democratic party and its platform, and that it was something sufficiently large for the people of the United States to vote on. [Laughter.] And after all, in your eyes and that of the Speaker's, I was the central figure of that election. [Renewed laughter on the Republican side.] Why, that that should have been brought forward as an issue; not even my colossal vanity would permit the entertainment of such a thought. [Laughter.]

I say it is a great pity that this question has been thus made a question of politics. It is a great misfortune that instead of treating this question as we ought to, we are treating it as we ought not to, and that at the very moment when gentlemen on the other side are obliged to admit that they have adopted one-half of the obnoxious rules which they say were repudiated by the people, and when they are expecting in due time, as their education progresses, to adopt them all. Why, nobody need have spent any time arguing about the right of the House to establish one hundred as a quorum of the Committee of the Whole. Why, we established it. [Laughter.]

There was no use arguing about the propriety of it. We did it, and it worked well; and these gentlemen are walking humbly in our footsteps. That is right. Let us give them the credit they deserve; and perhaps I am unreasonable in expecting them to go the whole distance—perhaps I am unreasonable in asking the Democractic party to catch up with us entirely within four years. [Laughter.] But, I tell you the time will come; it is as sure as anything on earth that the House of Representatives which meets to do business will follow upon the lines of the Fifty-first Congress. [Applause on the Republican side.]

The Speaker is kind enough to say that this is my hobby. Perhaps he means something in the nature of a slur at me for presenting it. It is true, it is my hobby; and I had it long before the Fifty-first Congress. Many a time and oft have I addressed this House upon that subject. And is the hobby unworthy? The method of doing business on the part of the greatest legislative body on the face of the earth—is that an unworthy thing for any man to be interested in? Is that beneath the dignity of a member from any part of this Union?

Nay, not so. It is worthy the attention of the whole House, and because it was worthy the attention of the whole House, and despite the fact that I knew certain defeat was in front of me, I ventured to address the House this afternoon. Every attempt that has been made in the Fifty-second Congress and in this Congress has been to arrive at the same results that we arrived at in the Fifty-first Congress, and at the same time to conceal the imitation. [Laughter.] This last plan, of having the Committee on Rules meet at any time and report at any time is a confession that the methods of the Fifty-second Congress were not satisfactory.

Now, I sincerely hope that this House will lay aside partisanship and meet this question in a manner worthy of the dignity of the House of Representatives, and give us rules by which your majority can do business and by which any majority, whether political or otherwise, may do the business which the country desires done. If you do that you will have the thanks of the American people, and on this side we will not be backward in giving you the credit that you deserve. [Applause on the Republican side.]

Mr. SPRINGER. Mr. Speaker, I agree with very much of what has been said by the distinguished gentleman from Maine and by the Speaker of the House. So far as the rule in regard to the quorum of the Committee of the Whole is concerned, it is not new to me. Gentlemen who were in the Fiftieth Congress will remember that at that time I submitted a rule upon that subject. On December 8, 1887, at the first session of the Fiftieth Congress, in the House preceding the one of which the distinguished gentleman from Maine was Speaker, when the rules were under consideration I moved the following:

Resolved, That paragraph 2 of Rule XXIII be amended so as to read as follows: The Committee of the Whole House shall consist of at least one hundred members, which number shall constitute a quorum to do business.

The Fifty-first Congress, therefore, when it adopted that rule, was following the suggestion which I had made two years before, and which I am glad to see is now to be incorporated in the rules of the House on the report of this committee. I need not, therefore, dwell further upon that, because both sides are now agreed that it ought to be incorporated into the rules of the House, and, aside from that, I do not see anything else in these rules that appears to be taken from the rules of the Fifty-first Congress.

Mr. BURROWS. Did I understand the gentleman to say that he offered in the Fiftieth Congress a proposition to have the quorum of the Committee of the Whole consist of one hundred?

Mr. SPRINGER. I did.

Mr. BURROWS. Then why did the gentleman vote against that proposition in the Fifty-first Congress?

Mr. SPRINGER. I voted against the whole code of rules, and that was among them.

Mr. BURROWS. No; the Committee on Rules in the Fifty-first Congress reported in its code of Rules the very proposition which the gentleman from Illinois introduced in the Fiftieth Congress, and on a motion to strike that provision out, on a separate vote, the gentleman is recorded as voting in favor of expunging it. [Laughter.]

Mr. SPRINGER. Is that true?

Mr. BURROWS. Yes, sir.

Mr. SPRINGER. I have not examined the RECORD, but if the gentleman is correct, I voted so because I distrusted the methods which would be used to enforce the rule. [Laughter.] But, at any rate, Mr. Speaker, I am glad to see that provision proposed to be revived here now, because it is a very good one. And that, I believe, is all the rules of the Fifty-first Congress that have been adopted in this code.

The Speaker of the House has spoken of the rules that were in force in the last Congress, and has said that under those rules it is always in the power of the House to put a stop to dilatory motions, and to filibustering, and to bring the House to a direct vote upon any question that may be pending. That is true with this slight modification: The House can reach its right to exercise that power under the rules only when the Committee on Rules reports a proposition for that purpose. If it should happen, as it did happen in the last Congress, that the Committee on Rules did not desire to stop the filibustering, or were in sympathy with those who were trying to defeat a pending measure, and therefore refused to bring in a proposition to close the debate, then that measure was hopelessly defeated, because it was in the power of any member of the House to continue dilatory motions without limit.

Now, sir, I believe that it ought to be in the power of the majority of the House—not in the power of the Speaker, but in the power of the majority of the House—to determine whether dilatory proceedings shall be brought to an end or not. I desire to call attention to the fact that on yesterday in this House was presented one of the sublimest spectacles ever exhibited in a legislative body. The representatives of the American people by a majority vote had fixed a day and an hour when there should be an end of all debate and of all dilatory motions, and of all other motions, and when that time arrived every member was in his seat; for on yesterday more members were in their seats than have ever been in attendance on any occasion since I have been in Congress—only two absentees from the whole body.

The members were in their seats, and they began to vote upon the pending propositions, and, under the proper ruling of the Speaker, the House was kept down to its work until it had performed one of its great legislative functions. How much better was that than to have seen this body powerless under a filibustering performance, which would have worn out the patience of members, and kept us here for days and weeks moving to adjourn, to adjourn to a day certain, and so on.

The gentleman from Maine claims that he has brought to light or invented a method of bringing this House to a direct vote on a pending proposition. Sir, in the Fiftieth Congress it was determined, in a caucus of the Democratic members of this House, to bring into the House a rule, which was brought in and adopted, fixing a time when the House should vote upon the bill to refund the direct tax to the States. That question had been under debate for weeks, and the distinguished gentleman from Alabama

[Mr. OATES] had led those who were fighting against the final consummation of the measure. But at the time referred to the Democratic party itself in this House set the example of a cloture, and that cloture was adopted by the House. Thus the cloture was, for the first time in my recollection, adopted by the Democratic party itself in the Fiftieth Congress.

Mr. McMILLIN. The gentleman is referring to the action on the direct-tax bill?

Mr. SPRINGER. Yes, sir.

Mr. McMILLIN. The gentleman will permit me to correct him in regard to that matter. In the case referred to an agreement in writing was entered into and an order of the House adopted in pursuance of that agreement among members.

Mr. SPRINGER. It was agreed to by a majority vote in the Democratic caucus, after which the proposition was brought into the House and made an order or rule of the House by its vote.

Mr. GROSVENOR. The gentleman from Illinois will permit me to remind him that a vote upon the direct-tax bill was entirely defeated during the first session of the Fiftieth Congress, and was not reached until the short session.

Mr. SPRINGER. That was a part of the order.

Mr. McMILLIN. The arrangement was reached by agreement; it never took the form of a cloture, if my good friend will permit me to correct him.

Mr. SPRINGER. An agreement was reached for a cloture, and a time was fixed when the vote should be taken.

In that same Congress a resolution was adopted by the House upon the report of the Committee on Rules—a Democratic committee—closing debate on the Oklahoma bill. That was done, not by agreement, but by a majority vote of this House.

Now, so far as concerns the rules now proposed, the House will have the right to close debate only when the Committee on Rules shall bring in a proposition for that purpose. I desire to enlarge that power. I think that certain committees of this House charged with measures of great public interest ought to have the right to bring into this House and submit with the measures which they report a proposition making the particular bill or measure a special order and fixing the time when the final vote shall be taken. Holding this view, I shall, when the proper time arrives, offer the amendment which I ask the Clerk to read.

The Clerk read as follows:

Add to Rule XI the following as an additional paragraph:

"60. The committees authorized to report general appropriation bills and the river and harbor bill when reporting such bills; the Committee on Ways and Means when reporting bills raising revenue; the Committee on Banking and Currency when reporting bills relating to banking and currency, and the Committee on Coinage, Weights, and Measures when reporting bills relating to coinage, may at the time of reporting such bills report, by order of the committee, a resolution making the bill reported a special order, not to conflict with special orders which may then exist, and fixing the time when the vote shall be taken upon the final passage of the bill. Said resolutions may be called up for consideration the same as reports from the Committee on Rules, and shall be disposed of as provided in paragraph 57 of Rule XI.

Mr. SPRINGER. At a proper time I will offer this as an amendment. As will be observed, it simply provides that the committees having charge of the general appropriation bills, including the river and harbor bill; the Ways and Means Committee, when it reports any bill raising revenue; the Committee on Banking and Currency, when it reports measures relating to that subject, and the Committee on Coinage, Weights, and Measures when reporting a bill relating to coinage, may by order of the committee submit with the measure reported a resolution making it a special order for consideration and fixing a time when the vote shall be taken on its final passage.

Under this amendment committees having these great measures in charge will have a right, when any such measure is submitted, to propose an order, which the House may adopt or reject, as it may choose, but which if adopted will at the time fixed bring the House to a direct vote upon the particular measure.

Mr. BOATNER. I would like to put this inquiry to my friend from Illinois [Mr. SPRINGER]: If, in his judgment, it is right that the House should be brought to a vote upon measures such as are indicated in the amendment just read, why does he not extend the scope of the amendment so that any committee having a bill in charge may, whenever it is necessary, move a cloture on the bill, or on any question arising during its consideration? If the gentleman's object is to enable the majority of the House to assert itself on any question, why does he limit this power to the committees mentioned in the amendment?

Mr. SPRINGER. I am very glad the gentleman has called my attention to this point by his question. I will state my reasons for limiting this privilege to these committees. There are certain committees of this House the business of which is essential to the preservation of the Government. The Committees on Appropriation must be permitted to bring in their measures for consideration and passage by the House. It would be doing great injustice to the country to permit a minority of members to stop the wheels of Government by indulging in filibustering, so as to prevent action on the appropriation bills. Hence, measures of that character are included.

The Committee on Ways and Means is required to report to this House bills raising revenue. Without revenue the Government can not exist. It would not be proper to permit a minority of this House to throw itself in the path of a bill raising revenue and to say the House should not pass it. Hence, measures of that kind are included. The other questions involved are those relating to our currency and to the coinage of the silver dollar. The people of this country are entitled to have money with which to do the business of the country.

This is a very great and important question; and the committees having charge of such subjects, especially at this session, ought to be permitted to submit to the House, when a measure of that kind is reported, a proposition for the proper consideration of such measure, fixing a time when all debate shall cease and the House be brought to a direct vote on the question, as was done yesterday upon the repeal bill by the operation of a special rule which the House had adopted.

Mr. BOATNER. Mr. Speaker, if the gentleman from Illinois will permit me to suggest to him, I made no objection to the amendment he offers. But my complaint was that it did not go far enough. The gentleman explained why he believed it necessary to give this power to these other committees; and the question I asked was why, if it was necessary to give them this power, it was not equally necessary to confer a similar power on the other committees, so as to enable them to obtain a vote on all measures which they have considered, and which they bring before the House for its action?

Mr. SPRINGER. Mr. Speaker, I will endeavor to explain that. This is a very large body, consisting of 356 members. There are some forty-five committees of the House, and if every committee—composed as they all are of a large number of the members of the House—had that power, we would simply do nothing but contend between the committees as to which of them should have the right of way. Therefore I have limited this amendment to those committees which have charge of the more important matters of legislation, so that they may bring before the House from time to time their deliberations, with some prospect of securing action upon them, leaving the minor matters for the consideration of the Committee on Rules, which committee, in my judgment, will do justice to all such measures.

I have full faith and confidence in the committee. Therefore I think as to general matters of legislation, which we can adopt or not, as we like, and which are not essential to the support or progress of the Government, it is well to leave the power of bringing in a resolution to the Committee on Rules; and, as I have said, I have confidence that it will do justice to every measure. But these other matters are of such transcendent importance, and there is a likelihood of a division—even on this side of the House—a division on such measures, and the Committee on Rules would be in some embarrassment in interfering in the matter.

I thought it better, therefore, to leave to the committees themselves having charge of these measures the right of determining what should be the order of business in disposing of them, and I believe that it will tend to divide the responsibility between the Committee on Rules and the important committees of the House in charge of these subjects of legislation, so that this divided responsibility will result in more efficient, prompt, and better administration, and a more effective dispatch of the public business.

Mr. CULBERSON. Why do you limit that resolution to the four committees named?

Mr. SPRINGER. I have just stated—the gentleman from Texas did not hear me—the reason. I will not now. Mr. Speaker, recapitulate what I said further than to say that I make this amendment because of the very great importance of the subjects committed to these committees as compared with the general mass of legislation of which the other committees have control.

Mr. CULBERSON. Do you expect any further report from the Committee on Coinage on the silver question?

Mr. SPRINGER. I hope we will have a report on that subject. I have a bill in my pocket which I shall introduce at the proper time, providing for the coinage into silver dollars of the seigniorage bullion in the Treasury, and I hope it will be considered by that committee, reported to the House, and passed at an early day. I hope the committee will proceed to carry out the other provisions of the Democratic platform and lose no time in bringing the measure forward, and I want to put it in a position to fix a time when the debate shall close and action can be taken upon their suggestions.

I believe, Mr. Speaker, it is the duty of the House of Representatives—the Representatives of the people—to provide such

a rule to give these committees that power. I believe that this power should be lodged with the committee so that a majority of their members could so conduct the affairs of the House that we may discharge our proper legislative duties here as Representatives of the people, and transact the business that we were sent to transact. I therefore hope that the proposition I shall offer at the proper time will be agreed to; and trust that the amendment reported by the Committee on Rules in regard to the membership of the Committee of the Whole will also be agreed to.

There is one other proposition to which I will refer, and which I hope will be adopted. That is, after a motion has been made to fix a time to which the House shall adjourn and voted down it shall not be in order to renew the motion again on that day. This provision ought to be adopted. It is to me the most senseless waste of time to be moving to adjourn, and to fix a day to which the House shall adjourn, frittering away our valuable time when we ought to be deliberating on measures that are of benefit to the people.

Mr. BOATNER. Mr. Speaker, it is a matter of profound regret to the people of this country that the distinguished gentleman from Maine has never forgiven either the House or the country for its refusal to indorse the rules recommended by him and adopted when he was Speaker of the House. He seems to be unable to understand the difference between a Speaker administering the rules of the House according to the wishes of a majority of the House, or at least a majority of his party in the House, and the Speaker who occupies the position of a czar, who decides all questions without appeal—a man who declares what the rule is and holds that any appeal from that ruling is in itself a dilatory motion and not permissible under the rules, and will not be recognized by himself. He can not apparently understand the difference between the power conferred on the Speaker of submitting, through the Committee on Rules, a proposition to the House for its action, and the power of counting the hats, walking canes, and umbrellas of members as evidence of their actual and corporeal presence, although it may be indicative of the absence of intellectual acquiescence in the proceedings of the House.

I think, however, the verdict of the country on the rules which the gentleman assumes to be so acceptable to the House and to the country, and on which he bases his principal hope of living in the history of this Government, ought to be satisfactory to him, as it demonstrates the opinion of the masses of the people of both political parties. Because, certainly the vast multitude who voted for the Democratic members in this House could not have been all Democrats; some of them, at least, must have been converted Republicans, and I think he ought to be satisfied that whatever may be his interpretation of the power that is conferred on the Speaker by his election to preside over this House it is not the judgment of the American people.

But, Mr. Speaker, I think a good deal of what the gentleman from Maine [Mr. REED] has said in criticism of these rules is well founded. While it is contended that under our rules a majority of the House is empowered and authorized to assert itself, yet that is not wholly true.

A majority of the House may assert itself and may act upon legislation, provided the Committee on Rules wishes to permit it to do so. If the Committee on Rules does not see fit to intervene, why, the one-man power is as great in this House as it ever was. I, for one, am as absolutely opposed to the one-man power on the floor as I am to the one-man power in the Speaker's chair, and if I had to choose between the one-man power on the floor and the one-man power in the Speaker's chair, I believe I would prefer to elect a one-man power to the Speaker's chair, because that would be a responsible power, a power to be exercised under his responsibility to the House and the country.

To my mind, Mr. Speaker, it is a shameful spectacle to see the whole House stopped by the opposition of one single man to any measure which may be brought here by a committee, and upon which the House may have the most earnest desire to act. Yet under the rules of the last House, and under the rules proposed to be adopted by this House, it would be entirely possible to have such a spectacle presented to us any number of times during the coming session, unless the Committee on Rules see fit to act and to assert their authority and to bring in a resolution.

In order, therefore, Mr. Speaker, to enable the majority of this House to assert itself at all times and under all circumstances; in order to enable a majority, in the language of the gentleman from Maine [Mr. REED], to do business, I prefer to offer the following amendment to the fifty-eighth paragraph of Rule XI:

When the chairman of a committee or any member thereof, having a bill in charge which is under consideration in the House, moves the previous question on a pending amendment, or on the engrossment, third reading, or final passage of the bill, the Speaker shall submit the question to the House without further debate, except as provided in the rules, and without entertaining any other motions. If the motion is agreed to, the question shall then be put on the proposition to which the motion for the previous question applied.

Then, Mr. Speaker, if the chairman of any committee brings a bill into this House by leave of the House, and enters upon the consideration of it, after the bill has been thoroughly debated and fairly considered, it will not be in the power of any one man to stop a vote on it, nor will the House be dependent upon the action of the Committee on Rules to retire and bring in a rule to enable the House to proceed to a vote; nor will it be possible for any gentleman to commence in the morning, before the Journal is read, and consume the whole day with dilatory motions against the approval of the Journal. For one, I heartily and cordially concur in the principle that a majority of the members of this House should be able to act, not only upon the subjects of vital importance mentioned by the gentleman from Illinois [Mr. SPRINGER], but upon any subject which legitimately and lawfully comes before this House for consideration.

Mr. HERMANN. Will the gentleman permit a question?

Mr. BOATNER. Yes.

Mr. HERMANN. How will the gentleman answer this objection, that so long as the Speaker has the right to recognize any member he chooses, he may recognize the chairman of some other committee, and ignore the chairman of the committee having a particular bill in charge.

Mr. BOATNER. That is a matter which, in my judgment, can not be provided for. That is a matter which must necessarily be left to the Speaker. We are bound to suppose that the Speaker in such matters will discharge his duty fairly.

Mr. HERMANN. Then you admit that your amendment will not accomplish what you desire.

Mr. BOATNER. I differ with the gentleman from Oregon. I think it will. Since I have been a member of this House I have seen bills repeatedly brought up for consideration which were supported by a large majority of the House, and which would have been passed by a large majority if a vote could have been had, but which were killed by an insignificant faction of the House filibustering against their consideration until the time which had been allotted for their consideration was consumed, and the House was compelled to proceed to other business.

Mr. KILGORE. Will the gentleman allow me to ask him a question?

Mr. BOATNER. Yes.

Mr. KILGORE. Has there ever been any great clamor by the people against the "insignificant minority" that has filibustered?

Mr. WEADOCK. A great deal.

Mr. BOATNER. I think there has been.

Mr. KILGORE. Has not the action of the "insignificant minority" in such cases been approved?

Mr. BOATNER. I think there has been a great deal of objection to the proceedings of minorities in many such cases.

Mr. KILGORE. I never heard any clamor in my country because I stood up against the bankruptcy bill, which my friend advocated.

Mr. BOATNER. I did not yield to my friend from Texas for a speech. I would suggest, as a reason for what the gentleman states, that perhaps the gentleman's constituents read only his speeches, and do not read the other side. I do not know whether mail facilities are good there or not; but I imagine that if the gentleman's constituents knew that many matters of important public interest and private interest had been defeated, that people had been turned away from here, that a large majority of this House had on many occasions been compelled to defer their judgment upon matters of important public legislation, to the judgment of the gentleman from Texas [Mr. KILGORE], the gentleman's constituents would themselves have said, "While we have elected 'Col. Buck' to represent us, we do not expect him to represent all the balance of the United States." [Laughter.]

I do not expect or desire that the judgment of the House of Representatives upon these matters shall be subordinated to the gentleman from Texas whenever he sees fit to put his No. 11 boot down upon a proposition and say it shall not become law. [Laughter.] Now, I for one, Mr. Speaker, am not willing that my independence as a Representative, my right to freedom of judgment as a Representative, shall be destroyed by any gentleman who imagines that he is endowed with superior judgment and wisdom, and knows better what the people of the United States want than the entire House of Representatives put together.

I do not recognize any such principle in legislation, Mr. Speaker. I say that it is essentially vicious; it is essentially undemocratic; it is essentially contrary to the spirit of our institutions; it is essentially derogatory and ruinous to the usefulness of the House

of Representatives that any one man, or any half dozen men, shall set their judgment against the whole House and say that any particular measure shall not become law unless it becomes law on condidititions which they themselves prescribe.

I am perfectly willing to concede to every member of this House the right to vote as he pleases and the right to speak as he pleases, the right to use every constitutional means to defeat any measure that his judgment rejects, and when he comes to me and says, "You shall not exercise your judgment; you shall not have your right to record your vote on a question that affects your constituency and the country at large," I say, Mr. Speaker, that is going beyond the prerogative which is given to a member of the House upon this floor.

Mr. KILGORE. Will the gentleman allow me a moment? I hope that he will revise his allegation when he charges me with wearing a No. 11 boot. [Laughter.]

Mr. BOATNER. I believe, on reflection, that it is a thirteen that the gentleman wears. I would have so stated, but I did not think of it. [Laughter.]

Now, Mr. Speaker, in conclusion I hope that this House in adopting these rules will relieve the Committee on Rules of the burden of the responsibility and the disagreeable necessity of intervening in many cases between friends, by coming upon the floor, as it were, and saying to his party or to that party, "You shall cease your opposition." It is perfectly proper that the committee should take responsibility in matters of great public moment or in matters which are of great political importance.

In such cases there is no hardship and they should take the responsibility. But there are many measures on which the Committee on Rules will naturally shrink from taking the active part of bringing in a resolution carrying cloture in the House; and the House ought to vest itself, now that it is free, with the power at any time to assert the will of the majority of the House and to carry that will of the majority into effect by crystallizing it into law. [Applause.]

Mr. HOOKER of Mississippi. I have listened with great pleasure to what has fallen from the distinguished gentleman from Maine, the former Speaker of this House, and the reply which has been made by the present Speaker on the question of the rules of the Fifty-first Congress and the rules of the last Congress. But I beg to say that there is a question higher than the question as to whether——

Mr. BOATNER. Will my friend permit me one moment?

Mr. HOOKER of Mississippi. Certainly.

Mr. BOATNER. I desire to say that as the House by its rules approves of these filibustering motions and does not provide any means for the House itself to beat them down, gentlemen think they are perfectly authorized and that they are committing no wrong against anyone in availing themselves of any lawful motion to defeat a measure. Therefore I think the House ought to invest itself with the power to beat them down; and I am in favor of such an amendment as I have suggested, which, in my judgment, will thoroughly do away with filibustering, because gentlemen who would be disposed to enter upon that sort of thing would see that it would be useless and must soon terminate.

Mr. HENDERSON of Iowa. Have your amendment pending.

Mr. HOOKER of Mississippi. Mr. Speaker, I was proceeding to state, when I yielded to the gentleman from Louisiana [Mr. BOATNER], that I thought there was a higher question before this House than the consideration of the question as to whether the rules adopted by the Fifty-first Congress and their mode of administration by the then Speaker, or the rules adopted by the last Congress and the mode of their administration by the then Speaker, were proper rules properly administered. I say there is a higher question than that before this body; and it is the question of the power and right of the House, under the Constitution, to adopt its own rules. There are many members who are new to the House, and they ought to be advised by the older members of the methods of procedure by which rules are adopted and business is conducted.

I was here, Mr. Speaker, in the days when the distinguished Speaker from Kentucky [Mr. Carlisle] sat in that chair and was then opposed to the constitution of the Committee on Rules as it is now constituted upon principle, not because I objected to Mr. Carlisle's judgment or patriotism, but I believed that I saw in the constitution of the Committee on Rules in the manner in which it is now constituted in this House the realization of the old aphorism, "that power is always stealing from the hands of the many for the few."

For I believe that 356 men sent here by the people of this country to fashion legislation, to speak the people's sentiments, and to represent them, ought not to be controlled by a committee composed of two men on the Democratic side and two men on the Republican side, with a casting vote on the part of the Speaker. Therefore I have opposed this proposition, not because of any opposition to the present Speaker or to the particular gentlemen who now constitute the Committee on Rules. This power could probably be as safely intrusted to them as to any other five men; but I doubt the propriety of intrusting it to any five men.

Therefore, sir, when the report of that committee was brought in by my colleague from Mississippi [Mr. CATCHINGS] I attempted to get in a motion to amend the report, but immediately the previous question was called, the right of debate was denied, and the power of amendment was cut off.

Now, what do these rules propose? First, they propose that the Committee on Rules shall consist, as heretofore, of five members—and you have already voted that, though many of you do not know it—and now, by this report presented by my colleague from Mississippi, it is proposed to give that committee the most extraordinary powers intrusted to any committee in the House. And, by the way, it is a remarkable fact that when my colleague introduced his partial report, as he called it, it proposed to increase the membership of every other committee in the House except this Committee on Rules, the most powerful of all.

The membership of that committee was not increased in number, but was left at five members, two from the Republican side, two from the Democratic side, the Speaker having the casting vote.

Now, this report proposes (page 13, section 51) that:

All proposed action touching the rules and joint rules and—

I call the attention of the House to the following words—

order of business shall be referred to the Committee on Rules.

In other words, sir, you are yielding up to five men the whole power of the House to determine what subject-matter of legislation shall be considered, how long it shall be considered, and when it shall be voted upon. I say that is undemocratic. I say that is really the absorption of the whole power of the House into the hands of three men virtually, the majority of the Committee on Rules, whose votes will determine all such questions. I have always been in favor of enlarging the Committee on Rules and giving it a membership of at least ten members, if it is to be clothed with these extraordinary powers.

Again, it is proposed to give these additional powers to the committee:

It shall always be in order to call up for consideration a report from the Committee on Rules, and, pending the consideration thereof, the Speaker may entertain one motion that the House adjourn; but after the result is announced he shall not entertain any other dilatory motion until the said report shall have been fully disposed of.

Who is to determine whether the motion made is a dilatory motion?

Mr. HENDERSON of Iowa. The Speaker.

Mr. HOOKER of Mississippi. How is that question to be decided. It can not be decided by anybody but the Speaker. He alone can say whether a motion is dilatory or not, and these rules as now proposed invest the Speaker with that power. I say, therefore, that virtually under these rules you are yielding to the Committee on Rules the guiding power of the House. They can make a report providing that such a bill shall be taken up at such a time, that it shall be considered for such a length of time, and that at such a time it shall be voted upon. You say they can not do that unless the majority sides with them.

But have not gentlemen seen in the last two Congresses numerous instances where the Committee on Rules would come in with a rule providing that such a measure should be taken up, that it should be considered for such a time, and that then the vote should be taken upon it; and have you not seen the previous question called upon that report, and every mouth in the House hermetically sealed? Have not gentlemen seen that, whether under the Congress over which the gentleman from Maine [Mr. REED] presided, or in the Congress over which the gentleman from Georgia, the present Speaker, has presided? I say, therefore, gentlemen, we should well consider the power with which we are vesting the Committee on Rules. Why should we vest this committee, or any committee, with such extraordinary powers? We may want to consider a particular measure, but unless we can get a report from the Committee on Rules it can not receive consideration here.

There is no power in the House, therefore, to go behind the Committee on Rules. Under these rules, if you adopt them, that committee is clothed with the power to report at any time a resolution proposing immediate action upon any measure, and then no dilatory motion can be interposed to prevent such action. The Speaker, a member of the committee who voted to bring into the House the proposed order, must decide, necessarily, whether any proposed motion is dilatory or not.

The effect, therefore, of this proposition is to take away from the majority of the House and to give to this committee, of which the majority consists of three members, control of the whole question as to what measures shall be considered and the time and manner of their consideration. I have witnessed the operation

of a rule of this character in many Congresses—not merely in the last or the last but one. The effect of such a rule is virtually to give to the Committee on Rules the power to determine what questions shall be considered, how they shall be considered, and when the vote shall be had upon them.

Another thing, Mr. Speaker, I believe in giving the minority of any body that may be called here for deliberation their right to participate in such deliberation. I have had the misfortune to be in the minority in many Congresses. I then held, as a member of the minority, and I hold now as a member of the majority, that the minority has the right to be heard not only by speech, but by amendments. Each member of the minority has the right to act here as the representative of his constituency as much as each member of the majority. Therefore, no set of rules ought to be adopted here by which the voice of the minority will be hushed and silenced.

When you propose to clothe the Committee on Rules with the power here contemplated, you might as will concede to them everything else. You make a single committee of the House to judge of what measures ought to be reported favorably for the consideration of the House. You give to a single committee (the majority of which, as I have said, comprises but three members) the power to determine what bills should be reported, what action should be taken upon them, what length of time they should be discussed, and when the vote should be taken.

Why, sir, I remember a memorable case which occurred in the Congress before the last when a report was brought in here—not by the Committee on Rules, but by the Judiciary Committee—a report upon a bill affecting the legal interests of this whole country, a bill establishing an intermediary appellate court; and under the order reported, thirty minutes by the index hand of the dial on that clock were allowed for the consideration of the great questions involved.

I do not believe in cutting off debate. I believe that on every important measure there should be allowed full, free, fair consideration and discussion, whether the measure comes from one quarter or another. And when you have clothed five men of this House with the power here proposed—when you have authorized them to determine whether a measure shall be considered, how long it shall be considered, when the vote shall be taken upon it, you might as well concede to the committee the residue of your power; you might as well go home to your constituents and say to them, "We have surrendered to a committee of five men the whole power of the House, and have left ourselves no right to speak as your representatives."

This is a question upon which I have battled not only in this Congress and the last, but in all the Congresses of which I have been a member. I believe we should have a set of rules which will allow a hearing to everybody for a reasonable time upon every proposition. And we should not authorize the restriction of this right by any committee of the House. At the same time it may be conceded that the committee having a bill in charge should have large control over the time given for its consideration; the Committee on Appropriations, so long presided over by my distinguished friend from Indiana [Mr. HOLMAN] with an ability, a fidelity, and an honesty which this whole country recognizes, or the Committee on Ways and Means, now differently presided over from what it was in the last Congress, or any other important committee, ought to have the right in large degree to control the time; but I have never seen an occasion, when an important committee coming before this House with an important measure, was not willing to allow full and fair discussion of the whole question.

I say, therefore, that in acting on these rules we ought to be governed by the idea of holding the power of the House where the Constitution placed it, in the hands of the majority of the House.

What other proposition is submitted by the Committee on Rules? Another proposition is that when we go into Committee of the Whole the quorum shall be changed from the quorum provided by the Constitution——

Mr. HOPKINS of Illinois. Before the gentleman enters upon a new topic I would like to ask him whether he has formulated as an amendment the ideas which he has expressed as to the power which should be given to various committees in relation to the consideration of their bills?

Mr. HOOKER of Mississippi. That has already been done by my friend from Louisiana; but I intend, when we are considering amendments to this report, to bring up this question.

Mr. HENDERSON of Iowa. You will see that such an amendment is offered?

Mr. HOOKER of Mississippi. Yes, sir. I ought to remind the House that after these rules are adopted you can not get rid of them very easily. When we have once adopted rules it is one of the hardest matters in the world to change them; because any proposition for a change must go to the Committee on Rules; and unless that sovereign body chooses to report back the proposition, the majority of this House, however much it may favor the proposed change, can not get at the subject, because that section or clause that I have read in these rules proposes that every proposition to change the rules shall be referred to the Committee on Rules.

It may bury it and never present it at all to the House, and no matter how strongly the majority of the House may desire to change, unless you induce the Committee on Rules to make a report and return it to the House for action, it will be tied hand and foot, and there is no member of the Committee on Rules who does not know this to be true.

But, Mr. Speaker, I want to call the attention of the House especially to that provision of the rules recommended by the committee here which proposes to make one hundred members a quorum for the transaction of business in the Committee of the Whole. The invariable rule, with one exception, on that subject has been that a quorum of all the members constituting this body shall be necessary for the transaction of business in the Committee of the Whole.

May I be permitted to say, sir, that this is a proposition as now embodied in the rule proposed here to evade the manifest, direct, positive, certain, and unequivocal provision of the Constitution of the United States? What is the Committee of the Whole? My honorable friend from Mississippi, the able member of the Committee on Rules, Gen. CATCHINGS, says it is simply a committee of the House, like any other committee of the House.

It is, Mr. Speaker, the whole House resolved into a Committee of the Whole; and you can not pass an appropriation bill or a tariff bill without resolving yourself into Committee of the Whole House on the state of the Union. It is bound to consider under the form of your rules, whatever they are, all of these propositions, which must have their first consideration in Committee of the Whole House on the state of the Union. You can not consider any great question from your Committee on Ways and Means, from the Committee on Appropriations, or from any other committee which deals with the money or the property of the United States, but especially three great committees of the House, unless you first resolve yourself into Committee of the Whole House on the state of the Union.

Now, it is proposed in this report of the Committee on Rules to change the organization of the Committee of the Whole. Why was the old rule on this subject adopted? It was adopted because our forefathers believed they would thereby guard the power of the people, as represented by the majority in this House, and their rights and privileges should not be denied them by any arbitrary action which could, in the House, cut off all debate by the operation of the previous question and prevent the voice of the people, through their Representatives, from being heard on such subjects of legislation. Section 5 of Article I of the Constitution of the United States is the provision which fixes the question of the membership of this House, when it undertakes to legislate upon any subject:

> Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each House shall constitute a quorum to do business, etc.

Now, a majority of the members of the House must be here to do business. You resolve yourself into a Committee of the Whole to do the business of preparing the appropriation bills, appropriating millions of dollars of the people's money, and yet you propose now that you will evade the distinct and positive provision of the Constitution and say, absolutely in the face of an express provision of the Constitution, that only a hundred members shall constitute a quorum to do business. I deny your power.

We are aware of the fact, Mr. Speaker, that in that other legislative body across the water, analogous to our own, what is known as the British House of Commons, that forty members constitute a quorum, although they have a membership of six hundred and over. Forty members constitute a quorum for business purposes under the rules of the House of Commons; and if you may here prescribe by your rules, introduced by the Committee on Rules of this House, that one hundred shall constitute a quorum to transact the important business of the Committee of the Whole, can not you make it forty as well; and if you may say that forty members shall constitute a quorum, would you not have the power to make it twenty; and if twenty, why not make it ten?

Mr. GROSVENOR. Why not leave it to the Committee on Rules to do it?

Mr. HOOKER of Mississippi. A very good suggestion.

So I say that there is no more power in this House for the adoption of a set of rules by which the quorum established by the Constitution to do business would be evaded and avoided, than there is to make a rule by which you constitute forty members a quorum to do business.

The argument made by some gentlemen, the argument of inconvenience, that you can not get the members here, ought not to be considered for a moment, because when you come out of the Committee of the Whole you go immediately back into the House, and then upon the very measure which you have passed, by a quorum of 100 in Committee of the Whole, you are required to have 179 members to constitute a quorum in the House. It has been said that it was inconvenient for members to be here. If, Mr. Speaker, that is worth anything, then it ought to be inconvenient for such members to be elected, and they ought never to have been sent here. [Applause.]

Let us have the quorum fixed by the Constitution in Committee of the Whole, as we have in the House, whenever we attempt to legislate. And no set of rules which proposes to evade the requirements of the Constitution, in my judgment, ought to be adopted by this body. Let us widen the scope of the power which belongs to the majority of the people instead of lessening it. Therefore, it was not in any spirit of hostility to the Speaker of the House, or the membership of the Committee on Rules of the House, that I wanted to enlarge that committee to fifteen as the other committees are enlarged. But who has ever known a man possessing power who wished to relax his hold upon it?

It is said that man is sometimes restrained by conscience, and the fear of public opinion, but that multitudes of men are not afraid of public opinion because they make it. In this instance the proposition is to increase the membership of every other committee, but the sacred committee of five, the Committee on Rules, is too holy to be invaded by the addition of any members of this body within its sacred precincts. Why not? Other committees have been enlarged. If they should be given power, why should not the Committee on Rules be enlarged for the same purpose? If the judgment of the Committee on Rules as to any measure we have introduced and referred to the committee is to be final, definite, and conclusive upon this body, why should not its membership be increased to correspond with the membership of other committees dealing with important subjects.

If this is simply a committee to make rules for the guidance of the House, or a steering committee for mapping out the business of the House, why not enlarge it, make it a strong committee, make it fifteen at least. You have increased other committees to seventeen, and the House ought to have power not only to approve the reports of the Committee on Rules, but ought to have power to be represented on the committee in order that they may have a voice in any question that the committee shall report.

I have made these remarks in order that my position, which I only had the chance the other day to briefly indicate, when the previous question was called, might be understood. I believe it is the right of the American House of Representatives to adopt its own rules, knowingly, wisely, and intelligently, in order that it may do business under them in accordance with the provisions of the Constitution; and I am not willing to sit in my seat and see adopted what I regard as an invasion and a violation of the Constitution of the United States by a proposition to make a less number than that which the Constitution provides a quorum to transact business.

I am not willing to sit quietly in my seat and see these rules adopted which contain these propositions without raising my voice in protest. Having done that, I have done my duty. You may adopt them if you will. I can live under them as readily as any of you. I can manage my way in the House as readily as can any of you; but I warn all the new members of this House that you will wake up after the adoption of these new rules and you will find your hands, and even your ankles, fastened, and you will not be able to open your mouths during this session, and in the next session, if you readopt these rules; so long as you keep them, you never will have an opportunity.

It is very difficult to infringe upon custom. It gets customary to do so-and-so, and nobody wants to depart from it. Especially those who are in power do not want to depart from it; but I warn the majority of the House, and I warn every member of the House, that if we want to recognize the right which properly belongs to us in our individual capacities as members, we will adopt no rule which proposes a subterfuge when we go into Committee of the Whole to change the provisions of the Constitution and make that a quorum which the Constitution declares shall not be. [Applause.]

Mr. CUMMINGS. Mr. Speaker, "Must you get in?" asked the gentleman from Maine [Mr. REED] a few minutes ago as I arose to make an apt inquiry. Yes, I must get in, Mr. Speaker, and now. There would have been no necessity for my getting in if the gentleman from Maine had answered the inquiry instead of avoiding it. He is wont to appear here as a lion and not as a fox.

The gentleman asserted that the Speaker of this House in the Fifty-first Congress had the highest approval in the land for his rulings and actions—the approval of the majority of this House. I deny that this is the highest approval in the land. I averred that the people were the court of last resort, and that they had given an adverse decision. In this I appear to have offended.

Let us see what actions the majority of this House sustained in the Fifty-first Congress. They sustained action in the Speaker's chair that counted a Democrat 800 miles away as being in the House and not voting. This was done to make up a quorum. Twice while a member of the Fifty-first Congress was I counted as being present here to make a quorum when I was upon Pennsylvania avenue. Other gentlemen now on the floor had a similar experience.

Let us see what was done by the majority of this House under the Speaker's ruling. Eight Democratic members of Congress were unseated and Republicans put in their places, not to make up a quorum, but to pass a force bill, and the bill was passed by the exact majority acquired by this process. The first Democrat hurled from his seat was Judge Jackson, of West Virginia. It was done under the Speaker's ruling, before any rules whatever were adopted. He acted under what he was pleased to say was parliamentary law.

One of these eight Democrats had over 800 majority. Another had over 1,300 majority. He was Mr. Cate, of Arkansas. A third, the Hon. Louis W. Turpin, of Alabama, came here with nearly 14,000 majority. Yet these men were unseated under the ruling of the Speaker, with the approval and sanction of the majority of the House. Worse than these was the case of Wm. H. Venable, of Virginia. Here, with over 600 majority, owing to a split in the Republican party in the Petersburg district, a Democrat was unseated to make room for a Republican. He could not be unseated without the presence of a quorum. The majority was unable to find its own quorum, only one Democrat remaining in the House, so they counted as present but not voting the Democrat, the gentleman from Virginia [Col. O'FERRALL], who is to be the next Democratic governor of that State. They thus unseated Mr. Venable and seated Prof. Langston. If Mr. Venable had been in his seat and Col. O'FERRALL absent, they would have counted Mr. Venable as being present and not voting, and would have used this count to unseat Venable himself. If there had been one Republican in the House and all the Democrats, and the latter had refrained from voting, they would have unseated Mr. Venable by the vote of the solitary Republican.

So much for the rules of the Fifty-first Congress. It is upon such rulings as these that the late Speaker of the House bases his attack upon the rules offered to-day. The people did not sustain them. The gentleman from Maine [Mr. REED], when he said he was sustained by the people of his district, knew very well that the people of his district did not include the people of the United States. His people may have given him a greater majority than he ever had before received, with the Kittery navy-yard in the background and the Biddeford naturalization frauds in the foreground; but that majority was greatly reduced in the next election, when such aid was lacking.

Sir, the people of the United States repudiated both him and his majority in this House. The 170-odd Republican votes, including the 8 obtained by fraud in the Fifty-first Congress, were reduced to 87 in the Fifty-second Congress, where the gentleman received the disapproval of the highest court in the land—the people of the United States. [Laughter and applause.]

Mr. PICKLER. Mr. Speaker, I offer an amendment in my time.

The SPEAKER *pro tempore* (Mr. RICHARDSON in the chair). The amendment will be read for information in the time of the gentleman, but not to be considered as pending.

The Clerk read as follows:

Amend by adding after the words "Committee on Rules to consist of five members," on page 8, the following words: "*Provided*, That on the first day of the regular session of the Fifty-third Congress the Speaker shall appoint four additional members on said committee."

Mr. PICKLER. I suppose, Mr. Speaker, that this report is submitted as a report in full by the Committee on Rules, and that that amendment will be in order when we reach that part of the rules. The point I desire to make is in line with the argument of the gentleman from Mississippi [Mr. HOOKER] in regard to the size of the Committee on Rules. I thoroughly agree with the gentleman from Mississippi that this most powerful committee in the House is altogether too small. In my opinion there are no five men, as the committee is now constituted, in any government under the sun, that have like authority and power with the Committee of Rules of this House. Upon all political questions this power resolves itself down to three men—the three in the majority, two on the same side with the Speaker.

I have taken some little trouble to look at the constitution of the Committee on Rules as to size in the past history of this

Government, and there are some interesting features in connection therewith. I find that the first Committee on Rules, consisting of five members, was in the Ninth Congress. In the Twelfth, Thirteenth, Fourteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth, Nineteenth, Twentieth, Twenty-first, and Twenty-third seven members comprised the Committee on Rules. Following that, in the Twenty-fourth, Twenty-sixth, Twenty-seventh, Twenty-eighth, Twenty-ninth, Thirtieth, Thirty-first, and Thirty-second Congresses, the Committee on Rules was comprised of nine members; and in the Thirty-fifth Congress, for the first time in the legislative history of the country, the Speaker of the House became a member of the Committee on Rules.

Never since that has there been any larger number upon the Committee on Rules. I do not know whether there is anything indicative in that or not, but it is simply history; and I agree with the gentleman from Mississippi [Mr. HOOKER] in expressing the same regard for the members of the Committee on Rules that he does. I do not criticise the personal membership of the committee, but simply the naked proposition of five members being too small a number for the Committee on Rules. It takes but a short service in this House for any member to perceive that the business of the House is altogether within the hands of the Committee on Rules.

The Calendars are crowded, and no motion, no bill, no measure can be gotten before the House if the Committee on Rules is not willing that it should be brought forward. You gentlemen know well how one measure after another crowds upon the Calendar, and how from time to time gentlemen are found traversing this House with petitions to the Committee on Rules, asking that some measure or other be considered. It is interesting to note in this very House what power they have, and what additional power they are taking in this House. No one will deny that the rules brought in here at the present give the committee greater power than heretofore.

No one will deny that the Committee on Rules absolutely governs the House. In other words, no measure that is reported can be considered, as it can readily be laid aside if they do not desire it considered, and there is no chance for any measure to pass with their objection. There has never, in the history of this Government, been a member of the Committee on Rules from a State west of the Mississippi River, save and except Mr. MILLS of Texas, who was a member at one time.

Mr. WILSON of Washington. And no other member on any committee where the business was of importance to our part of the country.

Mr. PICKLER. I do not know exactly as to that.

Mr. WILSON of Washington. There are four representatives of the East on the Committee on Appropriations out of ten States, and the West has but a single representative on that committee.

Mr. PICKLER. To-day, with all the great interests of the West, from Michigan and Ohio to the Pacific coast, there is not one State has a member on the Committee on Rules. I have taken the trouble to look up the representation of the Committee on Rules; and in this committee which governs this House—in a House of 356 members—is placed all the power in this body. The committee consists of the Speaker, Mr. CATCHINGS, Mr. OUTHWAITE, Mr. BURROWS, and Mr. REED. They represent a constituency of 828,078, while from the Congressional Directory, where I obtained these figures, the population of the country is given at the time this book was compiled at over 62,000,000 of people.

Now, I have no criticism to make of these gentlemen, because I believe they will perform their duties as well as any members of this House, but I do object to the general proposition of concentrating all this great power in a few men representing but 828,000 voters out of 62,000,000 of people. This is just as the record shows it.

My proposition is that on the first day of the regular session in December the Speaker of the House shall appoint four other members so as to give the Committee on Rules nine members. As I have already said, in a majority of the Congresses in the history of this country the Committee on Rules has had a membership of from seven to nine. So it ran down to the Thirty-fifth Congress, when the Speaker became its chairman, and since that time the Committee on Rules has consisted of only five members.

Now, in my opinion, the interests of this country demand an enlargement of that committee, and I think that a time like this, when there is no particularly exciting question agitating the House or the country, would be a good time to increase it. The interests of such great States as Illinois, Missouri, and the States west of the Mississippi and the Missouri Rivers seem to me to be entitled to have some representatives upon that committee, who would take care that their measures should be brought forward and should receive consideration here. I do not see why there should be any objection to increasing the membership of the Committee on Rules.

As has been well stated by the gentleman from Mississippi [Mr. HOOKER], nearly all of the other committees of the House, which were already much larger than the Committee on Rules, have been increased this very Congress. Why, then, should not the Committee on Rules also be enlarged? I believe it really ought to consist of fifteen members. I believe that with 62,000,000 of people entitled to representation upon this floor, the time has come when that committee ought to be increased to fifteen, especially when we remember that as far back as the Ninth Congress it had five members; that as far back as the Twelfth Congress the membership was increased to seven, and that it stood at seven or nine until the Thirty-fifth Congress.

I trust that gentlemen will consider this matter thoughtfully. It seems to me everyone must concede that with such unlimited power as this committee has—for no such power is intrusted to the hands of any five men under any Government as this rule puts in the hands of our Committee on Rules——

Mr. WILSON of Washington. If the gentleman will permit me to interrupt him, his idea about enlarging the Committee on Rules is very good, but it will not be adopted, and I wish he would extend his view to some of the other committees where the West has always been treated with injustice, except in the Fifty-first Congress, when the distinguished Speaker [Mr. REED] gave us representation on the Committee on Appropriations and also on the Committee on Ways and Means, a right which we were denied in the Fifty-second Congress. The West never gets justice.

These committees are made up of Representatives from east of the Alleghanies and south of the Ohio River. Ten States of the West, with a large and teeming population, have no representation on the Committee on Appropriations or on the Committee on Ways and Means. Vermont has one, Massachusetts has two, New York has one, but the West has none. You come to us and ask for our votes when you need them, but when we seek to get upon the committees where we are entitled to representation we are denied that right, and always have been except by the distinguished Speaker of the Fifty-first Congress.

Mr. PICKLER. I certainly agree with my distinguished friend from Washington that the people of the West ought to have representation——

Mr. WILSON of Washington. Well, they do not get it; do they? [Laughter.]

Mr. PICKLER. I still think the gentleman is about right. Mr. Speaker, the only way we can possibly have this representation, in view of the great pressure upon the Speaker and the great influences that are brought to bear from older and richer portions of the country, is by increasing the size of the committees.

And, gentlemen, that would not damage the East. It would not hurt the South. The South is certainly very well represented now on the Committee on Rules. I do not see why there should be any objection to enlarging this committee. I speak especially of the Committee on Rules, because, as I said before, it has more power than all the other committees of this House combined. To enlarge it would do no injury and no injustice to anybody; and it would only be fair to give us some consideration there, and to place at least four new members on that committee from portions of the country now unrepresented. I will append to my remarks a statement showing the membership of the Committee on Rules from the First Congress down to the Fifty-third.

Following is the statement:

Committees on Rules of different Houses of Representatives in Congress from 1787 to and including Fifty-third Congress.

Committee in Federal Convention—Mr. Wythe, Mr. Hamilton, Mr. Pinckney.

CONGRESSES.

First and Second—Joint Committee, Mr. Bland, Mr. Trumbull, Mr. Vining, on part of the House.
Third and Fourth—Mr. Trumbull, Mr. Jeremiah Smith, Mr. Baldwin.
Fifth and Sixth—Mr Sitgreaves, Mr. Dent, Mr. Macon.
Seventh and Eighth—Mr. Eustis, Mr. New, Mr. Huger.
Ninth—Mr. Varnum, Mr. Denson, Tallmadge, Mr. Gregg, Mr. Holland.
Tenth—Mr. Winn, Mr. Gray, Mr. John Campbell, Mr. Brown, Mr. Gardner.
Eleventh—Mr. Mason, Mr. Smilie, Mr. Rhea of Tennessee, Mr. Southard, Mr. Shaw.
Twelfth—Mr. Bassett, Mr. Pitkin, Mr. Macon, Mr. Nelson, Mr. Bibb, Mr. Quincy, Mr. Findley.
Thirteenth—Mr. Roberts, Mr. Macon, Mr. Pleasants, Mr. Breckinridge, Mr. Pitkin, Mr. Nelson, Mr. Clark.
Fourteenth—Mr. Stanford, Mr. Bassett, Mr. Sargeant, Mr. Gold, Mr Desha, Mr. Crawford, Mr. Telfair.
Fifteenth—Rules of preceding House adopted.
Sixteenth—Rules of preceding House adopted.
Seventeenth—Mr. Nelson of Virginia, Mr. Baldwin, Mr. Taylor, Mr. Bassett, Mr. Condict, Mr. Smith of Maryland, Mr. Rich.
Eighteenth—Rules of preceding House adopted.
Nineteenth—Rules of preceding House adopted.
Twentieth—Mr. Randolph, Mr. P. P. Barbour, Mr. Taylor, Mr. Ingham Mr. Oakley, Mr. Kerr, Mr. Wilde.

Twenty-first—Rules of preceding House adopted.
Twenty-second—Mr. Williams, Mr. Drayton, Mr. Taylor, Mr. Speight, Mr. Sutherland.
Twenty-third—Mr. Foot, Mr. J. Q. Adams, Mr. Polk, Mr. Bell of Tennessee, Mr. Wayne, Mr. Speight, Mr. Sutherland.
Twenty-fourth—Mr. Mann of New York, Mr. Adams, Mr. Thomas, Mr. Williams of North Carolina, Mr. Cambreling, Mr. Everett, Mr. Parks, Mr. Parker, Mr Chambers of Pennsylvania.
Twenty-fifth—Mr. Mercer, Mr. Hamer, Mr. Briggs, Mr. Smith of Maine, Mr. Muhlenberg.
Twenty-sixth—Mr. Hoffman, Mr. Bell, Mr. Banks, Mr. Sargeant, Mr. Briggs, Mr. Pickens, Mr. Atherton, Mr. Vanderpool, Mr. Reim.
Twenty-seventh—Mr. William B. Calhoun, Mr. Lewis Williams, Mr. Richard W. Habersham, Mr. George W. Hopkins, Mr. A. Lawrence Foster, Mr. Thomas J. Campbell, Mr. Joseph Lawrence, Mr. James W. Williams, Mr. Linn Banks.
Twenty-eighth—Mr. Wise, Mr. Adams, Mr. Dromgoole, Mr. Beardsley, Mr. White, Mr. C. J. Ingersoll, Mr. Davis, Mr. Vinton, Mr. R. Chapman.
Twenty-ninth—Mr. Holmes of South Carolina, Mr. John Quincy Adams, Mr. Hamlin, Mr. Hunter, Mr. R. Chapman, Mr. Bowlin, Mr. Vinton, Mr. Caleb B. Smith, Mr. Reid.
Thirtieth—Mr. Charles J. Ingersoll, Mr. Truman Smith, Mr. Howell Cobb, Mr. Caleb B. Smith, Mr. Barringer, Mr. McClelland, Mr. R. Chapman, Mr. Gentry, Mr. Jenkins.
Thirty-first—Mr. Kaufman of Texas, Mr. Jones of Tennessee, Mr. Vinton of Ohio, Mr. Strong of Pennsylvania, Mr. Stephens of Georgia, Mr. Phelps of Missouri, Mr. Ashmun of Massachusetts, Mr. Littlefield of Maine, Mr. McGaughey of Indiana.
Thirty-second—Mr. Jones of Tennessee, Mr. Stephens of Georgia, Mr. Chandler of Pennsylvania, Mr. Robinson of Indiana, Mr. Stanley of North Carolina, Mr. Seymour of New York, Mr. King of Rhode Island, Mr. Olds of Ohio, Mr. Wallace of South Carolina.
Thirty-third—Mr. Mace of Indiana, Mr. Campbell of Ohio, Mr. Millson of Virginia, Mr. Stephens of Georgia, Mr. Wright of Pennsylvania.
Thirty-fourth—Mr Perry of Maine, Mr. Jones, Mr. Campbell, Mr. Haven of New York, Mr. Stephens of Georgia.
Thirty-fifth—Mr. Speaker, Mr. Winslow, Mr. Grow, Mr. Bocock, Mr. Israel Washburn, jr.
Thirty-sixth—Mr. Speaker, Mr. Israel Washburn, Mr. Bocock, Mr. Grow, Mr. Winslow.
Thirty-seventh—Mr. Speaker, Mr. Elihu B. Washburne, Mr. Colfax, Mr. Richardson, Mr. Mallory.
Thirty-eighth—Mr. Speaker, Mr. Elihu B. Washburne, Mr. Mallory, Mr. Littlejohn, Mr. Cox.
Thirty-ninth—Mr. Speaker, Mr. Elihu B. Washburne Mr. Banks of Massachusetts, Mr. Dawson of Pennsylvania, Mr. Raymond of New York.
Fortieth—Mr. Speaker, Mr. Orth, Mr. Robeson, Mr. Randall, Mr. Blackburn.
Forty-first—The Speaker, Mr. Banks of Massachusetts, Mr. Ferry of Michigan, Mr. Garfield of Ohio, Mr. Brooks of New York.
Forty-second—The Speaker, Mr. Banks of Massachusetts, Mr. Garfield of Ohio, Mr. Cox of New York, Mr. Randall of Pennsylvania.
Forty-third—The Speaker, Mr. Maynard, Mr. Garfield, Mr. Cox, Mr. Randall.
Forty-fourth—The Speaker, Mr. Randall, Mr. Cox, Mr. Blaine, Mr. Banks.
Forty-fifth—The Speaker, Mr. Stephens of Georgia, Mr. Blackburn of Kentucky, Mr. Garfield of Ohio, Mr. Frye of Maine.
Forty-sixth—The Speaker, Mr. Stephens of Georgia, Mr. Sayler of Ohio, Mr. Banks of Massachusetts, Mr. Garfield of Ohio.
Forty-seventh—The Speaker, Mr. Orth, Mr. Robeson, Mr. Randall, Mr. Blackburn.
Forty-eighth—The Speaker, Mr. Blackburn, Mr. Randall, Mr. Keifer, Mr. Reed.
Forty-ninth—The Speaker, Mr. Randall, Mr. Morrison, Mr. Reed, Mr. Hiscock.
Fiftieth—Mr. Carlisle, Mr. Randall, Mr. Mills, Mr. Reed, Mr. Cannon.
Fifty-first—Speaker Reed, Mr. McKinley, Mr. Cannon, Mr. Carlisle, Mr. Blount, Mr. Ingalls.
Fifty-second—Speaker Crisp, Mr. McMillan, Mr. Catchings, Mr. Reed, Mr. Burrows.
Fifty-third—Speaker Crisp, Mr. Catchings, Mr. Outhwaite, Mr. Reed, Mr. Burrows.

Mr. HEPBURN. Mr. Speaker, I desire to call the attention of the House to Rule XIV, which, in my judgment, is one of the most important of all the rules reported from the committee. It is especially important to the new members of the House. It is not so important to those who have been here for some time and have attained to such positions as enable them at all times to secure recognition. This rule, as reported, provides that—

When any member desires to speak, or deliver any matter to the House, he shall arise and respectfully address himself to Mr. Speaker, and, on being recognized, may address the House from any place on the floor, or from the Clerk's desk; and shall confine himself to the question under debate, avoiding personalities.

It will be observed that there is no requirement in that rule upon the Speaker to recognize a member, although he may be the only member upon the floor, the only one seeking recognition. The language of the rule is "when recognized." It is my opinion that that ought to be so changed as to require the Speaker, in a case of that kind, when the member asking recognition is clearly in order, to recognize that member. There certainly is no proposition to be found in the spirit of the Constitution more clearly than that which recognizes the equality of the constituencies that are represented upon this floor.

Each constituency is the equal of every other, and through its Representative is entitled to the same rights as every other; but under this rule, as it is proposed, it would be within the power of the Speaker to absolutely disfranchise a constituency, to prevent its Representative from having any voice in discussion, or from taking any part in perfecting legislation. He might be unable to express his views, or to offer the slightest amendment, and might be compelled to content himself with merely voting yea or nay upon propositions presented by other members. I do not believe that that is in accordance with the spirit of the Constitution. I believe, on the contrary, it is a gross and palpable violation of that spirit, and that this recognition at the will or caprice of the Speaker is a power with which no man ought to be intrusted.

Gentlemen have had much to say about the power of the Speaker with reference to the direct count of a quorum—much to say about the power of the Speaker, and its probable misuse, in determining whether a motion is dilatory in its character. But here it is proposed to invest him with another power infinitely more dangerous to individuals and constituencies; and yet, so far as this debate has proceeded, no word of protest has been uttered.

I want to bring this proposition particularly to the attention of those gentlemen who have had least experience in this House. Ordinarily at the beginning of a session the new member, unfamiliar with the rules, without knowledge as to how they may bear upon him, follows the leadership of those who are more prominent upon either side.

Those gentlemen who are thus followed belong almost invariably to that class who are able from their deserved prominence to have recognition from the Speaker at all times, no matter who the Speaker may be. Hence the rule will not bear unfairly or unfavorably upon them. But new members will find later on that it bears most onerously upon them. This matter will be brought home to you, gentlemen, later on, when you are upon the floor seeking to deliver to this House important matters in behalf of your constituents, when you have succeeded in getting the Speaker's eye and when the Speaker blandly inquires of you, "For what purpose does the gentleman rise?"

Is it any business of the Speaker for what purpose any gentleman rises? When he has delivered his matter, then if it is obnoxious to criticism, because of a violation of the rules, it is the province of the Speaker to call him to order and require him to take his seat. But in advance, before the Speaker knows what is the purpose of the member, while he is upon his feet, seeking to perform a function which he has been sent here to perform, a duty which is required of him, it seems to me that such an inquiry as that borders upon insolence, and that no Speaker, I say it respectfully (because surely if this power is to be wielded by anyone, I know of no gentleman upon the other side that I would have wield it in preference to the gentleman now holding the office of Speaker), should be vested with so vast a power.

A rule of this kind proposed in the last month of the session would not secure the concurrence of a majority of this House. If adopted at all, it will be adopted in the early days of the session, because we do not appreciate its influence and do not know how this power can be wielded to prevent us from doing those things that we believe we ought to do.

I confess, Mr. Speaker, that the subject is fraught with difficulty. The second clause, however, of the proposed rule provides that the Speaker may elect whenever any real difficulty or contention between two members may arise.

It is suggested that still further difficulty may arise from the fact that in the absence of this power debate may be prolonged unnecessarily. Surely not under the operation of the previous question; surely not under the power with which you propose to invest your Committee on Rules. This proposed amendment does not involve any interference with either of those rules or with the power of the House to prevent unnecessary and improper debate.

Having made these suggestions, I ask that the amendment which I propose to offer may be read, so that it shall go into the RECORD. To-morrow, or at some subsequent time when the occasion may be fitting, I shall ask leave to offer this amendment.

The SPEAKER *pro tempore*. The amendment will be read as part of the gentleman's remarks.

The Clerk read as follows:

Amend Rule XIV as follows:
Insert after the word "Speaker," in the third line of clause 1 of Rule XIV, the words "and shall be recognized, if in order, by the Speaker;" so that the clause will read:
"When any member desires to speak or deliver any matter to the House, he shall rise and respectfully address himself to 'Mr. Speaker,' and shall be recognized, if in order, by the Speaker, and, on being recognized, may address the House from any place on the floor or from the Clerk's desk, and shall confine himself to the question under debate, avoiding personality."

Mr. BRYAN. Mr. Speaker, I wish to say a word in behalf of the amendment offered by the gentleman from Mississippi and then a word in behalf of one or two provisions in the proposed rules. I think the remarks of the gentleman from South Dakota [Mr. PICKLER] are worthy the consideration of members. We need not disguise the fact that there are in various parts of the country interests which pertain to those parts alone and that however honest and however anxious the members of the Committee on Rules may be to give every part of the country fair representation, it is impossible for them to enter fully into the wishes and interests of sections in which they do not live.

The gentleman from South Dakota has called attention to the history of this question and has shown that up to the Thirty-fifth Congress, I believe, the Committee on Rules contained a larger number of members; and it is strange to my mind that as our country grows in size and as the number of Representatives in Congress increases the number of members of this committee should diminish rather than increase. And I emphasize what has been already said that there is not to-day upon the Committee on Rules a member representing that great transmissisippi country.

The center of population has been going westward. It is now in southwestern Indiana. Take the Western members of the Committee on Rules, and they are near to the center of population. Is it possible that these gentlemen, however desirous they may be to do justice to our section of the country, can as fairly represent our people, can as faithfully urge the importance of our measures as they could if they lived among us and understood our interests? And is it unfair for us to insist that this section of the United States is just as important as any other section, and that its interests should be looked after just as carefully?

It seems to me that if the membership of this committee was increased to nine, and the Speaker was thereby permitted to select the additional members from the sections not now represented, no harm could be brought thereby to other sections, but that on the contrary justice would be insured to this large part of our country now unrepresented.

Mr. HOPKINS of Illinois. Will the gentleman allow me a moment?

Mr. BRYAN. Certainly.

Mr. HOPKINS of Illinois. Did the gentleman from Nebraska hear the proposition of the gentleman from Louisiana [Mr. BOATNER] to clothe the various committees of the House with authority to control the legislation reported from them?

Mr. BRYAN. I knew of the resolution before it was presented in the House, but was not present when it was read.

Mr. HOPKINS of Illinois. I would ask the gentleman further if the method there suggested would not meet his approval as presenting a better system than by the proposed enlargement of the Committee on Rules?

Mr. BRYAN. I think that both propositions might be adopted. The proposition of the gentleman from Louisiana helps the case, but it is not inconsistent with this proposition to also increase the membership of the Committee on Rules.

As has been said, Mr. Speaker, the Committee on Rules is the most important committee of the House. To that committee is committed the question as to what measures will come before the House for its consideration. We all know that we do not reach bills on the calendars. After a few weeks of the session have passed the calendars are loaded down with measures too numerous to receive consideration, and there must be some extraordinary process resorted to for selecting from among them those which should be considered. When we give into the hands of the Committee on Rules almost the entire control of the legislation of the country, as we do in this case, it is only just and fair that this committee shall be large enough to represent every interest in this vast country, and every section as well.

I do not see what objection can be made to the suggestion of increasing the committee, in view of the fact that all of our principal committees have been enlarged. That geographical considerations have weight in the make-up of the committees is shown from the fact that all of our committees are chosen with a view to representing all interests.

Mr. WILSON of Washington. Will the gentleman allow me to interrupt him to say that if he will look at the Committee on Ways and Means and the Committee on Appropriations he will see that in these committees geographical considerations were not regarded? I would like to ask the gentleman to inquire of the membership of these committees of the House if they have been selected with a view to geographical situations, as far as the Western part of our country is concerned.

Mr. BRYAN. I am not here to discuss whether or not in the selection of every committee there has been such care given to represent the various portions of the country as should have been given; but I say that the geographical consideration is taken into view in making up the committees, at least to a certain extent.

But, Mr. Speaker, when we come to act on this proposition, whether we shall increase the membership of the most important committee of all, and find that there is not a man representing the great country west of the Mississippi River upon that committee, or that even lives near the Mississippi River—except the gentleman from Mississippi [Mr. CATCHINGS], who lives on the east side—is it unjust that this part of the country should insist on having representation upon that committee? I submit it to the intelligence of this body, I submit it to your sense of justice, if we are asking more than our right when we ask you to change the rule and permit the membership of this committee to be enlarged so as to include the representation from these sections? It might be possible with a committee of five only to cover more than one-half of the country; but with a committee of nine, there could be no excuse for leaving unrepresented the various interests which, up to this time, have been unrepresented in the make-up of this important committee of the House.

Mr. WILSON of Washington. We have representation enough now in the West on the arid lands, but we never get any appropriations to irrigate them. [Laughter.]

Mr. BRYAN. I have not investigated that particular committee. But having said this much in behalf of the amendment, I desire to say a word in regard to the other parts of the report.

Mr. COX. Has the attention of the gentleman been called to the fact that all committees have been increased in number except this?

Mr. BRYAN. Yes, sir.

Mr. OUTHWAITE. The important committees.

Mr. BRYAN. The gentleman has suggested that the large committees, the important committees——

Mr. OUTHWAITE. That is better.

Mr. BRYAN (continuing). Have been increased in number, and yet the most important committee of all remains only at five, when the membership of the House has been increased since our last session.

But I will not detain the House longer on this question. I desire to submit a word only in behalf of some portions of the rules where they differ from the rules of the Fifty-first Congress. A great deal has been said here about the Supreme Court having ratified or approved of the action of the Speaker of that Congress in counting a quorum. I call the attention of the House to the fact that the Supreme Court simply decided, in a case before it, that this House had the right to determine, by rule, in what manner the presence of a quorum should be ascertained. The court did not say that the Speaker of the House was authorized, before the adoption of the rules, to declare that certain members were present, and therefore that a quorum was ready to transact business. That question was not brought before the court.

It is immaterial to us, however, whether the Speaker had authority for his ruling or not before the adoption of this new rule by the House. It is immaterial to us whether he said in 1880:

> It is not the visible presence of members, but their judgment and their votes the Constitution calls for.

And whether ten years afterward he said a different thing while occupying the Speaker's chair, when it was necessary in order to secure an increased representation of his party in Congress.

Mr. GROSVENOR. Does the gentleman think it any reflection upon the statesmanship of a member of Congress for him to change his mind upon a question?

Mr. BRYAN. Not at all, sir. In fact, I believe it is the duty of a man to change his mind if he finds that he is wrong.

Mr. GROSVENOR. There have been some changes of opinion lately in this House, and I did not know whether the gentleman was passing criticism upon that. [Laughter.]

Mr. BRYAN. I will say this, however, that it sometimes is the case that where one party is in power, and desires to do a thing, one of the party out of power will denounce the act as wrong, and then when that man comes into power he will change his mind, when party necessity requires a change of action. I say that is possible; and I am sure that the gentleman from Ohio [Mr. GROSVENOR] will agree with me that such a change of mind is not to be defended. Only that change of mind which is an honest change, brought about by an honest consideration of all the questions involved, is to be commended.

But I say, Mr. Speaker, it is not a question whether the Speaker of this House at that time violated the precedents of a hundred years and placed a construction upon the Constitution which no previous Congress had placed there. It is not a question whether his opinion in power was different from that which he expressed when out of power. The question is simply as to the wisdom of adopting the rule which was adopted at that time.

I quote from the Supreme Court decision, where the court says that this House has the right to select, not only the method selected in the Fifty-first Congress, but the right to select the method which has been selected in every other Congress from the beginning of this Government to this time; in other words, that the House can determine for itself how the presence of a quorum shall be ascertained. In the decision the rule adopted February 14, 1890, authorizing the Speaker to count a quorum, is set forth, and then follows this language:

> The action taken was in direct compliance with this rule. The question, therefore, is as to the validity of this rule, and not what methods the Speaker may of his own motion resort to for determining the presence of a quorum,

nor what matters the Speaker or Clerk may of their own volition place upon the Journal.

Neither do the advantages or disadvantages, the wisdom or folly, of such a rule present any matters for judicial consideration. With the courts the question is only one of power.

The Constitution empowers each House to determine rules of proceeding. It may not by its rules ignore constitutional restraints or violate fundamental rights, and there should be a reasonable relation between the mode or method of proceeding established by the rule and the result which is sought to be attained. But within these limitations all matters of methods are open to the determination of the House, and it is no impeachment of the rule to say that some other way would be better, more accurate, or even more just.

It is no objection to the validity of a rule that a different one has been prescribed and in force for a length of time.

* * * * * * *

But how shall the presence of a majority be determined? The Constitution has prescribed no method of making this determination, and it is therefore within the competency of the House to prescribe any method which shall be reasonably certain to ascertain the fact. It may prescribe answer to roll call as the only method of determination; or require the passage of members between tellers, and their count as the sole test; or the count of the Speaker or the Clerk, and an announcement from the desk of the names of those who are present.

* * * * * * *

Summing up this matter, this law is found in the Secretary of the Treasury's Office, properly authenticated. If we appeal to the Journal of the House, we find that a majority of its members were present when the bill passed, a majority creating by the Constitution a quorum, with authority to act upon any measure; that the presence of that quorum was determined in accordance with a reasonable and valid rule theretofore adopted by the House.

But when we say, that instead of adopting the method adopted in the Fifty-first Congress, we will adopt the method adopted by all preceding Congresses and by the Fifty-second Congress, I believe that we follow the safer course, and that our action in not counting a quorum or allowing it to be done, is based on solid wisdom.

And just a word, Mr. Speaker, to show the wisdom of our method. The gentleman from Texas [Mr. BAILEY] in the last Congress showed what various States had done; and while I can not give the States as he gave them, yet my recollection is that more than half of the States of this Union provide by their constitutions that no bill shall become a law until a majority of all the members elected shall express their consent upon a yea-and-nay vote. I believe that provision is a wise one. I believe it is only a safe provision that before a bill shall become a law a majority of all members elected to Congress shall express it as their wish, and not merely a majority of those who happen to be present if a quorum is present.

A great deal was said about wanting the majority to rule. Mr. Speaker, I call attention to the fact that the counting of a quorum is not a device by which a majority can rule. It is a device by which a minority can enact laws. A majority in favor of a bill requires no counting of a quorum. It is when there is not a majority in favor of a bill, that a quorum must be counted in order to pass the bill. Now, what is possible under it? We have in this House 356 members. One hundred and seventy-nine make a quorum.

According to all rules, if we have present 179 members, and 90 members vote aye and 89 vote no, the bill will be passed. Now, that is because the Constitution says that, a quorum being present, a majority of the majority is sufficient to pass a bill. But for one hundred years our people have placed a construction on that, and they have given to the minority the right, by refusing to vote, to compel the concurrence of a majority in legislation.

I believe that that safeguard is a wise one, and that no great interest will suffer if you simply stay the hand of legislative power until you bring in a majority who are in favor of the proposition. But in the rules of the Fifty-first Congress that safeguard was taken away, and with 89 refusing to vote, the Speaker, according to the rules afterward adopted, and in accordance with his own opinion before the rules were adopted, was able to count the 89 as present, and thus two more than one-fourth of the House were able to unseat a member and put another member in his place.

The first instance where this rule was called into effect was in the case of Smith *vs.* Jackson, which came up on the 29th day of January, 1890. There 162 members of Congress voted in favor of unseating the man who held the certificate. It was not a majority of the members of that Congress, and yet it illustrates what could be done under the rules of the Fifty-first Congress. We have refused to adopt these rules. We have gone back to the precedents of a hundred years, and left it in the power of those dissenting to compel the concurrency of a majority in the passage of a measure by refusing to vote, thereby breaking a quorum, whenever, in their judgment, such action would be justifiable.

There is another question. The Fifty-first Congress gave to the Speaker the right to determine what was a dilatory motion. That power, sir, when wisely exercised is perhaps not a dangerous power; but that power the Fifty-second Congress refused to give the Speaker; that power this Congress has so far refused to trust to the Speaker; and I believe we are wise in refusing that power to any man.

Mr. HOPKINS of Illinois. Will the gentleman permit me to interrupt him there?

Mr. BRYAN. Certainly.

Mr. HOPKINS of Illinois. Do I understand the gentleman to say that we have no rule that would permit the Speaker to determine what is a dilatory motion?

Mr. BRYAN. I do not believe the Speaker of the House should be invested with the power to declare by his judgment what is a dilatory motion, and thus stop what we call filibustering.

Mr. HOPKINS of Illinois. Now, if the gentleman will permit me, did he not, as a member of the last Congress, vote for a code of rules that clothed the Speaker with that authority?

Mr. BRYAN. Under the provision with regard to suspension of the rules?

Mr. HOPKINS of Illinois. Yes, sir.

Mr. BRYAN. I believe that no motion is in order——

Mr. HOPKINS of Illinois. But did not the gentleman in the last Congress vote for a code of rules which clothed the Speaker with that authority?

Mr. SPRINGER. In two cases only.

Mr. HOPKINS of Illinois. I do not care whether it is two or one.

Mr. BRYAN. I was going to say——

Mr. OUTHWAITE. It does not clothe him with the power to determine what is a dilatory motion——

Mr. REED. It takes three of them to answer.

Mr. OUTHWAITE (continuing). Or what the motive of the maker is. It only enables him to declare a motion dilatory when the motion itself shows it is a dilatory motion, and for delay.

Mr. BRYAN. And that is what the rule says.

Mr. HOPKINS of Illinois. Does it not clothe the Speaker with authority to declare what is a dilatory motion?

Mr. BRYAN. It does not give the Speaker the right to determine what the motive of the maker was, but simply what the effect was; and that was the rule.

Mr. HOPKINS of Illinois. Has not the Speaker, under section 8, Rule XIV, the same power, when it comes to a question of suspending the rules, that the Speaker of the Fifty-first Congress was clothed with under the rules adopted by that body?

Mr. PAYNE. And in language precisely the same?

Mr. REED. It is on pages 14 and 19.

Mr. BRYAN. It seems to take three gentlemen to propound the question. [Laughter].

The SPEAKER *pro tempore*. Does the gentleman from Nebraska yield to the gentleman from Illinois?

Mr. BRYAN. Yes, sir; I yield to the three gentlemen. [Laughter.]

Mr. HOPKINS of Illinois. Before the gentleman yields to the others, if he will simply answer my question I will be obliged. Did not he, as a member of the last Congress, vote for a code of rules that lodged with the Speaker the power to determine what is a dilatory motion? He has refused to answer that question yet.

Mr. BRYAN. I voted for the rules adopted.

Mr. HOPKINS of Illinois. Can not the gentleman be frank, and say yes or no? Will the gentleman allow me——

Mr. BRYAN. I will allow you to frame your question if you will allow me to frame my answer.

Mr. HOPKINS of Illinois. Does it require an argument to answer? Can not you answer by yes or no?

Mr. BRYAN. Are you ready to let me answer?

Mr. HOPKINS of Illinois. Do you decline to answer my question?

Mr. BRYAN. If the gentleman is through with the question I will answer.

Mr. HOPKINS of Illinois. Well, Mr. Speaker, I will not press the gentleman upon that point, as I see it is a delicate subject with him. It is a question which could have been answered with a direct yes or no.

Mr. BRYAN. The gentleman has submitted his question, and I will try to answer it and go back to the point where he interrupted me. Now, while such a provision is in the rules of the last Congress, those rules provided that in the instances which the gentleman refers to the Speaker was permitted to decide that a motion which delayed action was not in order.

But I do not understand that the decision of the Speaker in the last Congress was at all like the decision of the Speaker of the Fifty-first Congress. And furthermore, the decision of the Speaker of the last Congress was based upon the decisions of Speakers in other Congresses previous to the Fifty-first, under the same rule, and presents a very different question from that which was raised in the Fifty-first Congress.

Mr. HOPKINS of Illinois. In the last Congress, in the two instances to which the gentleman's attention has been called, is not the language which lodges this power in the Speaker precisely the language in which the rule was clothed that was adopted by the Fifty-first Congress?

Mr. BRYAN. I can not say. Will you answer that question yourself?

Mr. HOPKINS of Illinois. I think it was.

Mr. BRYAN. The gentleman thinks it was and I do not know, so we will leave it there. [Laughter.] Now, Mr. Speaker, I want to say this: The provision of the rules in this Congress and in the last Congress is very different from that in the rules of the Fifty-first Congress, in that, instead of lodging the power in the Speaker to stop filibustering, they lodge that power in the House itself, and to my mind there is a very great distinction between allowing a Speaker to say that filibustering shall stop and allowing the House itself to say that filibustering shall stop.

Mr. PAYNE. But suppose that the majority of the Committee on Rules are in sympathy with the filibusterers, and a proposition is made to stop the filibustering and is submitted to the Committee on Rules, the committee, of course, being in sympathy with the filibusterers, would not report such a rule. Now, in that case, how is the majority of the House to act? When the Speaker is to determine, I can see very well that there may be an appeal from his decision, so that the House can vote and a majority may revise his decision; but if a majority of the Committee on Rules, being in sympathy with the filibustering, fail to bring in a rule to stop it, how can the majority of the House act?

Mr. BRYAN. Mr. Speaker, my recollection is that in the Fifty-first Congress there were instances where even the appeal from the decision of the Chair was declared to be dilatory, and the gentleman from New York would find it very difficult to get the House to express itself upon such a question when the Speaker refused to put the question.

Mr. REED. If the gentleman from Nebraska will allow me to make a suggestion, the House has always power to revise the action of the Speaker. It may not be always by way of appeal, but, by direct action, the House has always the right to do that.

Mr. BRYAN. Well, will the gentleman from Maine tell me—for he is informed—how the House would act in this case: Suppose a motion is made and the Speaker decides it to be a dilatory motion, and therefore out of order; an appeal is taken from his decision, and he decides that that is a dilatory motion and out of order; in such a case, how can the House act?

Mr. REED. The House, by a direct proceeding, could raise the question the Speaker had decided improperly.

Mr. BRYAN. The House itself?

Mr. REED. Yes. Let me say to the gentleman from Nebraska that in the British House of Commons no appeal whatever is allowed from a decision of the Speaker upon a question of order, but the British House of Commons is not powerless in such a case; for, where the Speaker disregards his duty, it can, by a direct proceeding, attack his action.

Mr. BRYAN. Do I understand, then, that the minority in the Fifty-first Congress overlooked one advantage that they might have had——

Mr. REED (interposing). One? They overlooked no end of them. [Laughter.]

Mr. BRYAN. Well, Mr. Speaker, if I have done nothing else I have given a new weapon to the minority in future Congresses, where the gentleman from Maine may preside if his prophecy of the other day shall prove true, for if he refuses to put a motion they can put it themselves—although, as has been suggested, it may be that when he takes the Chair again his opinion will undergo the same change that it did upon the question of the right to count a quorum. But, Mr. Speaker, I do not desire to detain the House longer.

Mr. PAYNE. But will not the gentleman from Nebraska, before he sits down, answer the question I asked him? Suppose the majority of the Committee on Rules are in sympathy with the filibusterers and refuse to bring in a rule to stop filibustering, how, then, can the House act?

Mr. BRYAN. The question is a pertinent one. If the Committee on Rules does not bring the proposition before the House, the House will not act upon it. [Laughter.] But the Committee on Rules is composed of a majority belonging to the dominant party, and it is presumable that, in any important case, if it was the desire of the House and of the majority to stop filibustering the rule would be brought in and the filibustering would be stopped.

But I insist that the changes made by the last Congress and by this Congress from the rules of the Fifty-first Congress on these two important questions were wisely made; that instead of adopting the rules of the Fifty-first Congress we are as far away from the two vicious rules of that Congress as we ever were, and that this Congress can adopt the rules reported by the committee without fear that the members are thereby subjecting themselves to the same criticisms which they made against the Republicans of the Fifty-first Congress.

I was glad to find that in the Forty-sixth Congress, although the Democrats were in a majority, they refused to adopt the rule of the Fifty-first for the counting of a quorum. I was proud that the last Congress, although the Democrats had a majority there, refused to follow the example of the Fifty-first Congress, and I am glad that this Congress refuses to take that power simply because it can do it, and in giving to the Committee on Rules the right to bring in a rule here stopping filibustering, we are simply putting power in the hands of the House to conduct its business and to stop delay—not putting that power in the hands of the Speaker.

MEMORIAL SERVICES ON DEATH OF HON. J. LOGAN CHIPMAN.

Mr. WEADOCK, by unanimous consent, submitted the following resolution; which was read, considered, and adopted:

Resolved, That Saturday, the 2d day of September, A. D. 1893, beginning at 2 o'clock p. m., be set apart for the purpose of giving the House an opportunity to pay fitting tribute to the memory of Hon. J. Logan Chipman, late a Representative from the State of Michigan.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. SETTLE, for five days, on account of important business.

To Mr. COCKRAN, indefinitely, on account of sickness.

PRINTING FOR WAYS AND MEANS COMMITTEE.

Mr. WILSON of West Virginia, by unanimous consent, submitted the following resolution; which was read, considered, and adopted:

Resolved, That the Committee on Ways and Means be, and is hereby, authorized to have printed and bound such documents and papers for the use of said committee as it may deem necessary in connection with subjects considered or to be considered by the Committee on Ways and Means during the term of the Fifty-third Congress.

PRINTING FOR COMMITTEE ON MILITARY AFFAIRS.

Mr. OUTHWAITE, by unanimous consent, submitted the following resolution; which was read, considered, and adopted:

Resolved, That the Committee on Military Affairs be, and is hereby, authorized to have printed and bound such documents and papers for the use of said committee as it may deem necessary in connection with subjects considered or to be considered by this committee during the Fifty-third Congress.

COINAGE OF SEIGNIORAGE SILVER BULLION.

Mr. SPRINGER, by unanimous consent, introduced a bill (H. R. 3) to provide for the coinage of the seigniorage silver bullion in the Treasury; which was read a first and second time, referred to the Committee on Coinage, Weights, and Measures, and ordered to be printed.

And then, on motion of Mr. WEADOCK (at 5 o'clock and 15 minutes p. m.), the House adjourned.

SENATE.

WEDNESDAY, *August 30, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

COURT OF CLAIMS REPORT.

The VICE-PRESIDENT laid before the Senate a communication from the clerk of the Court of Claims, transmitting the findings of fact in the case of Lovell *et al.* *vs.* The United States; which, with the accompanying papers, was referred to the Committee on Claims, and ordered to be printed.

PURCHASE OF SILVER BULLION.

Mr. VANCE. Mr. President, I give notice that on Friday morning, immediately after the routine morning business, I shall beg the indulgence of the Senate for the purpose of submitting a few remarks on the pending bill for the repeal of the purchasing clause of the Sherman silver law.

PETITIONS AND MEMORIALS.

Mr. MANDERSON. I present a petition of some 5,000 citizens of Omaha, Nebr., who met in mass convention urging that action be taken by Congress upon the bill to establish postal savings banks. At the beginning of the present session I introduced a bill for the establishment of such banks, which was referred to the Committee on Post-Offices and Post-Roads. I move that the petition be also referred to that committee.

The motion was agreed to.

Mr. MANDERSON. I also present a petition signed by all the national banks in the city of Omaha, Nebr., composing the Omaha Clearing House Association, in which association there seem to be nine national banks, praying for the immediate pas-

sage of the bill to repeal the purchasing clause of the Sherman act, expressing the belief that the repeal would go very far to bring to an end the present serious and destructive financial disturbance, and further expressing somewhat in detail the opinion of the association that there should be further legislation by Congress as speedily as possible to continue the use of silver as a money metal upon such safe conditions as will maintain its parity with gold. I move that the petition lie on the table, as the bill has been reported.

The motion was agreed to.

Mr. CALL presented a joint resolution of the Legislature of Florida; which was read, and referred to the Committee on the Judiciary, as follows:

House concurrent resolution requesting the Senators and members of the House of Representatives from Florida in the Congress of the United States to procure an investigation by Congress of the conduct and judicial acts of Charles Swayne, judge of the United States district court for the northern district of Florida.

Whereas Charles Swayne, United States district judge for the northern district of Florida, has so conducted himself and his court as to cause the people of this State to doubt his integrity and to believe that his official actions as judge are susceptible to corrupt influences; and

Whereas the reputation of Charles Swayne as a corrupt judge is very injurious to the interest of the entire State of Florida: Now, therefore,

Be it resolved by the house of representatives of the State of Florida, the senate concurring, That the Senators and Representatives of the State of Florida in the Congress of the United States be, and they are hereby, requested to cause to be instituted in the Congress of the United States proper proceedings for the investigation of the administration of the United States circuit and district courts for the northern district of Florida by Charles Swayne, as United States district judge for the northern district of Florida, and of his acts and doings as such judge.

Resolved, further, That the secretary of state of the State of Florida is instructed to certify to the Senators and Representatives from Florida in the Congress of the United States, under the great seal of the State of Florida, a copy of this resolution and its unanimous adoption by the house of representatives and the senate of the State of Florida.

Approved, June 2, 1893.

STATE OF FLORIDA,
Office of Secretary of State, ss:

I, Jno. L. Crawford, secretary of state of the State of Florida, do hereby certify that the foregoing is a correct copy of the original now on file in this office.

Given under my hand and the great seal of the State of Florida, at Tallahassee, the capital, this 21st day of August, A. D. 1893.

[SEAL.] JNO. L. CRAWFORD,
Secretary of State.

Mr. PEFFER presented petitions of citizens of Brown, Dickinson, and Seward Counties; of citizens of Stafford, and of representatives of the People's party of Sedgwick County, all in the State of Kansas, praying for the free and unlimited coinage of silver; which were ordered to lie on the table.

Mr. HARRIS presented a petition of citizens of Lauderdale County, Tenn., praying for the repeal of the Sherman silver law only upon condition that there be substituted therefor an act providing for the free and unlimited coinage of silver at a ratio of 16 to 1; which was ordered to lie on the table.

Mr. VOORHEES. I present a petition numerously signed by citizens of St. Joseph, Mo., who describe themselves as business men, merchants, and others, in which they say that restoration of confidence being absolutely necessary to avert further disaster, it is the duty of our legislators to do everything in their power to bring about such restoration of confidence, and earnestly urging upon Senators and Representatives at the extra session of Congress that the purchasing clause of the Sherman silver act be unconditionally repealed.

I also present a similar petition from citizens of Adams County, in the State of Indiana, and a similar petition from citizens of LaGrange County, in the State of Indiana. I move that the petitions lie on the table.

The motion was agreed to.

Mr. LINDSAY presented a petition of citizens of Madisonville, Ky., praying for the repeal of the silver-purchasing clause of the Sherman law; which was ordered to lie on the table.

Mr. COCKRELL. I present resolutions adopted at a meeting of citizens of the city of New York, held at the Fifth Avenue Hotel, in that city, on the 25th instant, of which John G. Boyd was the chairman. The preamble recites the increase of population and the decrease, comparatively, of the circulating medium, and the platforms of both political parties, and proceeds:

The platform of the party now in control of both Houses of Congress and the Executive demands explicitly the use of both gold and silver as the standard money of the country, and the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the market and in payment of debts; and that all paper currency shall be kept at par with and redeemable in such coin; insisting upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and fluctuating currency.

The petitioners thereupon resolve:

First. That this assemblage of citizens of New York, viewing with apprehension the continuing senseless attacks on the so-called Sherman bill, hereby caution the Congress about to assemble that there is an influential opinion in this community on the great issue involved which is not expressed by assemblages of bankers or merchants under dictation from our banks and certain newspapers.

Second. That we demand of the party in control of Congress and the Executive the prompt fulfillment of the pledge of their platform as to the indiscriminately equal treatment of both gold and silver for coining into legal-tender money.

Third. That Congress shall indignantly resent the demand for the unconditional repeal of the so-called Sherman law, as merely a proposal to substitute bank notes for the automatic issue of United States notes; and refuse absolutely to repeal the said law except by an act which shall at the same time fulfill literally the demand of the aforesaid platform of the party in control.

Fourth. That the proposal to substitute bank notes for legal-tender notes of the United States is the equivalent of the obnoxious proposal of the bank of the United States, a joint stock corporation, rejected by Andrew Jackson in 1834, although urged by Daniel Webster, and besought in this city by Charles O'Connor, who was defeated by the labor element in the Democracy of New York on the ground that gold and silver were the products of labor, while bank notes were the creatures of the printing press.

Fifth. That we call upon our domestic bankers, merchants, small tradesmen, and men of small property, real and personal, in this city as elsewhere; as well as the managers of institutions investing savings of the poor; and upon all organizations of labor, to commend these and like resolutions to favorable consideration by the Congress of the United States.

I think the resolutions had better go to the Committee on Finance for the prayerful and deliberate consideration of that committee.

Mr. McPHERSON. Does the Senator from Missouri submit a resolution or present a petition?

Mr. COCKRELL. I have presented resolutions adopted at a mass meeting of citizens of New York City. I think it would do the Finance Committee good to give the resolutions close consideration notwithstanding what they have reported to the Senate for action here. Therefore, I ask that the resolutions be referred to that committee, and I hope my distinguished friend from New Jersey will give them very close attention.

The VICE-PRESIDENT. The petition will be referred to the Committee on Finance.

Mr. McPHERSON presented the petition of D. J. Farmer and 11 other prominent citizens of Elizabeth, N. J., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. CAREY presented the petition of John Charles Thompson, ex-surveyor general; of A. C. Campbell, ex-United States attorney, and of John F. Carrol, editor of the Democratic Leader, and 33 other citizens of Cheyenne, Wyo., praying that the silver-purchasing clause of the so-called Sherman law be not repealed, and that a more extended law for free silver be enacted; which was ordered to lie on the table.

He also presented three petitions of citizens of Rock Springs, Wyo., containing 97 signatures, praying for the passage of the Stewart bill providing for the free coinage of silver at a ratio of 16 to 1; which was ordered to lie on the table.

Mr. LODGE presented the petition of H. S. Ballou and 35 other citizens of Massachusetts, praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. CAMERON presented a petition of citizens of Duncannon, Pa., praying for the repeal of the silver-purchasing cluse of the so-called Sherman law; which was ordered to lie on the table.

He also presented a petition of the Window Glass Workers' Assembly, No. 300, Knights of Labor, of Pittsburg, Pa., praying for the speedy passage of a law providing for the free coinage of silver limited to the product of the mines of the United States; which was ordered to lie on the table.

Mr. HUNTON presented the petition of W. F. McCue, postmaster, and other citizens of Staunton, Va., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

WILLIAM M'GARRAHAN.

Mr. TELLER, from the Committee on the Judiciary, to whom was referred the bill (S. 341) to submit to the Court of Private Land Claims, established by an act of Congress approved March 3, 1891, the title of William McGarrahan to the Rancho Panoche Grande, in the State of California, and for other purposes, reported it without amendment, and submitted a report thereon.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a bill (H. R. 4) to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes, in which it requested the concurrence of the Senate.

BILLS INTRODUCED.

Mr. CULLOM introduced a bill (S. 746) for the relief of William Martin; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 747) granting to Ira Bacon, of Company A, Fifty-second Regiment Indiana Volunteers, an additional bounty of $100; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 748) granting a pension to Sarah A. Hanger; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 749) granting a pension to Matthias Reed; which was read twice by its title, and referred to the Committee on Pensions.

Mr. McPHERSON introduced a bill (S. 750) to increase the appropriation for the erection of a public building at Paterson, N. J.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 751) to provide a postal currency, and for other purposes; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. HARRIS (by request) introduced a bill (S. 752) to extend North Capitol street to the Soldiers' Home; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. GEORGE introduced a bill (S. 753) for the relief of Louisa Q. Lovell and others; which was read twice by its title, and referred to the Committee on Claims.

Mr. HIGGINS introduced a bill (S. 754) for the relief of the Southern Railroad Association, lessees of the Mississippi Central Railroad Company; which was read twice by its title, and referred to the Committee on Claims.

Mr. DOLPH introduced a bill (S. 755) granting right of way to the Albany and Astoria Railroad Company through the Grand Ronde Indian Reservation, in the State of Oregon; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 756) for the application of the accretions of the Caracas awards of 1868 to the new awards made in 1889 and 1890; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 757) to provide for the erection of a first-class fog signal at or near the present position of the Cape Arago light station; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Commerce.

He also introduced a bill (S. 758) extending the time allowed the Umatilla Irrigation Company for the construction of its ditch across the Umatilla Indian Reservation in the State of Oregon; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Indian Affairs.

Mr. GALLINGER introduced a bill (S. 759) for the relief of Thomas F. Rowland; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. CAMERON introduced a bill (S. 760) for the relief of James Jones; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 761) to indemnify the State of Pennsylvania for money expended in 1864 for militia called into the military service by the governor under the proclamation of the President of June 15, 1863; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 762) for the relief of the legal owners of the Columbia Bridge, at Columbia, Pa.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 763) relieving the personal representatives of John Sherman, jr., late United States marshal for the Territory of New Mexico, from the requirements of section 833 of the Revised Statutes; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 764) for the relief of certain senior medical directors on the retired list of the Navy; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Naval Affairs.

EXCLUSION OF CHINESE IMMIGRATION.

Mr. DOLPH. Yesterday I introduced a bill (S. 745) making an appropriation to enable the Secretary of the Treasury to enforce the Chinese exclusion acts, and I inadvertently had it referred to the Committee on Foreign Relations, when I intended to ask that the bill lie on the table until I could submit some remarks upon it. I ask that the order of yesterday be rescinded and that the bill lie on the table.

The VICE-PRESIDENT. Without objection, the bill will be recalled from the Committee on Foreign Relations and lie on the table.

WITHDRAWAL OF PAPERS.

On motion of Mr. CULLOM, it was

Ordered, That James W. Neely have leave to withdraw from the files of the Senate, under the rules, the papers filed with the bill for his relief.

LEE MANTLE.

Mr. PUGH submitted the following resolution; which was referred to the Committee on Privileges and Elections:

Resolved, That there be allowed out of the contingent fund of the Senate, to Lee Mantle, the sum of $5,000 in full compensation for all his time and expense in prosecuting his claim to a seat in the Senate as a Senator from the State of Montana.

JOHN B. ALLEN.

Mr. SQUIRE submitted the following resolution; which was referred to the Committee on Privileges and Elections:

Resolved, That there be allowed out of the contingent fund of the Senate to John B. Allen the sum of $5,000, in full compensation for all his time and expense in prosecuting his claim to a seat in the Senate as a Senator from the State of Washington.

ACTING ASSISTANT DOORKEEPER.

Mr. HALE submitted the following resolution; which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

Resolved, That the Sergeant-at-Arms be, and he is hereby, authorized to employ an additional acting assistant doorkeeper at an annual salary of $2,592, to be paid from the miscellaneous items of the contingent fund of the Senate.

AMOUNT OF REVENUES.

Mr. STEWART. I submit a resolution, and after it is read I desire to call the attention of the Senate to the matter.

The resolution was read, as follows:

Resolved, The Secretary of the Treasury is directed to inform the Senate how the revenues, since the commencement of the present fiscal year, compare with the estimates of the Treasury Department, and whether such revenues exceed or are less than such estimates, and the amount of such excess or deficiency, as the case may be.

Mr. STEWART. Mr. President, I shall move to refer the resolution to the Committee on Finance because I do not wish to proceed against the wish of Senators in this respect, but I desire to call attention, before it is referred, to a statement which I find in the Journal of Commerce and Commercial Bulletin, purporting to come from official sources, as to the condition of the revenues of the Government:

WASHINGTON, *August 28, 1893.*

The purpose of Secretary Carlisle to wait until the disposition of the silver question before communicating with Congress on the threatened deficit in the Treasury seems to meet general approval. The Secretary is not oblivious to the rapid shrinkage of the revenue, and has had several consultations on the subject with Assistant Secretary Curtis, Treasurer Morgan, and other Departmental officials. He feels, however, that it is better to draw somewhat upon the gold rather than precipitate a new cause of controversy into Congress while the silver question is pending. Assistant Secretary Curtis has been giving considerable attention to the threatened deficit and the best manner of meeting it, and he is disposed to favor the issue of short-term bills against the future revenue, according to the plan already outlined in the Journal of Commerce and Commercial Bulletin.

It is evident that the revenue will be less than the expenditures during the remainder of the present calendar year, and whatever Government paper might be issued will have to run a year and a half or two years before it could be redeemed. The alternatives are an issue of gold bonds, which would be an expensive manner of meeting a temporary deficit if the gold were not needed to replenish the reserve, and the use of the silver bullion purchased under the Sherman law. The latter device seems to encounter opposition in many quarters upon the theory that the bullion is held to secure the notes, and that either the notes or the new money issued against the bullion would be in the nature of a fiat currency.

It is no longer denied at the Treasury Department that some special measures must be taken to replenish the exchequer. A statement prepared for Mr. Curtis by the Warrant Division shows a decrease from July 1 to August 23 in customs receipts from $31,006,000 in 1892 to $23,430,000 in 1893, and a decrease in internal-revenue receipts from $25,370,000 in 1892 to $22,593,000 in 1893. This represents a total loss of $10,253,000 on receipts, which aggregated $54,376,000 last year, or a shrinkage of nearly 20 per cent. The falling off in customs receipts is not unexpected, in view of the depression in business and the possibility of tariff changes. The decline in internal-revenue receipts was more of a surprise, and recovery has already begun to show itself.

The total receipts for August up to the close of business on Saturday last were $20,750,000, of which $10,367,000 were from customs duties and $8,850,000 were from internal-revenue taxes. The expenditures for the same time were $31,520,000, of which pensions called for $12,585,000. Another million will be required for pensions before the month ends, and there will evidently be a shortage of nearly $10,000,000 for the month. The general balance, including the gold reserve, was $117,887,567 on July 31, and will be below $108,000,000 on August 31. Saturday's balance was already $108,498,772, of which $98,288,247 was in gold.

The policy of paying out gold on ordinary obligations is due to a scarcity of currency, which has been oppressing the Department for some time. The present supply of available currency is $17,673,089, of which $9,844,270 is in United States notes, $5,204,603 in Sherman notes, and $2,624,216 in silver certificates. This is a bare working margin for the exchanges of currency which are carried on at the Department, as it takes several days for an exchange to be consummated, and a margin is necessary to cover the intervening time. The gold which is being paid out here in Washington seems to be no more acceptable than at New York. Most of it has been taken in eagles and double eagles, contrary to the expectation of the officials that small denominations would be asked for. Washington is probably better equipped with currency than any other city in the country, because of the large payments of salaries and other items which are made in cash. C. A. C.

I move that the resolution be referred to the Committee on Finance, because I do not wish to ask anything that the Senate will not readily grant without an objection; but it seems to me that the facts I ask for are easily ascertainable, and the Senate would have had it in an official form without any delay if the resolution previously submitted by me had been passed yesterday. I think when we are passing financial measures and looking into this subject, and when one of the questions is whether we shall avail ourselves of the bullion in the Treasury without increasing the debt and there is a difference of opinion upon it, we ought to have the exact information so as to know how to proceed.

But I shall not ask for the passage of the resolution. I want it referred to the Committee on Finance. It is said that the

Democratic party is in power and we must not interfere with their arrangements. There is a good deal of evidence that some party is in power which is injuring the country very rapidly. I do not believe it is the Democratic party, but it may be that it is; I think it is the gold party that is doing all this harm.

The VICE-PRESIDENT. Without objection the resolution will be referred to the Committee on Finance.

CLERKS IN DISTRICT HEALTH OFFICE.

Mr. HARRIS. On Monday last I reported from the Committee on the District of Columbia a little bill authorizing the Commissioners of the District to appoint two additional clerks in the health department of the District. The health officer reports that his clerical force is wholly insufficient; that it is impossible to keep up the work, and that at this particular time it is more than usually important that it should be kept squarely up to current date. I ask the unanimous consent of the Senate to consider the bill this morning.

The VICE-PRESIDENT. The Senator from Tennessee asks unanimous consent for the present consideration of the bill (S. 721) to authorize the Commissioners of the District of Columbia to appoint two additional clerks. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

HOUSE BILL REFERRED.

The bill (H. R. 4) to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes, was read twice by its title, and referred to the Committee on Appropriations.

PURCHASE OF SILVER BULLION.

Mr. SHERMAN. Mr. President——

Mr. VOORHEES. I ask that House bill No. 1 be laid before the Senate as the order of business.

The VICE-PRESIDENT. The morning business having been closed, the Senator from Indiana asks that House bill No. 1 be laid before the Senate.

Mr. VOORHEES. It is the bill as amended by the report of the Senate committee yesterday, but it retains its number as a House bill. I ask that it be laid before the Senate, on which the Senator from Ohio may make his address.

The VICE-PRESIDENT. Without objection, the Chair lays before the Senate the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. SHERMAN. Mr. President, the immediate question before us is whether the United States shall suspend the purchase of silver bullion directed by the act of July 14, 1890. It is to decide this question the President has called Congress together in special session at this inconvenient season of the year. If this was the only reason for an extraordinary session, it would seem insufficient. The mere addition of 18,000,000 ounces of silver to the vast hoard in the Treasury, and the addition of fourteen millions of Treasury notes to the one thousand millions of notes outstanding, would hardly justify this call, especially as Congress at the last session neglected or refused to suspend the purchase of silver. The call is justified by the existing financial stringency, growing out of the fear that the United States will open its mints to the free coinage of silver. This is the real issue. The purchase of silver is a mere incident. The gravity of this issue can not be measured by words. In everyway in which we turn we encounter difficulties.

If we adopt the single standard of gold without aid from silver, we will greatly increase the burden of national and individual debts, disturb the relation between capital and labor, cripple the industries of the country, still further reduce the value of silver, of which we now have in the Treasury and among our people over $593,000,000, and of which we are the chief produces, and invite a struggle with the great commercial nations for the possession of the gold of the world.

On the other hand, if we continue the purchase of 54,000,000 ounces of silver a year, we will eventually bring the United States to the single standard of silver—a constantly depreciating commodity, now rejected by the great commercial nations as a standard of value; a commodity confessedly inconvenient by its weight, bulk, and value for the large transactions of foreign and domestic commerce, and detach us from the money standard now adopted by all European nations, with which we now have our chief commercial and social relations. In dealing with such a question we surely ought to dismiss from our minds all party affinities or prejudices; all local and sectional interests, and all preconceived opinions not justified by existing facts and conditions.

Upon one thing I believe that Congress and our constituents agree: That both these extreme positions shall be rejected; that both silver and gold should be continued in use as money—a measure of value; that neither can be dispensed with. Monometallism, pure and simple, has never gained a foothold in the United States. We are all bimetallists. But there are many kinds of bimetallists. One kind favors the adoption of the cheaper metal for the time being as the standard of value. Silver being now the cheaper metal, they favor its free coinage at the present ratio, with the absolute certainty that silver alone will be coined at our mints as money; that gold will be demonetized, hoarded at a premium, or exported where it is maintained as standard money. The result would be monometallism of silver.

Another kind of bimetallist, recognizing that 16 ounces of silver are not worth in the market 1 ounce of gold, proposes the free coinage of 20 ounces of silver as the equivalent of 1 ounce of gold. But this is only a difference in degree, because 1 ounce of gold is worth from 27 to 29 ounces of silver. Gold being undervalued, the hoarding or exportation of gold will inevitably follow, and silver will be the only standard. Another kind of bimetallist is one who believes that the essential quality of bimetallism requires that the coins of the two metals shall be maintained of equal purchasing power. The only way in which this can be done, in case the two metals are not on a parity of value at the legal ratio, is by freely coining the more valuable metal and coining the cheaper metal at the legal ratio, and maintaining by the fiat of the Government coins of the two metals at parity with each other.

The two metals, as metals, never have been, are not now, and never can be kept at par with each other for any considerable time at any fixed ratio. This necessarily imposes upon the Government the duty of buying the cheaper metal and coining it into money. The Government should only pay for the bullion its market value, for it has the burden of maintaining it at par with the dearer metal. If the bullion falls in price the Government must make it good; if it rises in value the Government gains.

The Government is thus always interested in advancing the value of the cheaper metal. This is the kind of bimetallism I believe in. It is the only way in which two commodities of unequal value can be maintained at parity with each other. The free coinage of silver and gold at any ratio you may fix means the use of the cheaper metal only. This is founded on the universal law of humanity, the law of selfishness. No man will carry to the mint 1 ounce of gold to be coined into dollars when he can carry 16 ounces of silver, worth but little more in the market than half an ounce of gold, and get the same number of dollars.

The free coinage of silver means the single standard of silver. It means a cheaper dollar, with less purchasing power. It means a reduction in the wages of labor: not in the number of dollars, but in the quantity of bread, meat, clothes, comforts he can purchase with his daily wage. It means a repudiation of a portion of all debts, public and private. It means a bounty to all the banks, savings institutions, trust companies that are in debt more than their credits. It means a nominal advance in prices of the produce of the farmer, but a decrease in the purchasing power of his money. Its chief attraction is that it enables a debtor to pay his debt contracted upon the existing standard with money of less value. If Senators want cheap money and to advance prices, free coinage is the way to do it; but do not call it bimetallism. The problem we have to solve is how to secure to our people the largest use of both gold and silver without demonetizing either.

Now, let us examine the situation in which we are placed. Our country is under the pressure of a currency famine. Industries, great and small, are suspended by the owners, not because they can not sell their products, but because they can not get the money to pay for raw material and the wages of their employés. Banks conducted fairly are drained of their deposits and are compelled not only to refuse all loans, but to collect their bills receivable. This stringency extends to all trades and business; it affects even your public revenues, all forms of public and private securities, and, more than all, it stops the pay of a vast army of laboring men, of skilled mechanics, and artisans, and affects the economy and comfort of almost every home in the land.

The strange feature of this stringency is unlike that of any of the numerous panics in our past history. They came from either an irredeemable currency, which became worthless in the hands of the holder, or from expanded credit, based upon reckless enterprises which, failing, destroyed confidence in all industries. Stringency followed failure and reckless speculation. This panic

occurs when money is more abundant than ever before. Our circulating notes to-day are sixty million more than one year ago. It is all good—as good as gold. No discrimination is made between the gold and silver dollar, or between the United States note, the Treasury note, the silver certificate, or the gold certificate. All these are indiscriminately hoarded, and not so much by the rich as by the poor. The draft is upon the savings bank, as well as the national or State bank. It is the movement of fear, the belief that their money will be needed, and that they may not be able to get it when they want it. In former panics, stringency followed failures. In this, failures follow stringency.

Now, as representatives of the people, we are called here in Congress to furnish such measure of relief as the law can afford. In the discharge of this duty I will sweep away all party bias, all pride of opinion, all personal interest, and even the good will of my constituents, if it were necessary; but, fortunately, I believe their opinions concur with my own.

Let me first state the reasons of the President for calling this extra session. The President denounces the act of July 14, 1890, in the following terms:

> This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free-silver coinage and those intending to be more conservative.

Let me recall the history of this "truce."

In the beginning of the Fifty-first Congress there was developed in both Houses great opposition to the Bland-Allison act, which had failed to maintain or advance the value of silver. It slowly but steadily declined. It was insisted on our side that this act should be repealed and silver be left to settle upon its commercial value. On the other hand, it was insisted that silver should be coined as legal-tender money, at the request and for the benefit of the owner, at the ratio of 16 to 1 in gold.

This contention was decided in the House by a bill which provided—

> That the Secretary of the Treasury is hereby directed to purchase from time to time silver bullion to the aggregate amount of $4,500,000 worth in each month, at the market price thereof, and to issue in payment for such purchases of silver bullion Treasury notes of the United States.

The bill, as it passed the Senate June 17, 1890, contains this provision for the free coinage of silver:

> That hereafter any owner of silver or gold bullion may deposit the same at any mint of the United States to be formed into standard dollars or bars for his benefit and without charge; but it shall be lawful to refuse any deposit of less value than $100, or any bullion so base as to be unsuitable for the operations of the mint.

The vote on this proposition was as follows:

Yeas—Messrs. Bate, Berry, Blodgett, Butler, Call, Cameron, Cockrell, Coke, Colquitt, Daniel, Eustis, George, Gorman, Harris, Hearst, Ingalls, Jones of Arkansas; Jones of Nevada; Kenna, Manderson, Mitchell, Moody, Morgan, Paddock, Pasco, Payne, Plumb, Power, Pugh, Ransom, Reagan, Saunders, Squire, Stewart, Teller, Turpie, Vance, Vest, Voorhees, Walthall, and Wolcott—41.

Fourteen Republicans and 27 Democrats.

Nays—Messrs. Aldrich, Allen, Allison, Blair, Casey, Chandler, Cullom, Dawes, Edmunds, Evarts, Frye, Gray, Hale, Hawley, Hiscock, Hoar, McPherson, Morrill, Pierce, Platt, Sawyer, Sherman, Spooner, Stockbridge, Washburn, and Wilson of Maryland—26.

Twenty-three Republicans and 3 Democrats.

The bill, as agreed to in a conference of which I was a member, contains the following provision:

> That the Secretary of the Treasury is hereby directed to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered, in each month, at the market price thereof.

The vote upon the adoption of this conference report was as follows:

Yeas—Aldrich, Allen, Allison, Blair, Casey, Cullom, Davis, Dawes, Dixon, Dolph, Edmunds, Evarts, Farwell, Frye, Hawley, Higgins, Hiscock, Hoar, Ingalls, Jones of Nevada, McMillan, Manderson, Mitchell, Moody, Pettigrew, Pierce, Platt, Plumb, Power, Quay, Saunders, Sawyer, Sherman, Spooner, Squire, Stewart, Stockbridge, Washburn, Wolcott—39.

Nays—Barbour, Bate, Blackburn, Call, Carlisle, Cockrell, Coke, Colquitt, Daniel, Faulkner, Gibson, Gorman, Hampton, Harris, Jones of Arkansas, Kenna, McPherson, Pasco, Pugh, Ransom, Reagan, Turpie, Vance, Vest, Voorhees, Walthall—26.

The conference report was adopted and became a law. The reasons for my concurrence in this report have been already stated. As conferees, we had no right to go beyond the differences between the two Houses. We were limited to either the free coinage of silver or the purchase of silver bullion. We chose the latter alternative. The only latitude which parliamentary law allowed us as conferees was to provide the conditions of free coinage in case the Senate bill was adopted, or to fix the amount, price, and manner of purchasing silver bullion in case the House bill was adopted. The House had taken a vote which, by a close majority, rejected free coinage, and, therefore, I correctly stated this fact to the Senate; but I was not blind to the danger that, if the conferees reported a disagreement, the narrow majority in the House against free coinage would melt away under the pressure for some affirmative action by Congress.

I was not in favor of either free coinage at the present ratio, or the purchase of silver bullion except as needed for coinage. I regarded free coinage as another name for monometallism of silver. The other two conferees of the Senate were in favor of free coinage, or, that failing, were in favor of the purchase of silver bullion provided for by the House bill. After many meetings and great delay, we agreed to report a compromise bill providing for the monthly purchase of 4,500,000 ounces of silver bullion at its market value, and the insertion of several provisions which I deemed of great importance. One was that, instead of appropriating $4,500,000 a month for the purchase of silver bullion, we should provide for the purchase of 4,500,000 ounces. I believed that this was a safer proposition, as, if silver fell below $1 an ounce, the cost of 4,500,000 ounces would be less than $4,500,000. If, however, it should advance, the cost would be greater. As the result proved, after a brief period, silver continued to decline, so that now, at the market value, the purchase of 4,500,000 ounces costs the Government about $3,300,000.

We also agreed upon a provision that the Secretary of the Treasury might redeem the Treasury notes issued for the purchase of silver bullion in gold or silver coin at his discretion, thus enabling him to maintain the two coins at parity with each other. We also agreed to the declaration that it was the established public policy of the United States to maintain the two metals upon a parity with each other upon the present legal ratio, or such ratio as may be provided. This was a direction to that officer to so exercise his discretion as to maintain the parity of the two coins.

With these provisions the law is far better than the bill of the House or the bill of the Senate.

When any Senator hereafter undertakes to criticise the law, which has been misnamed after me, he should remember that it was a substitute for a bill of the House of Representatives and a bill of the Senate, both of which would have been far more dangerous in their results than even the law of which I am now speaking.

Another object secured by the conference bill was the repeal of what is known as the Bland act, or Bland-Allison act, which required all silver purchased to be coined at its legal ratio. The Government bought silver at its market value and coined it at the ratio of 16 to 1, thus making a nominal profit to the Government—a profit which, if real, was an extortion, but in fact it is utterly delusive. If silver did not advance the United States was still bound, according to its established policy, to redeem the notes issued at par with gold, and no profit could accrue. If bullion still declined in market value there would be a loss instead of a gain. The silver bullion purchased under the Bland-Allison act at present prices is worth $67,899,847 less than it cost.

It was a confident expectation and belief of a majority of the conferees that the purchase of all the silver bullion produced by the United States would advance the market value of silver, and most of them agreed that it would advance the price of silver to the legal ratio. I did not concur in this belief, but believed that such a purchase would tend to prevent the further fall of silver bullion. In this I was mistaken. The result disappointed these expectations. After a spasmodic effort, largely the result of speculation, silver bullion abnormally advanced for a brief period, but fell again to less than its value in July, 1890, and continued to decline until now, since the action of the English Government in respect to India, it fell in July last to the price of 72 cents per ounce. Its average price in the year 1892 was 87½ cents an ounce. Its lowest price during that year was in September, 83.8 cents an ounce.

The President states in his message the fall of silver, the disappointment of those interested in silver production, and the results of the act of July, 1890, in these words:

> Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.
>
> Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

But the President does not state the causes of this decline. He leaves to the impression of the passing reader that they came from the purchasing of four and a half million ounces of silver a month. If he had taken a broader view of the causes of that decline, he would have been easily enabled to explain them.

It so happens that while our country is vast and rich, and full of wealth in the past and in its promises for the future, yet, from its peculiar position, it may be made the base from which gold, silver, or anything else may be drawn.

There is among the nations of the world one great creditor nation, which holds bonds and securities in various forms to the amount of thousands of millions of dollars. It is a country which has not been invaded by a foreign foe for five hundred years. Its insular position is its safety and its fortress. It is a nation of intelligent people, who command the commerce of the world, whose flag floats on every sea. We ought not to be ashamed of them, or to hate them or dislike them, because we are their children and possess very many of the qualities of the parent stock.

England is the great creditor nation, but in her vast enterprises she became involved in difficulties since the passage of the act of 1890. Large investments were made by her capitalists in the Argentine Confederacy, amounting to hundreds of millions of dollars. They, by some sudden collapse, were entirely lost; the Bank of England was threatened, and was compelled to make good those losses, at least to the extent of the drafts made upon England, in order to maintain the banking houses of England, which might have otherwise toppled to their fall, perhaps carrying with them the old mother of them all, the Bank of England.

These difficulties suddenly grew up and England was compelled to obtain money from France and other parts of Europe. The immediate result was that our securities were sent home here to our market. They held our securities abroad, and now hold them, to the amount of billions of dollars. They were sent here for sale, and the proceeds in gold were shipped back to pay the losses of Great Britain in the Argentine Confederation.

As I said, sir, our country is great, rich, and powerful; but we have this difficulty, it is a new country. Our wealth is not in gold and in silver, not in money, not even in bonds and mortgages to send abroad. Our wealth is in our mines, our farms, our workshops, and our railroads—the most wonderful development of modern times, because we have in this great agency of commerce more miles of railroad than all the nations of the world.

These are our sources of wealth, but they are also causes of danger, because they could not have been developed in the last few years without going into debt, and that debt may be demanded at any time and will draw from us gold, silver, or anything else.

Following the Argentine trouble, the banks of Australia failed, and the same process went on there, with the same result. They drew upon our gold.

Not only that, but other causes combined to produce this trouble. At the very time when we were carrying on this experiment under the act of 1890, Austria-Hungary, Roumania, and several other countries of Europe were changing from a paper or a silver standard to gold, and they made demands upon us. They did it through the English bankers, who were compelled to sell American securities in order to draw our gold away, and then, after the decline of these securities, caused by their sudden sale, recouped their losses in the market by buying them at an advance in a short period. That was an additional trouble.

There was still another trouble. For the first time in many years, the balance of trade turned against us last year. Hitherto we have boasted of from fifty to one hundred million and sometimes two hundred million dollars balance in our favor, which helped us to pay our debts and the debts of our people; yet during the last fiscal year, ending on the 30th of June, the balance of trade against us was $18,735,728. What it will be next year we can not tell; we do not know. We believe that our crops, now ripening, will probably enable us to maintain the balance of trade in our favor. I believe the forced economy, which always follows such a panic as this, will of itself be a prevention of unusual and unnecessary imports, so that I hope next year there will be no balance against us.

It seems to me that the President, with his broad conception—and I admit him to be a very able man—should have stated that the failure to coin silver did not cause the trouble. The trouble which now occurs did not come from the mere purchase of four million and a half ounces of silver a month, but it came from causes which are as apparent as the sky, as broad as the firmament, as open to the eye of every man as the sun which shines in the heavens by day, or the moon which shines at night.

An erroneous idea, therefore, has been carried in the public mind that this small measure has produced results with which it has no connection. But nevertheless the situation is upon us, and we have got to deal with the situation and not with the measure.

I was very much interested with the observation made yesterday afternoon by the Senator from Colorado [Mr. TELLER] upon one branch of this question. Although I am not able to agree with him in many things, I am glad to agree with him upon something.

I here give the loss in the bullion purchased under the act of 1890 at 74¼ cents an ounce, which I am told is its value to-day. The loss is $22,345,356. It must be remembered also that we have issued on the 150,000,000 ounces of silver that were bought under that law Treasury notes to the amount of the cost of that bullion, which pay no interest and which have been used as current money by the people of our country. Suppose this provision had not been made in 1890; suppose we had been compelled to face the storms that followed in 1890, the failures of banks, of the Barings, and all other causes without any increasing currency in the markets of our country; suppose the Sherman law had been stricken from the files in 1890 or rejected, who can tell what would have been the consequences in this country of the great depressing effects I have already mentioned?

Sir, "give the devil his due." The law of 1890 may have many faults, but I stand by it yet, and I will defend it, not as a permanent public policy, not as a measure that I take any pride in, because I yielded to the necessity of granting relief; but I do say that the beneficial effects that flowed from the passage of that law were infinitely greater even in the percentage of money than the loss we have suffered in the fall in the price of silver. Without it, in 1891 and 1892 we would have met difficulties that would have staggered us much more than the passing breeze of the hour—a storm for a month, or even for a year, growing out of causes entirely different, I think, with due deference to the President, from the causes he has named.

Now, Mr. President, I was not blind in respect of the operations of the law of 1890. Long before our Democratic friends ever thought of providing a measure of relief I introduced in the Senate a bill, which I hold in my hand, to suspend the operation of the law of 1890, a bill in almost the same words as the bill now brought forward by the honorable Senator from Indiana. Here it is:

[Fifty-second Congress, second session.]

S. 3423.

IN THE SENATE OF THE UNITED STATES.

July 14, 1892.—Mr. SHERMAN introduced the following bill; which was read twice, and referred to the Committee on Finance.

A bill for the repeal of certain parts of the act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes, approved July 14, 1890.

Be it enacted, etc., That so much of the act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, as directs the Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, and to issue in payment for such purchases of silver bullion Treasury notes of the United States, is hereby repealed, to take effect on the 1st day of January, 1893: *Provided*, That this act shall not in anyway affect or impair or change the legal qualities, redemption, or use of the Treasury notes issued under said act.

Why did not our friends then see the terrors that would arise out of this law and help us suspend its operations a year ago? They can answer for that. I thought then, after two years' trial, that it was better to suspend it, and we tried to do it on this side of the Chamber, but had no support, I believe, at all on the other side.

Now, Mr. President, it is therefore manifest that I am not a new convert for the repeal of this purchasing clause. If I erred in yielding to the opinion of my associates, and consenting to sign the conference report, I must take my share of the responsibility for the great loss that has fallen upon the Government by the act of July 14, 1890. Still, I feel bound to say for myself and my associates that we did what we thought was best in securing the compromise between the opposing bills of the two Houses, and still believe that the advantages secured by that act in the repeal of the Bland act, and the guaranty of the United States to maintain its coins at a parity with each other was a wise and prudent compromise under the circumstances.

It received the sanction of my political associates after full consideration and before it was reported to the Senate. It received the opposition of the Democratic Senators because it did not go to the extent of free coinage of silver. It is not fair for them to denounce the purchase of a limited amount of silver without saying that they struggled to obtain all the unused silver of the world. The question upon the adoption of the report was a question between the free coinage of silver and the purchase of silver bullion. That issue, unfortunately, assumed a political character in which a large majority of the Republicans were in favor of the purchase of bullion rather than free coinage, and the great body of the Democrats were in favor of the free coinage of silver rather than a limited purchase.

I never questioned the sincerity of the motives of any of these gentlemen, and especially of the representatives from the Western States, where silver was an important and leading industry. They obeyed the will and sought to promote the interests of

their constituents. But it remains nevertheless true that in the struggle of opposing opinions we secured, by the act of July 14, 1890, the most favorable result of this controversy for the people of the United States that could then possibly be obtained. The immediate result of the measure was to increase our currency, and thus relieve our people from a panic then imminent, similar to that which we now suffer. The very men who now denounce from Wall street this compromise were shouting "Hallelujah!" for their escape by it from free coinage.

Now the condition is changed. One year ago we had the experience of the operation of the law for but two years. The price of silver steadily declined. Every purchase made was in a falling market. Our purchases were inducing the mining companies to increase their production of silver, while European countries stopped their purchase of silver, and, in some cases, sold their silver on hand in our market. Then was the time to suspend our purchases and await the course of events. It is manifest that if our Democratic friends at the last session had been willing to vote for the repeal of this clause, the existing panic, so far as it is the result of the purchase of silver bullion, would not have occurred. Instead of this, they were denouncing the law of 1890 as a miserable makeshift; they were demanding and promising free coinage of silver, cheap money, and plenty of it.

In certain States this largely influenced the result of the election of the President of the United States. Now that they are in power we have a different call. The President asks us to suspend the purchase of silver because it "has led to renewed and persistent efforts in the direction of free coinage of silver." I am glad to notice that many of the gentlemen who voted for the free coinage of silver are now in favor of the repeal of this act. My only surprise is that the great body of them who voted against this act, and denounced it as a makeshift, are now unwilling to vote for its repeal.

My reasons for its repeal are now stronger than ever before. The result of the act has by unforeseen events disappointed the hopes and expectations of its authors. It has, by its operation, tended to reduce rather than to increase the value of silver. The burden assumed by the United States led to the completion of gold monometallism in Europe by giving a market to silver that was demonetized. Its results encouraged and led to the Indian policy of the British Government. The act of 1890 may have contributed somewhat to the amount of gold sent to Europe, though I think that the cause of this movement is that the balance of trade has lately been against the United States, and therefore transferred to Europe the only money they will accept in payment of balances due them. One of these imports paid for in gold was silver sent us from Mexico and Europe.

The act of 1890 has demonstrated also the inevitable result of free coinage in our country. If the purchase of 54,000,000 ounces of silver a year did not prevent the further decline of that metal, what would have been the result if we received and coined all the silver that would be brought into the United States from any region of the world at the fixed price of $1.29 per ounce, worth in the market 73 cents an ounce? This is a proposition the logic of which it is impossible to avoid. It is a lesson necessarily to be taught. Without it many honest people could not be persuaded that the fiat of the Government was not sufficient to lift the price of silver or to prevent its fall.

There is no doubt that the act of 1890 is made the imaginary pretext for many evils it did not produce. It is made to bear the results of wild speculation, of fears well or ill founded as to future legislation, of failures and disturbances with which it has no connection. It is made the scapegoat for extravagance and folly. The fears of business men that the tariff policy of the Democratic party will disturb all domestic industries and open our markets at cheap rates to the productions of every country in the world, and the cautionary measures taken by them to guard against this competition is a far more potent cause for distrust, stopping of factories and workshops, than the purchase of 4,500,000 ounces of silver a month.

Certain it is that the act of 1890 did not produce a scarcity of currency. The evil which our people are suffering now is not the volume of money but the hoarding of it. It is a currency famine caused by the hoarding of money taken from its ordinary channels and hidden away in secret places by reason of the fears of millions of people in all ranks and conditions of life. This act which we are called upon to repeal has furnished yearly from $34,000,000 to $50,000,000 of Treasury notes issued for the purchase of silver bullion. If the issue of this great sum in monthly installments had any effect, it must have been to expand the currency. Its repeal leaves no law in force for any increase of a circulating medium at a time when above all others currency of every kind is in great demand and is bought at a premium.

Let us not deceive our people as to the reasons for this repeal; for when the purchasing clause is repealed you will still have to deal with the real causes of the prevailing stringency and distrust. I do not vote for this repeal with any expectation that it will in any considerable degree relieve us from the industrial stagnation that has fallen upon all kinds of business and production, and that has thrown out of employment hundreds of thousands of laboring men and women. They care little about the kind of money that is paid them, provided that it is equal in purchasing power to any other money, and is backed by the United States. They do not study the question of ratio, or the difference between silver and gold, and, if left to choice, prefer the notes of the United States to either coin.

What they want is employment, fair wages for home industry, reasonable protection against undue competition with foreign laborers miserably paid, fed, lodged, and treated. Give them these, and you may make your standards of value as you choose. Mete out to them the same measure of value that you do to yourselves and they are content. The fear that industrial conditions will be so changed that the prosperity of the past will be followed by diminished production, lower prices, lower wages, diminished exports and increased imports, resulting in a continued balance of trade against us—these are the chief factors of the present financial stringency. It is manifest that if this law is repealed, it is not to relieve the people from a stringency of currency, but to relieve the money market from the dread of the effect of free coinage of silver.

And now, Mr. President, recognizing as I do to its broadest extent, not only the ability, but the power, that is now entrusted to the party in ascendency on the other side of the Chamber, in the Executive branch, and in the other House, I warn them, in view of the lesson we are now receiving as to the way any great danger affects the productions of our country, affects its interests, and disturbs values, and stops industry now profitably conducted, if they undertake to pursue that line of policy with reference to the tariff, they will only be involved in the same trouble and the same kind of defeat we suffered in the last election. You have the responsibility for the condition and for the remedy. I trust in God you will exercise it wisely; but I believe, from the signs of the times, that the propositions which are being made will disturb the industries of our country and add deeper and deeper lines to the dark days we are now suffering.

The President, in the midst of a panic, appeals to us to repeal this law. He will not make this appeal in vain to me. I am under no obligations to him and have no sympathy with him in many of his ideas of public policy, but in this matter I believe he is right, and that, without respect to party divisions or party affinities, it is my duty to respond to his call. We ought to suspend the purchase of silver bullion. The strange spectacle is presented that those of us who confess ourselves responsible for this law and voted for it are willing to repeal it, while the great body of his political friends who voted against it and declaimed against it refuse to repeal it and cling to it as their ark of safety. Our Democratic friends have denounced this purchasing clause as a miserable makeshift. It was a makeshift, but I think a good one to defeat the free coinage of silver on the ratio of 16 to 1. I believe in this respect it has rendered the country an enormous service.

It is said that the demand for repeal comes from banks and bankers in the Eastern cities; that they have combined together to influence our action; that they refuse to pay their depositors and coöperate to create a panic, and therefore a repeal. Such action should not influence us either way. If any of them refuse to pay a lawful demand of a depositor it is an act of bankruptcy and should lead immediately to the appointment of a receiver. This would be the action with any bank in Ohio of $50,000 capital, and should be even more summary with a bank of ten millions capital. The clamor of a bank or banker should not influence us for or against repeal.

I will vote for its repeal because I believe the purchase of silver is no longer necessary, that it is unprofitable and dangerous—not that I wish to depreciate silver, for if I had the power to regulate the market, I would gladly advance it to par with gold at the legal ratio. As this is impossible, I am willing to vote for any measure that will tend to maintain the parity of the two metals at some fixed ratio approaching their commercial value. I will coöperate with any person or any party in any measure that will tend to maintain the harmonious use of silver and gold as standards of value for all human productions.

Now, I wish to make a few observations in regard to what ought to be done for the future. If the purchasing clause is repealed, what then? I do not want to advise either this Congress or the Administration. I have no right at all to be weighed in their council, but I take it that whether we are Democrats or Republicans we are all Americans, and that every American would desire to do that which is best for all interests and all parties. I think there are certain urgent duties resting upon the Democratic party at this time, and although I am not their

adviser, I have the right as an American citizen to give them my opinion, and I will briefly do it.

I take it the first object we all have in view is to preserve intact the parity of all our money. We have now seven or eight hundred million dollars of paper money outstanding for which we are responsible. We have undertaken to maintain that at a parity. How can it be done? Ordinarily a small reserve would be sufficient to give security to everyone and prevent any fear; but in times like these, in my judgment, it is the duty of the prevailing party, who have the power of the Government in their hands and can exercise that power at any moment, to strengthen the reserve, so that nobody will fear we will not maintain the parity of all forms of money in our country.

In order to carry that out it may be necessary to issue the securities of our country to buy gold. They will command gold in any market. They would draw it from the Bank of England. A demand note, a note payable at the pleasure of the United States, drawing, say, not to exceed 4 per cent interest, would command gold everywhere; and although this is not my business, yet at the same time it is the only way by which you can summarily acquire the possession of gold to maintain your reserve.

I tried at the last Congress, in aid of the Democratic party (the first time I ever tried to act as their aid), to secure the passage of a law that would enable the Secretary of the Treasury to fortify his reserve in case there was a necessity; but gentlemen on the other side were afraid of the popular effect. They were afraid we would have to pay a little interest in the meantime, and that it would be increasing the bonded indebtedness; they thought it was so much cheaper and easier to issue more United States notes. The issue of United States notes would be like setting a match to powder, and would rather increase and bring about the danger which threatens us. I hope that among the measures the honorable Senator from Indiana may provide for relief will be some broad and liberal measure authorizing the President or the Secretary, whichever he prefers to exercise the power, to sell our securities, if necessary, in order to maintain the parity of all our money.

There is another point to be noticed. We must not overlook the fact that there may possibly be a balance of trade against us next year. The appropriations made at the last session of Congress, although made under the scrutiny of very careful economists, may exceed the amount of revenues received by the Government. Some authority to make good this deficit, whatever it may be, ought to be provided for by law. There is no question about that. Some power should be given to the executive officers they do not now possess. If there is an insufficient revenue to meet our expenditures, a contingency which I hope will not happen, they ought to have the power to meet it. That power has always been granted by any party, whatever it may be, to any Administration whenever such a necessity is likely to arise.

We ought to encourage in every way possible the exportations of our products. I do not precisely see how this can be done. If any measure whatever can be devised to facilitate transportation, even if possible by the use of American vessels, in various ways, it ought to be done. We ought to pour the wealth of our country into the lap of all Europe and sell them our products in order to avoid any difficulty. I do not say precisely how we could aid the Treasury, but the people of the United States are an ingenious people; they will devise ways and means of meeting any demand that is made upon our resources by the people of Europe or any other country.

Another thing, I think, could be done for immediate relief. By that strange rule of logic by which you can coin an equal amount of dollars out of a given quantity of bullion and then have a surplus over, if there is such a surplus in the Treasury (and I suppose there is, because some Senators have said there is), I would undoubtedly coin that surplus, and use it, if necessary, for the ordinary operations of the Government to prevent a deficiency, or for any purpose that it might be lawfully coined.

I do not believe in that kind of management, buying silver from our people and then coining the same amount and having a large profit, as it is called. If it is a profit it is an outrage. If it is not a profit it is a fraud, and I think it is a fraud to call our purchases of silver bullion profitable because we can coin more dollars out of it, having the supreme power to do it, than we pay for the silver bullion.

Now, Mr. President, with these remarks I shall for a brief period (for I will not take very long) refer to another subject which I think I am bound to do by every obligation of honor and duty.

COINAGE ACT OF 1873.

I wish now to call attention of the Senate to the coinage act of the United States, and especially to the act of 1873, which has been the subject of so much misrepresentation and falsehood in this debate. I propose, not on my own account, but for the benefit of the distinguished officers of the Government who participated in this legislation, to show, in the most unequivocal manner, the deception and falsehood, largely the result of cowardice, that has been uttered in respect to the act I refer to.

When the coinage ratio was fixed by Alexander Hamilton of 15 ounces of silver as the equivalent of 1 ounce of gold, it was substantially equivalent to the market ratio, but the constant tendency of silver to decline in relative value had been going on for years and continued in an almost imperceptible degree, so that when the French standard was fixed at 15½ to 1, the little gold then in the United States was exported, and silver alone was the coin in circulation.

Mr. MILLS. About what time was the French standard fixed at 15½?

Mr. SHERMAN. It was in 1803, I understand. At that time, and for many years, foreign silver coins were largely circulated as money in the United States, mostly in worn and depreciated coin worth less than its nominal value. This caused the silver dollar, then coined in small quantities, to be melted, as more valuable than the coin then in circulation.

Up to that time I believe the whole amount of silver dollars was less than $2,000,000. I am quite sure of it. Mr. Jefferson, in 1805, discontinued the coinage of the silver dollar, and for thirty years not a dollar was issued. Our currency was either the paper of State banks, fractional coins, or depreciated foreign silver coins. A friend of mine here said he knew of a large payment being made for a farm in silver dollars during this period; but I soon satisfied him that that was a mistake. However, the Spanish milled dollar and the Mexican silver dollar still continued to be the legal standard of money in this country until 1873, some of it at least.

Mr. COCKRELL. Up to 1857, the Senator will remember.

Mr. SHERMAN. To 1857, but I think some of it was kept until 1873.

Mr. COCKRELL. It was full legal tender up to 1857, and being such was not recoined.

Mr. SHERMAN. So the only dollars then in circulation in this country were dollars of foreign manufacture. After the action in 1835, etc., they were beginning to be coined more or less, but almost entirely for the Chinese trade. They were exported there during and since our civil war, at the time when specie payments were suspended in all parts of our country except in California. Practically no gold coin was then in circulation. This continued until June 28, 1834, when, in order to secure gold in circulation, the ratio was changed to 16 of silver to 1 of gold. The object of this change was distinctly stated, especially by Mr. Benton, who said:

> To enable the friends of gold to go to work at the right place to effect the recovery of that precious metal which their fathers once possessed; which the subjects of European kings now possess; which the citizens of the young republics to the south all possess; which even the free negroes of San Domingo possess; but which the yeomanry of this America have been deprived for more than twenty years, and will be deprived forever unless they discover the cause of the evil and apply the remedy to its root.

By the act of 1834, superadded to by the act of 1837, the ratio of 16 to 1 instead of 15 to 1 was adopted. The result was that gold coins were largely introduced and circulated; but as 16 ounces of silver were worth more than 1 ounce of gold, the silver coins disappeared, except the depreciated silver coin of other countries, then a legal tender. To correct this evil Congress, February 21, 1853, provided for the purchase of silver bullion. That was the first time the Government had ever undertaken to buy bullion for coinage purposes, so far as I now remember. It provided for the purchase of silver bullion and the coinage of subsidiary silver coins at the ratio of less than 15 to 1.

As the value of these coins was less than gold at the coinage ratio, they were limited as a legal tender to $5 in any one payment. They were, in fact, a subsidiary coin made on Government account, and, from their convenience and necessity, maintained in circulation. They are the very coins now in use, revived and reënacted by the resumption act of 1875.

It was not the intention of the framers of this law to demonetize silver, because they were openly avowed bimetallists, but it limited coinage to silver bought by the Government. They saw in this expedient a way in which silver could be more generally utilized than in any other. Mr. R. M. T. Hunter, an avowed bimetallist, in a report to the United States Senate, said:

> The mischief would be great indeed if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than one-half; and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race.

He evidently did not consider the purchase of silver bullion at its coinage value by the Government, instead of the free coinage of silver, as monometallism.

After the passage of the act of February 21, 1853, gold in great quantities, the product of the mines in California, was freely coined at the ratio of 16 to 1, and was in general circulation. If,

then, the purchase of silver instead of the free coinage of silver is the demonetization of silver, it was demonetized practically in 1835, and certainly in 1853, when the purchase of silver and its use as money increased enormously. In 1852 the coinage of silver was less than $1,000,000. In the next year the coinage of silver rose to over $9,000,000, and reached the aggregate of nearly $50,000,000 before the beginning of the civil war. Then, as now, the purchase of silver bullion led to a greater coinage than free coinage.

This was the condition of our coinage until the war, like all other great wars in history, drove all coins into hoarding or exportation, and paper promises, great and small, from five cents to a thousand dollars, supplanted both silver and gold.

Now we come to the act of 1873, which dropped from the coin the silver dollar. The charge has been made over and over again that this was surreptitiously done; that it was done under cover in some way. That has been clearly disproved by the exhibition of the public records, and it seems to me that every intelligent man ought now to have seen that fact. But there has been a repetition of that imputation. It was an imputation against the whole mass of the Forty-second Congress, and yet in conventions no doubt of honest and good people—I do not in the least disparage them—they denounced the act of 1873 as a fraud and as a crime; yes, it was the crime of 1873.

Not only that, but we have innuendoes of various kinds made on this floor in respect to it, and I must confess I was greatly affected and surprised when the honorable Senator from Indiana [Mr. VOORHEES] got up and applied the words he did to that law, describing it as the "stealthy and treacherous" law of 1873.

Mr. VOORHEES. Mr. President, I desire to say that nothing could possibly have been further from my purpose or intention than to say a disagreeable word to the Senator from Ohio. I have my views as to the character of the act of 1873, but I thought the Senator from Ohio had three or four years ago so thoroughly extricated his own name from any improper connection with the act that he was not in my mind at all, as I beg to assure him, when those words were uttered; and inasmuch as they have given him a single moment's disagreeable feeling, or have been in the slightest degree offensive to him, I express my regret that they were uttered at all; they were not necessary to me in the description I was giving. I beg to say that I am thoroughly incapable of inflicting an affront unprovoked upon any gentleman either in this body or anywhere else, and nothing was further from my purpose than to say an irritating or disagreeable thing to any Senator, certainly not to the Senator from Ohio, on the occasion to which he alludes.

Mr. SHERMAN. I certainly have no desire to say anything more about the matter than what is stated by the Senator from Indiana. This statement is entirely satisfactory, and I know it was purely some of his exuberant eloquence, for he was very eloquent that day, and I supposed probably had forgotten.

But, Mr. President, I wish to assure you that while I do have some feeling about this matter, it is not on my own account. I do not believe any man here present would suppose that I would mislead deliberately the Senate of the United States in the passage of a great public measure; but the charge having been made among the people it does tend to bring into contempt and ridicule the great body to which we belong. These charges, repeated over and over again by innuendoes, do tend to disgrace and dishonor the body of which we are members.

My name is not mentioned in these accusations, but I was chairman of the Committee on Finance, and had charge of the bill here; and I prefer to show exactly what was done. But the great act of 1873 is thus stained by the imputation of our own countrymen, and I intend to produce the public records and make this matter plain and clear, that the whole history of that law from beginning to end was honorable to Congress, free from corruption, open and ingenuous, frank and full. I will place it upon the public records, and hereafter when any man makes such an imputation I will simply say that it is a falsehood, and I brand it so now in advance.

What is the history of that bill? I have here the original bill. It was a bill framed in the Treasury Department. It did not come into Congress in the ordinary way, but it was framed in the Treasury Department by a distinguished body of experts, every one of whose names is now borne with honor wherever it is mentioned. Most of them are dead, but some of them are living. Mr. Pollock, long a Director of the Mint; Mr. Secretary Boutwell, who, as I shall show you, claims to be the author of the bill, and properly so, because he was at the head of the Department; Mr. John Jay Knox, who held the office of Deputy Comptroller of the Currency; Mr. Linderman, who was Director of the Mint; Mr. Robert Patterson, vice-president of the Fidelity Trust Company of Philadelphia, and a whole host of other experts, framed that bill after a most elaborate correspondence, which is contained here in the official documents communicated to Congress at the time.

So the whole matter was open. They circulated thousands of copies of the bill to everybody who desired to read it or could be prevailed upon to read it, in order to get the sense and judgment of the experts of our country in respect to the coinage, and those answers are here printed in a public document communicated to Congress upon the call of the House of Representatives before a single step was taken on the bill.

Mr. ALDRICH. That was in 1870?

Mr. SHERMAN. Yes; I will give the dates in a moment. These were men of untarnished character. It was a scientific bill, a bill that we members of Congress do not care much about handling, because if we are lawyers we are not metallists; if we are business men we do not know anything about the mystery of coinage, one of the most subtle and careful sciences. These were men who would rather pore over a table of logarithms or study a problem in geometry or do something of that kind than do anything to tarnish their name and their fame. They prepared this bill at the request of the Secretary of the Treasury, and it was communicated to Congress. Here is the first communication conveying the bill to me as chairman of the Committee on Finance to be submitted to the Senate:

TREASURY DEPARTMENT, *April 25, 1870.*

SIR: I have the honor to transmit herewith a bill revising the laws relative to the Mint, assay offices, and coinage of the United States, and accompanying report. The bill has been prepared under the supervision of John Jay Knox, Deputy Comptroller of the Currency, and its passage is recommended in the form presented. It includes, in a condensed form, all the important legislation upon the coinage, not now obsolete, since the first mint was established, in 1792; and the report gives a concise statement of the various amendments proposed to existing laws and the necessity for the change recommended. There has been no revision of the laws pertaining to the Mint and coinage since 1837, and it is believed that the passage of the inclosed bill will conduce greatly to the efficiency and economy of this important branch of the Government service.

I am, very respectfully, your obedient servant,

GEO. S. BOUTWELL,
Secretary of the Treasury.

Hon. JOHN SHERMAN,
Chairman Finance Committee, United States Senate.

The bill contains seventy-one sections. Sections 15 and 18 of the bill are the only ones to which this imputation has ever been made. I have here sections 15 and 18 as originally introduced by the Secretary of the Treasury and sent to the Committee on Finance. Here are the original sections:

SEC. 15. *And be it further enacted*, That of the silver coin, the weight of the half-dollar, or piece of 50 cents, shall be 192 grains; and that of the quarter-dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar. That the silver coin issued in conformity with the above section shall be a legal tender in any one payment of debts for all sums less than $5.

This is a literal copy, word for word, from the act of 1853, except that it drops the 5-cent piece, I believe it is.

Mr. MILLS. The act of 1873, the Senator means?

Mr. SHERMAN. No; I say the bill that was sent to us reenacts the law of 1853, and is an exact copy of it; but as the law of 1853 applied only to the fractional coins, in this draft they added to the four or five sections fixing the gold and silver and other coins the following section:

SEC. 18. *And be it further enacted*, That no coins, either gold, silver, or minor coinage, shall hereafter be issued from the Mint other than those of the denominations, standards, and weights herein set forth.

Under that section the dollar was dropped from the coinage, a dollar that had scarcely been used for nearly seventy years except to put silver in form for exportation. But I will allude to that more hereafter.

These sections in the three years that the bill was pending in Congress were changed either in the House or Senate in only one or two unimportant particulars. The House of Representatives thought it was necessary to provide a dollar. They knew that the dollar was dropped out, as everybody else must have known, because the gentlemen who framed the original bill give the history of the act, and, as I shall show you in a moment, this matter was pointed out by them. It was discussed and the reasons given, and I will furnish in a moment the extract.

I have here the form which these two sections assumed when the bill was finally passed. Here is the difference:

That the silver coins of the United States shall be a trade dollar.

Instead of a trade dollar, and omitting the dollar of 412½ grains—nobody proposed such a dollar—the House of Representatives put on a dollar of 384 grains, and that was to be, like the half-dollar, a subsidiary coin. It was to be of the exact weight of two half-dollars. That was put on by the House of Representatives, because they wished to keep the form of a dollar, and it contained 384 grains.

Mr. MILLS. Was it a full or a limited legal tender?

Mr. SHERMAN. A limited tender to $5. There, if at all, the dollar of 412½ grains being out of use, the dollar was reduced down to a subsidiary coin, just as our smaller coins had in 1853 been reduced from their full legal tender quality.

Mr. FRYE. The Senator, I think, has not stated when the Boutwell bill was first introduced in Congress.

Mr. SHERMAN. I gave the date.
Mr. FRYE. In 1870?
Mr. SHERMAN. Yes, in 1870.
Mr. FRYE. Then it is the action of 1870 of which the Senator is now speaking?
Mr. SHERMAN. This is the bill as it was passed into a law.
Mr. CULLOM. That was in 1873.
Mr. SHERMAN. In 1873. It was pending during three different sessions of Congress. The dollar of 384 grains was inserted when it came to us from the House. The bill of 1870 having passed the Senate, failed in the House of Representatives for want of time. In the following Congress the same bill was taken up in the House, there considered, passed, and sent to the Senate. The Senate then, upon the demand of the people of the Pacific coast and the petition of the State of California, which I had read here in open Senate some years ago, inserted, instead of the 384-grain dollar, the trade dollar containing 420 grains. The Senate also dropped out the word "grains," which had been introduced in the House, and in that form it finally passed. Throughout all these changes this provision remained:

SEC. 17. That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth.

It is thus shown that from the first introduction of the bill, April 25, 1870, until its final passage into a law, February, 1873, the silver dollar of 412½ grains was dropped from the silver coins, and by section 17 was prohibited.

In the report accompanying the introduction of the bill, under date of April 25, 1870, Mr. John J. Knox, Comptroller of the Currency, gives the history of the silver dollar and the reasons for its discontinuance.

The dollar unit, as money of account, was established by the act of Congress April 2, 1792, and the same act provides for the coinage of a silver dollar, "of the value of a Spanish milled or pillar dollar, as the same is now current." The silver dollar was first coined in 1794, weighing 416 grains, of which 371¼ grains were pure silver, the fineness being 892.4. The act of January 18, 1837, reduces the standard weight to 412½ grains, but increases the fineness to .900, the quantity of pure silver remaining 371¼ grains as before, and at these rates it is still coined in limited amount.

He then says:

SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD.

The coinage of the silver-dollar piece, the history of which is here given, is discontinued in the proposed bill. It is by law the dollar unit, and, assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being 103.12) and intrinsically more than 7 per cent premium in our other silver coin, its value thus being 107.42. The present laws consequently authorize both a gold-dollar unit and a silver-dollar unit, differing from each other in intrinsic value. The present gold-dollar piece is made the dollar unit in the proposed bill, and the silver-dollar piece is discontinued. If, however, such a coin is authorized, it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar, which is the favorite for circulation in China and Japan and other oriental countries.

NOTE.—"Assuming the value of gold to be fifteen and one-half times that of silver, the French 5-franc piece is worth about 96¼ cents (96.4784); the standard Mexican dollar 104.90, our silver-dollar piece 103.12, and two of our half-dollar pieces 96 cents."

I shall, without reading, quote from public records—for on this subject I shall not put one word in my speech except what I quote from public records—the statement made in this correspondence by Mr. Robert Patterson, of Philadelphia, who is confessedly one of the ablest scientists and best metallists in the United States, and probably in the world. He has a great reputation. He discussed the proposition for and against. Here is what he says:

[Ex. Doc. H. R. No. 307, second session Forty-first Congress.]

Silver dollar, half dime, and three-cent piece discontinued. Coins less than a dime of copper-nickel legal tender. One-cent piece of one gram in weight.

The silver dollar, half dime, and three-cent piece are dispensed with by this amendment. Gold becomes the standard money, of which the gold dollar is the unit. Silver is subsidiary, embracing coins from the dime to half dollar. Coins less than a dime are of copper-nickel. The legal tender is limited to the necessities of the case, not more than a dollar for such silver, or 15 cents for the nickels.

* * * * * * *

COMPUTATION OF SILVER-COINAGE PROFITS.

The difference is called profit and so credited to the silver profit and loss account. But if the silver dollar is abolished (as seems to be agreed on, and properly so), a new normal or standard must be agreed on to estimate profit.

These were statements communicated to us with the bill by Dr. H. R. Linderman, formerly Director of the Mint, whose character and standing is known by all Senators. Dr. Linderman says:

Section 11 reduces the weight of the silver dollar from 412½ to 384 grains. I can see no good reason for the proposed reduction in the weight of this coin. It would be better, in my opinion, to discontinue its issue altogether.

The gold dollar is really the legal unit and measure of value. Having a higher value as bullion than its nominal value, the silver dollar long ago ceased to be a coin of circulation, and, being of no practical use whatever, its issue should be discontinued.

J. Ross Snowden, formerly superintendent of the mint at Philadelphia, says:

THE PRESENT SILVER DOLLAR SHOULD NOT BE DISCONTINUED.

I see it is proposed to demonetize the silver dollar. This I think inadvisable. Silver coins below the dollar are now not money in a proper sense, but only tokens. I do not like the idea of reducing the silver dollar to that level. It is quite true that the silver dollar, being more valuable than two half dollars or four quarter dollars, will not be used as a circulating medium, but only for cabinets, and perhaps to supply some occasional or local demand; yet I think there is no necessity for so considerable a piece as the dollar to be struck from the metal which is only worth 94 cents. When we speak of dollars let it be known that we speak of dollars not demonetized and reduced below their intrinsic value, and thus avoid the introduction of contradictory and loose ideas of the standards of value.

Hon. WILLIAM E. CHANDLER, formerly Assistant Secretary of the Treasury, says:

The necessity of such a revision has been apparent to everyone connected of late years with the Treasury Department. The work has been admirably performed by you. You have happily secured and availed yourself of the suggestions of others, while impressing upon codification that unity and completeness which can only result from the operations of one thoroughly informed mind. If the law is enacted it will result most beneficially.

The abolition of the coinage charge, and the adoption of the metrical system, with a view to an international system of coinage, are so clearly apparent that I can not believe that Congress will delay action much longer.

I am pleased with your report as a compendious statement of useful information connected with the coinage system. The table on page 26, showing the weight, fineness, and tolerance of all the United States coins, together with the amount in which such coins are legal tender, is especially valuable. I believe the very best results will follow from your work.

Mr. President, the Finance Committee carefully examined that bill. We were not in any hurry about it. It was sent to us in April, 1870. In December, 1870, the Committee on Finance, after a careful examination, after having the bill printed and sent by the order of the Senate to everyone who desired to read it or look over it, reported it unanimously.

That committee was composed of Messrs. SHERMAN, Williams, who was from Oregon, Cattell, MORRILL, Warner, Fenton, and Bayard.

The bill was reported to the Senate December 19, 1870, after lying in our committee room for eight months. The nature of the bill I have already described. The dollar was dropped from the coinage in the bill framed in the Treasury Department. It was then an unknown coin. Although I was quite active in business which brought under my eye different forms of money, I do not remember at that time ever to have seen a silver dollar. It was an unknown quantity. Probably if it had been mentioned to the committee and discussed it would have been thought, as a matter of course, scarcely worthy of inquiry. If it was known at all, it was known as a coin for the foreign market.

No one proposed to reissue it. The Pacific coast had six intelligent, able, and competent Senators on this floor, representing a population then of not more than a million, if that much. They would have carefully looked out for the interests of silver, if the bill affected them injuriously. But the silver dollar at that time was worth more than the gold dollar. California and Nevada were on the gold standard.

As I said, the bill was printed over and over again, finally reported, and brought before the Senate. It was debated here for three days, and I have the voluminous record upon the subject. The Senator from Nevada [Mr. STEWART] took a leading part in that debate, and every Senator from the Pacific coast spoke upon the measure. Representing the committee, I presented the questions as they occurred from time to time, until finally we differed quite seriously upon the question of a charge for the coinage of gold. The only yea-and-nay vote in the Senate on the passage of that bill, after two days debate, occurred on the 10th day of January, 1871, and I shall read the vote:

In favor of the bill, Messrs. Bayard, Boreman, Brownlow, Casserly—

From the Pacific slope—

Cole—

Also from California—

Conkling, Corbett—

From Oregon—

Davis, Gilbert, Hamlin, Harlan, Jewett, Johnston, Kellogg, McCreary, Morton, Nye—

From Nevada—

Patterson, Pomeroy, Pool, Ramsey, Rice, Saulsbury, Spencer, STEWART, Stockton, Sumner, Thurman, Tipton, Trumbull, Vickers, Warner, Willey, Williams, Wilson, and Yates—36.

Every one of the six members from the Pacific coast voted for the bill after full debate.

I know that the Senator from Nevada [Mr. STEWART] questioned somewhat the accuracy of the statement of my neighbor here, the Senator from Massachusetts [Mr. HOAR], in regard to his vote; but his vote is on record. If the Senator desires to look at it here it is [exhibiting paper].

Mr. STEWART. I shall in due time reply to the Senator and state how it was, so that it may be all understood.

Mr. SHERMAN. Very well. Strange to say, that against this bill were:

Messrs. Abbott, Ames, Anthony, Buckingham, Carpenter, Chandler, Fenton, Hamilton of Texas, HARRIS, Howell, MORRILL of Vermont, Pratt, Scott, and SHERMAN—14.

So that on the only vote which was ever taken upon this floor the Senator from Nevada [Mr. STEWART] voted for it, and I, the "devil fish," [laughter] voted against it. It was not on account of demonetizing the silver dollar. I did not do it because of that, but I did it because gold was then only coined for the benefit of private depositors; we were not using gold except for limited purposes. Gold was the standard in California, and we thought they ought to continue to pay the old and reasonable rate for coinage of one-fifth of 1 cent to the dollar. Because we were beaten upon that proposition, the majority of the Committee on Finance voted against the bill which was reported, not because it left out the silver dollar, but because it struck out the charge for mintage of gold; and every member from the Pacific coast voted for it.

The VICE-PRESIDENT. The Senator will please suspend. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, the title of which will be stated.

The SECRETARY. A bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. MANDERSON. I ask that the unfinished business may be temporarily laid aside by unanimous consent, so that the Senator from Ohio may proceed.

The VICE-PRESIDENT. Is there objection? The Chair hears none. The Senator from Ohio.

Mr. SHERMAN. Mr. President, the continuation of the history of that bill through the House of Representatives and through all of its stages until it finally passed into the hands of the committee of conference is so clearly and distinctly stated by the report of Mr. Knox, which has already been published, that I shall ask to have it embodied in my remarks, so as to relieve me from the necessity of reading it. Every statement contained in this report I have had verified by the public records. It is, therefore, a mere quotation of the proceedings of Congress:

On April 25, 1870, the Secretary of the Treasury transmitted the following letter to Hon. JOHN SHERMAN, chairman of the Finance Committee of the Senate:

TREASURY DEPARTMENT, *April 25, 1870.*

SIR: I have the honor to transmit herewith a bill revising the laws relative to the mint, assay offices, and coinage of the United States, and accompanying report. The bill has been prepared under the supervision of John Jay Knox, Deputy Comptroller of the Currency, and its passage is recommended in the form presented. It includes in a condensed form all the important legislation upon the coinage, not now obsolete, since the first mint was established in 1792; and the report gives a concise statement of the various amendments proposed to existing laws, and the necessity for the change recommended. There has been no revision of the laws pertaining to the mint and coinage since 1837, and it is believed that the passage of the inclosed bill will conduce greatly to the efficiency and economy of this important branch of the Government service.

I am, very respectfully, your obedient servant,

GEO. S. BOUTWELL,
Secretary of the Treasury.

The report and the bill were referred, on April 28, 1870, to the Finance Committee of the Senate, and subsequently, on May 2, 1870, 500 additional copies were ordered to be printed for the use of the Treasury Department. The report says:

"The method adopted in the preparation of the bill was first to arrange in as concise a form as possible the laws now in existence upon these subjects, with such additional sections and suggestions as seemed valuable. Having accomplished this, the bill, as thus prepared, was printed upon paper with wide margin, and in this form transmitted to the different mints and assay offices, to the First Comptroller, the Treasurer, the Solicitor, the First Auditor, and to such other gentlemen as are known to be intelligent upon metallurgical and numismatical subjects, with the request that the printed bill should be returned with such notes and suggestions as experience and education should dictate. In this way the views of more than thirty gentlemen who are conversant with the manipulation of metals, the manufacture of coinage, the execution of the present laws relative thereto, the method of keeping accounts, and of making returns to the Department, have been obtained with but little expense to the Department and little inconvenience to correspondents. Having received these suggestions, the present bill has been framed, and it is believed to comprise within the compass of eight or ten pages of the Revised Statutes every important provision contained in more than sixty different enactments upon the mint, assay offices, and coinage of the United States, which are the result of nearly eighty years of legislation upon these subjects."

The amendments proposed by the bill were as follows:

PROPOSED AMENDMENTS.

"The new features of the bill now submitted are, chiefly: The establishment of a Mint Bureau of the Treasury Department, which shall also have charge of the collection of statistics relative to the precious metals; the consolidation of the office of Superintendent with that of the Treasurer, thus abolishing the latter office, and disconnecting the Mint entirely from the office of Assistant-Treasurer; the repeal of the coinage charge, and authorizing the exchange of unparted for refined bars; a reduction in the amount of wastage, and the tolerance (deviation in weight and fineness) in the manufacture of coin; requiring the token coinage to be of one material of uniform value, and to be redeemed under proper regulations when issued in excess, and the expense of its manufacture to be paid from specific appropriations, and not from the gain arising in its manufacture, as heretofore; an entire change in the manner of issuing the silver (subsidiary) coinage; discontinuing the coinage of the silver dollar; limiting the amount of silver to be used as alloy, so as to make the gold coinage of uniform color; the destruction of the dies, not in use, annually; requiring vouchers to pass between the different officers of the Mint in all transfers of bullion or coin; requiring increased bonds from officers of the Mint, and authorizing each officer to nominate his subordinate before appointment; and also making it an offense to increase or diminish the weights used in the Mint."

The report of Mr. Knox called special attention to the discontinuance of the silver dollar as a standard, as may be seen from the following paragraph on page 11:

"SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD.

"The coinage of the silver-dollar piece, the history of which is here given, is discontinued in the proposed bill. It is by law the dollar unit, and assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being 103.12) and intrinsically more than 7 per cent premium in our other silver coins, its value thus being 107.42. The present laws consequently authorize both a gold-dollar unit, and a silver-dollar unit, differing from each other in intrinsic value. The present gold-dollar piece is made the dollar unit in the proposed bill, and the silver-dollar piece is discontinued. If, however, such a coin is authorized, it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar, which is the favorite for circulation in China and Japan and other oriental countries."

The appendix to the report contained a copy of the English coinage act of 1870, and four tables giving (1) the existing coinage, including the silver dollar; (2) the proposed coinage in which the silver dollar was omitted; (3) a metric system of coinage suggesting the issue of a subsidiary silver coinage consisting of two half-dollars constituting in weight and fineness an exact equivalent to the French 5-franc piece, and a quarter-dollar and dime with proportionate weight and fineness, which proposition was finally adopted; (4) a table giving a comparison of coinage existing and proposed. A note at the foot of this table states that the silver dollar, half-dime, and 3-cent piece are omitted in the proposed bill. Subsequently, on June 25, 1879, the Secretary of the Treasury transmitted to the House of Representatives a letter of the then Deputy Comptroller of the Currency, together with copies of the correspondence of the Department with the officers of the different mints, assay offices, and other experts in reference to the bill and report previously submitted.

The bill in its original form, which was transmitted to the correspondents throughout the country for consideration and comment, contained the following section, as appears from the manuscript copy at the Treasury Department:

"SEC. 15. *And be it further enacted*, That of the silver coins [the weight of the dollar shall be 384 grains] (now 412½ grains) the weight of the half-dollar or piece of 50 cents shall be 192 grains; and that the quarter-dollar and dime [and half-dime] shall be, respectively, one-half and one-fifth [and one-tenth] of the weight of said half-dollar. That the silver coin issued in conformity with the above sections shall be a legal tender in any one payment of debts for all sums [not exceeding $5, except duties on imports] *less than* $1."

If the words inclosed in [brackets] of the section as here given are excluded and the words in *italics* included, the section will conform precisely to the section which was transmitted to Congress and which passed the Senate on January 9, 1871.

The dollar of 384 grains was proposed in the rough revision of the bill for the purpose of obtaining an expression of opinion in reference to the proposed omission of the dollar piece and the words "except duties on imports" inserted for the reason that a regulation or usage at the custom-house in New York limits the payment of silver coins to the fractional parts of a dollar, except when the payment to be made is $5 or less. Several gentlemen in their criticisms upon the rough revision of the bill referred to this section.

Hon. James Pollock, the Director of the Mint at Philadelphia, said:

"SEC. 11. The reduction of the weight of the whole dollar is approved, and was recommended in my annual report of 1861." (Page 10.)

Mr. Robert Patterson, of Philadelphia, sent to Mr. Knox some notes on the bill suggesting amendments. He called attention to one of these in the following words:

"The silver dollar, half-dime, and three-cent piece are dispensed with by this amendment. Gold becomes the standard money, of which the gold dollar is the unit. Silver is subsidiary, embracing coins from the dime to half-dollar; coins less than the dime are of copper-nickel. The legal tender is limited to necessities of the case; not more than a dollar for such silver or 15 cents for the nickels."

Mr. Franklin Peale, formerly melter and refiner and chief coiner of the mint at Philadelphia, recommended the discontinuance of the three and one dollar gold pieces, and supplying the place of the latter with a proper silver coin to be used as change. Dr. H. R. Linderman, the present Director of the Mint, said:

"Section 11 reduces the weight of the silver dollar from 412½ to 384 grains. I can see no good reason for the proposed reduction in the weight of this coin. It would be better, in my opinion, to discontinue its issue altogether. The gold dollar is really the legal unit and measure of value. Having a higher value as bullion than its nominal value, the silver dollar long ago ceased to be a coin of circulation; and being of no practical use whatever its issue should be discontinued."

Mr. James Ross Snowden, formerly Director of the Mint, said:

"I see that it is proposed to demonetize the silver dollar. This I think unadvisable. Silver coins below the dollar are now not money in a proper sense, but only tokens. I do not like the idea of reducing the silver dollar to that level. It is quite true that the silver dollar, being more valuable than two half-dollars or four quarter-dollars, will not be used as a circulating medium, but only for cabinets and perhaps to supply some occasional or local demand; yet I think there is no necessity for so considerable a piece as the dollar to be struck from metal which is only worth 94 cents. When we speak of dollars let it be known that we speak of dollars not demonetized and reduced below their intrinsic value, and thus avoid the introduction of contradictory and loose ideas of the standard of value."

Mr. George F. Dunning, formerly superintendent of the United States assay office in New York, proposed that the law in regard to the silver coinage should be in the following language:

"SEC. 11. *And be it further enacted*, That the silver coins of the United States shall be a dollar, a half-dollar, a quarter-dollar, a dime or tenth of a dollar, and a half-dime or twentieth of a dollar; and the standard weight of the silver coins shall be in the proportion of 384 grains to the dollar, and these coins shall be a legal-tender in all payments not exceeding $5."

The officers of the San Francisco branch mint made the following suggestions:

"Section 11: Would not the proposed change in the weight of the silver dollar disturb the relative value of all our coinage, affect our commercial conventions, and possibly impair the validity of contracts running through a long period? Might not the dollar be retained as a measure of value, but the coinage of the piece for circulation be discontinued?"

Mr. E. B. Elliott, of the Treasury Department, gave a complete history of the silver dollar, and suggested the issue of a commercial dollar of nine-tenths fineness, and containing of pure silver just 25 grams, in place of the then existing silver dollar of 412½ grains, the proposed silver dollar being almost the exact equivalent of the silver contained in the older Spanish-

Mexican pillared dollar established in 1704 by proclamation of Queen Anne as a legal tender of payment and accepted as par of exchange for the British colonies of North America at the rate of 5*4d.* sterling to the dollar, or $4⅔ to the pound sterling.

On December 19, 1870, the bill was reported from the Finance Committee of the Senate and printed with amendments.

On January 9, 1871, in accordance with previous notice, the bill came before the Senate and was discussed during that day and the following day by Senators SHERMAN, Sumner, Bayard, STEWART of Nevada, Williams, Casserly, MORRILL, and others, and passed the Senate on the 10th by a vote of 36 yeas to 14 nays.

On January 13, 1871, on motion of Hon. William D. Kelley, the Senate bill was ordered to be printed. On February 25, 1871, Mr. Kelley, the chairman of the Committee on Coinage, reported the bill back with an amendment in the nature of a substitute, when it was again printed and recommitted. Mr. Kelley again, on March 9, 1871, introduced the bill in the Forty-second Congress, when it was ordered to be printed, and referred to the Committee on Coinage, when appointed.

On January 9, 1872, the bill was reported by Mr. Kelley, chairman of the Coinage Committee, with the recommendation that it pass. The bill was read and discussed at length by Messrs. Kelly, Potter, Garfield, Maynard, Dawes, HOLMAN, and others. Mr. Kelley, in the opening speech, said:

"The Senate took up the bill and acted upon it during the last Congress and sent it to the House; it was referred to the Committee on Coinage, Weights, and Measures, and received as careful attention as I have ever known a committee to bestow on any measure.

* * * * * * *

"We proceeded with great deliberation to go over the bill, not only section by section, but line by line, and word by word; the bill has not received the same elaborate consideration from the Committee on Coinage of this House, but the attention of each member was brought to it at the earliest day of this session; each member procured a copy of the bill, and there has been a thorough examination of the bill again."—*Congressional Globe*, volume 100, page 322.

Mr. Kelley on the same day also said:

"There are one or two things in this bill, I will say to the gentleman from New York, with his permission, which I personally would like to modify: that is to say, I would like to follow the example of England and make a wide difference between our silver and gold coinage. * * *

"I would have liked to have made the gold dollar uniform with the French system of weights, taking the gram as a unit." (Page 323, volume 100.)

On January 10, 1872, the bill after considerable discussion was again recommitted, and on February 9, 1872, it was again reported from the Coinage Committee by Hon. Samuel Hooper, printed and recommitted, and on February 13, 1872, reported back by Mr. Hooper with amendments, printed, and made the special order for March 12, 1872, until disposed of.

On April 9, 1872, the bill came up in the House for consideration. Mr. Hooper, in a carefully prepared speech of ten columns, explained the provisions of each section of the bill. In this speech (page 2306, volume 102 of the Congressional Globe) he says:

"Section 16 reënacts the provisions of the existing laws defining the silver coins and their weights, respectively, except in relation to the silver dollar, which is reduced in weight from 412½ to 384 grains, thus making it a subsidiary coin in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion or intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware. It does not circulate now in commercial transactions with any country, and the convenience of these manufacturers in this respect can better be met by supplying small stamped bars of the same standard, avoiding the useless expense of coining the dollar for that purpose."

Mr. Stoughton, of the Coinage Committee, also made a speech of seven columns, in which he says:

"The silver coins provided for are the dollar, 384 grains troy, the half-dollar, quarter-dollar, and dime, of the value and weight of one-half, one-quarter, and one-tenth of the dollar, respectively; and they are made a legal tender for all sums not exceeding $5 at any one payment. The silver dollar, as now issued, is worth for bullion 3½ cents more than the gold dollar, and 7½ cents more than two half-dollars; having a greater intrinsic and nominal value, it is certain to be withdrawn from circulation whenever we return to specie payment, and to be used for only manufacture and exportation as bullion."

The latter, in commenting upon the bill, says:

"Mr. Speaker, this is a bill of importance. When it was before the House in the early part of this session I took some objections to it which I am inclined now to think, in view of all the circumstances, were not entirely well founded, but after further reflection I am still convinced that it is a measure which it is hardly worth while for us to adopt at this time. * * * This bill provides for the making of changes in the legal-tender coin of the country and for substituting as legal-tender coin of only one metal instead as heretofore of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of gold alone; but why should we legislate on this now when we are not using either of those metals as a circulating medium?

"The bill provides also for a change in respect of the weight and value of the silver dollar, which I think is a subject which, when we come to require legislation about it at all, will demand at our hands very serious consideration, and which, as we are not using such coins for circulation now, seems at this time to be an unnecessary subject about which to legislate." (Page 2310, volume 102.)

Mr. Kelley also said:

"I wish to ask the gentleman who has just spoken [Mr. Potter] if he knows of any government in the world which makes its subsidiary coinage of full value? The silver coin of England is 10 per cent below the value of gold coin, and, acting under the advice of the experts of this country and of England and France, Japan has made her silver coinage within the last year 12 per cent below the value of gold coin, and for this reason: It is impossible to retain the double standard. The values of gold and silver continually fluctuate. You can not determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now.

"Hence all experience has shown that you must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal tender for a limited amount and be redeemable at its face value by your Government. But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar and worth 7 cents more than two half-dollars, and that so long as those provisions remain you can not keep silver coin in the country."

On May 27, 1872, the bill was again called up by Mr. Hooper for the purpose of offering an amendment in the nature of a substitute, and the bill as amended passed that day—yeas 110, nays 13.

Just previous to the passage of the bill Mr. McNeeley, of the Coinage Committee, said:

"As a member of the Committee on Coinage, Weights, and Measures, having carefully examined every section and line of this bill, and generally understanding the subject before us, I am satisfied that the bill ought to pass." (Page 3883, volume 104.)

The substitute reported by Mr. Hooper and passed by the House, so far as it refers to silver coinage, was identical with the bill previously reported from the Coinage Committee by him. It was also identical with the bill introduced by Mr. Kelley, with the single exception of the provision authorizing the coinage of a silver dollar weighing 384 grains. The bill of Mr. Kelley, so far as it related to the silver coinage, was identical with the bill which was prepared at the Treasury Department, and which had passed the Senate, excepting that the latter bill made the silver coin a legal tender for all sums less than $1, while the bill of Mr. Kelley made the silver coins a legal tender for $5 in any one payment.

The bill was again printed in the Senate on May 29, 1872, and referred to the Finance Committee. Senator SHERMAN, in reporting it back on December 16, 1872, said:

"This bill has, in substance, passed both Houses, except that the Senate bill enlarged and increased the salaries of the officers of the mint; it was passed by the Senate at the session of the last Congress, went to the House, and now, somewhat modified, has passed the House at this Congress, so that the bill has practically passed both Houses of Congress. The Senate Committee on Finance propose a modification of only a single section; but as this is not the same Congress that passed the bill in the Senate, I suppose it will have to go through the form of a full reading unless the Senate are willing to take it on the statement of the committee, the Senate already having debated it and passed it." (Page 203, volume 105, third session Forty-second Congress.)

After further debate, on motion of Mr. Cole, the bill was printed in full with amendments.

On January 7, 1873, it was again reported with amendments and again printed for the information of the Senate. It passed that body on January 17, 1873, after a discussion occupying nineteen columns of the Congressional Globe. In the course of the debate Senator SHERMAN said:

"This bill proposes a silver coinage exactly the same as the French, and what are called the associated nations of Europe, who have adopted the international standard of silver coinage; that is, the dollar (two half-dollars) provided for by this bill is the precise equivalent of a 5-franc piece. It contains the same number of grams of silver, and we have adopted the international gram instead of the grain for the standard of our silver coinage. The trade-dollar has been adopted mainly for the benefit of the people of California and others engaged in trade with China.

"That is the only coin measured by the grain instead of by the gram. The intrinsic value of each is to be stamped upon the coin. The Chamber of Commerce of New York recommended this change, and it has been adopted, I believe, by all the learned societies who have given attention to coinage, and has been recommended to us, I believe, as the general desire. That is embodied in these three or four sections of amendment to make our silver coinage correspond in exact form and dimensions and shape and stamp with the coinage of the associated nations of Europe, who have adopted an international silver coinage." (Page 672, volume 106, third session Forty-second Congress.)

The bill was sent to the House, and on January 21, 1873, on motion of Mr. Hooper, it was again printed with amendments, and subsequently committees of conference were appointed, consisting of Messrs. Hooper, Houghton, and McNeely, of the House, and Senators SHERMAN, Scott, and Bayard, of the Senate. The reports of the committees of conference were agreed to, and the bill became a law on February 12, 1873, substantially as originally prepared at the Treasury.

The bill as prepared at the Treasury omitted the silver-dollar piece, and the report stated the fact of its omission three different times and gave the reasons therefor. The silver-dollar piece was omitted from the bill as it first passed the Senate. It was also omitted from the bills reported by Mr. Kelley; but in the bills reported by Mr. Hooper a new silver dollar was proposed equal in weight (384 grains) to two of the half dollars then authorized.

The Senate substituted a trade dollar weighing 420 grains in place of the dollar of 384 grains, in accordance with the wishes of the dealers in bullion upon the Pacific coast, that being considered by them as the most advantageous weight for a coin to be used for shipment to China and Japan.

The weight of the subsidiary silver coin was increased about one-half per cent in value, making the half dollar, quarter dollar, and dime, respectively, of the weight of 12½ grams, 6¼ grams, and 2½ grams, or precisely one-half, one-quarter, and one-tenth, respectively, of the weight of the French 5-franc piece. All of said coins were made a legal tender in nominal value for any amount not exceeding $5 in any one payment. The bill was read in full in the Senate several times, and the record states on January 9, 1872, that it was read in the House. It was undoubtedly read at other times. The bill was printed separately eleven times and twice in reports made by the Deputy Comptroller of the Currency, thirteen times in all by order of Congress. It was considered at length by the Finance Committee of the Senate and the Coinage Committee of the House during five different sessions, and the debates upon the bill in the Senate occupied sixty-six columns of the Globe and in the House seventy-eight columns of the Globe.

The Secretary of the Treasury called the special attention of Congress to the bill in his annual reports for 1870, 1871, and 1872. In his report of 1872 he says:

"In the last ten years the commercial value of silver has depreciated about 3 per cent as compared with gold, and its use as a currency has been discontinued by Germany and by some other countries. The financial condition of the United States has prevented the use of silver as currency for more than ten years, and I am of opinion that upon grounds of public policy no attempt should be made to introduce it, but that the coinage should be limited to commercial purposes, and designed exclusively for commercial uses with other nations.

"The intrinsic value of a metallic currency should correspond to its commercial value, or metals should be used for the coinage of tokens redeemable by the Government at their nominal value. As the depreciation of silver is likely to continue, it is impossible to issue coin redeemable in gold without ultimate loss to the Government; for when the difference becomes considerable the holders will present the silver for redemption and leave it in the hands of the Government to be disposed of subsequently at a loss.

"Therefore, in renewing the recommendations heretofore made for the passage of the mint bill, I suggest such alterations as will prohibit the coinage of silver for circulation in this country, but that authority be given for the coinage of a silver dollar that shall be as valuable as the Mexican dollar, and to be furnished at its actual cost."

As a final answer to the charge that the bill was passed surreptitiously, I append, first, a copy of the section in reference to the issue of silver coins as printed in the report of the Treasury Department and as passed by the Senate; second, a copy of the section as reported by Mr. Kelley; third, a copy of

the section as reported by Mr. Hooper; fourth, a copy of the section as finally passed by the Senate and agreed upon by the conference committee.

The following section was printed in the two reports of John Jay Knox, Deputy Comptroller of the Currency, to Congress; also in Senate bill 859, Forty-first Congress, second session, April 28, 1870; in Senate bill 859, December 19, 1870, and January 11, 1871, third session Forty-first Congress, as reported by Mr. SHERMAN:

"SEC. 15. *And be it further enacted*, That of the silver coins the weight of the half-dollar, or piece of 50 cents, shall be 192 grains; and that of the quarter-dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half-dollars; that the silver coin issued in conformity with the above section shall be a legal tender in any one payment of debts for all sums less than $1."

The following section was printed in Senate bill 859, Forty-first Congress, third session, February 25, 1871, and House bill No. 5, Forty-second Congress, first session, March 9, 1871, as reported by Mr. Kelley:

"SEC. 15. *And be it further enacted*, That of the silver coins the weight of the half-dollar, or piece of 50 cents, shall be 192 grains; and the quarter-dollar and dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; which coins shall be a legal tender, at their denominational value, for any amount not exceeding $5 in any one payment."

The following section was printed in House bill No. 2934, May 29, 1872; House bill No. 1427, February 9, 1872, and February 13, 1872, Forty-second Congress, second session, as reported by Mr. Hooper:

"SEC. 16. That the silver coins of the United States shall be a dollar, a half-dollar or fifty-cent piece, a quarter-dollar or twenty-five-cent piece, and a dime or ten-cent piece; and the weight of the dollar shall be 384 grains; the half-dollar, quarter-dollar, and the dime shall be, respectively, one-half, one-quarter, and one-tenth of the weight of said dollar; which coins shall be a legal tender, at their denominational value, for any amount not exceeding $5 in any one payment."

The following section was printed in House bill No. 2934, December 16, 1872, January 7, 1873, and January 21, 1873, Forty-second Congress, third session, as reported by Mr. SHERMAN:

"That the silver coins of the United States shall be a trade dollar, a half dollar or fifty-cent piece, a quarter dollar or twenty-five-cent piece, a dime or ten-cent piece; and the weight of the trade dollar shall be 420 grains troy; the weight of the half dollar shall be 12½ grains; the quarter dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment."

The following section was contained in all of the different bills and the coinage act of 1873:

"SEC. 18. *And be it further enacted*, That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth."

Copies of the different bills may be obtained at the document room of the Senate.

This bill went to the House of Representatives. The official record shows that it was carefully considered there, especially section 16, dropping the old dollar. It is sometimes said that nobody explained that the dollar was demonetized. Here is the statement made by Mr. Hooper, who had charge of the bill, one of the most eminent men who has been furnished the House of Representatives from the State of Massachusetts. I will ask that the Secretary read what Mr. Hooper said in the debate pending that bill.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

Mr. Hooper said, April 9, 1872 (Congressional Globe, part 3, second session Forty-second Congress, page 2306):

"Section 16 reenacts the provisions of existing laws defining the silver coins and their weights, respectively, except in relation to the silver dollar, which is reduced in weight from 412½ to 384 grains; thus making it a subsidiary coin in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion and intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware. It does not circulate now in commercial transactions with any country, and the convenience of those manufacturers in this respect can better be met by supplying small stamped bars of the same standard, avoiding the useless expense of coining the dollar for that purpose. The coinage of the half dime is discontinued for the reason that its place is supplied by the copper nickel five-cent piece, of which a large issue has been made and which, by the provisions of the act authorizing its issue, is redeemable in United States currency.

Mr. SHERMAN. If any man could make a clearer statement of this matter than Mr. Hooper did when it was pending, I do not know how it could be done.

Mr. DANIEL. Was that the Congress at which the bill finally passed?

Mr. SHERMAN. As a matter of course, it was the same Congress.

Mr. DANIEL. But it was at another session of that Congress, was it not?

Mr. SHERMAN. It was the first session of that Congress. The bill finally passed in the second session.

Mr. STEWART. Mr. Hooper did not state in the extract which has been read the provision that limited the legal-tender quality to $5. The change of weight was the only change he explained, as I understand.

Mr. SHERMAN. It was put in as a subsidiary coin, as stated here expressly by this gentleman, in the same section, a section which itself provides that these coins shall be only a legal tender for $5. If there was any demonetization of the silver dollar, here was a humiliation of it. Instead of being a legal tender for all debts, public and private, it was reduced to a subsidiary coin by the House of Representatives, upon the motion of the chairman of the committee, after as distinct a statement as could be made. The old dollar must have blushed then in its old age, that after one hundred years it should not be better placed.

Mr. President, that shows that it was done openly and fairly, that attention was called to it, and that it was debated; but, as a matter of course, the full history of the transaction will be given in the extracts which I have already quoted. The bill finally passed the House of Representatives on the 27th of May, 1872. It came to the Senate, was referred to the Committee on Finance, and not reported until December 16, 1872. We were not in a hurry about it. It was a great measure, a heavy measure. It was finally brought before the Senate, and the Senate, instead of providing for a dollar of 384 grains, struck that out and inserted the trade dollar, with the history of which the Senate is quite familiar. That trade dollar was only a legal tender for $5. It was not until years after, when that trade dollar came into general circulation here, that finally the legal-tender quality was given to it. The Senator from Nevada was a Senator at that time, too.

Mr. President, there is another thing. I have here a statement made recently by Mr. Boutwell, which I will ask to have read, he being about the only survivor of the men who participated in framing that law. He comes out now in a broad declaration, not only giving the history of the law, but avowing himself as the author of it; and he was the author of it. It was he who communicated it to Congress, and he, being the head of the Department which sent it to us, manfully came out and avowed his authorship, and it is true to my certain knowledge. Mr. Boutwell, in a statement published in the Boston Herald, Sunday, July 9, 1893, says:

Any statement by me touching the financial condition of the country compels a reference to my policy and acts while I was at the head of the Treasury Department, and while I acted as a member of the silver commission of 1876.

The act known as the act for the demonetization of silver was passed in 1873, and upon a distinct recommendation made in my annual report to Congress in December, 1872. The statement so often made and so generally believed, that the provision was introduced and passed surreptitiously, was without any foundation, as will appear from quotations from my report, which I shall incorporate in this article.

The country had due and full notice of the policy proposed, and if the friends of a silver currency were ignorant of the movement the fault was their own. Not only was there no concealment, but, on the other hand, the change proposed was announced early and definitely. For myself, I can say that I never hesitated to avow the authorship of the measure, and I have been ready always to assign the reasons by which I was influenced.

We were then on a gold basis as far as the use of the metals had a part in our financial affairs; we were a principal producer of gold, and the most important steps had been taken in the work of bringing the Treasury note to the standard of gold coin.

In the same report I advised the coinage of a silver dollar, known as the trade dollar, in value superior to the Mexican dollar, which was then in use almost exclusively in the commerce of China and the East Indies. This coin, which was not current in the United States, became the means of a very considerable export of silver to the East.

My discussion of the contest of 1876 will be ended by the use of one additional extract from my report, in which I made a summary of my views:

"At present the gold dollar of the United States, which contains 25.8 grains of standard gold, will purchase a larger quantity of pure silver than is contained in the dollar of 412.5 grains of standard silver.

"The superior value of the gold dollar would prevent its use, and the gold coin and the gold bullion of the country would at once be exported to other countries, and silver in exchange would be returned, and, when coined, it would be introduced into the circulation of the United States. The demonetized and discarded silver of every other country would flow to the United States, and there can be no doubt that after the first effect of its demonetization had passed away it would steadily depreciate in value.

"Nor can there be a doubt that our unfortunate experience would furnish an argument against the remonetization of silver by the commercial nations of the world.

"It is contended by those who advocate a bimetallic standard for the United States, without regard to the policy of other countries, that its use by us would so advance its value in the markets of the world that it would be at a par with gold. It can only be said in answer to this assumption that there is no evidence that such would be the result, while, on the contrary, it is reasonable to anticipate that the demonetization of silver in Germany, the limitation of its coinage by the nations of the Latin Union, its reduced value in India, and the large production in America would counteract the effect of an increased demand for coinage in the United States, and that in a period of ten years its relative value to gold would be less than it now is."

The evils thus anticipated in 1876 have been realized with fearful augmentation in this year 1893.

The bill was brought up again before the Senate for final consideration. No doubt the Senate was somewhat weary of it. It had already passed the Senate in the previous Congress, had been read in full in all its copious length, and was then taken up and considered as such a bill is very apt to be which has once passed the Senate of the United States. Finally, after debate upon several amendments, it was passed unanimously, and then, at last, I was charged with the responsibility for it, when I merely voted with all others for the bill.

Mr. MILLS. I desire to ask the Senator if he has stated that at one time before, about 1805, Mr. Jefferson stopped the coinage of the silver dollar? Did he give any reasons for it? Is the Senator familiar with that?

Mr. SHERMAN. The best statement of his reasons that I have seen is contained in the report of Mr. Ingham, who was the Secretary of the Treasury of General Jackson, I think, about the time they were beginning to formulate for passage the bill of

1833. Mr. Ingham gives an interesting statement of the action of Jefferson, saying that Mr. Jefferson found that the silver dollar being bright and clean and new, and containing a trifle more silver, and of more value than the Mexican dollar, should not be issued; that it was a waste of time, the Mexican dollar being also a legal tender; and for thirty years after that not a single dollar was issued.

The action of the Senate was unanimous. The only important amendment made, I think, to this section, or to any section of the bill, was the substitution of the trade dollar for what was called the franc dollar. I believe the dollar provided for by the House was precisely the equivalent of 5 francs, or two half dollars of our subsidiary coin. Then it was made a legal tender for only $5. On final action on that bill, the conferees on the part of the Senate were Messrs. SHERMAN, Scott, and Bayard. We went into that conference, and every matter was settled promptly, quickly, and decisively.

There never was a bill proposed in the Congress of the United States which was so publicly and openly presented and agitated. I know of no bill in my experience, which was printed, as this was, sixteen times, in order to invite attention to it. I know no bill which was freer from any immoral or wrong influence than this act of 1873. Not one single word of that act has been impugned, but there has been the false allegation made that the silver dollar was surreptitiously omitted from the coinage. No fact can be proved more clearly and fully than that is a falsehood and a lie by whomsoever uttered.

Mr. President, there has been an invention of a story in connection with Ernest Seyd. I suppose Senators have often heard of the story. Some fellow—some man, I will call him, for it might insult him to call him a fellow—whose name I do not recall, made an affidavit that he knew Ernest Seyd; that he had often met him at his own table; had often dined with him, and at one time, when they were in conversation, he said that the Parliament of Great Britain was corrupt. Mr. Seyd then said "They are nothing like the Congress of the United States; that is the most corrupt body that ever existed." He then went on in a confidential conversation, according to the statement of this man, whoever he is.

Seyd said he would tell him a secret, if he would pledge himself never to reveal it while he (Seyd) lived. He promised to wait until Seyd died. Thereupon, Seyd said to him that he had raised a fund of £100,000 in the winter—now, mark the time—of 1872-'73 to bribe Congress to demonetize silver;" and, with a wink, he conveyed the idea to this man, whoever he was, that he had done it, and said that that was a greater act of corruption than had ever occurred in the British Parliament.

Three or four years after Seyd died this man revealed this important secret, which has made all this turmoil, and which has disturbed the country about the act of 1873.

Mr. President, such a story as that, told under these circumstances, would be hooted at by any lawyer or any honest man. Unfortunately for him, the man, as all rogues are apt to do, gave himself away; for in the end of this letter he declares himself an anarchist, opposed to all governments and all property; and yet he made an affidavit of this kind, which had no legal force or effect. It is falsified in every single line and word.

In the first place, according to all the information I can get, Mr. Seyd was a gentleman, and probably one of the finest writers upon the subject of metallism in the world. I never saw him, and only know him by his works. I have here a book which I obtained from the library, of the date of 1871, in reference to the metallic currency of the United States of America by Ernest Seyd, a member of the council of the Statistical Society of London. I venture to say that there is not upon this class of subjects a work of greater accuracy, of more thoroughness, and clearer, sounder views than are contained in this little book of Ernest Seyd, who is now dead and gone, and whom this man, whatever his name may be, misrepresents.

This whole book was written in 1871, after the time when the Senate passed the bill in the first instance, a bill which dropped out and demonetized the silver dollar. Every page and line of it shows that Mr. Seyd was a bimetallist and as extreme as any man within the sound of my voice. His views are stated in language so forcible as almost to convince anyone not familiar with the subject and who has no set views upon it.

From the whole book, from the surrounding circumstances, and from what I can hear of Mr. Seyd, he was a gentleman and a scholar. Whether he was here or not, I do not know; but it was certain that his letter came here, and that letter I have here also, which shows that Mr. Seyd had, at the request of Mr. Hooper, examined the bill which was then pending. Mr. Hooper was not satisfied with the scrutiny it had had by American metallists, and, attracted by the reading of this book of Mr. Seyd, he wrote to a friend of that gentleman to get the views of Mr. Seyd in regard to the bill.

Mr. Seyd, in a letter which, thank God, we have now here before us, showed that he retained his views upon bimetallism, and that he never could have uttered such language as this obscure anarchist and enemy of mankind attributes to him. It stamps the statement of that man as a lie made out of whole cloth, to arouse and aggravate the good, sensible, honest people of this country. Wherever he is, if he is alive, I brand him here as a liar, so proved by evidence which can not be gainsaid. Yet upon such stuff as that the members of the Congress of the United States are to be assailed as corrupt; men who would not stain their honor for all the gold in the world are to be held up before popular audiences as corrupt and dishonest, with hands and hearts stained with bribery.

Mr. President, I say that such things ought not to exist, and I hope now that the good people of the United States, as I shall put all this evidence in form, will read it, and banish forever the belief that Congress can be corrupted.

Before the time this man says Mr. Seyd came here, that law had passed both Houses with the silver dollar dropped from the coins of the United States. Mr. Seyd was against the exclusion of the dollar, and in his book he criticises specially the acts of 1834 and 1837 and the act of 1853, because they surrendered the principle of bimetallism.

This bill passed the House in April, 1872. It first passed the Senate, I think, in February, 1871. It again passed the Senate and became a law in 1873.

My friend from Nebraska [Mr. MANDERSON] calls my attention to an important fact, which is, that the letter of Mr. Seyd was dated February 17, 1872, at 1 A Princess street, Bank, London. So that Mr. Seyd must have been in London in February, 1872, and wrote there against the very clauses which it is charged were corruptly put in the bill, induced by bribes paid by him.

Mr. MCPHERSON. Will the Senator have that letter published with his remarks?

Mr. SHERMAN. It is almost too long.

Mr. MANDERSON. It has already been printed in the RECORD.

Mr. MCPHERSON. Very well; if it has been already published, that will answer.

Mr. SHERMAN. The letter is dated long before Mr. Seyd is said to have come here. Mr. Hooper probably invited him to come here, but it must have been after this letter was written. He came here a known bimetallist, who had committed himself not only in a book but by letter; and now, according to this anarchist, he came here and bribed Congress in the winter of 1872-'73 with $500,000 to do what both Houses had done long before! That is the way the thing stands now, because the bill had passed both Houses before Seyd could have come here, and he was opposed to it absolutely, and in clear and forcible language depicts the consequences which would follow the demonetization of silver by the countries of Europe and by the United States.

It is sometimes said that Gen. Grant did not know of the demonetization of silver. Well, what of it? Gen. Grant was not a financier nor a metallist nor a monetary expert, but he was a brave, strong, noble man. He might truly have said this, but he could also have said, if he had seen fit, that his Secretary of the Treasury, his chosen officer, in a document only second in importance to that of a message of the President of the United States, had, in December, 1872, just before the passage of this act, urged Congress to pass the act, and gave as a reason that, unless it was passed, we would be disturbed by the falling of silver in the markets of the world. Gen. Grant might have said that he did not read the report of the Secretary of the Treasury, but how can members of Congress make such a plea as that? Their business is to watch and guard the interests of their constituents as well as the common good of the whole people of the United States.

Sir, I would rather stand this day before you defending a law which has been denounced and vilified, as this has been, boldly avowing that I did read the law and that I knew its contents, than to plead the baby act, and say I did not know what was pending here before us for two or three years as an act of legislation. That legislation dropping out the silver dollar was in that bill from the beginning to the end, and never was erased from it. The Senator from Nevada said he did not remember. Very well. It seems to me that, representing 53,000 intelligent, active, industrious people whose whole fortunes were involved in the mining of silver and gold, he ought to have known whether the dear dollar of the daddies was dead and gone or not. [Laughter.]

I take him, however, at his word. The law was passed in February, 1873, and I do know that within a year from that time the Senator from Nevada knew that silver was demonetized, because he said so; and he said it February 11, 1874, as will appear in the document which I have here before me, and to which I give him a reference, so there can be no mistake about it. On

page 1392, volume 2, part 2, of the CONGRESSIONAL RECORD, first session, Forty-third Congress, he said:

I want the standard gold, and no paper money not redeemable in gold; no paper money the value of which is not ascertained; no paper money that will organize a gold board to speculate in it.

Again, only a week or two after this, on the 20th of February, to be found in CONGRESSIONAL RECORD, volume 2, part 2, page 1677, when he was speaking in favor of the resolution instructing the Committee on Finance to report a bill providing for the convertibility of Treasury notes into gold coin or 5 per cent bonds, he said:

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

[Laughter.]

Mr. President, the Senator from Nevada, in making these declarations, fairly and truly represented the people of his State, because, from the beginning of the war up to this hour they have refused to take anything but gold coin of the United States. I have here two documents. One is the Virginia (Nev.) Chronicle of Saturday, August 12, 1893, only a short time ago. There is contained in this newspaper nearly half a page, or perhaps a third of a page, of advertisements by various mining companies calling for assessments "payable in United States gold coin;" every one of them has the stipulation "payable in United States gold coin."

They do not take paper money, or at least they advertise that they do not, nor silver money, although they require us to buy all the silver they produce at its market value and complain because we do not pay $1.29 an ounce for it in gold when worth in the market only 73 cents; and yet they demand of their own people—their own stockholders—the payment of these assessments in gold coin.

The same practice exists in California. I have here the San Francisco News Circular. The whole of that page of this circular [exhibiting] contains assessment notices of silver-mining companies, and every one of them requires the assessments to be paid in United States gold coin. Therefore, I must defend the Senator from Nevada from any imputations which might be made that he has not represented his constituents. He is representing them, not only in demanding gold coin for everything that is paid to them, but tendering silver broadly at its ratio price to anybody to whom they want to sell it. Now, they are sharp; they are keen. I have always heard that the miners of the West are about the keenest men in the country; and from the specimen we have around us I am rather inclined to think they are too sharp for a Buckeye Yankee. [Laughter.]

I have some observations upon the causes that have produced the decline of silver. They are substantially embodied in the statement made by Mr. Leech, late Director of the Mint, in the Forum, and are very clear and far more concise than I could state them. I will ask leave to incorporate them in my remarks without going over them at all.

The closing of the mints of British India to the coinage of silver coins of full debt-paying power is the most momentous event in the monetary history of the present century. It is the final and disastrous blow to the use of silver as a measure of value and as money of full debt-paying power, and the relegation of it to the position of a subsidiary or token metal. It is the culmination of the evolution from a silver to a gold standard which has been progressing with startling rapidity in recent years.

For the last quarter of a century civilized countries have combined to dethrone silver as a precious metal and have declared in unmistakable terms that, by reason of its cumbersomeness, the enormous quantity produced, and the violent fluctuations in its value, silver is not fit to serve as a measure of the values of all other things; that hereafter gold alone shall be the standard of value, and that the business of the world is to be done with gold money and an enlarged use of instruments of credit, such as bank notes, checks, drafts, settlements by transfer, by telegraph, and by clearinghouse, which nineteenth-century civilization has provided as substitutes for actual money.

This modern preference of gold for silver manifested itself first and most strongly among people of the highest civilization and of the largest commercial pursuits. The reason for it will be found in the immense expansion of modern commerce, requiring very large payments in the settlement of balances and necessitating the use of that metal containing the greatest value in the least bulk, thus making gold the money of commerce; and in the wonderful improvements and developments in modern banking, providing substitutes for money, and avoiding as far as possible the actual handling of cash.

The remarkable series of events which have characterized or made manifest this evolution from a silver to a gold standard are nearly all condensed in the brief period of twenty years, and are probably without a parallel in ancient or modern mohetary history. In 1816 England legally adopted the gold standard, for the reason, as stated in the act of Parliament, that "great inconvenience has arisen from both those precious metals being concurrently the standard measure of value and equivalent for property." With the single exception of England, all Europe forty years ago had the silver standard not only legally, but actually—silver coins constituting the great bulk of the money of actual transactions. To-day not a mint in Europe is open to the coinage of full debt-paying silver coins, and the gateways of the Orient have been closed against it. Twenty years ago 1 ounce of gold exchanged in the markets of the world for 15½ ounces of silver; to-day 1 ounce of gold will buy nearly 30 ounces of silver.

A brief review of the world's transition from the silver to the gold standard will be instructive.

In 1871–1873, after the close of the Franco-Prussian war, Germany found it necessary to organize a new monetary system for the new German Empire, in place of the various systems of coins in existence in the states thereafter to compose it. In this reorganization the gold standard was adopted, replacing the silver standard, which for very many years had been in existence in all the German states; new imperial silver coins were provided for, but of limited tender, to serve the purposes of change money only, and the silver coins which constituted the bulk of the circulating medium of the states comprising the new empire were demonetized. All the silver coins which had been previously issued and received in the several German states were called in. The value of the silver coins demonetized by Germany was 1,081,742,800 marks ($257,454,000).

In order to procure the necessary gold for coinage purposes, Germany was forced to sell from time to time large quantities of silver from its store of melted coins, including the amount received after the close of the war with France in payment of indemnity. The total amount of silver thus sold was 89,695,728 fine ounces, at a loss of 96,481,000 marks ($23,000,000). This great European power, the first to take the lead in this modern evolution from silver to gold money, voluntarily incurred this heavy loss, nearly 10 per cent on its enormous stock of silver coins, all of which were in circulation as money, as the cost of placing itself on a sound monetary basis.

In 1874 the States comprising the Latin Union (France, Italy, Belgium, Switzerland, and Greece) decided to limit the coinage of 5-franc silver pieces (the only silver coins of full debt-paying power), and after further limitations, in subsequent years, these States in 1878 closed their mints to the coinage of full legal-tender silver coins, since which time silver coinage has not been resumed. By this action the States of the Latin Union practically adopted the gold standard. The action of Germany in demonetizing silver was also followed promptly by the Scandinavian countries, Norway, Sweden, and Denmark. In December, 1872, these States entered into a monetary treaty, adopting gold as the sole standard of value and making silver subsidiary, to be coined only for change purposes. In 1875 Holland, which had been on a silver basis since 1847, closed its mint to the coinage of silver, thus practically adopting the gold standard. In April, 1884, an act was passed authorizing the sale of 25,000,000 florins of silver coins whenever the state of the currency demanded it; but it has not been found necessary to make the sale.

By the law of September 9, 1876, Russia prohibited the coinage of silver, except such as was necessary for the Chinese trade. In 1879 Austria-Hungary, where the silver standard had prevailed since 1857, closed her mints to the coinage of silver for individuals, and more recently that Empire has legally adopted the single gold standard, using silver for subsidiary or token coins. In March, 1890, Roumania adopted the gold standard, the law requiring the replacement of 40,000,000 francs of the 5-let silver currency with gold coins. About 25,000,000 francs in silver were withdrawn from circulation and sold as bullion at a heavy loss.

Thus we see how, one after another, the European countries have placed themselves on the gold standard, outlawed silver from their mints, many of them actually melting down and selling their silver coins at a considerable loss in their efforts to place their currency systems on a safe basis.

In the United States gold was practically made the standard of value in 1834, and from that date to 1878 gold constituted our only metallic currency. In 1873 Congress abolished the silver dollar, a practically obsolete coin, only eight millions of which had been coined since the foundation of the Government, and gold was legally declared the sole standard of value.

At the beginning of the year 1878, when the United States entered upon the disastrous policy of silver purchases and coinage, we find that the movement of civilization from the silver to the gold standard had progressed to this extent, viz, the mints of all the great commercial countries of the world were closed to the coinage of silver coins of full debt-paying power and gold was the recognized measure of values throughout the civilized world.

Only India, Mexico, Japan, and a few South American countries coined silver. The silver coinage of Mexico cut no figure in the world's annual addition of metallic money, for the reason that the great bulk of the silver pesos struck at the Mexican mints went fresh from the coining presses into the melting pots of other countries, having no greater value in commerce than the amount of pure silver bullion they contained, and what few remained annually in the shape of Mexican coins were absorbed in Asia. So, too, with the silver coins of South American countries; they possessed in commerce only a bullion value, and were melted as fast as they found their way within the boundaries of other countries; while the silver coinage of remote Japan served only the purpose of embarrassing the domestic circulation of that country.

In 1878 the United States, just on the threshold of specie resumption, without any silver money, with all its currency based on gold, its stock of gold increasing rapidly and enormously, and with ample authority of law to secure all the gold necessary for resumption purposes, took the first backward step in the progress of civilized countries from a silver to a gold standard, and remonetized the silver dollar, which was practically demonetized in 1834 and legally in 1873.

At the same time was inaugurated the financial policy of buying silver with gold for currency purposes, for twelve and one-half years, to the extent of monthly purchases and coinage into legal dollars of $2,000,000 worth of silver, and since August, 1890, by the monthly purchase with legal-tender notes redeemable in gold of 4,500,000 ounces of silver. This policy has resulted in the accumulation of 448,000,000 ounces of silver, costing $445,000,000, and the coinage and injection into our monetary system of over 419,000,000 silver dollars, worth intrinsically about half their face value, effecting a complete change from a gold to a silver currency and threatening with disaster the business interests of our country.

At the period this policy was begun, 1878, India alone was the great absorber of silver—the silver sink of the world—where all the surplus silver discarded by Europe gravitated as naturally as the waters flow to the sea. This vast empire, with a population of more than 250,000,000 souls, mostly very poor and very ignorant, exchanged its raw products for silver bullion, which was coined into small silver coins, the largest the rupee, of the former value of about 48 cents (now about 30), which coins answered the barbaric demand for ornaments and served as a medium of exchange among a people of small transactions without banks and civilized methods of effecting exchanges throughout most of the vast territory.

There is a general impression that silver has been the money of India from remote generations. This is a fallacy. It has not been a great many years since India adopted the silver standard. The ancient money of the Hindoos was gold, which in 1818 was supplemented by silver; but gold coins remained legal tender until 1835, when silver was made the sole standard of value and legal-tender money in British India, and gold was demonetized. Although large quantities of gold have been imported into India since 1835, the importations of gold for the eight fiscal years ending with 1870 amounting to nearly $250,000,000, nevertheless gold is not a legal tender in that empire and gold coins do not circulate.

During the last fifty odd years India has absorbed vast quantities of silver. From 1863 to 1892—a period of only thirty years—the imports of silver

to India aggregated over £225,000,000, or about $1,100,000,000. The enormous and apparently unlimited power of India to absorb silver, where it was promptly converted into coin, becoming actual money, not reëxported or recoined, has undoubtedly saved silver from a very much greater depreciation than has taken place in its value in recent years. The "advantages" of a silver currency in India in maintaining the general level of prices, in affording a bounty to the export of Indian products, and in working a corresponding disadvantage to the American farmer, lowering the price of his wheat by bringing it into competition with Indian wheat in Liverpool, have been the familiar stock arguments of the free-silver-coinage advocates in the United States.

And yet all the while the ears of Parliament have been filled by India's cry for relief from the burdens growing out of a depreciated currency, which has rendered necessary additional taxation amounting last year to $7,000,000 of rupees to cover India's loss on exchange in paying its European obligations in gold (making it impossible, by reason of the fluctuations in the value of the rupee, to estimate the annual expenditure with any degree of accuracy), and has reduced legitimate commercial trade to a mere speculation; and two royal commissions have been appointed to consider the grave evils and inconveniences resulting to British India from the depreciation of the gold price in silver.

The committee appointed last October to consider and advise whether it was expedient to modify the Indian currency was composed of Lord Chancellor Herschell, Mr Leonard H. Courtney, Sir Thomas Farrer, Sir Reginald Welby, Mr. Arthur Godley, Lieut. Gen. Strachey, and Mr. B. W. Currie. The first three named had been members of the royal commission appointed in 1887 to inquire into the recent changes in the relative values of the precious metals, while the last two were delegates to the international monetary conference at Brussels from British India and Great Britain, respectively.

The question referred to the committee was "whether, having regard to the grave difficulties with which the Government of India are confronted through the heavy fall in the gold value of silver, it is expedient that Her Majesty's Government should allow them to carry into effect the proposals which they had made for stopping the free coinage of silver in India, with a view to the introduction of a gold standard."

In a dispatch of June 2, 1892, the Indian authorities expressed their deliberate opinion that "if it became clear that the Brussels conference was unlikely to arrive at a satisfactory conclusion, and if a direct agreement between India and the United States was found to be unattainable, the Government of India should at once close their mints to the free coinage of silver, and make arrangements for the introduction of a gold standard." The Government of India forwarded at the same time a memorandum prepared by Sir David Barbour outlining the method proposed for the introduction of the gold standard in India. The sessions of the committee were suspended during the Brussels conference; but when that body adjourned without reaching any satisfactory plan for the solution of the silver problem, they were immediately resumed.

The proposals which have received the serious consideration of this distinguished committee group themselves in four classes: (1) Closing the Indian mints to the coinage of silver on private accounts, with or without authority for the Government to continue coinage; (2) the establishment of the gold standard, with or without a gold currency; (3) the imposition of a large seigniorage on silver coinage; (4) the imposition of a duty on silver imported.

The committee, in their report dated May 31, 1893, state their conclusions as follows:

"While conscious of the gravity of the suggestion, we can not, in view of the serious evils with which the government of India may at any time be confronted if matters are left as they are, advise your lordship to overrule the proposals for the closing of the mints and the adoption of a gold standard, which that government, with their responsibility and deep interest in the success of the measure suggested, have submitted to you. But we consider that the following modifications of these proposals are advisable. The closing of the mints against free coinage of silver should be accompanied by an announcement that, though closed to the public they will be used by the government for the coinage of rupees in exchange for gold at a ratio to be then fixed, say 1*s.* 4*d.* per rupee; and that at the government treasuries gold will be received in satisfaction of public dues at the same ratio."

As is shown by the recent action of the Indian Government, the recommendations of the committee have been carried into practical effect by closing the Indian mints to silver coinage, without indicating the intention as to coinage on government account, and by fixing a permanent rate of exchange with India of 16 pence for the rupee, which nearly corresponds with the commercial gold value of the pure silver in that coin at the date of the order.

* * * * * * *

The action of the Indian Government in closing the mints to the coinage of silver, rendered necessary by the depreciation of its silver currency, is the first step towards the establishment of the gold standard in that empire. It is not a temporary measure nor one adopted hastily, but a permanent policy, recommended in the first instance by the Indian Government and carefully considered and reported on before final adoption by a committee of distinguished and conservative men familiar with the needs of India, who weighed carefully all the possible and probable results.

As was officially announced by the secretary of state for India in his dispatch to the Viceroy, it is the intention to "make arrangements for the adoption of a gold standard." It is useless and worse than silly to attempt to minimize the effects of this action on the future of silver by statements upon the part of silver advocates as to the impossibility of carrying out the policy adopted for India, or by holding out hope of continued purchases and coinage of silver by the Indian Government. The fact remains that the gold standard is to be established in British India, and the closing of the mints to silver coinage was the initiatory and necessary step in carrying out that policy.

This action upon the part of British India leaves the United States (unless we include Mexico, although, as is well known, Mexican silver coinage cuts no figure in the case) the only country in the world which continues to purchase and coin silver into legal-tender money.

This policy has already resulted in changing our currency from gold to silver, and has created widespread distrust of our ability to maintain the gold standard. It is not possible, now that barbaric India, our great silver ally, has pulled down her silver idol and taken steps to conform her monetary system to that of the civilized world, that the United States will continue to act in monetary isolation, in defiance of the rest of the world, and still further imperil its magnificent prosperity and credit by paying gold for a discarded, a depreciated, and a depreciating metal.

It must be remembered that whatever importance there may be in the use of money as a medium of exchange, its greatest value is as a measure of values, and that in this respect the United States has not departed since 1834 from the gold standard. Gold is still the sole standard of value in the United States, both legally and actually, and the determination and ability of the United States to maintain all its money at a parity with gold is still unabated.

While the road back to safe financial principles may be rough and stony it is still open, and the sooner we enter upon it the surer will be our relief from the present distressing and threatening business difficulties.

EDWARD OWEN LEECH.

Now, Mr. President, to resume for a moment the history of the act of 1873: It was framed in the Treasury Department after a thorough examination by experts, transmitted to both Houses of Congress, thoroughly examined and debated during four consecutive sessions, the information called for by the House of Representatives and printed six times by order broadly circulated, and many amendments were proposed, but no material changes were made in the coinage clause from the beginning to the end of the controversy. It added the French dollar for a time, but that was superseded by the trade dollar, and neither was made a legal tender but for $5. It passed the Senate on the 10th of January, 1871—36 yeas and 14 nays—every Senator from the Pacific coast voting for it.

It was introduced in the House of Representatives by Mr. Hooper at the next session. It was debated, scrutinized, and passed unanimously, dropping the silver dollar as directly stated by Mr. Hooper. It was reported, debated, amended, and passed by the Senate unanimously. In every stage of the bill and every print the dollar of 412½ grains was prohibited, and the single gold standard recognized, proclaimed, and understood. It was not until silver was a cheaper dollar that anyone demanded it, and then it was to take advantage of a creditor.

Now, it has always been within the power of Congress to correct this error, if error was made; but Congress has refused over and over again to do it. When the controversy arose about the Bland bill and the House of Representatives proposed the free coinage of silver, the Senate rejected it after a deliberate contest and substituted in place of it what is called the Bland-Allison act, which required the purchase of silver bullion at its market value and its coinage to a limited amount. Every effort has been made from that time to this to have the Congress of the United States pass a free-coinage act.

As I said before, shortly after the passage of the Bland-Allison act, and from that time on there was a constant debate going on in Congress, and finally Congress raised the amount of silver bullion to be purchased to four million and a half ounces by the act of 1890. The question then was between the free coinage of silver and the purchase of silver in a limited amount to be coined at the pleasure of the Government as it was needed. The same question is upon us now in the difficulties which surround us, and it is time that the question should be definitely and finally settled.

Mr. President, it is said that if we stop the coinage of silver it will be the end of silver. I have heard here that moan from some of my friends near me, that it will be the end of silver. I do not think it will be the end of silver. We have proven by our purchases that the mere purchase of silver by us in a declining market, when all the nations of Europe are refusing to buy silver and throwing upon us their surplus, is an improvident use of the public money, and it ought to be abandoned, or at least suspended until a time shall come when we may, by an international ratio or by some other provision of law, prevent the possible coming to the single standard of silver. Now, that can be done.

What do we propose to do now? We simply propose to stop the purchase. We do not say when we will renew it again, but we simply say we believe, in view of a panic or any possibilities of a panic, that it would be idle for us to waste either our credit money or our actual money to buy that which must be put down into the cellar of our Treasury and there lay unused, except as it is represented by promises to pay in gold. I say that such a policy as that would be foolish and delusive.

Senators say that this is a blow at silver. Why, silver is as much a part of the industry of my country as it is a part of the industry of the State of the Senator from Colorado, the able exponent of this question. The production of silver is a great interest, and the people of Ohio are as deeply interested in the success of that interest as the people of Colorado. It is true we have not the direct ownership of the property, but it enters into measures of value of our property. There could be no desire on the part of any portion of the people of the United States to strike down silver. That idea ought to be abandoned at once. Therefore, in order to at least give the assurance of honest men that we do not intend to destroy an industry of America we put upon the bill a provision proposed now by the Senator from Indiana.

I say that instead of desiring to strike down silver we will likely build it up; and any measure that could be adopted for an international ratio that will not demonetize gold will meet my approbation and favor. But I would not dissever the financial business of this great country of ours, with its 65,000,000 of peo-

ple, from the standards that are now recognized by all the Christian nations of Europe. I would not have our measure less valuable than the measure of the proudest and haughtiest country of the world.

Mr. President, this is not a question of the mere interest of Nevada or Colorado. It is not a question about what Wall street will do. They will always be doing some devilry or other, it makes no difference who is up or who is down. We take that as a matter of course. The question is what ought to be done for the people of the United States in their length and breadth. If Congress should say that in its opinion it is not now wise after our experience to continue the purchase of silver bullion, is any injustice done to Colorado or Nevada? Are we bound to build up the interest of one section or one community at the expense of another or of the whole country?

No. I heartily and truly believe that the best thing we can now do is to suspend for a time, at least, the purchase of silver bullion. We should then turn our attention to measures that are demanded immediately to meet the difficulties of the hour. Let this be done promptly and completely. It involves a trust to your officers and great powers over the public funds. I am willing to trust them. If you are not, it is a strange attitude in political affairs. I would give them power to protect the credit of the Government against all enemies at home and abroad.

If the fight must be for the possession of gold, we will use our cotton and our corn, our wheat and other productions, against all the productions of mankind. We, with our resources, can then enter into a financial competition. We do not want to do it now. We prefer to wait awhile until the skies are clear and see what will be the effect of the Indian policy, and what arrangements may be made for conducting another international conference. In the mean time let the United States stand upon its strength and credit, maintaining its money, different kinds of money, at a parity with each other. If we will do that I think soon all these clouds will be dissipated and we may go home to our families and friends with a conscientiousness that we have done good work for our country at large. [Applause in the galleries.]

Mr. TELLER. Mr. President——

Mr. STEWART. If the Senator from Colorado will give way for a moment, I should like to give notice that on Tuesday next I shall take occasion to give the history of the demonetization of silver. I shall give the true history from the records.

Mr. HALE. I rise to a parliamentary question. I desire to call the attention of the Senator from Indiana [Mr. VOORHEES], the chairman of the Committee on Finance, to the parliamentary condition of the bill reported by him yesterday. I was not here, but gathered from the newspapers that he intended by motion or by some action to substitute the measure which he reported yesterday as the unfinished business for whatever might be before the Senate. I suggest to him, as debate is to continue, whether it would not be advisable that it be continued upon the proposition which he submitted yesterday, and that by some action on his part that be made the unfinished business, so that it can not be said a week from now that the Senate has not even been considering that measure. I only make this suggestion for the discretion of the Senator from Indiana.

Mr. VOORHEES. I appreciate the point made by the Senator from Maine. I gave notice yesterday that as far as I could I should ask the consideration of the bill for the repeal of the Sherman act every morning after morning business. That was subject, however, to the accommodation of Senators who desire to address the Senate. The Senator from Ohio preferred to address the Senate upon that bill, and it has been before the Senate. The Senator from Colorado, who desires now to occupy the floor, prefers to speak on the bill (S. 453) to provide for the issue of circulating notes to national banks. He spoke on that bill yesterday, and desires to continue his remarks to-day. I therefore ask that the pending bill, on which the Senator from Ohio has delivered his address, may be laid aside and the bill I have indicated be taken up, in order that the Senator from Colorado may proceed orderly with his remarks.

Mr. TELLER. I suggest to the Senator that the Vice-President laid the pending order before the Senate at the expiration of the morning hour. It does not require any action to take it up.

Mr. VOORHEES. So much the better. The bank bill being the pending bill, the Senator from Colorado will proceed upon it, but I give notice that to-morrow, after the morning business is transacted, I shall ask the Senate to proceed with the consideration of House bill No. 1, for the repeal of a part of the Sherman act, and I shall continue to do so from day to day, subject of course, to my desire to accommodate Senators who wish to speak upon the bank bill.

Mr. STEWART. I suggest that there is no quorum present. I should like to have the roll called.

The VICE-PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Aldrich,	Davis,	Hunton,	Platt,
Allen,	Dixon,	Jones, Ark.	Power,
Bate,	Dubois,	Jones, Nev.	Ransom,
Berry,	Faulkner,	Kyle,	Roach,
Brice,	Frye,	Lindsay,	Shoup,
Caffery,	Gallinger,	Lodge,	Stewart,
Call,	Gordon,	McMillan,	Teller,
Camden,	Gorman,	Manderson,	Vest,
Cameron,	Gray,	Mitchell, Wis.	Vilas,
Carey,	Hansbrough,	Morgan,	Voorhees,
Cockrell,	Harris,	Pasco,	Walthall,
Coke,	Hawley,	Peffer,	White, La.
Cullom,	Higgins,	Perkins,	

The VICE-PRESIDENT. Fifty-one Senators having responded to their names, a quorum is present.

INCREASE OF NATIONAL BANK CIRCULATION.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks, the pending question being on the amendment submitted by Mr. COCKRELL.

Mr. TELLER. Mr. President, yesterday when the Senate went into executive session I was presenting some facts in connection with the scheme organized in the city of New York last spring for the purpose of bringing a sufficient pressure upon Congress to secure the repeal of the Sherman law. I read an article from the San Francisco Examiner, which seems to have been practically the same as one published in the New York Sun. I have also an article from the New York Sun of April 29 last, from which I will read an extract:

> The conference yesterday between Secretary Carlisle and a number of the bankers of this city was of great value in that it resulted in a definite understanding of the financial policy of the Administration, as indicated in this column last Tuesday. That policy is to interpose no obstacle to the natural operations and logical results of the Sherman law. In a word, the Administration proposes to allow the people to reap the rewards of their own folly.
>
> The statement of Mr. Carlisle to the New York bankers makes it clear that, while Mr. Cleveland works in Congress, the bankers will be expected to work, not in New York only, but throughout the country, doing their utmost to pinch business everywhere in the expectation of causing a money crisis that will affect Congress powerfully from every quarter. There is an explicitness in these declarations and a boldness in making them that would be astounding were not the country too familiar with Mr. Cleveland and his methods to be astonished by anything from him.

That is a quotation from the New York Sun of April 29. In the same line I find in the Empire of Finance and Trade, under date of August 26, the following:

> Let us point to another fact, and we are done. Never before have the large banking institutions of Chicago and the West ordered their gold in such large quantities direct from Europe, and in this fact is found one reason why our bankers are puzzled over the anomaly that although all these millions are coming to the country they experience little or no relief therefrom. The other reason, gentlemen, is, in order to force the repeal of the Sherman act and to quickly establish your power over the plain people of this land, you first sent out of the country one hundred and ten millions of the people's currency in order to assist the Rothschilds to demonetize silver in Austria and elsewhere, and then let it remain there, to teach the West and South an "object-lesson," as the President called it, until you found it was necessary to recall it in order to save your own house from destruction. Now, you have not only taught the West and the South an object-lesson, but yourselves one as well, and you can be sure of it.

THE SCHEME OF THE BANKERS.

I think, after what I have read, I may safely assume that the opinion is very general in this country that a scheme was organized early in the season in New York for the purpose of creating a financial panic which would compel an extra session of Congress for the repeal of the Sherman purchasing act, and I think the well-known and undisputed utterances of the Executive and the conduct of the Secretary of the Treasury bear out the inference that it was not to be the act of the banks alone, but that when the New York Sun says that the bankers were to work not only in New York but elswhere with the Administration, it spoke by authority.

I would not have anyone infer that I believe the bankers of New York intended to create just the condition of affairs that now exists. I think they undertook to create a distrust and a disturbance in the country that would justify the President in calling Congress at an extraordinary time, and thus secure action, first, on the purchase bill; secondly, on the proposition suggested by the Senator from Ohio, and suggested by them in their conference of bankers with the Secretary last spring—the issuance of a large amount of Government bonds, upon which they could continue to do banking business.

But, as stated in the article that I read from the Chicago Inter-Ocean yesterday, this panic got away from them a little. They rather overdid the business and frightened the people beyond even what they had intended. However, as stated in the paper I have just read, they are responsible for the condition, and if they get hurt they ought not to complain.

I stated yesterday that banks have two great functions—one to receive money and pay it out, and the other to transmit money from one section of the country to the other by way of bills of

exchange. I think I demonstrated that the banks of New York City, Philadelphia, Boston, and of, perhaps, some other cities, have absolutely broken down as banks of deposit or banks of exchange.

CIRCULATION.

There is another function for national banks—not for State, but for national banks—and that is to maintain a circulation for the people. That was one of the great purposes for which these banks were organized in 1884. We were told then, as we have been told since, as we were told by official utterances even as late as last December, that the banks of the country were ready and willing, or would be when properly organized, to furnish to the people of the United States a sufficiency of currency which should always be as good as gold.

There are two things with reference to the currency that the people are particularly interested in, and which of the two they are interested in most it would be somewhat difficult to say. They are interested, primarily, I suppose, that there shall be a sufficiency of money, for by a sufficiency of money only can you maintain prices. By a sufficiency of money only can you maintain the equity of contracts. They are also interested that it shall be good money: that if the banks undertake to issue circulation it shall be as good as any money the Government issues.

I propose to deal with these banks for a few moments as banks of issue, and I think I can demonstrate very satisfactorily to everybody that as banks of issue they have been as great failures as they have been as banks of deposit and banks of exchange.

By the original act, as I recollect, without having looked at it, but speaking from memory—if I am incorrect some Senator can correct me—they were originally limited to $300,000,000. That has been extended since so that my recollection is that the limit is now in the neighborhood, if not quite, $400,000,000—$380,000,000, or in that neighborhood.

Some Senators around me say that the entire limit was removed. I am inclined to think on reflection that the limit has been removed, but for the purpose for which I am speaking it is immaterial whether it has been removed or not, because at no time have they ever approached the limit that was provided for them by law. I believe, without absolute certainty as to the particular time, that they reached the highest limit some ten or twelve years ago, when the bank circulation reached $352,000,000 or thereabouts

Mr. PEFFER. Three hundred and fifty-eight million dollars.

Mr. TELLER. Three hundred and fifty-eight million dollars, the Senator from Kansas says. I am speaking now from recollection, not having considered the exact number of millions as being of any particular consequence. I see that it was $358,000,000 in 1882. The Senator from Kansas is right. What was the amount of bank circulation in existence last December? The amount that was supposed to be in circulation in the United States was $172,000,000. The amount for which the banks were responsible was $147,000,000, and at times since the issue reached $358,000,000, it has been as low as $124,000,000. There are three years in the history of banks since 1882 in which the circulation of the banks has fluctuated to the extent of $50,000,000 in each year.

In the fall of 1892 the money in circulation amounted to $172,000,000 and a fraction, of which the banks were responsible for $147,000,000; or, in other words, the banks had endeavored to reduce their circulation from $358,000,000 down to $147,000,000, and at one time, as I stated, they had let it fall to $124,000,000. The violent fluctuations in the currency then, which everybody knows are accompanied by more or less disturbance, are certainly an indication that the banks have not supplied the circulating medium of this country in a satisfactory way.

The Senator from Delaware [Mr. GRAY] asks me what is the difference between the circulation and what they are responsible for. When a bank under the existing law desires to retire its circulation, it does not do as it did under the original law, take its own notes to the Treasury and withdraw its bonds. The old original law required that the banks should take their own notes and deposit them in the Treasury in order to retire their bonds. It was changed in 1870 or 1874, I do not now recall the exact year. They can now take Treasury notes to the Treasury or they can take their own notes and deposit them. The difference between $147,000,000 and $172,000,000 is the money that they are supposed to have deposited in the Treasury of the United States for the redemption of their paper, but which has not been actually redeemed, and remains in circulation.

I find that between October 31, 1885, and October 1, 1886, there was a shrinkage of the circulation of national banks of $56,593,533. I find that between October 1, 1886, and October 31, 1887, there was a shrinkage of $50,495,589.

In 1890, when we came here and before the time of the passage of the much-talked-of and much-despised Sherman act, the national banks had in circulation $136,753,837; or, in other words, they had increased their circulation that year by $11,795,000. There was a general complaint of a stringency in money affairs in the country at that time. I spoke of that yesterday.

The Senator from Kansas [Mr. PEFFER] calls my attention to the fact that the limitation on the issue of national bank circulation was removed in 1875. I was under that impression, but I failed to find it in the few minutes I devoted to that point. If these banks have failed to furnish circulation in a proper manner, they have failed to perform any function of banking assigned to them by law. At least those banks that have failed to pay their depositors have, and the banks of the country have, failed to provide the requisite and necessary amount of currency.

WILL THE BANKS DO BETTER IN THE FUTURE.

I do not need to discuss the question whether in the spring of 1890, when we took steps to secure to the people more currency, it was needed. That it was needed was admitted by everybody. It was admitted by the officials of the Government. I never heard it disputed in this body, and I do not think it was disputed anywhere. It was said then that the banks could not furnish the money profitably, and therefore they declined. Now we are told that if we allow them to do so they can furnish all the money that is necessary and no other legislation is needed; that if we will pass this bill, which gives them 100 cents instead of 90 cents on a dollar of issue, it will so encourage them that I suppose we are to believe that the $585,000,000 of United States bonds still existing, or the amount not used for banking purposes, will be put into the Treasury and issue be made upon them. The past conduct of the banks indicates that they will not do anything of the kind.

Mr. President, there is no reason to suppose that if these banks are allowed to continue either with the present bonds or other bonds, unless there is some special privilege given to them they will furnish a suitable amount of currency. We all remember that in 1881, when there was a proposition to change the bonded indebtedness of the United States from a large interest-bearing debt to a smaller, when the provisions of the law required the national banks to take the bonds drawing smaller interest, they came to the Treasury in a month with $18,000,000 or $20,000,000 of their paper and deposited it, and declared they would withdraw all their circulation if Congress persisted in this to them objectionable legislation.

The amount of the circulation of the banks has increased or decreased, not according to the wants of the people, not according to the demands of commerce and trade, but according to their wishes, and practically with reference to the price of United States bonds. When the bonds went up high enough so that it was of more profit to sell them than it was to use them for issue in banking, they sold them and contracted the circulation, one time as much as $56,000,000 in a year. They can not now surrender more than $3,000,000 a month; that is, $36,000,000 a year. I understand the limit of $3,000,000 a month does not apply to banks that suspend or go into liquidation, but is the amount that can be voluntarily surrendered.

TIME TO REFORM THE BANKING SYSTEM.

I am opposed to the extension of the banking system of the United States as banks of issue. If the conduct of the banks at this time is to be a criterion of what it will be in the future, I am opposed to the extension of the banking system, or its continuance, for any purpose. I stated yesterday my opinion that the control of the paper money of the country should not be lodged with any corporation. I am opposed to giving to individuals or corporations the right to contract the currency at one time and to expand it at another, just as the speculative spirit of Wall street may demand. I believe it to be the prerogative of the Government of the United States, as it is of every other Government, to issue its own currency.

I submit to the honorable chairman of the committee who comes here in hot haste with a bill to give to these banks $19,000,000 or $20,000,000 of extra money, or $50,000,000 if they should see fit to put in an additional amount of bonds, whether it is not a good time, in view of their misconduct, in view of their failure to perform the functions imposed upon them by law, to reform the banking system in the United States. It will hardly do after we have heard the speech of the distinguished Senator from Ohio [Mr. SHERMAN] to assert that there is any longer any great haste in this proposed legislation, for he tells us in substance that the fright the people have been under in the United States for the last sixty days simply arose from a fear that we were about to go to free coinage, and I think after the vote in the House of Representatives the other day on that subject, even the most timid Wall street operator will have no fear on that point. If that is true, we have plenty of time to deliberate; there is no haste now, the cure has been found; confidence will be restored as quickly as the people can read of that vote.

GREENBACKS.

When the proposition came before the Senate on the amendment of the Senator from Missouri [Mr. COCKRELL] to increase the greenback issue, the Senator from Ohio assailed it with great violence and with considerable heat. He said, "Here is an indebtedness of the Government not due. You propose by your amendment to the bill to make it due. You propose to say that it is payable now." That part of the Senator's statement is true. How is it to be paid? By a note of the Government? It will still be a Government debt.

The greenback is nothing after all but a note of the Government, with a promise as to how it shall be redeemed, and when it shall be redeemed; but it takes the place of money in this country in the most satisfactory manner. It will go everywhere where the English language is spoken; nay more, it will go everywhere where civilized men will trade. It is good in Europe; it is good in Northern Africa; it is good in Southern Africa; it is good all over this continent—North and South.

Mr. ALDRICH. I do not wish to interfere with the orderly proceeding of the Senator from Colorado, but I should be very glad before he finishes his remarks if he will discuss the pending amendment offered by the Senator from Missouri [Mr. COCKRELL].

Mr. TELLER. Oh, I am coming to that.

Mr. ALDRICH. I am very glad to hear it.

Mr. TELLER. I will get down to that in due time, some time before the hour to adjourn arrives. I was speaking of the value of the greenback. It is a legal-tender paper between the citizens of the United States. It will not only buy, which is one of the desirable and essential qualities of money, but it will pay debts, which is a greater and more valuable function of money than that of purchase. It has never been discredited an hour since we undertook to make it good with gold or silver. Is it not better than a national-bank note that is not a full legal tender?

Oh, but says the Senator from Ohio, if you issue $40,000,000, or $50,000,000, or $100,000,000, you will have increased your demand upon the reserve fund, that sacred fund, that fund which gives the Senator from Ohio and his class of thinkers so much trouble and so much worry for fear it may be depleted. I submit to the Senate there is not a man who, when the Senator from Ohio made that objection, did not immediately remember that every national-bank note is a demand upon that reserve as much as a greenback. The Government of the United States has pledged itself to redeem the national-bank notes in greenbacks. That is the law and that has been the practice. If the bank redeems in money, satisfactory, lawful money at its counter, well and good. If the bank fails the Government of the United States has declared that it stands ready at all times to exchange for the national-bank note its note, which is payable on demand at all times in the coin of the realm, and by practice in gold.

Mr. GRAY. I should like to ask the Senator if the greenbacks which the Government pays out in the redemption of national-bank currency under those circumstances would not be a new issue of national currency?

Mr. TELLER. No; it is not a new issue.

Mr. GRAY. I would ask further, whether such a payment by such an issue of greenbacks out of the original stock of $346,000,000 would be a new liability of the Government or create a new demand on the reserve fund?

Mr. TELLER. If you increase the present bank issue from $172,000,000 to $500,000,000 there is just so much more paper in the country to demand of the Government greenbacks, and so many more people who can, if they choose, go to the Treasury and demand gold. There is nothing in the argument on either side. The suggestion made by the Senator from Ohio is absolutely worthless, in my judgment. There is no distinction, and nobody need be afraid of the issue of $100,000,000 of greenbacks because it is intrenching upon that reserve, nor need anyone be afraid of the issue of $100,000,000 of national-bank notes because it would intrench upon that reserve. It is a phantom; it is not worthy of attention.

Mr. SQUIRE. Would it not be necessary for the Government to have the greenbacks in its possession in order to exchange the national-bank notes?

Mr. TELLER. The United States holds itself in readiness at all times to exchange a greenback for a national-bank note, if any holder wants to have it exchanged.

Mr. SQUIRE. The Government must have the greenbacks in its possession.

Mr. TELLER. It ought to have them, and it ordinarily does have them. I do not know whether it has them now.

Mr. SQUIRE. That is the point I wished to elucidate.

Mr. TELLER. I do not know whether we have reached a point where the Government is unable to make its redemption, but I suppose the holder would take payment in gold at least, because it is just the same whether he takes it in greenbacks today and in gold to-morrow, or whether he takes it in gold in the first instance. Of course I do not pretend to deny that the greater the amount of paper money the greater the possibility is that some man will want to go and demand gold for it. It would be childish for me to assert that there would be as many demands made upon the Treasury Department if there were only $100,000,000 of paper money, as there would be if there were $1,000,000,000. That may be an object of fear and of distrust, but the difference is absolutely *nil* between a national-bank note and a Government or legal-tender greenback—each is a demand on the reserve.

Mr. ALDRICH. Would it interrupt the Senator from Colorado if I should ask him a question?

Mr. TELLER. Not a particle.

Mr. ALDRICH. Will the Senator give his opinion of the relative value, for security and safety, between a legal-tender note and a silver certificate or silver dollar?

Mr. TELLER. Will the Senator repeat his question?

Mr. ALDRICH. I should like to have the Senator's opinion as to the relative value as currency for the people of the United States of a legal-tender note and a silver certificate.

Mr. TELLER. That may depend on a great many circumstances. With the ordinary citizen there is no distinction whatever.

Mr. ALDRICH. As I understand the Senator, he takes the position that a legal-tender note without any reserve fund is equally safe and secure in the form of currency for the people of the United States as a silver certificate.

Mr. TELLER. I have made no such statement, and the Senator from Rhode Island ought to know that I have made no such statement.

Mr. ALDRICH. I should be very glad to have the Senator's opinion, if he has not made the statement, on that precise question.

Mr. TELLER. I hold that no paper money ever ought to be issued without some provision for its redemption in the money metals of the world. Upon that subject my record is well known, and the Senator from Rhode Island knew it just as well before as he knows it now. I have never suggested interconvertible paper. I have never given a vote in that direction. The silver certificate is by positive direction of law payable in silver dollars, and if the Senator wants to know whether I think a silver dollar is as good as a gold dollar I will tell him that in every department of life since silver dollars have been in use, since 1878, they have performed every function that the gold dollar has performed in this country, and I assert that there has been at no time any exhibition by the people of the United States of distrust either of the silver dollar or the silver certificate.

LEGAL-TENDER NOTES AND SILVER CERTIFICATES.

Mr. ALDRICH. The precise question which I desire to have the Senator from Colorado answer is whether a legal-tender note issued in accordance either with the amendment of the Senator from Missouri, which has already been voted on or the amendment which is now pending, is equally valuable and safe as a form of currency to the people of the United States with a silver certificate. I must confess I am ignorant of the Senator's views on that subject, and I think it has a very important bearing upon the silver question which is now before the Senate.

Mr. TELLER. I do not know that my comprehension is sufficient to take in that question. I do not think the Senator from Rhode Island knows exactly what he means himself.

Mr. ALDRICH. I mean exactly this, if the Senator will allow me: The so-called silver Senators, including the Senator from Colorado, voted the other day solidly, I think, for the amendment of the Senator from Missouri. I was trying to find out whether they favor the pending amendment of the Senator from Missouri, which provides for an indefinite issue of legal-tender notes without any metallic reserve. If the silver Senators are in favor of that amendment, and believe that a legal-tender note without any reserve is equally valuable as a form of currency with silver, then it is very plain to me, as I think it will be to the people of the United States, that it is a needless expenditure of public money to buy silver to secure notes.

Mr. TELLER. The Senator from Rhode Island is jumping before he gets to the stile.

M. ALDRICH. I am trying to find out where the stile is.

Mr. TELLER. I voted for the amendment of the Senator from Missouri. It is not true, as stated by the Senator from Rhode Island, that there is no reserve or no way to redeem the paper that was proposed to be issued under that amendment.

Mr. ALDRICH. There was no additional reserve provided.

Mr. TELLER. Oh, "additional reserve;" that is another question. The Senator would have us understand that we voted for paper that there was to be no method of redeeming. He

knows better than that. He knows there is $100,000,000 of gold now in the Treasury, and it might as well be $300,000,000 or $500,000,000 under the law, because there is no limit on it. The law simply says that there shall be at all times a sufficiency of coin to redeem every greenback that comes to the Treasury, and that is as true of all the new notes that may be made as it is of the old. So there is nothing in the suggestion of the Senator from Rhode Island. We have not voted for interconvertible paper; we have not voted for fiat money.

The Senator from Rhode Island is exceeding anxious to know how I am going to vote on the pending amendment. I have not examined it with a great deal of care, but I understand it is a proposition to allow the State banks to do what the national banks are doing.

Mr. COCKRELL. It proposes to allow the State banks, the savings banks, the private banks, the loan and trust companies, and any individual who holds a United States bond to do it. In other words, it proposes to give the masses of the people of this country some rights as well as national banks.

Mr. TELLER. On the proposition before the Senate, the amendment of the Senator from Missouri, the Senator from Rhode Island is exceedingly anxious to know how I am going to vote. I shall vote not as I have voted on many occasions. I shall vote for the amendment. Heretofore I have voted against paper money. I have never voted since I have been in public life, seventeen years, for an issue of paper money. I shall not now vote for an issue of paper money unless there is something back of it, nor would I vote for it if I did not believe the laws were ample to maintain it upon an equality with the best money metal in existence.

I shall vote for it for a variety of reasons. I shall vote for it in this case, I am frank to say, because I believe we have reached a time when more money has to be issued, when the people must have more money, and when, whatever may be the result of our action here, whether the law of 1890 is repealed or not, it is evident that the present stock of money is not sufficient, and it is apparent to every thinking man that if the law remains it is not sufficient. If there is a possibility of its repeal, which the Senator from Rhode Island declares there is, if he is correct when he says it is a "dead certainty" that it is to be repealed, then I propose to give to the people more money, and I propose to give to them the highest kind of money that there is, unless it be gold and silver. If we fail to secure for them gold and silver on equal terms I shall endeavor to give them, I think with the concurrence and approval of the great mass of the people of the United States, the next best thing, and that is a greenback.

I shall not by my vote here put any more power into the hands of the banks of this country. I shall not enable them any longer to paralyze the industries and enterprises of this country as they are doing to-day, to shut up the mills, to close the mines, and to send out into the world homeless, without opportunity to earn their bread, men who were sixty days ago earning good wages at profitable employment. That is what they have done, and that is what they are doing. They can not get my vote for any further continuation of their existence, and if I could have a fair opportunity to wipe them out I would wipe them out as quickly as it could be done, keeping always in mind the great commercial interests that would be jeopardized by a sudden cessation of their pretended exercise of their functions, which they are but badly exercising at this time.

I will be frank with the Senator from Rhode Island; I will be frank with the Senate. I am opposed to the further continuation of the banking system as banks of issue. I desire to withdraw from them the privilege they now have of issuing circulation, and because I am opposed to that I shall vote for anything that will make it unnecessary that they shall continue to exercise that illy exercised function.

Before I get through with voting on this bill I have not much question but that I shall vote for some things I do not approve of. I shall vote for everything that I think will make the bill better, so that if it should become a law it will be sheared of some of the harm that would come by giving to the banks unlimited power over the circulation of this country. I may vote for some things that I do not think are desirable, in the hope that if they shall become a part of the bill the friends of the measure might conclude to drop it and not further press it; and I believe that to be a perfectly fair parliamentary method when you are attacking a bill which you believe to be absolutely vicious.

Mr. ALLEN. Will the Senator from Colorado permit me to ask him a question?

Mr. TELLER. Certainly.

Mr. ALLEN. What greater safety to the people of this country is there in a national bank under the proposed bank act at this time than there is in an equal volume of United States notes?

Mr. TELLER. There is not any greater safety, unless the creature is greater than its creator. To whom do the people look when they have a bank note? To the bank that issues it? Not at all. They look to the Government of the United States for its redemption, and the reason, as was said here the other day, why nobody had ever lost a dollar by national-bank notes is not because the banks that issued the notes were solvent, for many of them have gone into bankruptcy. It is because the Government of the United States has stood behind them ready at all times to make them good, and that, too, without reference to whether the bonds were worth $1 or 50 cents. No matter where the security in the hands of the Government goes, the bank bill is as good as gold, because it can always be exchanged for a currency that will readily exchange for gold.

So it can not be pretended by anybody that there is any merit in the issue by the banks, or any reason why it is safer to issue bank paper than to issue greenbacks, for if there were $1,000,000,000 of bank paper issued the Government of the United States would be put in exactly the same jeopardy with reference to its redemption as it would be put if there were $1,000,000,000 of greenbacks issued, not that the Government would have to pay the bank bill in the first instance in gold or silver but it would have to maintain at all times either gold or silver in sufficient quantities to redeem all that should come, because if the parties desired gold they would go to the Treasury Department and get a greenback and then turn around and go into the next room and get gold or silver for it as they might prefer.

Mr. COCKRELL. Will the Senator from Colorado permit me to make a suggestion?

Mr. TELLER. Certainly.

Mr. COCKRELL. If the national banks were to take all the bonds and the bill of the Finance Committee was passed, then they could issue just as much money as could be issued under the amendment.

Mr. TELLER. I was just coming to that. There are in the United States now——

Mr. DOLPH. Will the Senator yield to me for a moment?

Mr. TELLER. Certainly.

Mr. DOLPH. There would be this difference between the issue of United States legal-tender notes and bank notes, would there not: The national-bank notes would be put into circulation on the security of Government bonds already issued, while the United States legal-tender notes would be issued upon the credit of the Government and must either be redeemed, when presented, from the gold reserve or from bonds authorized for that purpose? Is there not that difference between the issue of the two kinds of currency?

Mr. TELLER. I do not see it, Mr. President.

Mr. DOLPH. Perhaps I did not make myself clear.

Mr. TELLER. Yes; I understand the Senator exactly.

Mr. DOLPH. The security for the national-bank notes is the bonds of the Government that have already been issued and sold, representing the debt of the Government.

Mr. TELLER. Does the Senator from Oregon mean to say that the indebtedness of the United States represented by a bond is better security than the entire credit of the United States, for that is what the greenback is? The Government of the United States has given to these banks the privilege of banking upon a Government indebtedness, and whether that is a good basis of banking depends entirely upon the credit of the United States. If the credit of the United States is to be distrusted without the bond, it is to be distrusted with the bond.

Mr. DOLPH. I desire to have my suggestion understood and correctly stated. I was not discussing the difference in the security for the payment of a national-bank note and of a legal-tender note. My suggestion was merely that the increase of of bank-note circulation must be secured by bonds which are already in private hands, while the issue of legal-tender notes by the United States not only increases the national indebtedness, but when they are redeemed they must be redeemed by the gold already reserved for that purpose, or additional bonds must be issued and sold for that purpose.

Mr. TELLER. The greenback, as I have stated, is an indebtedness of the United States, and the issue of $100,000,000 of indebtedness of that character adds $100,000,000 to the public debt.

Mr. DOLPH. Exactly.

Mr. TELLER. Now, there is not any trouble about that. The difference between the Senator from Oregon and myself, as I judge from his statement, is that he prefers to issue an interest-bearing evidence of debt while I wish to issue that which bears no interest.

Mr. DOLPH. No, the Senator must not understand that I am expressing any preference whatever. He was discussing the merits of the issue of national-bank notes and of legal-tender notes, as I understood him. He correctly stated that the issue of $100,000,000 of legal-tender notes increases the national indebtedness $100,000,000, but the issue of $100,000,000 of national-

bank currency I understand does not increase the aggregate indebtedness. It increases the liability of the Government to redeem the national-bank notes if it becomes necessary, but the $100,000,000 of obligations of the Government must be deposited for that purpose. So in the aggregate while the circulation is increased the indebtedness of the Government is not increased. I think I am correct about that.

Mr. TELLER. The indebtedness of the Government is not increased, of course, by that method. What I was discussing is the difference between the burden put upon the Government. The Government issues its greenbacks, which are payable on demand, but we know, as a matter of fact, they are never to be redeemed, never to be actually paid; that is, when the statute provides that they are to be brought to the Treasury and exchanged for gold they are still treated as money; they are treated by the Government as simply an exchange of one kind of money for another, and the greenback goes out to do its duty as money the next day just as it did before.

There is, of course, a technical debt in the greenback. Nobody in this country believes to-day that the time will ever come when the Government of the United States will take up the greenback and exchange it for any other kind of money; I mean permanently retire the greenback. The people of the United States are wedded to that kind of money, and would never consent to that.

SHALL THE GREENBACK BE RETIRED FOR SILVER?

The suggestion has been made time and again to me, as a friend of silver and representing a section of the country that is particularly interested in providing a way silver might be used, that we might make a great use of silver by retiring the greenbacks. I have always replied that the people of the United States would never submit to the taking up of the greenbacks and their cancellation or destruction, They are to be the money of this country as long as the flag floats, and everybody might as well make up his mind to that fact.

Why should they not be? Is it any incumbrance on the Government that it has to-day $356,000,000 of paper money out, save and except the $100,000,000 that it keeps in its till? I will venture to say, not having seen the statement within the last year, that there have not been $40,000,000 of greenbacks presented to the Treasury for redemption since 1879. Up to 1890 there had been just $28,000,000 presented, and undoubtedly that presentation was largely by parties who desired gold for export.

Mr. PEFFER. And they went out into circulation.

Mr. TELLER. And, as suggested, when they came in they immediately went out into circulation and performed the functions and office of money.

STATE BANKS.

The Senator from Missouri asked me if the national banks could not issue up to the limit. They can extend their issue up to the $585,000,000 of bonds. They have now, I suppose, a little over $200,000,000 in the Treasury Department that belongs to the national banks—something over $200,000,000—leaving, perhaps, $360,000,000 or $370,000,000 of bonds that are available for banking.

If the banks desire it they can to-day take that entire indebtedness and make it the basis of their banking. They have not been willing to do it, and when it is suggested that we give to the State banks the privilege of doing the same thing then Senators foresee great disaster and great trouble to come from allowing the State banks to do exactly what the national banks are allowed to do. I do not myself see any danger.

The State banks are not quite as strongly intrenched in capital, perhaps, as the national banks, but yet they are conducted, I think, all over the country in as respectable a manner as the national banks. But whether they are or not, they can issue no paper under the amendment of the Senator from Missouri, unless they deposit with the Government of the United States the obligations of the United States exactly as the national banks do.

Let me ask the Senator what particular right have the national banks to insist that they, and they alone, shall issue currency in this country? If they had fulfilled the functions of banks of circulation and issued all the money that was needed, then they might with some face say to us: "Do not disturb us in the exercise of the privilege which we have exercised to the entire and complete satisfaction of the people by furnishing a good currency in ample quantities." They have furnished a good currency, because the statutes of the United States make it good; but they have not furnished it in quantities acceptable to the people, as everybody admits. We have been compelled within the last three years to issue $150,000,000 of Treasury notes because of the paucity of circulation, because the banks did not fulfill the duties imposed upon them by law to furnish a proper circulation.

The Senator from Ohio put the question pertinently, What would be our condition but for the $150,000,000 of Treasury notes which we had issued under the act of 1890?

DECREASING BANK CIRCULATION.

Mr. COCKRELL. The Senator from Colorado yields to me in order that I may give some figures in regard to the national-bank circulation.

Mr. TELLER. I shall be very glad to have them.

Mr. COCKRELL. I take from the report of the Comptroller of the Currency for 1892, on pages 50 and 51, the decrease of the national-bank circulation year by year, beginning with the year ending October 31, 1884, and running down to the year ending October 31, 1892. During that period the national banks lessened their circulation by the amount of $213,343,917. They sold their bonds at a high rate of interest, took dollar for dollar in greenbacks of their circulation, and deposited in the Treasury and gave up their bonds regardless of what effect it would have upon the business of the country.

Mr. TELLER. In that connection I desire to read from the report of the Comptroller of the Currency for 1890. On page 7 he says:

It is a well-known fact that the circulation of national banks is in process of retirement. During the five years ended October 31, 1890, the aggregate of their circulation based upon deposit of United States bonds has been reduced from $276,304,189 to $124,958,736, showing a net decrease during the five years of $151,345,453. The net average decrease for each of the past five years is $30,269,090.

With a growing population, with an increasing commerce and business, which demand at our hands every year at least $60,000,000 or $70,000,000, this agency, to which we had intrusted the circulation of the country up to 1890, curtailed it over $151,000,000 in five years.

Mr. ALLEN. May I ask the Senator what is there in the law, if anything, which prevents any of the national banks from either expanding their bank issues to the amount of their bonds or entirely retiring them, and by that means disturbing the financial condition of the country?

Mr. TELLER. The only limitation upon the banks as to the issue or retirement of circulation is that they shall not retire more than $3,000,000 a month. They may by that process retire $30,000,000 a year, as was being done prior to 1890, and bring this country to a state of distress, as they did then.

I repeat what I have before mentioned here, that when we came here in 1890, owing to the contractions of the currency by the national banks for the preceding five years, we found everybody admitting that there must be an increase of currency, and it was largely that sentiment which compelled the Senate to agree to the purchase of 4,500,000 ounces of silver per month. I know that every department of the Government at that time was in earnest that there should be an increase of the currency. So, I repeat now, that the national banks have as signally failed to perform the functions imposed upon them as circulating agencies as they have the performance of the other functions put upon them; and there is no reason now why they should have extra privileges or extra opportunities to extend their circulation.

BANKS AND LEGISLATION.

I am not moved against the national banks by prejudice or by passion. I hold that banks properly conducted are helpful agencies of commerce and business. Whenever banks confine themselves exclusively and wholly to a legitimate banking business, they may become valuable agents, I repeat, to commerce and trade; but when they interfere with the political actions of Congress, and when they attempt, as they have done on more than one occasion, to dictate to the policy to be pursued in public affairs, they have been absolute failures every time.

Who does not remember that when we were attempting to resume specie payments in 1878, the banks in New York City with one united voice were against resumption? That may seem strange to some, because the banks have assumed that they possess all the financial wisdom of the world, and that they can not be mistaken; but it can not be forgotten by some members of this body, at least, that the Committee on Banking and Currency of the House of Representatives went over to New York in the spring of 1878 and held there a conference, as Mr. Carlisle did last April, with the leading bankers of the city of New York. It was said it was to be a secret and a quiet conference, so that they might instruct the Banking and Currency Committee of the House of Representatives as to what should be their proper course as to resumption, which it was expected would commence on the 1st of the following January.

It however got into the newspapers that these wise men of New York, who regard every man who does not physically handle money as incapable of passing upon financial questions, had, with one united voice, declared that it was absolutely impossible to resume on the 1st of January. If any Senator is at all interested in that question he will find the whole matter brought out before the subcommittee on Banking and Currency, of which Mr. Thomas Ewing was chairman.

When we, as I have before stated, attempted to fund the bonds of the United States at a lower rate of interest the banks were opposed to it. I have not any question that the furore that has been created, by which the public has been disturbed, millions of money destroyed, and men sent to untimely graves by the improper interference of banks with legislative matters, by an attempt to pinch, as the paper states, the people of the West and to coerce and force them to accept their views upon monetary affairs, was brought about by the bankers to forward their own ends. A set of men more incapable of giving instructions as to national finance than the bankers of this country have never lived. They understand the rates of exchange and discount; they know how to collect interest; but as to monetary science, there is not one out of a hundred of them who has ever given it thought or attention. I say they have done nothing which would justify us in putting into their hands this great power.

I am going now to read a few words from the remarks of the chairman of the Committee on Finance [Mr. VOORHEES], with reference to the character of these banks. I do not believe that I can be accused of being radical or unfair if I quote the words, and rely upon them as correct, of the chairman of the Committee on Finance of this body in his speech delivered here on the 22d of August. He said:

But there are still further features of the present financial situation which, in my judgment, demand consideration, and which do not result from the Sherman act, except in so far as its unsoundness in principle and its outlawed character as an instrument of finance are seized upon to shake public confidence and create business distress, thus advancing the ends and aims, not yet openly avowed, of certain vigilant and powerful moneyed classes in this country and throughout the world. The bitter and determined assault which we have witnessed on the present Administration to compel an enormous issue of Government bonds has not gone unheeded by the American people, nor have the authors of this assault, and those interested in its success, escaped widespread and intelligent observation.

Mr. STEWART. From what page of the RECORD is the Senator reading?

Mr. TELLER. From page 394.

Mr. STEWART. What is the date?

Mr. TELLER. The date of the RECORD is August 23, 1893.

Motive is the surest trail on which to find the perpetrator of a deed, and, tried by this rule, the authors of the money stringency during the last five months, and of the incessant demand for a large increase in our bonded debt, stand plainly revealed.

By virtue of a Treasury regulation, rather than by explicit provisions of law, a gold reserve of a hundred millions has been held for years past in the Treasury for the declared purpose of redeeming a branch of the currency which has never yet been presented for redemption. By breaking this reserve, by reducing it below its fixed amount, it was supposed the Secretary of the Treasury would be under immediate legal necessity to issue and sell bonds, with the proceeds of which the gold reserve was to be kept at its maximum.

The attack, therefore, on the head of that column was swift and strong. With intervals of delay for ample and skillful preparation, these attacks have been repeated again and again, and have only slackened in their frequency and force since it has been found that the executive department of the Government can not be coerced in that way.

But the campaign of capitalists seeking a new supply of interest-bearing Government bonds did not confine itself to any one point of assault. While they operated with unrelenting vigor to break down the reserve of gold in the Treasury, and to that extent impair the public credit, they also startled this country and filled the world with the cry that American gold was running away from this silver-blasted country, chased out by silver money, and that there was no way to lure it back except to bait plentifully with Government bonds.

It is in this connection also that the Sherman act has been made to do double duty. It has been held to answer not only for the inherent and ineradicable vices which it does possess, but it has been charged with grave offenses in which it has had no part.

* * * * * * *

The Government proceeded in orderly and constitutional methods to coin $24,000,000 per annum of silver money for the use and benefit of the American people, and continued so to do for the next twelve years—

Having spoken of the act of 1878 in the previous paragraph—

during which time the increase—not the decrease, but the increase—of gold in the United States was at the rate of about forty millions a year. At the date of the passage of the Bland-Allison act the estimate of gold money in this country was $230,000,000, and when coinage ceased under that act the estimate was more than $700,000,000. And such was the fulfillment of the prophecies of 1878, and yet I am now expected to believe that the fair and legitimate coinage of silver, its free coinage upon a properly ascertained and determined ratio, will banish all our gold and put us on a single silver basis.

I must be pardoned for believing nothing of the kind. The shipments of gold which have taken place from this country in the last four or five months must be accounted for, to my mind, in a different way. They were a part of the same plan which attempted to sack the Treasury of its gold-reserve fund, to create distrust, fear, agitation, panic, and a withdrawal, as far as possible, of all money in circulation; and all this to be accompanied by a concerted outcry from terror-stricken business circles and from the whole national banking system that nothing can restore public confidence and save the public credit except the issuance of at least three hundred millions of interest-bearing Government bonds.

Sir, I have no desire to assail the national banks, nor any feeling to gratify in doing so. As a general rule, they are under the management and control of gentlemen standing high for ability and integrity. It is the system which I arraign and not the individuals who conduct it. Eulogies on the national banks as a system of finance are very familiar to us all. They have many merits, some of which I desire to avail the country of at this time, as is well known; and yet it may be replied to every word in their praise that the good the banks have done in handling a safe and reliable currency has come alone from the power of the Government which pervades them, while the evils they accomplish have arisen from the fact that far too much power has been left in the hands of men to tempt their avarice and ambition.

The merits possessed by the national banks are created and upheld, every one of them, by the official hand of the Government, by the bonds on which their notes are issued, by their official engraving, and by a vigilant and efficient administration of their affairs at the hands of the Comptroller of the Currency. On the other hand, the unrestricted, unrestrained, and unbridled power which is permitted to the management of these banks, whereby the circulation of money in the hands of the people can be, and often has been, suddenly fluctuated from a prosperous maximum to a stunted and distressful minimum, constitutes a standing and a frightful menace against the safety, the welfare, and the happiness of the great and most useful body of American people—those who have labor and the products of labor to exchange for money, and who have a right to expect steady and remunerative rates of pay.

The idea here presented is an appalling one. No other government within the boundaries of civilization, as far as I can learn, has ever committed to private parties the power to make money plenty, or money scarce; times easy, or times hard; business prosperity, or business bankruptcy; the power, in fact, to circulate the Government's own currency, or to withhold it from circulation, at such times, and under such circumstances, and in such amounts, as will inure to the benefit of private speculation and personal gain, rather than to the public interests. Yet, such is exactly the terrible power now possessed by those engaged in national banking, and such the power they have called into disastrous action.

If it be asserted and admitted that some of the banks have themselves suffered and fallen by the overthrow of public and private confidence which has taken place, it only adds one more illustration to the well-k own fact that a demon of destruction once raised sometimes escapes the control of its masters and turns and rends them. If panic-stricken depositors make sudden and unexpected runs for their money, catching now and then a bank less prepared for such an emergency than its better managed kindred, it is because the policy of th banks has first inspired them with distrust and finally filled them with terror.

In their attempt to force the Government into the attitude of a borrower to escape bankrupty, the banks have endangered their own credit, and in many instances totally lost the confidence of those who have trusted them most.

Further on, the Senator from Indiana said:

While in the midst of a fair and reasonable degree of prosperity, the volume of our circulating medium, even while the people were looking at it, suddenly shriveled away and practically vanished from their sight. As if by some infernal enchantment, money disappeared, as it were, in a single night, and left the people in mourning and deep trouble when the morning came. Have the men of active business, and the toiling millions who suffer most, been tempted in their distress to say that there is no longer any money in this country?

Mr. President, that is an indictment against the banks of this country from the head of the greatest committee of this body, and the unfortunate part of it is, that it seems to be based upon facts. It is in strict accordance with the evidence which I produced yesterday and to-day of their preconcerted effort to disturb public confidence; and that condition is still being continued in this country to-day.

PROFIT OF ISSUE.

The other day, when this question was before the Senate, the Senator from Ohio [Mr. SHERMAN] and one or two other Senators, I believe, said that there could be no great harm in an increase of bank circulation, that it would be a great advantage to increase it, and they stated, if I recollect correctly, that the banks really were reluctant to engage in issuing circulation; that there was no profit to the banks in having circulation, and that very many banks had abandoned it. That probably is true.

When bonds were selling for $1.24 and $1.28 the banks could undoubtedly make more money by getting the premium on the bonds than they could by holding the circulation out at that particular time. Then, in utter and entire disregard of the needs of the community, which they are supposed to serve, they immediately sold their bonds and retired their circulation.

The New York World, perhaps some ten or twelve days ago, contained an appeal to the banks to issue more money, and gave a statement as to the profit which could be made by using money at the present time, on account of the high rates of interest in the city of New York and the country thereabout.

I have in my hand the report of the Comptroller of the Currency for 1892, wherein he attempts to show that there is profit even at the price at which bonds were then selling, which was very much higher than their price to-day. I do not care to read the whole of it, or to take up the time of the Senate, but the Comptroller figures out a profit on circulation at the then price and puts the interest that the banks were to receive at that time at 6 per cent. When the rate of interest is much higher, of course the profits will be much larger. I shall not read the figures because they are somewhat confusing, but the Comptroller says:

It will be noted that by taking out circulation the banks realize in each case more than 6 per cent on the money invested in bonds. The money invested in the purchase of bonds as a basis of circulation yields in the case of 2 per cent bonds, 6.032; in case of 4 per cent bonds, 6.33; in case of 6 per cent bonds, 7.218.

Mr. STEWART. If the Senator will allow me, I have taken the trouble to figure out what the banks make out of the Government by their investments.

By the investment of $5,000 in gold in 1863—the bonds drawing only 4 per cent interest during the whole time—on a $100,000 bank the net profits would have been $108,700. The investment in 4 per cent bonds at one-tenth, renders an interest on the investment of 11⅛ per cent. It is made up in this way:

Take $100,000 in bonds. They cost $110,000. The banker receives back of his capital for his own use $90,000, leaving his in-

vestment $20,000. He also receives from the Government $4,000 a year interest. He has to pay to the Government 1 per cent on $90,000—$900. The bonds being at a premium, he has to have a sinking fund to make up the $10,000 premium, which is something over $600. Then he has to pay $150 for Department expenses, leaving him a net profit of something over $2,300; which is 11½ per cent interest per annum on his investment, without regard to what he makes on his currency. When the bonds rose to one-twentieth his investment was $30,000, and his interest account on his investments fell down to a little over 5 per cent. Then he sold.

If we pass the pending bill, and let the banker issue the full amount of circulation to the face value of his bonds, his investment would be only $10,000, and the interest on that would be 23¾ per cent. These are figures that the bankers can not deny.

The Senator from Iowa [Mr. ALLISON] asks me if that would not be so if a private individual were allowed to take the bonds? Yes; but the private individual would do better. If he took the bonds and received the 90 per cent he would not have to pay the tax, and would not have to pay the $150 to the Department, which the bank is obliged to pay. But if you deduct from that 1 per cent for taxes, it would about equalize it. The profits of the investment suggested under the amendment of the Senator from Missouri would be about equal to the other. Under the amendment the profit to the owner of bonds, not being a national bank, would be about equalized with that of the person having a bank.

IF NOT SILVER, SOMETHING ELSE.

Mr. TELLER. Mr. President, the American people to-day are suffering for the want of a proper and suitable currency. We have practically abandoned the old automatic theory of money. We have determined, I may assume for the present, that we will not open our mint for the free coinage of silver on equal terms with gold. I trust that the sensitive body over in New York called the board of trade, or exchange, or whatever it may be, will now rest in peace. They have been very much disturbed over there of late, every time anything has been said here in Congress, for fear something might happen contrary to their ideas of finance.

A few days ago the Senator from Nebraska, who sits on the other side of the Chamber [Mr. ALLEN], introduced a bill into this body for the free coinage of silver. In the press reports of the condition of the finances in New York it was said that when the board opened business began fairly. When you deal with New York people you must remember they do not know that there is any business outside of the Stock Exchange in New York. That is the only point they look at, and it is the only interest which they have. Business opened up fairly, the newspaper stated; there was a general rise in prices—not much, but a little—when, suddenly, someone came in and said the Senator from Nebraska had introduced into the Senate a free-coinage bill, and down went all values at once. [Laughter.]

I fear that we have reached a point when the New York bankers may rest satisfied that they will not have any free coinage during the present session, at least, and I suppose business will resume its normal condition over there, especially if they shall believe the statements made by a distinguished member of the Finance Committee to-day, that the real trouble in this country is that the people are afraid we are going to free coinage, or, if they believe, as some of them profess they do, that all the disaster which has come to this country—and I admit it to be great—is the result of the Sherman law.

They will rest themselves in peace, at least, that there is in the other body a very respectable number who believe with them, or at least desire to get rid of it; and I suppose in the normal and natural condition of things we ought to have high prices.

SILVER AND COTTON.

The Senator from Louisiana [Mr. WHITE] said yesterday that cotton went up 14 points on the vote for repeal in the House of Representatives. It is just as well that we should meet the subject fairly. Does the Senator from Louisiana believe that the low price of cotton is the result of the Sherman act?

It is possible that the low prices of securities, bonds, and mortgages which we want to sell, if the theory is correct that the Sherman act has endangered our credit in Europe, might be the result of that distrust; but have they refused to buy our cotton because they were afraid we were going to a silver basis or to free coinage? Sixty-nine million dollars' worth less of cotton went to Europe last year than the year previous. Does anybody tell me that the $69,000,000 worth of cotton was not bought because the people of Europe were disturbed over the character of the currency we have in the United States?

What had they to do with it? They had to pay us in the only money they had; they had to pay us in gold, or they had to induce the man who sold cotton to take some American securities which he might prefer for his cotton. Does anybody believe that the low price of wheat, a price never before reached in the history of this country, was in consequence of the Sherman law? Have they refused to buy our wheat and to eat it because they thought we might be on a silver basis?

Mr. STEWART. They did not refuse to buy wheat from India for that reason.

Mr. TELLER. As the Senator from Nevada suggests, they buy their wheat from India, which is on a silver basis.

Back of all this trouble, long before this act was passed, there was disturbance in Europe, as I stated yesterday. There has not been an hour since the trouble of 1889 and 1890, when they have not hoarded more of our securities across the water than they have ever sent back, and there has never since been an hour of financial peace in Europe, outside of France.

Germany, Austria, England, Italy, Spain, and Portugal have all been in financial distress. Is it strange that it should have reached us also? It reached us in 1890. We averted it by the timely issue of four or five million dollars a month of as good paper as was ever issued, exactly as good as gold. That $150,000,000 of paper performed every function which $150,000,000 of gold could have performed, and with just as much satisfaction. Does anybody believe that the condition of Europe could be thus disturbed and finances thus disordered, and the disturbance not have reached this country?

I yesterday called attention to the great losses which the people in Europe had suffered in the Argentine Republic, losses which they did not fully appreciate in 1890, but which they now fully understand. When the Bank of England practically, or a committee of bankers, took the assets of the Baring Brothers, consisting largely of Argentine securities, it was supposed that they would net at least $15,000,000 above the debt of the house of Baring Brothers. To-day they can not be sold for anything like the debt. So they now realize the losses which they have sustained, though they did not then.

Have times been any better abroad? Look at the losses in Australia—$120,000,000 of capital and surplus in the suspended banks, and $400,000,000 of deposits, more than half of which the best authorities declare will be a dead loss, if not three-fourths; and in many cases the owners of the capital will be called upon to make up the losses—loss of capital, loss of surplus, loss of deposits. Is it any wonder that they send occasionally some of our gilt-edged securities to exchange for our produce or for our gold?

We have been threatening for years that we were going to a gold basis. We have heard here repeatedly that that was our only salvation.

Mr. STEWART. And that was said in the Brussels conference.

Mr. TELLER. And we heard it substantially in the Brussels conference. One delegate at least declared in that conference that, if no arrangement was made, the Government of the United States would unquestionably repeal the Sherman law. It was Mr. Cannon who made that statement.

I do not find anywhere that it was contradicted by other members of the delegation, but I suppose it was made perhaps as a threat in the hope that something would spring out of it. At all events the people of Great Britain believed we were about to repeal the Sherman act, and the commission appointed to consider the question what should be the monetary system of India, declared in so many words that they did not proceed in the manner in which they had proceeded so much to raise the price of silver as to save a fall, which was threatened by the action contemplated by this Government.

So in the last days of June, 1893, the British Government—not India, because India had not anything more to do with it than you or I—changed the whole monetary system of 300,000,000 people, without their consent and without their knowledge. They destroyed practically more than $300,000,000 of money in the hands of those poor people in that country who work for a mere pittance. I have it on the authority of a member of the House of Commons, that they reduced the value of the rupee securities of that country more than a thousand million dollars.

Do Senators believe that these great financial losses can take place in a country with whom our relations are so close as they are with Great Britain, with Germany, and with other countries of Europe, without disordering our finances here? Nobody ought to be astonished that there is disturbance here. We ought to be happy that the disturbances are no greater than they are, when we consider the condition of Europe and when we contemplate the effort which has been made by agencies which should have been engaged in promoting confidence and peace amongst the people, but which have been engaged in creating distrust.

Mr. President, you can not return to the original conditions by simply repealing one act or another; you can not do it by giving to the people of the United States forty or fifty nor, as I believe, one hundred million dollars of money. I believe a considerable output of money from the Treasury now, if it could be made properly, would be a great relief to the country, and would

in some degree bring back prosperity; but you have to wait until the people retain the confidence which they have lost.

It has been said in this Chamber a hundred times since I have been a member of this body, and truthfully said, that after all the bulk of the business of the world is not transacted with money, but on confidence. To that I have invariably replied, when I have made reply, the confidence with which you do business must be proportioned to the amount of money. If you have a narrow foundation upon which to base your confidence, by and by your great structure of confidence will tumble over; and when it goes over, there is no way to redeem and save yourselves.

CREDIT AND MONEY.

Mr. SQUIRE. Just there I should like to ask the Senator a question. I ask whether it is not true that the less credit money, so-called, which a country has, the greater the necessity for more cash money? Is that not an axiomatic proposition in finance? Is not the great need for currency in this country today because of the lack of credit money, which necessitates the possession of cash for the payment of debts?

Mr. TELLER. Undoubtedly. When that occurs, when the edifice topples and goes over, no longer does confidence take the place of money. That answers the Senator. Then confidence no longer takes the place of credit; you must have cash; you must have money. You can do with little money when everybody is satisfied, and when everybody is satisfied with everybody else; when everybody believes the banks are sound, that his neighbor is solvent, and all things are going on properly and orderly.

When, however, the citizen begins to distrust the banker and when the banker begins to distrust the citizen, then confidence is gone and business is not transacted on faith, on credit. Then you must have money. That is our trouble now.

We have not had money enough in this country, and we are feeling the effects of it. If we had money enough the disasters of Europe would not have disturbed us.

I have said on this floor at least three or four times within four or five years that if any disaster came to the business of this country it would not come from our internal condition, but it would come from abroad. I think anybody who has studied affairs in this world knows that to be the case, and I think every man should have known that Europe was in a condition to have financial difficulties and disasters, and that they would reach us.

Mr. President, I do not know that I care to continue further at present my remarks on this subject. I do want to say one thing more, however. I want to call attention to the fact that nobody need be surprised at a financial disturbance all over the world. There has been for the last four or five years a great scramble going on in Europe for gold.

When the Brussels conference met in November last, it was admitted, I think, by everybody that the world was not in a satisfactory financial condition. If I am mistaken about it, the Senator who occupied a place on that commission so honorably to himself, and who is sitting in front of me [Mr. ALLISON], can correct me.

Mr. Rothschild, one of the British commissioners, a man connected with the greatest banking house in the world, stated, in so many words, that there was danger of a financial panic if the conference came to no satisfactory conclusion touching silver. Let me read what he said:

> Gentlemen, I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this conference were to break up without arriving at any definite result there would be a depreciation in the value of that commodity which it would be frightful to contemplate and out of which a monetary panic would ensue, the far-spreading effects of which it would be impossible to foretell.

At least three other members of the conference, not from this country, however, sustained him in the statement that the dissolution of the conference without their coming to some conclusion was likely to bring disaster to the financial world, and to prevent that, more than anything else, I think, the conference, instead of adjourning sine die, finally adjourned to meet at a future day.

I do not care to pursue this subject longer. Some phases which it presents it is impossible to discuss on the pending bank bill, but when the other financial bill shall be before the Senate I shall take the liberty of presenting my views upon some phases of the question which I do not care to consider in connection with this discussion, which I desire, so far as possible, to be restrained to the question before the Senate.

EXECUTIVE SESSION.

Mr. HARRIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After thirteen minutes spent in executive session the doors were reopened, and (at 4 o'clock and 58 minutes p. m.) the Senate adjourned until to-morrow, Thursday, August 31, 1893, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *August 30, 1893.*

The House met at 12 o'clock m. Prayer by Rev. ISAAC W. CANTER, of Washington, D. C.

The Journal of yesterday's proceedings was read and approved.

LEAVE OF ABSENCE.

Mr. FELLOWS, by unanimous consent, obtained leave of absence until the end of the week on account of important business.

Mr. DINGLEY. I ask that my colleague [Mr. BOUTELLE] may be excused for the present from attendance upon the session of the House on account of illness.

The SPEAKER. If there be no objection, the request of the gentleman from Maine [Mr. DINGLEY] will be granted.

There was no objection.

WITHDRAWAL OF PAPERS.

Mr. O'FERRALL, by unanimous consent, obtained leave to withdraw from the files of the Fifty-second Congress papers in the case of John P. Brock.

REPEAL OF FEDERAL ELECTION LAWS.

Mr. TALBOTT of Maryland. I ask unanimous consent to introduce a bill for reference.

The SPEAKER. As there is another matter pending before the House, this can only be done by unanimous consent. The title of the bill will be read.

The Clerk read as follows:

A bill to repeal sections of the Revised Statutes authorizing the employment of marshals and supervisors of elections.

The SPEAKER. Is there objection to the introduction of this bill?

Mr. DINGLEY. I think it had better take the regular course.

The SPEAKER. Objection is made.

URGENT DEFICIENCY BILL.

Mr. BRECKINRIDGE of Kentucky. I am directed by the Committee on Appropriations to present a bill, with an accompanying report, and to ask that the bill be immediately considered.

The SPEAKER. There being a matter before the House this report can only be made and considered by unanimous consent. It is a bill reported from the Committee on Appropriations, and is one of those reports which under the rules, when adopted, are privileged; but in the present condition of business unanimous consent is required. The Clerk will read the bill, after which the Chair will ask whether there is objection to its consideration.

The Clerk read as follows:

A bill to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes.

Be it enacted, etc., That the following sums, or so much thereof as may be necessary, be, and the same are hereby, appropriated out of any money in the Treasury not otherwise appropriated, for the objects hereinafter expressed, for the service of the fiscal year 1894, namely:

TREASURY DEPARTMENT.

Recoinage of silver coins: For recoinage of the uncurrent fractional silver coins in the Treasury, to be expended under the direction of the Secretary of the Treasury, $200,000.

Expenses of national currency: For distinctive paper, express charges, and other expenses, $25,000.

HOUSE OF REPRESENTATIVES.

To enable the Clerk of the House to pay to Members and Delegates the amount which they certify they have paid or agreed to pay for clerk hire necessarily employed by them in the discharge of their official and representative duties, as provided in the joint resolution approved March 3, 1893, $75,000.

The SPEAKER. Is there objection to the consideration of this report of the Committee on Appropriations at this time? The Chair hears none.

The bill (H. R. 4) was read a first and second time.

Mr. BRECKINRIDGE of Kentucky. If there is no desire on the part of any member to make any inquiry I will call for the previous question.

Mr. CULBERSON. I would like the gentleman to explain the provision in regard to free coinage.

Mr. BRECKINRIDGE of Kentucky. There is in the Treasury to-day about $10,000,000 of uncurrent minor or subsidiary coin. When such coin is sent to the mint to be recoined there is an average loss of 3 per cent. That is the percentage of loss which there must be upon the recoinage of the sum of $10,000,000. This bill is simply for the purpose of using the $200,000 appropriated by it to make up to the Treasurer of the United States on his books the necessary credit that will keep his account balanced, so that that money may be recoined and then be put into circulation. As it is now it can not be put out into circulation; but recoined, it immediately becomes available for that purpose, it adds to the assets of the Treasury available for circulation; and thus it will

put into circulation eventually some $10,000,000. This appropriation is not sufficient to coin the whole $10,000,000, but it will coin all that can be coined with the present capacity of our mints during the fiscal year ending on the 30th of June, 1894.

The other provision as to the payment of the clerks of members, Mr. Speaker, is rendered necessary because of the fact that to-morrow is the last day of the month, and it must come in as a deficiency, for the reason that this bill can not get through the Senate and be approved by the President quite in time to pay these employés on the 1st of September. But there are a great many persons who have been employed by the Members and Delegates under the resolution passed by Congress at its last session, which resolution, however, confined the payment of the clerks to the contingent fund of the House, which contingent fund is only $20,000 at this time. It is absolutely necessary, therefore, to make a larger appropriation, and the committee have made an appropriation covering the amount they believe will be necessary up to the 1st of November next.

I will say further that this bill is the unanimous report of the subcommittee on the deficiency, as well as the unanimous report of the Committee on Appropriations itself, and I ask the passage of the bill.

Mr. RICHARDSON of Tennessee. Will the gentleman allow me to interrupt him for a question?

Mr. BRECKINRIDGE of Kentucky. Certainly.

Mr. RICHARDSON of Tennessee. In reference to the compensation of clerks to members, I wish to know if this amount, now proposed to be appropriated to provide for the employment of clerks, includes their payment since the beginning of the extra session convened on the 7th of August?

Mr. BRECKINRIDGE of Kentucky. It does. This provision is for the purpose of providing, upon an estimate, as far as we are able to make it, for the pay of the clerks from the beginning of this session until the 1st of November, and probably a little longer.

I now ask the previous question.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time; and being engrossed, it was accordingly read the third time and passed.

On motion of Mr. BRECKINRIDGE of Kentucky a motion to reconsider the last vote was laid upon the table.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one its clerks, announced that the Senate had passed the bill (S. 721) to authorize the Commissioners of the District of Columbia to appoint two additional clerks; in which the concurrence of the House was requested.

SETTLERS ON PUBLIC LANDS IN CALIFORNIA.

Mr. BOWERS of California. Mr. Speaker, I ask unanimous consent to introduce a resolution of inquiry and have it read and considered at this time.

The Clerk read as follows:

Resolved, That the Attorney-General is hereby requested to inform the House what action, if any, has been taken by him in the cases now pending in the United States courts in which the Southern Pacific Railroad Company has begun action to dispossess settlers upon public lands in Fresno, Tulare, and other counties in the State of California, said settlers occupying said lands by virtue of United States patents, or by complying with the laws regulating the entry of public lands. Also, as to whether he has any authority to appear in such cases and defend the right and title of the United States to such lands.

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. WILSON of Washington. Mr. Speaker——

Mr. BYNUM. Mr. Speaker, this matter is of so much importance that I think it should go to the committee, and I object to its present consideration.

Mr. BOWERS of California. Then I ask to withdraw the resolution for the present.

DONATION OF LAND, SAGINAW, MICH.

Mr. CATCHINGS. Mr. Speaker, I call up the report of the Committee on Rules——

Mr. BURROWS. I hope the gentleman from Mississippi will yield for one moment. My colleague [Mr. LINTON] is necessarily called away from the House and desires to introduce a resolution for reference.

Mr. LINTON. I ask consent, Mr. Speaker, to introduce a resolution for reference.

The Clerk read as follows:

Joint resolution (H. Res. 5) authorizing the Secretary of the Treasury to transfer a certain piece of land in the State of Michigan to the city of Saginaw.

There being no objection, the joint resolution was read twice, and referred to the Committee on Public Buildings and Grounds.

THE RULES.

Mr. CATCHINGS. I now call up the report of the Committee on Rules.

I would like to inquire, Mr. Speaker, before proceeding, if we can not come to some agreement with regard to the further time to be consumed in general debate. I suggest that we continue this general debate until 2 o'clock, and then proceed to consider the rules under what is known as the five-minutes rule.

The SPEAKER. The Chair will submit the request.

Mr. McCREARY of Kentucky. Mr. Speaker, I do not see any reason for taking nearly two hours for further general debate. Personally I should be in favor of proceeding under the five-minutes rule at once, unless some gentleman desires to have opportunity for discussion under the general debate.

Mr. CATCHINGS. I believe, Mr. Speaker, some gentlemen do desire to be heard, and while it may not possibly consume two hours, I have suggested that the debate be limited to that time. If we can end it sooner we will proceed then to consider the report under the five-minutes rule.

Mr. McCREARY of Kentucky. I shall not object to two hours if any gentleman wishes to be heard, but would prefer to go on now under the five-minutes rule.

Mr. CATCHINGS. I ask unanimous consent, Mr. Speaker, that general debate be closed at 2 o'clock, unless the debate exhausts itself before that time, after which the rules shall be considered by sections or paragraphs, under what is known as the five-minutes rule.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

SILVER.

Mr. BOEN. Mr. Speaker, if I am in order, I ask unanimous consent to have printed in the RECORD a petition of the farmers of the Red River Valley of the North, in the State of Minnesota, in favor of the free coinage of silver at the present legal ratio. I have received the petition too late to be presented during the debate on that question in the House.

The SPEAKER. The Chair will state to the gentleman that this time is assigned, by order of the House, for the consideration of this report from the Committee on Rules. If the gentleman can get unanimous consent, however, it can be done. The Chair will submit the request. The gentleman from Minnesota [Mr. BOEN] asks unanimous consent to print in the RECORD a petition relating to the free coinage of silver.

Mr. RICHARDSON of Tennessee. I object to printing petitions in the RECORD. It is unusual to do that.

THE RULES.

The SPEAKER. The Chair will recognize any gentleman who desires to address the House on the pending report of the Committee on Rules.

Mr. HOPKINS of Illinois. Mr. Speaker, I have an amendment which I desire to offer, and with the indulgence of the House will read my proposed amendment, and then submit one or two comments upon it.

Whenever any bill, resolution, or other matter for consideration in the House or Committee of the Whole is called for consideration or is under consideration in the House or said committee, and a motion to adjourn or other dilatory motion is made, the effect of which said motion is to delay a vote on the merits of the measure under consideration, the Committee on Rules shall at once call up for consideration a report from the committee fixing a time when a vote shall be taken on the merits of such measure.

Mr. SPRINGER. I ask that my colleague shall send his amendment up to the Clerk's desk and have it read. We could not hear it from his reading.

The Clerk read the proposed amendment.

Mr. HOPKINS of Illinois. Mr. Speaker, the merits of that proposed amendment, I think, will be appreciated by every member who has served in any of the previous Congresses, except the Fifty-first, where we had a rule by which the Speaker could ignore any dilatory motion. From the debate that was had here upon this floor yesterday, and from the fact that the gentleman having this code of rules in charge has presented them to the House without such a provision, it is apparent that that rule of the Fifty-first Congress will not be adopted by this House. It has been said, by gentlemen who favor the adoption of the code now under consideration, that the Committee on Rules will meet this question of filibustering whenever it is presented, and that they have the full power to stop it whenever in their judgment it has gone far enough.

Now, if we were sure that in every instance the Committee on Rules would act in the premises, then we could rest satisfied. But suppose a measure comes before this House, the merits of which are indorsed by a majority of the members, and yet the Committee on Rules, or a majority of them, are not in favor of that proposition. Under the rules which it is proposed to adopt

here, as presented by the gentleman from Mississippi [Mr. CATCHINGS], a minority consisting of not more than three men can absolutely block the wheels of legislation in this House, and hold it up from day to day until the committee having the bill in charge will be constrained to withdraw it from further consideration.

Now, it seems to me that this Committee on Rules, which under the rules have this power, should be directed by the House, by the adoption of the amendment which I have had read by the Clerk, whenever it appears that any minority in the House adopt filibustering tactics to defeat proposed legislation, at once to bring in a report and fix a time when the bill or resolution under consideration shall be voted upon on its merits.

Now, if this were a political question, there would be no trouble about it. But it oftens happens that a measure is one upon which there are no political divisions. It often happens that the question is one of a geographical rather than a political character, and it may come from a section of the country in which the members of the Committee on Rules are not interested at all, and hence they may sympathize with the filibustering of a very few members of this House and thereby tie the hands of the large majority. If this proposed amendment of mine is adopted in the language presented, it places it beyond the power of either the Committee on Rules or any small minority of this House to stop the wheels of legislation.

I think it is not necessary for me at this time to speak upon the merits of an amendment of this character. If it is opposed by the Committee on Rules, or by any gentleman, when the question comes up for adoption or rejection, I shall take occasion to still further elaborate my ideas upon this question.

[Mr. KILGORE addressed the House. His remarks will appear hereafter. See Appendix.]

Mr. GROSVENOR. Mr. Speaker, there was an episode in the deliberations of the House on yesterday which leads me to fear that we may drift away from unadulterated patriotism into the muddy and turbulent waters of partisanship. Having passed the Sherman repeal bill as a matter of patriotism, and having restored public confidence, I fear that this House may drift into partisan debate and discussion. I make my appearance in this debate for the purpose of presenting an object lesson to this House in opposition to that tendency.

The progress of the times in which we live, both in Europe and America, is toward parliamentary reform in the direction sought by a number of gentlemen on this floor. The time has gone by when an enlightened constituency will tolerate without reprobation a code of rules in the administration of a parliamentary body which under any pretext whatever is powerless to defend a majority against the aggressions of the minority. This system was intrenched in the British House of Commons behind a long series of precedents and a long period of toleration, which makes the appeal of gentlemen on the other side, or on this side, to the fact that we have lived under the same sort of system for a hundred years wholly unavailable as an argument.

We find that the British House of Commons, with only a small majority, in a very much larger body than this—nearly double the size of this House—at the suggestion of the leader on the floor, puts an end to the discussion and drives forward a bill carrying with it in its provisions the most radical innovation upon preëxisting legislation in that kingdom. And while the conservative opposition invoked the ghost of past precedents, they were met by their own record, which the people of England had more than once indorsed and ratified.

It is not my purpose to assail any other body but our own. Each branch of the American Congress has equal rights, equal privileges, and equal immunities; but unless the progress of the generation is to be turned backward, unless the experience of mankind for the past five years is to go for naught, there is no intelligent community, no patriotic and wise and enlightened constituency that will tolerate even the existence of a legislative body that will not place in the hands of the majority the power to go forward in the discharge of duty.

It may be a very important consideration to the man who is standing at the head of a minority, undertaking to block the wheels of progress, but in the long run the people of this country will not tolerate it; and whether it be the act of a majority in the House of Representatives, or whether it be the organized purpose in any other legislative body to thwart the will of the people of the United States, that minority and that factious leadership will be rebuked by the people of this country. These are the signs of the times that no man can fail to read who is intelligent enough to observe what is going on.

The step forward that was made in the Fifty-first Congress—then first made in Congress but not first in other legislative bodies in this country—was approved and ratified by the people of the country, in my humble judgment. The men who led in that reform, the men who stood on this floor and defended the right of the Speaker, independent of any question of rules, to say whether or not the legislative body was in this Hall or was somewhere else, are here to-day with the approval of their constituencies, armed and panoplied, and they will never yield the advocacy of that idea.

The gentleman from Nebraska [Mr. BRYAN], with an ingenuity which I can not help admiring, speaks of the fact that the Supreme Court of the United States, in passing upon the question submitted to them, only decided that the House of Representatives had a right to make a rule allowing the Speaker to announce the presence of a quorum, but I call the attention of the learned gentleman to the fact that nowhere in the United States, although the question has been directly and pertinently submitted over and over again, has a court of last resort failed to decide that the presiding officer of a legislative body may declare without the support of rules, without the authority of the rules of the body itself, whether or no there is a constitutional or legal quorum present.

In the State of Ohio a decision as to the counting of a quorum by the speaker of the house was made in 1877 for the first time. The question arose on an occasion as vitally important as the passage of a bill. Although the constitution of Ohio requires that there shall be a majority of all the members elected to the body voting in the affirmative in order that a bill may pass, yet at all the preceding stages of the bill it only requires a majority of a quorum to carry forward the business; and the speaker of the house, in 1877, when a minority refused to vote, and when those who did vote were in a minority of a quorum, deliberately counted the members present and not voting, declared the presence of a quorum, and the business went forward. I know whereof I speak, for I had the honor to be the speaker who made that ruling.

Two years later my successor, a distinguished and well-trained Democrat, to-day the admiration and pride of the Democrats of Ohio, our present consul at Liverpool, made precisely the same ruling against the party in whose favor I had ruled, and in favor of the former minority, who had then become a majority.

Afterwards the question arose in the city council of the city of Zanesville, and I will take pleasure in pointing out to the distinguished gentleman from Nebraska a unanimous decision of the supreme court of Ohio, made with both Democrats and Republicans on the bench, holding that the presiding officer of the city council had the right to declare that when, in a board of thirteen, five gentlemen voted aye and two sat still, the measure had been passed, and that the officer thereby elected should be inducted into office.

Without going into tedious details, I will state that such has been the decision, both legislative and judicial, whenever the question has been decided anywhere in the United States, and while I do not claim to cast my eye over the entire country, I know of no decision to the contrary; and I challenge the production of such a decision made by any court.

So, in the Fifty-first Congress the Speaker of the House of Representatives was right in declaring as a matter of parliamentary law and as a matter of fact that there was a quorum of the body present, and there has been nothing since that time but a mere effort to get rid of the force and effect of a decision which was, in my judgment, widely approved by the people of the country, by simply asserting that it has never been decided by the Supreme Court of the United States.

But it turns out that the very statement made by the gentleman from Nebraska shows that that was not the question that our friends on the other side were trying to have determined. They were claiming that the rules of the House could not confer such a power upon the Speaker. How else did the question get into the Supreme Court? How did the question arise there, if it did not arise upon the claim that, under the rules, the power could not be vested in the Speaker?

Now, Mr. Speaker, it is said by gentlemen on the other side that an overwhelming cyclone condemned the rulings of the Speaker of the Fifty-first Congress, and that his party was defeated by such an overwhelming majority as almost shocked the sensibilities of our Democratic friends. Well, sir, I take it that since the election there must have been a sort of riparian accretion of satisfaction and enthusiasm among our friends on the other side on this question. [Laughter.]

I have before me the figures of 1892, and they present some very singular answers to the suggestion that there was a tidal wave of Democratic victory in that year. There were cast in that election 12,154,142 votes. Of that total Mr. Cleveland received 5,556,533; lacking 520,737 of a majority of all the votes cast. And Benjamin Harrison, whom it is so very popular to sneer at here, received 5,175,577 votes—a much larger vote, if I am not mistaken, than was given to Mr. Cleveland four years before.

Mr. Speaker, there are some things disclosed by these election

returns which it would be wise for our friends on the other side to consider before they challenge and provoke analysis of the election returns of 1892. I refer now to the vote in a single State of the Union; and upon that I predicate my statement that Mr. Cleveland did not receive 40 per cent of the votes of this country for President. I refer to the State of Mississippi, simply because it happen to come under my eye more readily than the rest; a number of the States might suggest a similar remark. The State of Mississippi by the census of 1891 had a voting population of 271,000 in round numbers. At the election in 1892 she cast for the candidates for President 62,809 votes. At that election about 200,000 of her people were left at home; I do not know whom they would have voted for if they had had the full opportunity.

Mr. KILGORE. Would it be convenient for the gentleman from Ohio [Mr. GROSVENOR] to put into the RECORD, along with the statistics he has just quoted, the votes given for members of Congress in the fall of 1890, immediately after the adjournment of the long session of the Fifty-first Congress.

Mr. GROSVENOR. It would be convenient, but it would express nothing. Why, Mr. Speaker, one member of this House has come to me within a few moments, while I was preparing these statistics, and has said to me that there are seven members on this floor from a single State who received fewer votes for Congress in the aggregate than the majority which he had in his district.

There is on this floor a most distinguished member of Congress, representing a population, I assume, of 175,000 to 180,000, and yet he received only about 2,400 votes. I recollect a time when I, as a member on the floor of Congress, had cast for and against me more votes by 4,000 than had been given for and against the Representatives, ten in number, from a single State of the Union. So that, while I would gladly comply with the suggestion of my friend from Texas, any such exhibit would be a most misleading set of figures, telling absolutely nothing except the same tale which is told constantly by the failure of a large portion of the people of the country to vote.

Now, Mr. Speaker, I want to pursue for a very few moments a discussion of these rules. The distinguished Speaker of the House said yesterday that the proposed code "leaves it to the majority of the House, when it wants to move forward, to do so upon a report from a committee which is their committee." Mr. Speaker, we have no committees in this House which are the committees of the House; and, in my humble judgment, therein lies the whole trouble incident to our legislative system. No civilized country, so far as I know, that has a popular government—I may be wrong in this statement, but surely I am not wrong if I confine my remarks to the great leading nations of the earth, with their free legislative bodies—so far as I know, no other country has carried forward and made apparently perpetual and irresistible, certainly up to this time, the power of one man to control the legislation of a great body representing an enormous and intelligent constituency.

Underneath this whole system, in my judgment, there is a vital defect. My proposition is (and I wish to be brief and go forward as rapidly as possible) the House of Representatives of the United States, representing 65,000,000 of people, representing interests so diversified, extending from ocean to ocean—the interests of the manufacturer, of the banker, of the importer, and, then going westward, the interests of the agriculturist, the mighty interests that grow and dominate away across the continent to the Pacific Ocean—this body ought to be what it is not, a representative body of all these people.

This body originates laws most vital to the people of the country. This body is charged by the Constitution with the duty and the sole prerogative of originating revenue measures. Yet we hear constantly the statement made yesterday by the gentleman from Oregon, and approved, as I understood, by the gentleman from Nebraska, which is only a statement in condensed form of what might have been said every year for the last thirty years—a statement of the injustice that has been done to a mighty section of this country under our method of administration in this House. It all comes from permitting the Speaker of this House to appoint the committees of the House; and it is because I take this position and have taken it for years that I will vote to enlarge any committee, hoping that thereby relief *pro tanto* may be had against the system, which has grown to be the greatest abuse inherent in the legislative department of the United States Government.

Prior to the enactment of the law of the Fifty-second Congress, giving to each member of the House a clerk at the expense of the Government, a provision for which I voted in all the Congresses of which I have had the honor to be a member, there was placed in the hands of the Speaker of the House, indirectly it is true, but most potently nevertheless, a financial power, a power covered by dollars and cents, to aid very materially in substance and effect his appointment as Speaker of the House of Representatives. It was not a small matter that the chairmen of fifty odd committees of this House, some of these committees meeting but once or twice in a session and some of them never after their organization, were to be furnished at the expense of the public Treasury committee clerks with salaries ranging from $1,000 to $2,000 or $3,000 per annum.

But that is not all. No man should be in a position—I am here to make no insinuations; I have none to make; but I say no man should be put in such a position—a position to become the greatest power in the United States, a position with more power to promote or retard legislation than that exercised by any other twenty men—no man should be in a position to secure his election to such a place as that by the immediate, almost instantaneous use of such a power as is given to the Speaker of the House in the appointment of committees.

So, Mr. Speaker, my friends who are complaining here and justly complaining, the younger members of the House, the men who are hereafter to make for themselves careers, and there are plenty of them on this floor capable to make careers equal to that of any man who has preceded them in the House of Representatives—to them I will say if they will look into it they will discover, by examining back into the results of caucus action in this House, exactly where the trouble has arisen in regard to which these complaints are made all along the line. It is human nature. It can not be helped. We have grown up under a system here which suggests that a member shall be appointed to a position on an important committee based on his length of service in Congress.

That is a system which, to make it fair and just throughout the country, must be in the operation of a dictation to the people of all sections of the Union to keep in Congress a corresponding length of time their immediate Representatives. But the result is that in the new and growing States, where young, able, capable men are elbowing themselves to the front, they are not willing to sit down and wait for the State to grow into importance in this House by the longevity of the men who represent its various districts in Congress. Hence they are unwilling that their State shall take, as it were, a back seat in Congressional representation on committees; and we find as a consequence of the rule that has prevailed in this regard for so long a time that four or five of the great committees of the House are sometimes headed by gentlemen from a single State, with a great territory stretching across the continent totally unrepresented on the important committees which shape the legislation of this body.

Mr. Speaker, I have not time to suggest my remedy in its details, nor have I time to enumerate all of those abuses which have grown up in the course of time and which should be regulated. But I would follow the example, to a certain extent, of the House of Commons in England, the Legislative Assembly of France, and the legislative bodies of Belgium and Switzerland, and for this purpose and this purpose only and to this end, the practice in that regard of the Senate of the United States. The Senate of the United States does not permit its President—the man of dignified office, the man elected without any of the appliances which may be used in the election of the Speaker of the House of Representatives—they do not permit him to appoint the committees of the Senate in any instance, and in nearly all of the leading States of the Union the same rule prevails.

In my own State especially, and it is an intelligent State, a State with an experience a hundred years old, with a legislative history to challenge favorable comparison with that of any other State of the Union—in that State the senate, the leading legislative body of the State, forms its own committees on substantially the same basis as in the Senate of the United States. And why should it not do so? Here we have a Government based on the principle of representation from each State of the Union.

We have to-day in this body three general classifications, but we may make as many as there are in the French Assembly if we see fit. We can divide the body of the Representatives into Representatives from New England, from the Central States, the Mississippi Valley, the great Mississippi basin, the Western slope, the Southwest or the West, and the Northwest, or for the South if we see fit, and after these arbitrary subdivisions you may apportion the members of committees as is done in the Legislative Assembly of France.

Or we may do what is simpler and probably more popular. We may apportion the membership of the committees by common consent on the basis of party representation on the floor of the House, and then, as is done by the Senate, the members of the committee shall be selected by the caucus of the several parties according to the proportion that each party shall have.

But I only introduce this now as a sort of tentative suggestion. It is, however, because of this condition that the evils com-

plained of by my young friend from Washington [Mr. WILSON], and other gentlemen who have spoken, exist. These are evils of which they have a right to complain, and I say to them they can have no hope for the future correction of them, and that their sections will never be justly represented, until they take by the head this abuse and see that a representative basis is established that shall not be the voice and will of one man, that shall not be controlled under a system that has grown up as this has grown up, but which shall fairly represent every part of this country. Age and hoary-headedness is no excuse for the continuance of a system that has worked as badly as this has done.

I speak in favor of the amendment of my distinguished friend from Iowa. That is a relief. It strips from the Speaker of the House that unnecessary and unreasonable authority to say who shall be heard. I wish we could have at the opening of a session of Congress that experience among the new members that they will have at the end of a session of Congress, and they would know then exactly how to attack this abuse and destroy it, so that in representing their constituencies upon this floor on great questions of legislation they shall not be silenced by the arbitrary power of the Speaker to withhold recognition from them nor by the parceling out of the time by any committee of the House.

I have other views on this question which I should have been glad to have referred to at this time, but I am occupying the time that other gentlemen desire in this discussion. It is my own opinion that the march of events, the progress of parliamentary reform, which has just stricken down on the other side of the water a hoary-headed obstruction to legislation, will in the future dominate the minds of the masses of the American people so that they will demand and insist upon a reform in the House of Representatives, if not in the other branch of the legislative power of this Government. [Applause.]

Mr. HOLMAN. Mr. Speaker, it is quite apparent that a number of gentlemen desire to be heard on this subject. There is ample time, and I suggest to the gentleman having charge of this measure that there be an extension of time for half an hour or an hour.

Mr. OUTHWAITE. How much time does the gentleman want?

Mr. HOLMAN. I only want fifteen or twenty minutes, or perhaps less; but other gentlemen are seeking the floor.

Mr. DINGLEY. I would like to have fifteen minutes.

Mr. OUTHWAITE. I ask unanimous consent then that general debate be extended until 3 o'clock, the last thirty minutes to be controlled by the committee.

Mr. DINGLEY. Mr. Speaker, before that is done I would like to ask if it can be arranged so that I can have some time?

Mr. OUTHWAITE. I see no objection to the gentleman from Maine being recognized immediately after the gentleman from Indiana [Mr. HOLMAN].

Mr. DINGLEY. How much time does the gentleman from Indiana desire?

Mr. HOLMAN. Fifteen or twenty minutes.

Mr. DOCKERY. That will give ample time; that will give forty minutes before the committee takes charge, allowing twenty minutes to each of these gentlemen.

The SPEAKER *pro tempore* (Mr. RICHARDSON in the chair). The gentleman from Maine [Mr. DINGLEY] will be recognized immediately after the gentleman from Indiana has taken his seat. The gentleman from Ohio [Mr. OUTHWAITE] asks unanimous consent that general debate close at 3 o'clock, and that the last thirty minutes of that time be given to the Committee on Rules. Is there objection?

There was no objection.

Mr. HOLMAN. Mr. Speaker, the few minutes that I have I shall devote almost entirely to two features of these proposed rules; but before referring to them, following out the idea suggested by the gentleman from Ohio, I wish to call the attention of the House to a fact which I believe I have never heard mentioned in the House, and that is that the very first rules adopted by the first House of Representatives, on the 8th day of April, 1789, provided for the election of the committees of the House where the number of members exceeded three. I will read this rule of the House, which was adopted at the first session held under the Federal Constitution:

> Committees consisting of more than three members shall be balloted for by the House. If upon such ballot the number required shall not be elected by a majority of the votes given, the House shall proceed to a second ballot, in which a plurality of votes shall prevail; and in case a greater number than are required to compose or complete the committee shall have an equal number of votes, the House shall proceed to a further ballot or ballots.

That old rule seems to give a great deal of force to what has been said by the gentleman from Ohio. It is certainly a fairer measure to the whole country and to all members of the House than the investing of so extraordinary and gigantic power in the hands of any one member of the House.

Mr. Speaker, I exceedingly regret that the Committee on Rules have reported to the House a rule which four years ago, at the opening of the Fifty-first Congress, was more severely criticised and denounced than any one of the rules adopted by the Fifty-first Congress, except one. That is the rule in relation to the Committee of the Whole.

The first rules adopted by Congress provided for that Committee of the Whole House, and until the Fifty-first Congress, so far as I am aware, no proposition was ever made to reduce the number forming a quorum of that committee.

The reason for the action of the fathers is very obvious, as gentlemen will see, and it is this: It was provided that the great body of the business should be transacted in the Committee of the Whole, for the purpose of allowing proper deliberation and debate, and for the further purpose of preventing hasty legislation. On the 8th day of April, 1789, it was provided:

> It shall be a standing order for the day throughout the session for the House to resolve itself into a Committee of the Whole House on the state of the Union.

And every measure imposing a charge on the people was required to be considered in that committee without the trammels upon debate and consideration incident to the rules of the House. For myself I regarded that particular rule of the Fifty-first Congress as the most dangerous rule ever adopted in the House. Even in the early days of the Republic, when but light burdens were being imposed upon the people, that rule was adopted and deemed necessary for the safety of the Treasury.

Even then, Mr. Speaker, this wholesome rule was adopted with the idea of procuring economy and the safety of the public moneys; and now when we have enlarged our expenditures to a point where they exceed those of any other government, the limit probably running up in the neighborhood of $500,000,000, it is proposed to remove one of the safeguards which was deemed necessary by our fathers more than a hundred years ago, and which until the Fifty-first Congress no man, so far as I am aware, ever proposed to remove.

This is to be stricken down, and for what—to render legislation easy; to render the doing of business easy, and that means the plundering of your Treasury and the robbing of your people. I attach so much importance to this that I have nothing at all to say about the other rules which I think are subject to criticism. But, gentlemen, under that rule, I assure you, you will be powerless and helpless in keeping down the expenditures.

Mr. MILLIKEN. Will the gentleman permit me to ask him a question?

Mr. HOLMAN. Certainly.

Mr. MILLIKEN. Did not the Fifty-second Congress, with the safeguards up, make larger expenditures than the Fifty-first Congress, with the safeguards down?

Mr. HOLMAN. That is not exactly correct, but the foundation had been laid in the Fifty-first Congress; and the foundation of those large expenditures was laid under the rule which is to be established here.

Mr. MILLIKEN. That was done in nothing excepting in granting pensions, which I believe the gentleman very generally shared in passing.

Mr. HOLMAN. I do not quarrel with you about that. I have supported all the pension bills. I have uniformly supported just and fair pension legislation, and expect to continue to do so. That is a field in which this Government can not afford to be illiberal or unjust. While there may, perhaps, be frauds on the pension lists, in my judgment there are more instances where pensions fairly due have been denied than where pensioners have been placed on the pension list wrongfully or by fraud. I have no doubt, sir, that this Democratic House, as it always has, will see to it that every right of the pensioner is maintained; and the Democratic party will see to it that no soldier who served his country faithfully and well shall beg for bread.

But the foundation of the extravagant appropriations made by the last Congress was laid under this proposed rule, and for the purpose of doing business, and that was opening up an easier approach to your Treasury.

Mr. OUTHWAITE. Will the gentleman yield to me for a question?

Mr. HOLMAN. Certainly.

Mr. OUTHWAITE. Will you point out the instances to sustain the propositions you have just advanced?

Mr. HOLMAN. I should have to go through almost the entire record of that Congress. I should have to take up these items where great contracts were authorized, which involved enormous appropriations during the last two years.

Mr. OUTHWAITE. Would that be effected by the size of the quorum?

Mr. HOLMAN. Yes; in facilitating legislation.

Mr. OUTHWAITE. Were not every one of those passed under a roll call by a majority?

Mr. HOLMAN. Just a moment. You increase facilities for expenditure when you remove barriers, when you provide that fifty-one members may have charge of the great appropriation bills and control them, when you furnish extraordinary facilities, and they were furnished by this rule in the Fifty-first Congress, no one can deny that, notwithstanding the extraordinary length of the Fifty-first Congress——

Mr. McCREARY of Kentucky. I should like to ask the gentleman a question.

Mr. HOLMAN. Notwithstanding the extraordinary length of the session as a matter of fact, the appropriations were piled up beyond any past experience and necessities for further appropriations created, and they had to be provided for by the last Congress. Gentlemen will see that when this present Congress adjourns the appropriations as compared with those of the last Congress and those of the Fifty-first Congress will be reduced more than $60,000,000. The burden created by the Fifty-first Congress fell largely on the Fifty-second.

Mr. McCREARY of Kentucky. I want to ask the gentleman from Indiana a question.

The SPEAKER *pro tempore*. Does the gentleman from Indiana yield?

Mr. HOLMAN. Certainly.

Mr. McCREARY of Kentucky. The gentleman has been chairman of the Committee on Appropriations, and I will ask if it is not true that when we come to consider nearly all the appropriations bills they are considered with less than 100 members present? Is not that your observation?

Mr. HOLMAN. If that were correct, it will not change the proposition I submit. But as a rule quorums of the House have aid in forming the appropriation bills in Committee of the Whole.

Mr. McCREARY of Kentucky. Does it not give the power to one man to come in here and raise the point that a quorum is not present if it does not vote for an amendment he may offer and thereby stop all proceedings?

Mr. HOLMAN. I think, Mr. Speaker, that very few instances have occurred when an appropriation bill was being considered when less than a quorum was present. It has occurred, doubtless, but as a rule it has rarely been the case where there was not a quorum present.

Mr. BOATNER. Will the gentleman yield to me for a question.

Mr. HOLMAN. Certainly.

Mr. BOATNER. Does the gentleman from Indiana think that the appropriations of the Fifty-first Congress would have been less if the rules of that Congress had required a majority of the whole House to constitute a quorum of the Committee of the Whole?

Mr. HOLMAN. Well, I think that with the power of members to check for the time the wheels of legislation, securing deliberation and caution, there would have been a good deal less money appropriated.

Mr. BOATNER. Were not all these appropriation bills passed on a yea-and-nay vote, requiring a majority of the House?

Mr. HOLMAN. My friend understands that as well as I do. It is preparation of the bills that is to be considered.

Mr. BYNUM. Is it not a fact that the bills as reported by the Committee on Appropriations are put through Committee of the Whole with very few changes?

Mr. HOLMAN. There are always changes more or less. Some very important ones occur on most bills.

Mr. BYNUM. To what extent?

Mr. HOLMAN. Reducing the appropriations and sometimes in the millions.

Mr. McMILLIN. I will state to the gentleman from Indiana [Mr. BYNUM], with the permission of my friend from Indiana who has the floor, in response to his statement, that last session we reduced one appropriation bill, the Indian appropriation bill, about three-quarters of a million in the Committee of the Whole.

Mr. BYNUM. And it was put back in the Senate.

Mr. McMILLIN. No, sir; it was not put back. We cut down that bill three-quarters of a million dollars.

Mr. BYNUM. That was not saved in the Committee of the Whole?

Mr. McMILLIN. It was saved in the Committee of the Whole; and I will state further, in order that there may be no misunderstanding about it, as the gentleman from Indiana seems to be in confusion, what bill I have reference to.

There were two. In the first a saving was made in conference; in the second there was a saving of nearly a half or three-fourths of a million.

Mr. HOLMAN. Mr. Speaker, let us see what was the meaning of this rule adopted by our fathers. The meaning of it, the intention of it, was that there should be deliberation over any measure involving the expenditure of the money of the people. Gentlemen openly advocate here an approach towards the policy of the British House of Commons in this respect. Whither are we drifting? The British House of Commons held up to the American people as a proper model for their House of Representatives! In the British House of Commons forty members constitute a quorum. That body has but a single appropriation bill before it as a rule—the budget.

Gentlemen understand the entire difference between the conditions which prevail there and those under which we act. If that budget fails there is a change of the government, all upon a single measure. In a monarchical government like Great Britain they can very well afford to have a small committee of the whole and to allow a small number of men to legislate for the United Kingdom, for responsibility rests entirely on the men who, for the time being, constitute the government; but we can not afford to do it in this Government. Every member of the House is responsible. What right have the representatives of the people to be absent when the money of the people is being voted away? Yet that is what this proposed rule means. It is an invitation to absence.

Every gentleman here knows that the only real consideration that any one of the fourteen great appropriation bills will receive will be in Committee of the Whole. I have never in my life known a demand for the previous question on an appropriation bill, when it was reported from the Committee of the Whole, to fail; and when the previous question is ordered, then what? Debate is cut off, amendments are cut off, and but two motions can be made: a motion to recommit with a given instruction and an amendment to that instruction.

That is the end of it. The House is forced to a vote, and the bill goes through as reported from the Committee of the Whole, for of course the appropriation bills must pass. I never have known the House to recommit an appropriation bill except on a strong political issue. The whole business is done, as was contemplated by the rule of our fathers, in the Committee of the Whole; and yet it is proposed here to actually invite an increased absenteeism by providing in your rules that 100 out of 356 Representatives shall be a quorum to pass upon your great appropriation bills.

An aristocratic establishment like the British House of Commons can afford to do that; but, gentlemen, we can not afford to do it, and I appeal to this side of the House to stand firm against any temptation to abandon the interests of the people to a handful of Representatives, when it is our duty to be here on the floor looking after their affairs. The people have intrusted their affairs to 356 Representatives, not to 100 of them.

Absenteeism has increased quite rapidly enough of late years without needing any encouragement from the rules. The times have changed. I well remember the venerable John J. Crittenden, of Kentucky, sitting here, and when a night session was ordered, appealing to the House for leave of absence on account of his feeble health, he would say, "Mr. Speaker, in consideration of my feeble health I ask the House to excuse me from attendance at this night session."

Sir, it is very seldom that such an appeal is made now. Gentlemen simply stay away. And yet it very seldom happens that there is not a quorum present when an appropriation bill is being considered. You have fourteen great appropriation bills, gentlemen, and it is here proposed deliberately by a change of rules to abandon the control of those bills to a small minority of the House. Such a rule will tend to weaken and destroy that sense of responsibility and duty which should rest upon every Representative of the American people. It is an invitation to absence. Fifty-one men to vote away the millions that are drawn from the hard labor of the people of the United States! And this is proposed in the House of Representatives of the American Congress!

I did not hear a single Democratic speech in the campaign which elected the Fifty-second Congress that did not hold up to reprobation the monstrous fact that, instead of performing their duties, the majority in the Fifty-first Congress had made a rule which transferred to a majority of one hundred Representatives the power to vote away the people's money. I trust this House will not imitate that Congress.

Mr. Speaker, there is one other subject to which I wish to refer for a moment. It is this. Your fourteen great appropriation bills are divided between your committees as follows: The appropriations for the Agricultural Department are considered and prepared by the Committee on Agriculture; those for the Army by the Committee on Military Affairs; those for the diplomatic and consular service by the Committee on Foreign Affairs; those for the Military Academy by the Committee on Military Affairs; those for the Post-Office Department by the Committee on the Post-Office and Post-Roads; those for the Navy by the Committee on Naval Affairs; those for rivers and harbors by the Com-

mittee on Rivers and Harbors; and those for the Indian service by the Committee on Indian Affairs.

It will thus be seen that eight of the fourteen great bills are under the control of the committees having charge of the subjects to which the appropriations are to apply, while six of them remain under the control of the Committee on Appropriations. Now, I desire to make a suggestion which I had intended to make to the Committee on Rules, but I was not aware that the subject would come before the House at so early a day.

My suggestion is this. There is at least one of those remaining six bills that I think ought to be in the hands of the committee having control of the subject-matters to which the appropriation applies. I refer to the bill making appropriations for the payment of pensions, and I am glad to have the ear of the House for a few moments on that point.

That bill, as gentlemen are aware, involves a very large amount of money; and there is no argument in favor of either of eight appropriation committees having control of appropriation bills that does not apply with equal or greater force in favor of the Committee on Invalid Pensions having charge of the appropriations for pensions.

I presume I shall be asked the question why I had not thought earlier of the propriety of this change. Sir, the occasion for it never occurred until the last Congress; for up to that Congress, so far as I remember, there was never, with one exception, any legislation proposed on the bill making appropriation for pensions. In the Forty-eighth Congress there was a change made upon the pension appropriation bill in the compensation to be paid examining surgeons. That was a legislative provision; but I do not at this moment recall any other instance in which legislation was put upon that bill.

It is exceedingly desirable, Mr. Speaker, that if there is to be legislation on that bill, and if it can be placed there under the rules as they may now be adopted, that legislation should be prepared by the appropriate committee, and that committee is the Committee on Invalid Pensions.

Mr. DOCKERY. Does the gentlemen from Indiana think it wise to have the pension appropriation bill carry legislative provisions?

Mr. HOLMAN. No, not as a general rule: but does not the Military Committee provide legislation as well for the Army as for the appropriations for the Army? Does not the Indian Committee provide legislation in the Indian appropriation bill?

Mr. DOCKERY. But does not the gentleman think there ought to be legislation on an appropriation bill?

Mr. HOLMAN. No: I think not, as a general proposition. But it is the only practicable means of retrenchment. For retrenching the expenditures of Government legislation on appropriation bills can not be avoided. But my friend must bear in mind that there have been efforts to legislate on the pension appropriation bill, of which I am now speaking. If there is to be legislation on the pension appropriation bill, I for one wish it placed there by the Committee on Invalid Pensions, having the interests of the Union soldiers in charge.

Mr. DOCKERY. I think the gentleman from Indiana may safely proceed on the assumption that no legislation will be incorporated in the pension appropriation bill at this session.

Mr. HOLMAN. That may be all true; but the House will remember that there have been attempts to legislate upon that bill.

Mr. BYNUM. Does not the gentleman recognize the fact that under the rules which have prevailed in the House there can be no legislation on appropriation bills except in the reduction of expenditures?

Mr. HOLMAN. Yes, sir; that is the only way it can be done; but my friend will remember that there were three legislative provisions pending in the last House of Representatives as amendments to the pension appropriation bill.

Mr. PICKLER. More than three.

Mr. HOLMAN. Well, I remember three anyhow. What I want to say is that the proper committee to have charge of the appropriations on this subject is the Committee on Invalid Pensions; and I shall appeal to this side of the House to make that change as a measure of safety, a measure of prudence.

Mr. BOATNER. Does the gentleman think the Committee on Appropriations can not be trusted this session?

Mr. HOLMAN. I think they can be trusted very fully. That committee is a very able one, representing very well the various parts of the country. But at the same time neither that committee, nor any other, should have it in its power to take from the Committee on Invalid Pensions the right of initiating legislation with reference to the subject of pensions. I concede that there is no more patriotic committee in this House than the Committee on Appropriations. But appropriations for pensions do not belong to that committee as properly as they do to the Committee on Invalid Pensions.

Mr. DOCKERY. Does the gentleman think that if we change the rules so that the pension appropriation bill will hereafter be under the control of the Committee on Invalid Pensions it will result in a reduction of the appropriations?

Mr. HOLMAN. Do I think there will be a reduction by referring the pension appropriations to the Committee on Invalid Pensions? I do not think so; but if there is to be legislation on the pension appropriation of any kind I wish it to be inaugurated by that committee.

Mr. DOCKERY. Does not the gentleman know that the Committee on Appropriations always report the amounts estimated by the Department as necessary to be appropriated for the payment of pensions?

Mr. HOLMAN. Certainly; that was done in the last Congress, and always has been done. But, as my friend will remember, there was no attempt until the last Congress to legislate on the pension appropriation bill, except in the single instance to which I have referred.

I am aware that I should be chargeable with remissness or inconsistency in having deliberately sat by without bringing this subject heretofore to the attention of the House if it were not the fact, as I am now showing, that up to the last Congress legislation upon this particular bill was never attempted except in a single instance, and in that case it did not affect the soldier at all, but simply the examining surgeons.

Mr. DOCKERY. In view of the action of the House upon the amendments offered to the pension appropriation bill in the last Congress, does the gentleman apprehend that any attempt will be made at this session to incorporate legislation in that bill?

Mr. HOLMAN. I certainly can not tell. The House, I remember very well, voted down those proposed amendments by a strong vote in a strong Democratic House.

Mr. DOCKERY. Does not the gentleman think that, in the light of this experience, the appropriations can be safely left to the Committee on Appropriations?

Mr. HOLMAN. What objection can there be to intrusting the Committee on Invalid Pensions with this control over the pension appropriation bill? Is this committee in any respect inferior to the other eight committees which have charge of bills making appropriations of money?

Mr. DOCKERY. Might we not for similar reasons distribute all the appropriation bills in the same way? Should we not, for instance, give the Committee on the District of Columbia the power to report the appropriation for the government of the District of Columbia?

Mr. HOLMAN. No; I think that is a different case.

Mr. DOCKERY. That is where your logic carries you.

Mr. HOLMAN. No, sir; that is a different case.

Mr. CRAIN. May I interrupt the gentleman a moment?

Mr. HOLMAN. Yes, sir.

Mr. CRAIN. My suggestion may not be exactly germane to the subject-matter of the gentleman's present argument, but it has application to the rules in general. The gentleman has been in Congress a great many years and is a distinguished parliamentarian——

Mr. HOLMAN. I do not profess to be.

Mr. CRAIN. Can the gentleman tell me what real necessity there is for the existence of the Committee of the Whole on the state of the Union?

Mr. HOLMAN. The real necessity is this: it allows deliberation, it permits free discussion and the offering of amendments. The previous question and other rigid rules of the House do not apply. The rules of the First Congress, to which I have already referred, provided that a bill should be read through in the first place in Committee of the Whole; that it should then be read by sections for consideration and amendment, just as is done now in a full Committee of the Whole. Then, as now, substantially the whole business of considering a bill was done in Committee of the Whole. It is the Committee of the Whole, not the House, that prepares and perfects an appropriation bill. The proceedings in the House are purely formal; it is the Committee of the Whole House that, in fact, determines the measures of appropriation.

It will not do to say that the Committee of the Whole is analogous to other committees; that we have a Committee on Appropriations, consisting of 17 members, who frame the appropriation bill, and that we have this appropriation bill subject to be reconsidered by another committee, consisting of 100 members of the House. A quorum of the House should consider the bill. That would not do any more than to claim that the consideration by the Committee on Appropriations as a whole, on the recommendation of one of its subcommittees, should be conclusive on the House. In Committee of the Whole the bill really receives its first real, and, in fact, only consideration by the House as in committee, and is then reported to the House. Until it has received its consideration in Committee of the Whole it can not properly be before the House for action.

Mr. CRAIN. The gentleman is giving us a very interesting historical statement, which I presume, although I am not entirely familiar with the matter, is absolutely correct.

Mr. HOLMAN. Oh, the gentleman is not unfamiliar with the facts I have stated.

Mr. CRAIN. But I want the gentleman from Indiana to go a little further and tell us what is the real necessity for the existence, if any at all, of a Committee of the Whole House.

Mr. HOLMAN. It forms, I will state to the gentleman, a convenient method of considering a bill.

Mr. CRAIN. Why can not the House itself do that?

Mr. HOLMAN. A Committee of the Whole is the House, in reality, but working under rules which give larger freedom of debate and amendment. It is a Committee of the Whole House, but the Committee of the Whole is deprived of methods of ending debate and shutting out amendments which prevail in the House.

Mr. CRAIN. But the Constitution provides that a quorum of the House to do business shall consist of a majority of its members.

Mr. HOLMAN. Certainly. And a Committee of the Whole House, under the Constitution, contemplates a quorum of the members.

Mr. CRAIN. Whereas the rules now proposed provide that 100 members shall be substituted for the constitutional majority. Now, will the gentleman tell me the reason, if he can give any, that suggests itself to his mind why the House can not transact that business without the intervention of a Committee of the Whole?

Mr. HOLMAN. Undoubtedly the House could, but it never has done so.

Mr. CRAIN. There is no necessity for a Committee of the Whole, and the gentleman can not give any reason for its existence.

Mr. HOLMAN. It is the House itself. What is it but the House? Why, the very name, a "Committee of the Whole House," suggests that.

Mr. BOATNER. Is it not the House, however, doing business under a suspension of the rules of the House as to debate.

Mr. HOLMAN. It simply allows a greater latitude for debate and amendment.

Mr. CRAIN. Is it not a fact that the only difference between the House acting as a House and the House acting as a Committee of the Whole on the state of the Union is that you can not call the yeas and nays in Committee of the Whole, nor can you demand the previous question or make the ordinary motion to adjourn? Is it not also a fact that the Committee of the Whole tends to retard rather than to expedite business; and could not the Committee of the Whole, therefore, be abolished?

Mr. HOLMAN. What retards the transaction of business?

Mr. CRAIN. The existence of the Committee of the Whole.

Mr. HOLMAN. Of course it retards business. Why, I have never yet heard a Democrat arguing in favor of easy methods of legislation. In fact we denounced the Fifty-first Congress because of the facilities it afforded for reaching the Treasury. One of its actions that we most denounced was the easy access that it gave to the Treasury by preventing any resistance on the part of the minority from being effective. I for myself believe in minorities. I believe that minorities are often more valuable to the public interests in securing under just rules fair consideration of public measures than majorities. I do not have any apprehension on that score. An intelligent, firm minority is beyond question the strength and safeguard of good legislation. Is my friend in favor of adopting easy methods of legislation?

Mr. CRAIN. I beg the gentleman's pardon. I was not arguing in that direction. I was only asking a question.

Mr. HOLMAN. Excessive legislation is the peril of a republic. Easy legislation means ultimately profligate and corrupt government.

Mr. CRAIN. But does the Committee of the Whole expedite or retard the business of the House?

Mr. HOLMAN. It does not expedite it. It was not intended for that purpose. I think if it had done so it would have been abolished long ago.

Mr. BOATNER. Will the gentleman allow me to ask him a question?

Mr. HOLMAN. Certainly.

Mr. BOATNER. The gentleman's idea is that a minority ought to control. Now, I ask him how he expects to repeal the McKinley bill, or enact any legislation at this session, looking to important subjects of legislation touching the tariff, the election law, or other matters, if the minority is to control?

Mr. HOLMAN. The gentleman misapprehends me. I do not say that or anything approaching it. I am in favor of every measure involving an expenditure of the money of the people having the broadest latitude of discussion and consideration, and instead of opening up facilities and increasing opportunities for such legislation, I would much prefer to go in the opposite direction.

The rules of the House heretofore have been framed with a view to resisting objectionable legislation, and I would say now that I have never known a measure defeated by what is called "filibustering" that I thought ought to become law. I am aware of the fact that when the gentleman from Texas [Mr. KILGORE] occupied a large portion of the leisure time on a certain occasion here, my friend from Louisiana was very indignant. [Laughter.] But several other gentlemen on the floor were gratified with the defeat of the measure involved. It is also a fact that that measure has never made its appearance since.

Mr. BOATNER. Then you are in favor of the minority controlling the House? [Laughter.]

Mr. HOLMAN. I thought the minority was right. I was in favor of the fight on that bill.

But referring again to the proposed rule, I would just as soon, and rather, see the Committee of the Whole abolished, as to see it reduced to a hundred members, and to see a Democratic House inviting the absence of members from the floor and justifying their absence.

Just a moment more. We hear a great deal of indignant talk on the subject of motions for delay. When have they done any harm? Under rules intended to cut off such motions completely, your Fifty-first Congress was extended beyond any precedent in a time of peace. When, by filibustering, the bill for the refunding to the several States of the direct tax was postponed, no public injury came from it. No harm was done. In proper time and after proper consideration the measure became a law. When has any good measure been defeated by motions for delay? And yet, how many bad measures have been stricken down upon this floor within the memory of a large number of you gentlemen, and frequently by the resistance of a single man. I am not a filibusterer myself, and never have been, but I have——

Mr. DOCKERY. Aided and abetted. [Laughter.]

Mr. HOLMAN. I have looked on with satisfaction sometimes when it was going on. I remember one instance when under the leadership of one of my friends from Ohio [Mr. OUTHWAITE], who sits near me, as a filibusterer, you saved two millions and a half of money from the Treasury. Everybody knows now that that saving of money was a proper thing.

Mr. OUTHWAITE. The rules are not changed at all from what they were when that was done.

Mr. HOLMAN. Well, you will see; but I am answering this argument against "filibustering." I am standing up with my friend from Texas [Mr. KILGORE] upon that point. The people, I think, do not want to see legislation made easy for access to your Treasury. I do not want to see your rules made so stringent in their binding down of the minority that on the spur of the moment your Treasury can be readily reached. A little delay does no harm. We are employed by the year, gentlemen.

There is ample time and we are amply paid and can afford to stay here, not fifty-one of us, to look after an appropriation of five hundred millions of money, but all of us, except when necessarily absent from the House. I trust it will not go upon the public record that in the Fifty-third Congress a Democratic House deliberately contemplated the absenteeism of its members to such an extent, so negligent and so indifferent to the public interests, as to allow your principal legislation to be virtually controlled by 51 members of the House out of 356 members.

Your principal legislation is the appropriating of money from your Treasury, and I trust this House will not by its rules express such an indifference to the interests of the people and the appropriations of their hard earnings, gathered into the Treasury by excessive taxation. as to permit a committee of 100 members to control the most important legislation of the House.

Mr. OUTHWAITE. I yield ten minutes to the gentleman from Maine [Mr. DINGLEY].

Mr. DINGLEY. I understood I was to have more time.

Mr. OUTHWAITE. The gentleman from Indiana [Mr. HOLMAN] occupied the whole of the time.

Mr. HOLMAN. I am very sorry. I thought the Chair was to notify me when I had occupied the time allotted to me. I did not do it intentionally.

The SPEAKER *pro tempore*. The gentleman spoke forty minutes. The Chair was not authorized to call him down.

Mr. OUTHWAITE. I will ask unanimous consent to extend the time fifteen minutes, and that that time be yielded to the gentleman from Maine [Mr. DINGLEY].

The SPEAKER *pro tempore*. Does the gentleman mean to request an extension of the general debate until 15 minutes after 3 o'clock?

Mr. OUTHWAITE. Yes.

The SPEAKER *pro tempore*. The gentleman from Ohio [Mr. OUTHWAITE] asks unanimous consent to extend the time for general debate until 15 minutes past 3. Is there objection?

There was no objection.

Mr. OUTHWAITE. I yield to the gentleman from Maine [Mr. DINGLEY].

Mr. DINGLEY. Mr. Speaker, with one exception, I think that all the amendments which the Committee on Rules have reported to the rules as they existed in the last Congress ought to be adopted. They are in the right direction, although they do not go as far as they should.

The single exception to which I desire to call the attention of the House, and which I think is entirely in the wrong direction, is the proposed amendment to paragraph 4 of Rule XXIV, relating to what is known as the morning consideration hour. It will be remembered by many gentlemen here that in the Fiftieth Congress a forward step was taken in the direction of the facilitation of business in this House, and an hour was set aside each morning, after the reports of committees had been presented, for the consideration of bills upon the Union and House Calendars, which contain bills relating to public business exclusively, the bills to be designated by the chairmen of the committees as they should be called in regular order, each committee being assigned one hour on each of two days, making two hours in all.

The intention of that rule was to give the House an opportunity to transact business to which there was not very serious objection, business of a public nature, a large amount of this having constantly accumulated upon our calendars. That rule has been found to work so well that it has been continued during the Fiftieth, Fifty-first, and Fifty-second Congresses.

It is proposed now to amend that rule so as to allow committees to present private as well as public business during the morning hour. It will be seen at once that this is a departure from the original intention of that rule, which was simply to facilitate the dispatch of public business of a minor character. It seems to me, Mr. Speaker, that if we allow private bills to be presented in this morning hour, we shall find one of two things, or both, happening: First, either that some private claim will block the morning consideration hour and effectually prevent the transaction of public business; or that, in the desire of members to reach certain public matters in which they are interested, they will allow private claims to be passed in this House which ought not to be.

It seems to me that this proposed amendment is in the wrong direction; peculiarly so at the present time. Now is the time above all others when this House should be consulting economy, and not taking such action with reference to private claims that may be presented as will facilitate their passage more than the rules in the past have already provided.

I hope, Mr. Speaker, that this amendment will not meet with the approval of the House; and I hope that when the committee themselves shall contemplate exactly the character of this change, they will agree with me that it is a great deal better that the business to be transacted in the morning hour should be of a public nature exclusively, and not include private claims.

Now, a single word, Mr. Speaker, in reference to the amendment which the committee have reported, fixing a quorum of the Committee of the Whole at 100. I have sat in this House under the workings of the rule that has required a majority of the whole body to constitute a quorum of the Committee of the Whole, and when a quorum of only 100 has been required. I simply desire to say that experience has satisfied me that greater economy and greater efficiency have been secured under the hundred rule than under the other rule. I call the attention of gentlemen to what the practical effect has been of requiring a quorum of the whole membership of the House in Committee of the Whole, because I have noticed its workings here session after session and year after year.

Ordinarily gentlemen who wish to amend appropriation bills, so as to provide appropriations for objects of a doubtful character, seize upon the rule requiring a quorum consisting of a majority to press upon an unwilling House the adoption of an amendment which under other circumstances would not be adopted. How often have we seen in this House an amendment coming from outside the committee, making an appropriation for some object resisted by the committee, and when the friends of that measure had declined to vote for the very purpose of breaking a quorum, that the committee would be persuaded to yield to this demand for an increased expenditure by this use of the club requiring a quorum of the whole body.

My experience, Mr. Speaker, has been that we have secured the wisest legislation in the Committee of the Whole and the greatest economy by providing that the quorum required to transact business in the Committee of the Whole shall not exceed 100; and I have never seen a single instance where the reduction of a quorum to 100 has facilitated any undesirable appropriations.

Mr. Speaker, there is another point that I desire to call the attention of the House to. Of course, it is recognized by all that the rules of a body like this, composed of 356 members, legislating for a country of 65,000,000 people, with diversified interests, must provide some restrictions on the methods of transacting business. Not more than 10 per cent of the business that comes before this House, or is presented in the form of bills, can be transacted for want of time to cover all the objects that are proposed. There must be some power of selection somewhere as to what business shall be brought before the House.

Now, with reference to that, it has always seemed to me desirable that the House itself should select the business which it desired to transact. As it is now, and as it has been for years past, this business has been selected largely by the Committee on Rules, under a rule or order presented and referred to that committee and reported to the House. But it seems to me that it is not the most desirable way of selecting the business to be transacted by the House, and I will suggest that there are other methods by which the House itself can select its business; not that I reflect at all upon the manner in which the Committee on Rules have selected the business, because we must have some source of authority in the selection of business.

But what is there to prevent such an amendment of the rules as will allow any member, when that class of business is in order, to move to go into Committee of the Whole for the purpose of considering the Calendar of the Committee of the Whole, and couple with his motion a provision that a certain bill upon that Calendar shall be considered, with the right of one amendment; and thus the House itself be brought to decide for itself what bill it will take up on that Calendar.

Or, when a motion shall be made to proceed to the consideration of the House Calendar, why not permit the member thus recognized to move, in connection with that motion, that a certain bill upon that Calendar shall be considered, with an opportunity for one amendment, and thus allow the House itself to select the measure which it will consider?

I am aware that there would be some difficulties even in a selection in this manner, because there would at times be a conflict between gentlemen desiring the consideration of different bills; but it would avoid the difficulty which now exists when you commit to three gentlemen, a majority of the Committee on Rules, the right to determine what measures the House shall take up for consideration. And yet I am bound to say that, in the absence of other rules, the provision that the Committee on Rules may report a rule for the consideration of business is desirable. If we can have nothing more than this, then this should be had.

I make these suggestions without any reflection at all upon the action of the Committee on Rules in the past. I think they have endeavored to be fair in the selection of business; I think they have endeavored to select the business that they thought the House wanted to consider. But I see no reason why the House itself might not have within its own authority the selection of the business which it desires to consider, thus relieving the Committee on Rules of that duty.

But, Mr. Speaker, I do not regard this as the most serious difficulty in our present system of rules. What I regard as the most serious difficulty in our present system is the fact that under the rules themselves any single member of this House may commence the operation known as filibustering, and may actually prevent the House from reaching a decision as to matters upon which nine-tenths of the members desire to vote. I think that rules which permit a few men to nullify the wishes of the majority, as these do, ought to be amended in some important particulars. The remedy that was adopted by the last House, and which it is proposed to continue in this House, is to give authority to the Committee on Rules to report a rule to stop filibustering in each case when they desire to do so.

Now, Mr. Speaker, I should be as well satisfied to refer such questions to our present Committee on Rules as to any five gentlemen with whom I was ever acquainted; but why should we thus depute a matter which concerns every member of this House? Why should not the House itself, having taken up the bill which it desires to pass, have within its own authority the right to close debate when the proper time has arrived and the right to put an end to all dilatory motions? Is there any reason in the nature of parliamentary bodies why this should not be?

It was my fortune to be in the gallery of the British House of Commons during the great struggle on the home rule bill, a month or two ago, when I saw the speaker of the House of Commons exercising the right, under common parliamentary law, to prevent dilatory motions, when I saw the motion made by Mr. Gladstone to close debate and bring the house to a vote upon that important measure, and when I witnessed the struggle on the part of the Tories to prevent a vote, it carried my mind back to a time a few years ago when we saw in this House exactly the same course of procedure.

And yet, looking down as a disinterested spectator upon the scene, I could see no reason why the British House of Commons, composed of 670 members, or why the House of Representatives of the United States, composed of 356 members, should not, by a majority vote, have the right at the proper time to determine that debate should close, and that all dilatory motions should cease.

That, it seems to me, is a right essential to the preservation of free institutions, and I am sure that if we could get rid of all partisan feeling, and could bring ourselves down to the consideration of the subject in a common-sense point of view we should find no difficulty in agreeing about it.

What is the reason, for example, that the amendment suggested by the gentleman from Louisiana [Mr. BOATNER] should not be, in substance, adopted by this House? What is that proposition? It is that when the House has under consideration any bill, and the chairman of the committee or the member of the committee having that bill in charge shall move the previous question upon its third reading and engrossment, or upon its final passage, a vote shall be taken without dilatory motions, first on the previous question, and, if that be ordered, then that the House shall be brought to a vote at once upon pending amendments and the engrossment and third reading, or upon the passage of the bill. Why should not we, as sensible men, adopt such a proposition as that, and, once for all, put the majority of the House in control of its own business?

[Here the hammer fell.]

Mr. OUTHWAITE. Mr. Speaker, I had no desire to talk upon this report of the Committee on Rules, but as it has been subjected to some censure and some criticism, I feel it my duty to say a few words in defense of the report, and in favor of the propositions which have been assailed. It has been charged here that the Committee on Rules is taking unto itself arbitrary powers of an extraordinary nature for the purpose of controlling to the uttermost degree the legislation of this House. Members who are familiar with the rules of the last House, and who will glance at them, will see at once that the Committee on Rules have not extended or propose to extend their powers one iota.

There has been a slight change, but only this. Under the former rules it was provided that one day's notice should be given of a change of rules or of an order of business. That notice was usually given by some member offering a resolution for an order of business or for a change of rule, putting it in the box or filing it with the Clerk, and thus letting it go to the Committee on Rules. In no way beyond this was the attention of the House called to the proposition submitted, and frequently in such cases the Committee on Rules, more especially in the Fifty-first Congress, would report an order of business in lieu of the resolution which had been referred to them, which was as entirely different as if it did not relate to the same subject, although at the same time it had the same object in view—the expediting of the particular business to which the proposition had reference.

But the terms adopted were entirely different. It often happened that after the reference of such a proposition, and before its report to the House, circumstances had changed. For example, a resolution would be introduced fixing a future day for the consideration of some measure, or the business reported from some committee, and before the report of the Committee on Rules would be made the business of the House would have progressed beyond that day. Then the Committee on Rules, the business to which the resolution pertained having come before the House, would submit a resolution as to its disposition.

Now, I can say, because I had not the honor to be a member of the Committee on Rules in the last House, that I challenge any member of this body to point out a single instance in which the Committee on Rules arbitrarily or otherwise abused the privileges given it, or violated the rights of any member of this House, or in anywise did that which should subject the committee justly to criticism or censure.

The Committee on Rules under the rules here proposed has not the wonderful power that the gentleman from Mississippi [Mr. HOOKER] by his remarks might lead one to suppose. The Committee on Rules submits everything to you—the House. It has no legislation before it; it frames no legislative measures; it proposes no laws; it has no varying and conflicting interests to consider. The only interest that it has to consider is the interest of the country at large; and the progress of the public business is its chief concern. And this committee can, in the proper furtherance of these great objects, do nothing more than submit to the House propositions for its adoption or rejection. There must be some person or persons in the organization of this House charged with such a duty.

But grievous complaint is made that the Committee on Rules has on some occasions moved the previous question upon the order of business which it has reported. What of that?

Mr. REED. May I interrupt my colleague a moment?

Mr. OUTHWAITE. I have no objection whatever.

Mr. REED. I wish to suggest that the complaint made here is that under this rule the House has no opportunity to close debate and stop filibustering, although a majority of the House may desire to do so, unless the Committee on Rules will take the initiative; in other words, that the majority of the House is deprived of its right to do anything, unless with the sanction of the committee.

Mr. OUTHWAITE. That is a point which I will touch upon later. I want, first, to dispose of the matter I am now discussing.

If the House does not choose to vote in favor of the previous question, the control of the proposition reported passes into the hands of the opposition to it, or those who may wish to talk upon it or offer amendments to it. We can not compel you to vote in favor of something that your consciences or your judgments do not approve. I can see one objection to moving the previous question in cases of this kind, and that is that it sometimes cuts off the opportunity for oratory on the part of gentlemen whose notion is that the chief function of a statesman is oratory.

After the previous question is ordered, the main question is submitted to you; and if you do not approve of the proposition we have nothing more to say.

Now, as to enlarging the membership of the committee, it seems to me that would be simply to enlarge its power. If the Speaker is to be compelled to select representatives of all the different interests involved in legislation here, the committee would have to be enlarged to about fifty; and then there would be opportunity for those fifty to come upon the floor and bring up to the support of proposed orders of business all men of like thought upon the peculiar piece of legislation which they sought to have enacted.

When we start out to protect sections of this country, or to promote particular interests, where are we to end? The less we encourage the notion that certain sections of this country have interests so antagonistic to those of other sections, that there must be struggles on this floor on sectional lines, the better it will be for our whole country. There has been too much of such talk already.

Mr. Speaker, another proposition which this committee has submitted is assailed as vicious and unwise; that is the proposition to reduce the quorum in Committee of the Whole to 100 members. I recollect that when this subject was first broached here about four years ago I talked somewhat upon it. Standing where I now stand I objected to the proposition as a premium to absenteeism; and I even went so far as to say I believed it was unconstitutional. Well, I confess that I am educated a little above that view at this time. I have studied the subject more carefully in the meanwhile. Besides, I observed the workings of this rule in the Fifty-first Congress; but my observation then did not impress me with the value of the change so much as what I saw of the operation of the old rule in the Fifty-second Congress.

During that Congress I saw on this floor during proceedings in Committee of the Whole—I was about to say upon many occasions; but, without making any improper reflection, I will say that I saw upon more than one occasion a member offer an amendment to increase an appropriation, or to make an appropriation for some local matter, and when the Committee of the Whole voted down his proposition after fair discussion, joined in by himself and by other friends of the motion, and, although there was a quorum of the House present, some of whom were indifferent, I have seen the committee's business tied up all the rest of the afternoon because less than a quorum had voted. Sometimes we had to wait until the next morning for a full quorum before we could proceed. I have seen abuses of that kind retard business more frequently than I have seen the abuse of absenteeism resulting from the quorum being fixed at one hundred.

Now, gentlemen who oppose this proposition complain that it proposes to give to fifty-one men the control of all legislation which is considered in Committee of the Whole. Mr. Speaker, this rule proposes no exclusion of a single member of this House from his rights as a member of the Committee of the Whole. It contains nothing which will prevent any member of the House from being present in Committee of the Whole, if he desires to be. It is true that under this rule members may feel indifferent as to the proceedings of the Committee of the Whole, just as they may if a quorum consisted of two hundred; and under this indifference to legislation they may absent themselves. I observed, however, that when a quorum of the Committee of the Whole consisted of one hundred the attendance was just as good as when a larger number was required to do business.

We all know that the Committee of the Whole does not pass finally upon any measures; that when the bill is reported to the House there may be a call of the roll upon its passage, thus giving to every member opportunity to put himself upon record as

to his approval or disapproval of any particular measure reported from such committee.

Mr. DINGLEY. And there is opportunity for a separate vote on every amendment.

Mr. OUTHWAITE. I was coming to that.

Mr. McMILLIN. If the gentleman from Ohio [Mr. OUTHWAITE] will permit me, I wish to ask whether it is not the fact that when a bill is reported to the House from the Committee of the Whole there can be no separate vote upon the separate items of the bill.

Mr. OUTHWAITE. Upon the demand of a sufficient number of members, there can be a separate vote.

Mr. McMILLIN. On the separate items of an appropriation bill?

Mr. OUTHWAITE. Not on every item, but on important items there can be a separate vote; there can be an arrangement for a separate vote on any number of items while the committee is considering the bill. Such arrangements have often been made.

Mr. McMILLIN. But there can be no separate vote on any provision of the bill unless it was inserted in the Committee of the Whole as an amendment. The bill comes to the House from the committee as an entirety, and you can have no separate vote on each of its various items except under the circumstances I have indicated.

Mr. DINGLEY. But on every amendment you can.

Mr. McMILLIN. I made that exception.

Mr. OUTHWAITE. There can always be an arrangement made——

Mr. McMILLIN. Only by unanimous consent, and any one man can prevent your arrangement, and your bill is ready for action in the House as an entirety, except as to the separate amendments adopted in the committee.

Mr. OUTHWAITE. That is true; but it only goes to the point that each member interested in the different items of the bill shall be present during its consideration in committee.

Mr. McMILLIN. Then if the members are present your reduction of the membership of the committee does no good.

Mr. OUTHWAITE. I do not understand that kind of logic, that the reduction does no good simply because the members happen to be present. Members are often indifferent and do not vote, and the point, no quorum, is made.

Mr. McMILLIN. Because if they are present in Committee of the Whole your membership is the same as that of the House, and you do not need the amendment to the rules. There would be no necessity for such a provision if the members were present. If they are not present, they ought to be.

Mr. OUTHWAITE. There are many occasions when members may be present and, by inattention or inadvertence or lack of interest in an amendment offered, not vote upon the question presented, and thus show the lack of a quorum. This is generally the opportunity of the filibuster. The committee offers this change to prevent such delays, and I want to say right here that the Committee on Rules are not all opinionated about the proposition. If the House does not wish it, and chooses to vote it down, the committee will acquiesce. We have no wish to control the judgment of any member on this proposition. After careful consideration, we recommend its adoption.

But there is another reason, I submit, that it may be advisable to have this proposition inserted in the rules. It goes to the promoting of prompt action not only upon those questions which refer to voting money out of the Treasury, but also to those which relate to putting money into the Treasury. It goes not only to the appropriation bills, but to the revenue bills, which are also considered in the Committee of the Whole House on the state of the Union. As to their consideration, the experience of the past three or four Congresses shows that they are long drawn out; that when you come to the discussion of the several items of the revenue bills it takes weeks, and has taken months, before getting through with them: and that all members of Congress are not necessarily required to be present all that time—I mean during the discussion of every item of such a bill.

Members will take care, of course, to be here pending the consideration of those items or parts of the measures in which their constituents have an interest, and they will be here and vote upon them. But they are not necessary here on all other occasions during the discussion of the bill.

Therefore we may safely proceed with the consideration of the bill with 100 members willing and ready to vote on every item. Although this was the rule during the Fifty-first Congress—I will repeat now what I said before—that I do not remember an occasion that came under my observation in which the Committee of the Whole was any less in attendance than it was upon like occasions in the Fifty-second Congress.

As a matter of fact, the busines in the Committe of the Whole is as a rule done with a very much smaller number actively participating than one hundred. We all know of instances here when the votes on amendments in the committee have been perhaps not more than 10 on one side and 8 or the other, and no point of order of a quorum was made. No doubt many members who participate in the proceedings in the Committee of the Whole do not feel it necessary to vote on various amendments which are proposed. And yet the absence of a quorum on such occasions has sometimes completely blocked the business of this House for hours and even days at a time.

Now, I will speak of another proposition which has been offered, and that is the one in connection with the matter of recognition by the Speaker. The gentleman from Iowa [Mr. HEPBURN] offered a proposition to amend that portion of the report which relates to the matter of recognition. This question is one which has had the careful consideration of several Congresses. It strikes me that the gentleman's proposition would result in very much greater confusion than we have now.

It is that anyone that addresses the Chair must be recognized by the Speaker. Then if he is out of order the Speaker must stop him, or some one else may stop him. The rule is now that when business is going on and a member rises and addresses the Chair, the Speaker asks for what purposes the gentleman rises. Under the action of the proposed change a member might get upat any portion of the proceedings of the House, when he would be entirely out of order, and address the Chair, or at a time when he could not properly be recognized or could be recognized only for a particular purpose. It would lead to much less confusion, and certainly be more acceptable, if the Speaker asked him the question, For what purpose does the gentleman rise? and then informed him he could not then be recognized for such purpose, as he had intended, than if the Speaker recognized him and was forced to call him to order a moment later.

Mr. HEPBURN. Will it interrupt the gentleman to ask him a question?

Mr. OUTHWAITE. Not at all.

Mr. HEPBURN. As the rule is framed now, is it not in the power of the Speaker to entirely disfranchise a member on this floor during an entire session, except so far as casting his vote is concerned?

Mr. OUTHWAITE. If that be true——

Mr. HEPBURN. Will you answer my question?

Mr. OUTHWAITE. I intend to do so.

Mr. HEPBURN. Let me ask, further, was it not the intent of the rule now before us to put that power in the hands of the Speaker?

Mr. OUTHWAITE. No; it was not the intent of the rule. Conceding that such a state of affairs might result, there is no likelihood of its occurring. It is certainly a lesser evil than would result from several members rising together at different times during the business of the House and wrangling and struggling for precedence on the floor, as they would be encouraged to do by such a change as is proposed by the gentleman.

Mr. HEPBURN. Will the gentleman allow me to make this suggestion: That I am informed by a member of the late House that during an entire session of Congress he did not receive recognition of the Speaker once?

Mr. OUTHWAITE. I know nothing of that fact.

Mr. Speaker, I might appeal to the wisdom of preceding Congresses upon this subject. The following extract from a report made on the 9th of April, 1879, first session Forty-sixth Congress, from the Committee on Rules, by Mr. Garfield, and adopted by the House, on the subject of recognition in the House and in Committee of the Whole, I desire to give as an authoritative expression of the judgment of the House in this regard:

> With the exception of the last clause of Rule CXIII, which was adopted in 1805, these rules have remained unchanged for ninety years. In the nature of the case discretion must be lodged with the Presiding Officer, and no fixed and arbitrary order of recognition can be wisely provided for in advance; and the committee are of the opinion that these rules should not be changed.

And that wisdom has been indorsed by every Congress since the Forty-sixth Congress.

Mr. HEPBURN. May I ask the gentleman another question?

Mr. OUTHWAITE. Certainly.

Mr. HEPBURN. Is it not true that prior to the Forty-sixth Congress a rule, substantially the same as it would be with the amendment I have offered, was the rule of this House?

Mr. OUTHWAITE. I do not understand it so.

Mr. HEPBURN. And that it is the rule in the Senate to-day?

Mr. OUTHWAITE. Your former question would open up a discussion between you and me as to whether the rule prior to the Forty-sixth Congress is substantially the same as he proposes. I claim it was substantially the same as the rule now in force. You claim the contrary. I can not stop to discuss it further, but will let members who are interested in it look it up and construe it for themselves.

There is a proposition offered by the gentleman from Illinois

[Mr. SPRINGER] as to the order of business. The proposition is that certain committees, selected by himself as having the most important business—some four or six, I do not remember how many—shall have the authority to report an order of business for the consideration of their bills, and that that order of business shall be at once determined by the House. I believe that is a correct statement of the proposition.

Now, Mr. Speaker, in the Fiftieth Congress several committees assumed this jurisdiction. They reported orders of business, and those of us who had business in charge were busy reporting orders of business, special orders for our committees, and in a very short time the confusion became so great that it was necessary for the Committee on Rules to take charge of those orders of business. Each chairman felt that his particular measure was the great measure that the American people were pining to have considered and passed. Each one felt that it was of the utmost importance to the country, if not to himself, that the business reported from his committee should have a day or days fixed for its consideration. The result was confusion, which prevented any business from being transacted which was reported in that way. So it was insisted that all such resolutions should go to the Committee on Rules.

A member coming into this House for the first time might get the impression and perhaps come to the conclusion from the debates of yesterday and to-day, especially from the speeches made against the report of the Committee on Rules, that he had better vote against this report if he wished to see any legislation proceeded with or determined. He might think that nothing could be done unless with the consent of the Committee on Rules. That is not the case. Here are the calendars, to which the business of the several committees is referred; here is the call of the committees in the morning hour, giving daily the opportunities for the consideration of bills; here are the unanimous consents; here are the opportunities for the suspension of the rules, and there are other opportunities for proceeding with business.

As to the morning hour, concerning which the gentleman from Maine [Mr. REED] feels that we have not been so wise as we ought to have been, because we did not give it that elasticity with which it was clothed in the Fifty-first Congress. He saw but one side of that question, and that was the side favorable to his view of it. He has presented to this House the fact that after a bill has been considered for two hours—that is, one hour each on two succeeding days—it was necessary to pass a motion to go into Committee of the Whole upon some other bill in order to get rid of that bill which was under consideration.

As was stated by the other gentleman from Maine [Mr. DINGLEY] awhile ago, the morning hour for the call of committees is intended to permit committees to succeed in passing such legislation as there is not great opposition to. In such purpose it has proven most effective. I have seen the chairman of that committee which I regard as the greatest committee in this House, the Judiciary, secure the passage of several bills in the first morning hour. Other committees have had like success.

Now, under the system of rules in vogue in the Fifty-second Congress a bill sometimes got in the way of other business. It stopped us from proceeding in any other direction. It was there, and if it did not get through, and was not disposed of in two hours, it was necessary for the House to take some action in order to get it out of the way, and that is the objection to such a rule. It was not an unmixed benefit.

Mr. REED. Will the gentleman permit me to suggest to him that the power of the House to go on with such a bill rendered it unnecessary to make any arrangement with regard to that bill? The House had the power to go on with it until it finished it. The House was not limited by the expiration of the hour.

Mr. OUTHWAITE. That is what I say. You put it in the way of all other business—put it in a position in which the House must take affirmative action in order to get it out of the way. Is not that correct?

Mr. REED. Precisely, but it leads to a necessary extension of time to do it.

Mr. OUTHWAITE. It also made it necessary for us to frequently have motions and roll calls, in which considerable time was occupied, in order to get rid of the bill, so as to get at even more important business. We did not very often get rid of bills of that kind, however, because usually when the gentleman from Maine said "go" it went to the end.

Mr. REED. I will not encumber the debate with any remark on such delicate tributes. [Laughter.]

Mr. OUTHWAITE. The gentleman made another criticism which it strikes me is hardly justifiable. He spoke of the secrecy with which the Committee on Rules held its meetings. How often did the House of Representatives know what was going to be the order of the day or the business of the day during the Fifty-first Congress until the gentleman from Ohio [Mr. McKinley] came in and presented an order from the Committee on Rules which fixed an order or adopted a rule—I want to use a proper dignified term—framed by the Committee on Rules, which nobody knew anything about?

Mr. REED. The order was always presented to the full Committee on the Rules, which contained two members from the minority.

Mr. OUTHWAITE. Exactly; and the same proceeding was taken during the last Congress.

Mr. REED. I am not making any question of that sort whatever. There has been no lack of publicity of the action of the Committee on Rules of the last Congress, and I do not imagine there will be any in this; and the gentleman must not suppose that I based my criticism on that. That is a mistake.

Mr. OUTHWAITE. The gentleman made other criticisms which were not more exact.

Mr. REED. My point is that I did not make that criticism.

Mr. OUTHWAITE. The gentleman made one to which I must allude when he said that the Speaker had overruled one precedent set by his predecessors. The career of the gentleman from Maine in the Chair commenced by overruling the precedents of a hundred years, and also overruling his own opinion; and he continued to overrule his predecessors until the end of the session.

Mr. REED. I did not speak disrespectfully of the Speaker for overruling a precedent.

Mr. OUTHWAITE. I am not speaking disrespectfully of the gentleman from Maine for overruling precedents.

Mr. REED. I only spoke historically. [Laughter.]

Mr. OUTHWAITE. I am also putting a little history into the RECORD, only a little stronger.

[Here the hammer fell.]

The SPEAKER. The time for general debate is exhausted, and the Clerk will report the rules by paragraphs.

The Clerk read as follows:

3. He shall have general control, except as provided by rule or law, of the Hall of the House, and the disposal of the unappropriated rooms in that part of the Capitol assigned to the use of the House until further order.

Mr. REED. I would like to inquire if there is not an omission in that paragraph, whereby the corridors are no longer under the control of the Speaker?

Mr. OUTHWAITE. If it is, it is a misprint. There was no intention of leaving it out. If it has been omitted, it was omitted in the last Congress; but I do not know that it was.

Mr. REED. It formerly read the "Hall of the House, the corridors, and passages." That seems to be omitted. If that language is left out where does it leave the control—with the House?

Mr. OUTHWAITE. It will leave it with the House, or within the province of the Doorkeeper.

Mr. HOPKINS of Illinois. Would it not be better to amend that rule?

The SPEAKER. If the gentleman from Ohio will look to the rule prior to last Congress in the passage referred to he will see that it seems to have been unintentionally omitted.

Mr. REED. I would be very sorry to see the corridor taken from the control of the Speaker and put in the control of any other official, but if it is given to the House the action of the House can permit them to be invaded.

Mr. OUTHWAITE. I have the rules of the second session of the Fifty-second Congress, in which those words do not appear.

Mr. REED. Unless some good reason should be given for the omission I shall move to insert it. I move to insert the words, "and of the corridors and passages" after the words "Hall of the House," in the second line of paragraph 3.

Mr. SPRINGER. That is right.

The SPEAKER. Without objection this amendment will be considered as agreed to.

There was no objection.

The Clerk having completed the reading of Rule I—

Mr. OUTHWAITE. Mr. Speaker, I ask unanimous consent that the reading of Rules II, III, IV, V, VI, and VII be dispensed with. Those rules pertain to the election and duties of officers of the House, and no change in them is proposed.

There was no objection, and it was so ordered.

Mr. DINGLEY. Mr. Speaker, as I understand, the rules of the last House were referred to the committee, and they have reported them back with certain amendments?

The SPEAKER. Not technically. The committee have made a report, which is before the House.

Mr. DINGLEY. Then are these rules in the form in which they are reported by the committee to be considered as the matter before the House, so that all amendments must be offered to them?

The SPEAKER. Yes.

The Clerk read Rules VIII and IX.

Mr. CATCHINGS. Mr. Speaker, I ask unanimous consent that the reading of Rule X be dispensed with, as it has been already adopted by the House.

Mr. WILSON of Washington. Do I understand the gentleman to mean that there will be no opportunity given for amendment of Rule X?

Mr. CATCHINGS. The rule has been already adopted.

Mr. WILSON of Washington. Mr. Speaker——

Mr. REED. Mr. Speaker, I think that when we are having a general revision of the rules it is in order to offer an amendment to Rule X, even though it has been already adopted.

The SPEAKER. The Chair thinks the gentleman is correct, but the rule has not been read. If an amendment should be proposed to that rule, the Chair thinks it would be in order.

Mr. HOPKINS of Illinois. Mr. Speaker, I have an amendment pending.

The SPEAKER. There are no amendments pending.

Mr. HOPKINS of Illinois. It is an amendment that I presented during the general debate, for the information of the House, and it should come in after the completion of paragraph 57 on page 14 of the rules as reported by the committee.

The SPEAKER. That has not yet been reached.

Mr. HOPKINS of Illinois. Well, I made my statement only in view of the remark of the gentleman from Mississippi, that he proposed to omit the reading of this portion of the report.

The SPEAKER. The gentleman asks consent to dispense with the reading of Rule X only. Is there any amendment proposed to Rule X as heretofore adopted?

Mr. WILSON of Washington. I have sent one to the desk, which I ask the Clerk to read.

The Clerk read as follows:

Amend on page 6, so as to read as follows:

"On Ways and Means, to consist of nineteen members.

"On Appropriations, to consist of nineteen members; and that these additional members shall be appointed from the districts west of the Mississippi River."

Mr. WILSON of Washington. Mr. Speaker, the amendment which I have just offered to the rules provides for an increase in the membership of the two leading committees of this House, namely, the Committee on Ways and Means and the Committee on Appropriations, from 17 members to 19. I am not so much interested, sir, that the Committee on Rules shall be increased from 7 to 9 members as I am that the country west of the Missouri River, consisting of fifteen States and Territories, shall have some representation upon the Committees of Ways and Means and of Appropriations.

A close inspection of many of the committees will show that the members of the intermountain and Pacific coast country have not received those assignments upon the committees that their section and interest properly demanded. Take the great Committee on Naval Affairs. There is no membership west of the Mississippi River. Upon the Pacific coast is located at San Francisco one of the great naval stations of this country, and the Government is constructing a great dry dock upon Puget Sound in the State of Washington. That country is much interested not only in naval affairs, but in the development of the Navy by which and through which they can only hope for that adequate protection to which they are entitled.

To-day all of that country is without any protection whatever other than a single company of the United States Army located at Port Townsend, without fortification or without means of defense, and within the sound of the morning and evening guns of Great Britain from their naval station at Esquimault across the Straits of Fuca. And, sir, around this very Puget Sound have occurred some of the most historical incidents of our country. It is here that the great Democratic party took as their shibboleth "54° 40′ or fight," but we did not get 54° 40′, nor did we fight, either, because at that time and under the conditions then existing, the South was more interested in going toward the Southwest in search of slave territory than in securing territory in the Northwest.

Take the great Committee on Interstate and Foreign Commerce; an assignment to that section of the country seems to me would have been proper and legitimate, because through the Straits of Fuca passes a tonnage only fourth in the United States. Mr. Speaker, that country is greatly interested in commercial transactions and has been for many years.

Take the great Committee on Appropriations, in which the West is so much interested. Fifteen States and Territories have not been assigned upon that committee, and yet the greater amount of the appropriation in which they are interested arises in that committee, and they have no opportunity to be heard as they should be, except upon the floor of this House. The survey of public lands, the appropriations for land offices, the Geological Survey, and all these matters in which the West is so directly interested, can not be heard, except at such time as may be allowed them upon this floor.

If you will examine that committee you will find that the New England States have a representation of four, New York one, Indiana one, and Texas, Kentucky, Missouri, Georgia, Tennessee, Louisiana, Illinois, Iowa, Pennsylvania, are all represented; but the great country of which I have spoken, which is so intensely interested in appropriations for surveys and the continuance of local land offices, have no representation whatever.

Mr. Speaker, in a few short remarks made by me last evening, some of my colleagues have said to me that perhaps I was not satisfied with the assignments made to me by the distinguished occupant of the chair. To that I wish to enter a general denial. So far as I am personally concerned I am entirely satisfied with the assignment which the distinguished Speaker of this House has seen proper to give me; but when we come to look into the matter of assignments of others upon these committees, we find that the great West is, in my judgment, not fairly represented.

To illustrate: In the last Congress the distinguished chairman of the Committee on Appropriations brought in the sundry civil bill an appropriation of a certain fixed amount for the local land offices throughout the West, and, in addition thereto, required of the Secretary of the Interior that the number of land offices be brought within this amount.

Up to this date the Secretary of the Interior has not been able to so adjust the location of the various land offices as to bring this about, and at a single glance anyone can see how unjust it is. The local land offices throughout the United States not only support themselves, not only support the General Land Office in Washington, but turn into the Treasury annually a revenue exceeding the expenses all told.

In addition to this, Mr. Speaker, it is a great hardship to place upon the settler and the pioneer, who is blazing a pathway of civilization, an additional expense of going a long distance to secure his original entry and to make his final proof upon his homestead. For it is contemplated in the State that I have the honor in part to represent that it would compel many a settler to transport his witnesses, three in number, over 100 to 150 miles at a considerable expense to him and at a time when this should be saved to him, in order to make his final proof. Again, Mr. Speaker, the West is interested, more than it is possible to impress upon the members of this Congress, in the question of surveys.

Annually the great Committee on Appropriations brings in an amount, and it is an almost universal rule that it is impossible to increase this amount or in any way overrule the committee. It is settled in the committee room, and how unjust and ungenerous it is. We have no opportunity to secure an additional amount. In the last Congress the appropriation made was about $100,000. We had a long struggle over the amount. Think of it! $100,000 for surveys for all the public land States of this Union, to be divided proportionately among them all. We should have had $500,000.

In my State alone we have thousands of settlers upon unsurveyed public lands, waiting, day by day, month by month, year by year, for a survey of the lands, in order that they may secure titles to their homes. Annually, as I have said, this appropriation is brought in, and it is almost invariably a rule that, notwithstanding the members from the Western country make a vigorous fight for an increase, they are very seldom able to accomplish anything in that direction.

It is this and many other reasons, Mr. Speaker, that has induced me to offer the amendment that I have had read at the Clerk's desk. Many of the members on this floor are entirely unacquainted with the vast country west of the Mississippi and Missouri Rivers. We are a people that are interested not only in the growth and prosperity of that section, but of all sections of our common country. I believe that to be a great country. We are in the Union and we are interested in its prosperity, but our necessities are not understood. Think of it, Mr. Speaker; my colleague upon this floor, Mr. DOOLITTLE, has been assigned to the Committee on Arid Lands, and yet, sir, in the district he has the honor to represent, there is an annual rainfall of 108 inches every year. [Great laughter.]

The State of California is as much interested in the Committee on Ways and Means as any State in the Union, Pennsylvania not excepted. To my mind, to that State, California, the protective tariff is a necessity. Here vineyards and orchards are especially affected by it. Raisins, figs, and olives are produced by no other State in the Union, while oranges, lemons, prunes are also exclusively California products, if Florida is excepted. The raisin industry is now a flourishing industry in which ten millions is invested.

In California now there are more than 40,000 acres planted with prunes, and in 1887 the American people consumed 70,880,530 pounds of imported prunes, all of which could and ought to have been raised on the Pacific Slope. California alone among the American States produces olive trees which surpass in growth

and fruitage even those of Italy, and to-day there are more than 35,000 acres of olives in California, and the acreage is increasing at the rate of 25 per cent a year. California is one of the largest wool-growing States of the Union, and Washington is much interested, in fact her existence largely depends upon it, in whatever tariff may be placed upon lumber, upon hops, upon coal, upon barley, and upon lead.

It is these facts as I have stated, Mr. Speaker, that have constrained me to offer the amendment. We have waited year after year for assignments upon these leading committees. I know full well the great influence and great pressure that are brought to bear upon the Chair for these places, but it seems to me, sir, that we ought to receive more consideration than we have. We were not represented in the Forty-eighth, Forty-ninth, and Fiftieth Congresses, and it was only in the Fifty-first Congress that the distinguished gentleman in front of me [Mr. REED], who occupied the position you now hold, gave that recognition to the great West upon the Committee on Ways and Means, and the Committee on Rivers and Harbors, and the Committee on Appropriations, which they were justly and reasonably entitled to.

Sir, I appeal to this House to give us the representation we are entitled to. It is unjust, it is ungenerous—nay, more, it is unpatriotic to deny us upon these committees the rightful representation which all of the fifteen States west of the Missouri River believe we are entitled to. Mr. Speaker, I hope the amendment will be adopted. [Applause.]

Mr. HULICK. Mr. Speaker, I voted on this question under an impression—derived from the gentleman who made the motion—that there are not now on these two committees any members from the portion of country west of the Mississippi River. I have since been advised the impression under which I voted was wrong, and the fact is otherwise; therefore, I wish to change my vote to "no."

Mr. WILSON of Washington. Mr. Speaker, I extremely regret that I made a statement that has caused my friend from Ohio to vote aye when he preferred nay. I should have stated west of the Missouri River, instead of west of the Mississippi River, which would have been more correct, but I had reference to that great mountain country beyond the Missouri and Mississippi Rivers. However, he will find it true that there is no representative west of the Mississippi River. I believe my good friend, the gentleman from Iowa [Mr. GEAR], resides about two hundred yards west of the Mississippi River. While the gentleman from Arkansas [Mr. BRECKINRIDGE] resides west of the Mississippi River, his residence is east of Mr. GEAR, although the latter resides on the west of the Mississippi River.

So in fact we have no representative in that great intermountain country. These things can not be helped. I do not complain. I only desire to call it to the attention of the House and the country, and to show if I possibly can that we are much interested in that section in the development of the natural and industrial resources of this country, and equally desirous of assisting all sections of the Union and all classes of people, adding to their happiness and prosperity, binding them in one compact nation, and establishing our country as one of the greatest nations upon the face of the earth.

Sir, the coat of arms which is above me of the State of Washington when it was a Territory, has written there in the Indian language, the word "Al-Ki," the translation of which means "by and by." By and by, Mr. Speaker, when the center of population has crossed the Mississippi, we will control and dominate the policy of this Government, and when that day comes I know the people of that section will not be so unjust to your interests as you are now to theirs. By and by, justice will be accorded to us, because we will have the numerical strength to enforce it, and we propose to fight it out on this line as long as the Chair will recognize us, or until we get that justice and that representation which the great West is entitled to. [Applause.]

Mr. CAMINETTI. Mr. Speaker, in a House composed of 356 members it is difficult for any presiding officer to make a selection of 17 or even 19 members of a committee in such a manner as to satisfy all the members of the House. The interests affected by the action of the two great committees mentioned in the amendment of the gentleman from Washington are extensive and of great value. The whole Pacific coast, California in particular, is directly interested in any legislation which may be had upon the tariff question. It has been a difficult task for the Democratic party in that State to make any headway under the tariff-reform tendencies of the national platform of the Democratic party.

Now that an attempt is to be made to deal with the tariff, that State, as well as the country lying west of the Rocky Mountains, should have a representative on the committee which will formulate a law of such vital importance to that section.

In the work of the Committee on Appropriations we are equally interested.

The agricultural and commercial interests represented by the Pacific coast States and Territories are of such magnitude as to make it an imperative duty for those representing them on this floor to respectfully ask for this recognition. I hope the House will agree to the amendment.

The question being taken on the amendment of Mr. WILSON of Washington, there were—ayes 84, noes 115.

Mr. WILSON of Washington. I call for the yeas and nays.

The yeas and nays were ordered; 71 voting in favor thereof.

Mr. GROSVENOR. I rise to a parliamentary inquiry. Is it competent now to move to strike from the amendment the words, "west of the Mississippi River?"

The SPEAKER. The yeas and nays have been ordered on the amendment.

The question was taken; and there were—yeas 96, nays 163, not voting 94; as follows:

YEAS—96.

So the amendment was rejected.

Mr. CAMPBELL. I am paired with my colleague, Mr. BELDEN. If I voted I should vote "no."

The following additional pairs were filed with the Clerk:

Until further notice—

Mr. ENLOE with Mr. BOUTELLE.

Mr. HATCH with Mr. HARMER.

Mr. STEVENS with Mr. RANDALL.

Mr. GRAHAM with Mr. LINTON.

Mr. BRANCH with Mr. SETTLE.

Mr. SHELL with Mr. MARSH.

Mr. COCKRAN with Mr. SHERMAN.

Mr. MAGNER with Mr. CHICKERING.

Mr. RUSK with Mr. AITKEN.

Mr. MAGUIRE with Mr. HAINER.

For this day—

Mr. TALBOTT of Maryland with Mr. COOPER of Wisconsin.

Mr. O'FERRALL with Mr. O'NEILL of Pennsylvania.

Mr. HULICK. Mr. Speaker, I voted on this question under an impression derived from the gentleman who made the motion to amend, that there are not now on these two committees any members from the portion of the country west of the Mississippi River——

The SPEAKER. The Chair will state to the gentleman that pending a roll call debate is not in order.

Mr. HULICK. I only wish to add, that as I have since been advised, the impression under which I voted was wrong, and the fact is otherwise; therefore I desire to change my vote to "no."

The result of the vote was announced as above stated.

Mr. AVERY. Mr. Speaker, I have an amendment, which I send to the desk.

The Clerk read as follows:

Add to the standing committees one on public health, to consist of nine members.

The SPEAKER. Does the gentleman from Michigan desire to be heard on his amendment?

Mr. AVERY. Very briefly.

I am informed, Mr. Speaker, that in years past there was a committee on public health in this House. I think it is an exceedingly important committee and one at the present time that should commend itself to the judgment of the House. We are in the presence of cholera on the north and in the presence of yellow fever on the south. The preservation of the public health of the nation is of as great importance as the preservation of any of its rights, and the consideration of measures that will lead to that end is just as important as any other purpose for which the committees of this House can be appointed.

I think it would be an advantage and a satisfaction to the people of the nation to be informed that this legislative body was interested in preserving the public health, and for that reason I have moved that the Chair be authorized to appoint a committee on the public health, to consist of nine members. That is all I desire to say upon the question.

Mr. MILLIKEN. Mr. Speaker, I do not believe that I shall discuss the question of public health as presented in the amendment of the gentleman from Michigan, but I desire to make a few remarks that have been suggested by the discourse of my friend from Texas [Mr. KILGORE]. His complaint seemed to be, and the same complaint has been made here day after day since the assembling of this House, that in the Fifty-first Congress we had a czar in the Speaker's chair.

Now, Mr. Speaker, I am not in favor of czars. It has never been my misfortune to live under a government whose laws were administered, or the arbitrary rules which control the people, were made by a czar. But if we must have one I do not know but I would quite as soon have him in the Speaker's chair as to have him on the floor of the House; and I certainly believe if we are to have a czar in our legislation I would prefer to have one czar in the Speaker's chair, responsible for what he does before the House and the country, rather than to have them all over the House whenever anyone may see fit to exercise his arbitrary power here.

I think there is no old member of this House who was not cognizant of the fact, and so thoroughly cognizant of it that the impression has not faded from his memory, that under the loose rules of the last House, which as I understand it are to be substantially the rules of the present House, the gentleman from Texas himself, a gentleman for whom I have the greatest personal regard, exercised the powers of a czar which the rules authorized him to exercise as effectually and with as good purpose—I do not mean as good purpose for the benefit of the country, but to accomplish what he had in view—as that exercised at any time by the Speaker of the House of the Fifty-first Congress, or by anybody else.

Why, he stood here when nine-tenths of his party and all the Republicans desired to pass upon legislation, and by his veto power he obstructed the will of the whole membership of the House.

Had he been king, with the powers and prerogatives of a king in the Middle Ages, he could not have more effectually thwarted all the purposes of a majority which, in many instances, comprised almost the entire House except himself and his two or three lieutenants, and the House was unable to extricate itself from the helpless condition in which it had been placed by its own rules. He defeated the enactment of the bankrupt law by his veto as the czar of the House, which power he could exercise under the rules of a House which allowed him to make dilatory and obstructive motions without limitation.

Now, Mr. Speaker, I object to a system of rules governing the action of this body that will give an opportunity to any and every member of the House to place his veto on the legislative will, not of a majority alone, but of a majority of every member excepting the man himself, whenever he shall choose, either for what he may consider good cause or from caprice or other motive, to resist the continued will of all or a vast majority of his colleagues on this floor. Under the rules of the House in the Fifty-second Congress, a member needed only to understand parliamentary law sufficiently well to apply it to a few motions and possess the physical ability to endure as long as anybody else, and no legislation could pass this body without that member's sanction.

Gentlemen talk of a "czar" in the Speaker's chair; and yet by the very rules they themselves propose, and seek to have adopted, they would make as many czars as there are members of the House. The power that is conferred in this way upon a man who chooses to exercise it in the way of obstruction is incalculable.

Why, the shah of Persia, the greatest of all the shahs, in the prime of his power and the height of his glory, was never bowed down to or solicited more earnestly and humiliatingly than the gentleman from Texas himself and one or two of his lieutenants were, by the poor pensioners and petitioners with private bills that came here and almost on their knees begged these gentlemen czars not to object to the simple right of the House to consider the bills that were before it. And that is the question here.

It is not a question whether legislation shall or shall not pass the House. The question is whether the House itself shall have the power even with nine-tenths of its members in favor of a measure to give consideration, or shall it place itself in a strait-jacket and adopt rules here which shall take from it the power to do even what it wants to do?

Why do my Democratic friends have so much doubt about themselves? Are they so afraid of themselves here that they dare not trust themselves? Have they so much apprehension of what they may do, or that they may do something wrong politically, that they seek to bind themselves as a lunatic would have done to himself when in some lucid interval he begs to be put in a strait-jacket in order that he may not do harm when the time comes that the crazy spell shall again seize him?

Well, Mr. Speaker, if that be the purpose of the Democratic majority in this House, then I am sure they are to be congratulated upon knowing their own peculiar weaknesses so well; and the country, I doubt not, will note their patriotism in taking so early and efficient measures to prevent the injury it would receive, should they allow themselves for any considerable time to run loose. It is a touching and pathetic exhibition of tender regard for the country, on their part, which is quite as amazing as it is sincere.

If the Democracy shall only continue to appreciate its instinctive tendencies, and to put itself under restraint before it has time and opportunity to act, the nation will most assuredly be thereby a great gainer.

[Here the hammer fell.]

[Mr. WILSON of Washington withholds his remarks for revision. See Appendix.]

The SPEAKER. The question is on the amendment proposed by the gentleman from Michigan [Mr. AVERY], which the Clerk will report.

The amendment was again read.

Mr. BLAIR. Mr. Speaker, I would be glad if this amendment might attract the attention of the House. It does not seem to me that in any view it can excite opposition. There is certainly nothing partisan in the matter of the public health. All of us concede that there is no subject of greater importance, and it is a subject which is daily and yearly becoming, as it seems to me, more important to the people of the United States. It is but proper, therefore, that there should be some attention given to it by this great central organization, the National Government.

The increasing commercial intercourse between all parts of the earth seems to make it more and more necessary that some

method should be devised to bring to national attention proper measures for the regulation of the spread of disease and to to bring this all-important subject more directly under the immediate control of the law.

In so large a body as this there must be those who have medical education and training, who could very largely compose such a committee; and in the investigation of this important subject they could find a congenial occupation in the direction of their profession and very much in the direction of the public welfare. I know that this subject is one in which the medical profession is very largely interested, and it seems to me there can be no opposition to the appointment of this committee.

I hope the amendment will receive the favorable consideration of the House.

Mr. JOHNSON of North Dakota. Mr. Speaker, it occurs to me that such a committee could find a very fruitful field of labor right in this House. This Chamber is built, a box within a box, in such a way that it is utterly impossible to open a window or door in such a manner as to get the air direct from outside. The air is pumped up through these brass gratings in the floor, and throughout the Fifty-second Congress I often wondered whether the sweepings and the droppings of pieces of paper and of cigar stumps were ever cleaned out of these ducts through which the air comes up.

On the first day of the meeting of this Congress it was gratifying to find a new carpet on the floor and some varnish on the wood and polish on the brass grating in the floor of this whited sepulcher, but I was very careful to notice, and I found right there in front of the Speaker in that open area, under the grating in the floor, the same appearance of litter, of cigar stumps, and of paper and dirt and rubbish, that had been swept and kicked down for years into these places through which the air must come that we have to breathe; and I thought that I would not keep live stock on my farm in such an unhealthy atmosphere as we are bound to breathe when we sit here.

Mr. OUTHWAITE. There is a Committee on Ventilation and Acoustics that can take charge of the matter suggested by the gentleman.

The SPEAKER. The question is on the amendment proposed by the gentleman from Michigan [Mr. AVERY].

The question being taken, the Speaker announced that the noes seemed to have it.

On a division (demanded by Mr. AVERY) there were—ayes 59, noes 128.

So the amendment was rejected.

Mr. PICKLER. I desire to offer the amendment which I send to the Clerk's desk.

The Clerk read as follows:

Amend by adding after the words "Committee on Rules to consist of five members," on page 8, the following words: "provided that on the first day of the regular session of the Fifty-third Congress the Speaker shall appoint four additional members on said committee."

Mr. HOOKER of Mississippi. I desire to offer a substitute for that amendment.

Mr. DOCKERY. I desire to inquire whether the proposition of the gentleman from South Dakota [Mr. PICKLER] is before the House for action?

The SPEAKER. It is offered for that purpose.

The gentleman from Mississippi offers a substitute for the amendment offered by the gentleman from South Dakota. The Clerk will read the substitute, so that the Chair may see whether it is in order.

The Clerk read as follows:

Amend on page 8, by striking from the sentence "on rules to consist of five members," the word "five," and insert in lieu thereof the word "eleven."

Mr. PICKLER. I accept the amendment offered by the gentleman from Mississippi. The only difference is, I believe, that he fixes the number at eleven and would have the Speaker appoint them at once.

The SPEAKER. It can not be accepted as an amendment.

Mr. HOOKER of Mississippi. Why not?

The SPEAKER. For the simple reason that the gentleman from South Dakota has proposed to amend the rule constituting the Committee on Rules of five members by proposing to add four at the next session, while the gentleman from Mississippi has proposed to make it eleven now. The two propositions are inconsistent.

Mr. PICKLER. I withdraw my amendment.

Mr. HOOKER of Mississippi. Then I offer mine.

The SPEAKER. The gentleman from South Dakota withdraws his amendment, and the gentleman from Mississippi offers an amendment, which the Clerk will read.

The Clerk read as follows:

Amend on page 8, by striking from the sentence "On rules to consist of five members" the word "five," and insert in lieu thereof the word "eleven."

Mr. HOOKER of Mississippi. Mr. Speaker, the amendment which I have the honor to offer for the consideration of the House is in keeping with the sentiments I had the opportunity to express yesterday upon this question of the constitution of the Committee on Rules. It will be remembered, Mr. Speaker, a few days ago, when my honored colleague presented what he denominated a partial report from the Committee on Rules for the consideration of this House, that the previous question was called upon it, so that there was no opportunity to speak upon it, much less to offer an amendment.

I think that the House of Representatives, as it is now constituted, voted to call the previous question and thus silence debate and forbid amendments in ignorance of the effect and object of the temporary rule which came from the Committee on Rules. I never believed in adopting the rules of the House by piecemeal or by parts. It ought to be a consistent body of rules, framed with the desire of giving expression not only, Mr. Speaker, to the majority party of this House, but it ought to be a system of rules which would give a fair and reasonable hearing to the minority of the House.

It has been my fortune, sir, in many Congresses in which I served, to be here in the minority, and I learned the value of the privilege of the minority which is secured ordinarily by all parliamentary bodies. I learned to appreciate the value of a full and fair expression of opinion, and the value of being able to offer an amendment, even though I happened to belong to the minority. I now belong to the majority, but upon principle I hold the same doctrine is true now. We ought to adopt a system of rules which, while it should give a fair expression to the will of the majority, and allow that expression to be carried out, the minority ought not to be tied down or manacled either by the ruling of the Speaker under the rules or by the committee. I believe that ought to be the character and temper and spirit of the rules.

Now, through the report which my honorable colleague submitted the other day, there was an increase made in nearly every committee of the House save the smallest—the Committee on Rules. There was no proposition to increase that. There was no power on the part of myself or any other member of the House to offer an amendment to make an increase in the number, because the fact is that many members had no due knowledge of the effect of the House sustaining the call for the previous question. When those members who are now new members of this House shall have been here a little while longer and have felt the force and effect of the call for the previous question they will understand what it means, and they will understand that when the previous question is called they are forced to make a vote upon a distinct proposition that settles the question as to that particular measure.

I was very much gratified to learn that while I was absent from the Hall the Speaker ruled that the recent action of the House in adopting this rule was not now binding and that the House had the right to amend all of its rules.

Why, then, Mr. Speaker, should you and the majority of the House determine to increase every other committee and leave the Committee on Rules as it is? Sir, that Committee on Rules now, by these very rules under consideration, not only has the power which belongs to the Committee on Rules, as designated by its denomination, but it is proposed in these very rules to clothe that committee with the power to indicate to the House the order of business, a function which I assert does not belong necessarily to the Committee on Rules, and with which they ought not to be intrusted in this House.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Mr. HOOKER of Mississippi. I should like to have said a few more words, but will take the opportunity on another amendment.

Mr. BRECKINRIDGE of Arkansas. Mr. Speaker, it seems to me that the real point and object to which the attention of my distinguished friend from Mississippi [Mr. HOOKER] is directed is, that the organization and working of the House should be more representative and less personal in its character. Our system differs materially from that of the Senate. They organize under the direction of a committee. That committee is appointed by a caucus of the party in power. It recommends the various committees of the body, and those recommendations are approved or modified by a caucus of the party in control of the Senate, and that becomes the organization of that body.

We have not adopted that system. We have reached a point where it is too late to adopt that system. Our committees are already appointed. I think it not improbable that that system of organization might be adopted wisely and beneficially, but that is a matter that would require very careful investigation. It is certainly desirable to be as representative as possible, but we are a large body, the Senate is a small body, and there are

other features of difference that would need to be carefully inquired into before a correct determination could be reached.

But the question pertinent to the amendment now pending is whether, having clothed the Speaker with the power of organization, and having already crystallized the organization of this House by the appointment of committees, etc., under one theory, you can judiciously inject into it a feature which belongs to an entirely different method of organization, and I do not believe you can do that successfully and well. Who, under our rules, is to appoint this enlarged Committee on Rules? Is it to be representative by being selected by caucus, as the organization committee is selected in the Senate?

No, sir. The gentleman from Mississippi introduces his amendment at a point where the increase of the Committee on Rules would be made by the gentleman who is already the Speaker of this House, and already empowered to appoint committees. Therefore, would it not be as personal if adopted at this time as it is already? The whole question, therefore, it seems to me, comes to this, whether we can do better under a committee appointed in that way which is a large and cumbersome committee, or under a committee appointed in the same way, which is a small working committee.

Why are the other committees large? They are large because they deal with a multitude of subjects, or with subjects that cover a vast area and that are susceptible of subdivision. Those committees are divided into the logical divisions of the subjects-matter committed to them. Of course, there are other reasons.

But here is a committee the members of which are necessarily in the nature of special advisers to the Speaker in relation to the proceedings of the House.

We have intrusted to the Speaker the authority of which I have already spoken—and the whole theory of the rules always has been and is now proposed upon this principle of organization—and why should we seek to thrust upon him, under a different theory of organization, an addition that he does not consider likely to conduce to the efficient discharge of the duties already imposed upon him? Does he ask this assistance? Does he ask to be surrounded by a more numerous body of counselors of his own selection?

No, he does not; and I submit that the proposition of the gentleman from Mississippi, while it is predicated upon a principle that doubtless is a wise one, or that may be so, for I am not prepared to express a final opinion upon it, not having given it sufficient thought or consideration—I submit that while his proposition may be predicated upon a sound principle, the time has passed for the adoption of that principle into our present organization, and it can only be injected into our system at this point to the detriment of the organization and of the business of the House.

Mr. BRYAN. Mr. Speaker, I desire to say a word or two in reply to the gentleman from Arkansas. As I understand him, he does not discuss the principle, but, so far as I could gather from what he said, he seems to go upon the theory that this Committee on Rules is merely an advisory committee to act with the Speaker and to carry out the Speaker's will.

Mr. Speaker, if that is the idea, I desire to express my dissent. In doing so, let me say that no person in this House has been more kindly treated by the Speaker than myself, and for that reason I am perhaps in a better position to express a dissent from the committee's report than if I were suffering from disappointment.

No man has greater confidence in the Speaker than I have; and yet I must object to the idea that a representative body ought to place the direction of its legislation in the hands of one man, or of a few men; and if it is necessary, in order to carry out the idea which is incorporated in our rule to do that, then I would be in favor of a change in the rule sufficiently comprehensive to bring us back to the Democratic idea of a rule by the people themselves, and a rule by their representatives sent here to conduct their business.

If this committee were simply to report general rules like those we are now acting upon I would not feel called upon to object to its present size, but when the committee is given power to direct legislation by presenting a special rule for the consideration of each bill I insist, Mr. Speaker, that that can be more wisely done by a larger committee.

If the argument urged in favor of continuing the present size of this committee is correct, then a committee of one is just as good as a committee of five. If you want simply to centralize power why divide it among five men? Why not give it to one man?

But, sir, if you wish legislation to be conducted in the interest of all the people whose representatives are here, if you concede that every man on this floor should have an equal vote in its deliberations, if you concede that every constituency is equally interested in what goes on here, then, Mr. Speaker, I submit that this committee which has in charge the direction of our legislation ought to be large enough to comprehend every part of this country, and to give expression to all the large interests of the country. And it is not asking too much when we urge that this committee be enlarged.

Nor is it flying in the face of the Administration. It is paying no compliment to the Speaker of this House and those who are his intimate advisers to say that when we express a dissent we are in rebellion. It is paying no compliment to the Speaker of this House to say that he or his advisers desire to control our legislation. I think I pay him a higher compliment when I say that as the Speaker of this House he desires to give voice and expression to the wishes of the members who put him there, and not to control their deliberations, and that he will respect us if following our judgment we dissent from the rule proposed and express it as our opinion that the interests of the country will be better served if the committee is made larger.

[Here the hammer fell.]

Mr. PICKLER. Mr. Speaker, I do not wish to detain the House more than a moment by adding anything to the suggestions which I offered yesterday afternoon. It seems to me, and I believe it will seem to the people of this country, that the Representatives who have behind them only a little over 800,000 people should not control the destinies of 62,000,000 people.

Like the gentleman from Nebraska [Mr. BRYAN], I certainly can testify to only the kindliest treatment from the Speaker of this House, but I agree with the gentleman from Nebraska that if the position taken by the gentleman from Arkansas [Mr. BRECKINRIDGE] is sound, we should not have any Committee on Rules at all. Why not let the Speaker determine our method of proceeding in the transaction of business?

It is not probable that anything will occur to mar the feelings of the Speaker in any business that comes before the House. It is not probable that any Committee on Rules will ever force business before the House against the wishes of the Speaker. I suppose it will be a long time before anything of that kind occurs; but perhaps it was not to be expected that the Committee on Rules in fixing the number of this committee at the present time should have done anything else than what they did.

Why? Because in reporting in favor of a Committee on Rules consisting of five members, they are only following the precedents in this House in all the Congresses since the Thirty-fifth. But when we consider that beginning with the Ninth Congress, with the small number of people that there were then in this country, there were five members of this committee, and that in a majority of the following Congresses down to the Thirty-fifth this committee consisted of seven or nine members, it can not be urged with any show of reason that when we have 62,000,000 people, occupying a much larger territory than we ever had before, the different sections of the country should not have some representation on this committee. As has been well said by the gentleman from Nebraska, there are interests of our great Western States and Territories which men living in other parts of the nation can not understand or appreciate.

The gentleman from Mississippi has offered an amendment to increase the membership of this committee to eleven. My proposition was to make the number nine; and since the amendment of the gentleman from Mississippi was offered, some gentlemen have said to me that they would be willing to vote for an increase of the membership to nine, but not to eleven. I will, therefore, before I sit down offer an amendment to give this committee nine members, an increase of four. If this amendment should be adopted, it would do nobody any injustice. It would be no detriment to any portion of the country. It does not designate the localities from which the Speaker shall select these additional members, but offers him the opportunity to give to such great States as Illinois, Iowa, and Missouri, some representation upon the committee and also to the great southwestern part of the nation and the great Pacific coast.

Can there be anything unfair about this? Is there any danger that a committee of nine would be unwieldy? The proposition certainly can not be objectionable in any light; and, as I said yesterday, at this time, when there is no great question before the Committee on Rules or agitating the country and dividing us upon political lines, so far as the Committee on Rules are concerned, it seems to me that "now is the accepted time" to increase the membership of this Committee on Rules.

Another thing, this addition to the membership of this committee will relieve the Speaker of this House and of future Houses. He will be able to give good positions to a larger number of those gentlemen who always think they are qualified to serve upon these first-class committees.

[Here the hammer fell.]

Mr. PICKLER. I move to amend the amendment by striking out "eleven" and inserting "nine," so as to provide that the Committee on Rules shall consist of nine members.

The SPEAKER. The amendment will be considered as pending.

Mr. MCCREARY of Kentucky. Mr. Speaker, I have great respect for the views of my distinguished friend from Mississippi [Mr. HOOKER] but I can not support the amendment which he has offered. For a hundred years the Congress of the United States has been meeting; we have had fifty-three Congresses, and we have never had eleven members on the Committee on Rules. For about forty years, or ever since the Thirty-fifth Congress, there have been but five members on that committee, including the Speaker. During that time the nation has passed through great trials, great crises; and much important legislation has been enacted, yet it has not seemed necessary to American Representatives that there should be more than five members on the Committee on Rules.

I have listened attentively to the debate, but no member has shown such changed conditions, such demand for an increase of the Committee on Rules as to justify the adoption of the amendment offered by the gentleman from Mississippi.

Mr. Speaker, the experience of the past is always valuable. Those who have preceded us have never believed it was necessary that eleven members should be appointed, as this amendment proposes, on the Committee on Rules of this House. There are good reasons why the committee should not be so large.

The Committee on Rules should not be a large committee. It should not be cumbersome. It should not be so large that it would be difficult to have a quorum present. It should be composed of such number that a majority can be summoned quickly, and that it can transact its business quickly and harmoniously; and I think, therefore, that the indorsement we have of forty years in favor of five on the Committee on Rules should have its weight and influence with us in determining the membership of that committee.

It has been asserted that the committee has great power and can control legislation, and therefore the number of members should be increased.

I deny that the Committee on Rules can control legislation. This committee can facilitate legislation by reporting a rule on which the members may vote, but the rule has no force until adopted by the members of the House. The Committee on Rules simply proposes; the House disposes of the proposition.

I have been here for nine years, and I have at various times seen one member block the business of this House. I am in favor of giving to the Committee on Rules power sufficient to prevent the business of the House from being clogged, halted, and delayed unnecessarily by one member or a few members, so that no business can be transacted. After proper debate I believe the majority should control, and the Committee on Rules should have authority to report a resolution which when regularly adopted by the House will cause the business of the House to proceed and the will of the majority to prevail.

I believe that five members on the Committee on Rules are enough, and I am opposed to increasing the number to either nine or eleven. I do not believe that eleven members on the committee would be satisfactory. I am in favor of all sections of the country being represented on the committee, and I know the Speaker, in selecting the members of the committee, as far as possible recognized the different sections of the country, and we have a Committee on Rules composed of members who have always been fair and just.

Mr. Speaker, in my judgment, as I have already said, a Committee on Rules consisting of five members is decidedly preferable to a committee consisting of eleven, as proposed in the amendment. I am in favor of standing by what experience in the past has taught us is beneficial. I am in favor of standing by the position taken by our predecessors for nearly half a century, and I am in favor of adhering to the usage which has lasted for so many years and which has always worked so well.

Mr. HENDERSON of Iowa. Mr. Speaker, it seems to me that in the discussion that is now going on, as well as in some of the amendments that have been offered to this code of rules, an attempt is being made to reverse the election of last November. The Democratic party won the last election and have a majority in this House, and yet by these amendments it would seem we are trying "to turn them down." [Laughter and applause.]

I voted against the proposition to draw sectional lines on the amendment offered by my friend from Washington [Mr. WILSON], because this is not the place for that. At the polls is the place to give fair play to the entire country, and not come in here and try to do it by dabbling and piecemealing. My friend from Nebraska [Mr. BRYAN], it seems to me, is making the same mistake. You want to give, you say, to all of the sections of the country fair play, and you want to try to bring the great trans-Mississippi and mountain regions into the arena here and for fair play to put them upon the same footing as other regions. Too late! You should have attended to that, my friends, when the last general election was held. [Applause on the Republican side.]

Why, Mr. Speaker, this country is not in the control of the East in this House. Nor is it in the control of the middle section in the House, and certainly not in the control of the great West. That great stretch of country from sea to sea, where the smoke-stacks tell of the great engines of power driving all the mighty business of the nation, is not here in control.

Let us see where the majority of the majority of these committees is to be found. The Committee on Elections has nine Democrats and six Republicans. Of the majority of 9, seven-ninths are from the South. The Committee on Ways and Means, 11 Democrats, and of that majority six-elevenths are from the South. The Committee on Appropriations, 11 Democrats, of which majority seven-elevenths are from the South. The Committee on the Judiciary, 11 Democrats, and a majority of seven-elevenths of that great committee are from the South. The Committee on Banking and Currency, 11 majority, and seven-elevenths from the South. The Committee on Coinage Weights and Measures, 11 majority, of which seven-elevenths are from the South.

Interstate and Foreign Commerce, that wields such power over the destinies of the country, has 11 majority, and six-elevenths of that majority are from the South. Rivers and Harbors, the great feeder to the vast masses of the people and the transportation interests of the country, has 11 majority, and eight-elevenths from the South. The Committee on Agriculture, 11 majority, with seven-elevenths from the South. The Committee on Foreign Affairs, 9 majority, with six-ninths from the South. On Naval Affairs, 9 majority, and five-ninths from the South.

Post-Offices and Post-Roads, 9 majority, with sixth-ninths from the South. Public Buildings and Grounds, 9 majority, with six-ninths from the South. Education, 8 majority, with six-eighths from the South. Claims, 9 majority, with six-ninths from the South. War Claims, 7 majority, with four-sevenths from the South. District of Columbia, 9 majority, with seven-ninths from the South. Election of President and Vice-President and Representatives in Congress, 8 majority, with six-eighths from the South. Immigration and Naturalization, 7 majority, with four-sevenths from the South. Committee on Rules, 3 majority, with two-thirds from the South. Committee on Printing, 2 majority, all from the South. Joint commission to inquire into the status of laws organizing the Executive Departments, 2 majority, all from the South.

And how about the North? The Northern Democracy gets a majority of the following great (?) committees:——

The SPEAKER. The time of the gentleman has expired.

Mr. HAUGEN. If I may be recognized, I will yield to the gentleman from Iowa.

The SPEAKER. The gentleman from Wisconsin [Mr. HAUGEN] is recognized for five minutes.

Mr. HAUGEN. I yield to the gentleman from Iowa [Mr. HENDERSON].

Mr. HENDERSON of Iowa. Now, I have named the great committees, and shown where the control is in the committees that shape the busidess of this country.

Now, let us see what the Northern Democracy gets in the way of control of committees.

You have the majority of the Committee on Military Affairs, which is a powerful committee, indeed, in these times of war. [Laughter.] You have a majority of the Committee on Public Lands, when nearly all the public land questions have been settled. You have a majority of the Committee on Territories, when there is nothing left, I believe, but Utah, to be figured on. You have a majority of the Committee on Manufactures, a gigantic committee, my Northern Democratic friends. [Laughter.] You have a majority of Mines and Mining. What a power in the interest of this great nation! [Laughter.] You have a majority of the Committee on Labor, on Private Land Claims, Alcoholic Liquor Traffic, on Irrigation of Arid Lands, on Ventilation and Acoustics! Look out for your health, boys. Keep in good health those in control so that they may be able to run the House. You have a majority of the Committee on Expenditures in the Treasury, War, and Post-Office Departments, in the Department of Justice; you have a majority on the Committee on Expenditures on Public Buildings. The South has the chairmanship of the Committee on Expenditures in the War Department, so they can manage it. You of the North have a majority of the Committee on Enrolled Bills, and of the Select Committee on Capitol Centennial Anniversary.

The committees that are equally divided between the North and the South in the majority are as follows: Indian Affairs, Railways and Canals, Pacific Railroads, Reform in the Civil Service, and the Committee on Accounts.

Now, my good friend from Nebraska [Mr. BRYAN], do not go paring around the edges when it will count nothing. I say to my

good friend from Washington [Mr. WILSON], do not consume the time of the House with your amendment drawing a sectional line when it will not amount to anything. That was *res adjudicata* on election day until next election day, and then we may change the *res*.

Let us look a little further. Who are the chairmen of these great committees? The South has the following chairmen: Election, Ways and Means, Appropriations, Judiciary, Coinage, Weights and Measures, Interstate and Foreign Commerce, Rivers and Harbors, Agriculture, Foreign Affairs, Post-Offices and Post-Roads, Public Lands, Territories, Railways and Canals, Public Buildings and Grounds, Levees and Improvements of the Mississippi River, Education, Pensions, Claims, Private Land Claims, District of Columbia, Revision of the Laws, Ventilation and Acoustics, and six of the Department Expenditure committees; also on Public Buildings and Grounds, on Rules, on Accounts, on Printing, and on the joint commission to celebrate the Capitol Centennial—thirty-three in all.

There are the great committees that do the business of this House shaping the legislation of the nation. The following committees have Northern chairmen: Banking and Currency, Merchant Marine and Fisheries, Military Affairs, Naval Affairs, Indian Affairs, Manufactures, Mines and Mining, Pacific Railroads, Labor, Militia, Patents, Invalid Pensions, War Claims, Reform in the Civil Service, Election of President and Vice-President and Representatives in Congress, Alcoholic Liquor Traffic, Irrigation of Arid Lands, Immigration and Naturalization, Expenditures in the Treasury Department, Expenditures in the Department of Justice, Mileage, Library, and Enrolled Bills—with a very few exceptions, these are worthless committees and have but little influence on legislation.

Now, Mr. Speaker, that is all right. The Democracy of the South are entitled to it. They are the head and body and shoulders and brains of the Democratic party. You are right, gentlemen, in taking control of this Government; but let the Democratic party North answer to the great people of this country if they were right in putting you in control. There is the milk in the cocoanut. You have carried the election, my Democratic friends. The silver-tongued gentleman from Nebraska [Mr. BRYAN] helped to bring on this reposing of power in the Democratic party, and now do not get down and wriggle when you suffer from the logical result of that election. [Applause on the Republican side.]

[Here the hammer fell.]

Mr. RICHARDSON of Tennessee. Mr. Speaker, I think the gentleman who last occupied the floor has drifted very far away from the question presented by the amendment of the gentleman from Mississippi [Mr. HOOKER]. The gentleman has undertaken, however, to read to this House a lecture on the formation of the committees. I think the gentleman is quite unfair, if I may be allowed to say so, in the comments he has made upon the formation of the committees.

Now, sir, let me first take the Committee on Elections, to which the gentleman referred, and what is the condition there? That committee is composed of fifteen members, and eight members of that committee come from the States of the North, only seven from the South. The gentleman did not tell you that. You have a majority of the Committee on Elections. Are you not content with it? Do you decline to count the Republican members of that committee?

Mr. HEPBURN. Will the gentleman allow me to ask him a question?

Mr. RICHARDSON of Tennessee. No, sir. I have not the time. Take the Committee on Ways and Means, which is a committee composed of seventeen members. I find, Mr. Speaker, that that committee is composed of eleven from the north side of the Ohio River and only six from the south. Is not the gentleman satisfied with that? Take the next committee, which is the Committee on Appropriations. It is composed of seventeen members; ten of them come from the section to which the gentleman belongs. Is he not satisfied that these ten men can take care of the question of appropriations so far as the people of the North are concerned? Surely he would not argue that seven members from the poor South could do more in procuring appropriations than the ten members who come from his section of the country?

Take the Committee on the Judiciary, which is composed of fifteen members, Mr. Speaker, and ten of them come from the North, and only five from the South. Is not that satisfactory to the gentleman? Take, next, the Committee on Banking and Currency, composed of seventeen members, and ten of the members constituting that great committee, to which the gentleman referred, come from the North, and seven from the South. Is not the gentleman satisfied with a representation of that kind? Take the next committee, the Committee on Coinage, Weights, and Measures, which is composed of seventeen members, and ten of them come from the North, seven from the South. That certainly should be satisfactory to the people whom the gentleman represents.

Take the Committee on Interstate and Foreign Commerce, composed of seventeen members, and eleven of them come from the North and six from the South. Take the Committee on Rivers and Harbors, which is composed of seventeen members, and nine of them come from the North. Then take the Committee on Merchant Marine and Fisheries, composed of thirteen members, and nine of the thirteen come from the North. Take the Committee on Agriculture, composed of seventeen members, and ten of those members come from the North and seven from the South. Is not that satisfactory? Take the Committee on Foreign Affairs, composed of fifteen members, and nine of that number come from the North and six from the South. Take the Committee on Military Affairs, composed of sixteen members, and twelve of the sixteen members come from the North, only four from the South. Take the Committee on Naval Affairs, consisting of fifteen members, and ten of that number come from the North, five from the South. Take the Committee on the Post-Office and Post-Roads, consisting of fifteen members, and eight of that number come from the North. Take the Committee on Public Lands, composed of fifteen members, and eleven of the fifteen come from the North, only four from the South. Take the Committee on Indian Affairs, consisting of fifteen members, and ten of those come from the North, five from the South.

That is as far as I have gone in the short time I had; but every committee, and I have omitted none—so far every committee down to this point has a large preponderance of Northern men upon it; and yet my friend comes and complains of the mode in which these committees are constituted. I will tell you what is the matter, my friend. The party to which you belong is a sectional party, and it has no existence in one-half of the States of this Union. [Loud applause on the Democratic side.]

If you want representation from the South, let me say to you you must change your policies, abandon your sectionalism, improve your political principles, secure members of Congress upon this floor from that section, and then you will have no ground of complaint at the fairness of the occupant of the Speaker's chair. [Applause.]

Mr. WILSON of Washington. But you will count them out.

The SPEAKER. The time of the gentleman has expired.

Mr. CATCHINGS. The hour of 5 o'clock having arrived, I move that the House do now adjourn.

The motion was agreed to: and accordingly (at 5 o'clock and 1 minute p. m.) the House adjourned.

SENATE.

THURSDAY, *August 31, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of sundry merchants and bankers of Bloomington, Ill., praying for the unconditional repeal of the so called Sherman silver law; which was ordered to lie on the table.

Mr. PEFFER presented a petition of the Farmers Alliance and Industrial Union of Santa Clara County, Cal., praying for the free and unlimited coinage of silver; which was ordered to lie on the table.

Mr. ALLEN. I present resolutions adopted at a meeting of 5,000 citizens of Omaha, Nebr., presided over by the mayor, favoring the establishment of Government postal savings banks. I move that the resolutions be referred to the Committee on Post-Offices and Post-Roads.

The motion was agreed to.

Mr. ALLEN presented a petition of citizens of York, Nebr., praying for the enactment of legislation restoring silver to free and unlimited coinage upon an exact equality with gold; which was ordered to lie on the table.

Mr. MITCHELL of Wisconsin presented a petition of the Board of Trade of La Crosse, Wis., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

He also presented a petition of Local Union No. 30, Brotherhood of Carpenters and Joiners, of Milwaukee, Wis., praying for the enactment of legislation providing for the freer and more extended use of silver as money; which was ordered to lie on the table.

Mr. CULLOM. I present resolutions adopted at a grange meeting, held near Woodson, Ill., in favor of the free coinage of the silver bullion now in the Treasury and all that may be offered hereafter, and in favor of a constitutional amendment securing free coinage and forbidding the purchase of bullion or the issuance of bonds or paper money without the consent of a majority of the State Legislatures. I move that the resolutions lie on the table.

The motion was agreed to.

Mr. PALMER presented three petitions of business men, bankers, and other citizens of Chicago and Monticello, Ill., praying for the unconditional repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

Mr. MURPHY presented petitions of the Iron Molders' Union No. 108, of Troy; of the depositors of the Union Dime Savings Institution, of Troy; and of citizens of Saugerties County, all in the State of New York, praying for the unconditional repeal of the Sherman silver law; which were ordered to lie on the table.

Mr. LODGE presented the petition of C. A. Chapman, Thomas H. Goodspeed, and 19 other citizens of Massachusetts, praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. HUNTON presented the petition of James A. Sommerville and other citizens of Front Royal, Va., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

BILLS INTRODUCED.

Mr. PEFFER. I desire to introduce a bill which I wish to call up at the proper time and propose as an amendment to the pending bill reported by the Committee on Finance. It is a bill to provide for the free and unlimited coinage of gold and silver bullion. I will state to the Senate that it is simply a reënactment of five or six sections of the coinage act of 1837. I ask that it be printed and lie on the table.

The bill (S. 765) to provide for the free and unlimited coinage of gold and silver bullion was read twice by its title and ordered to lie on the table.

Mr. IRBY introduced the following bills; which were severally read twice by their titles, and, with the accompanying papers, referred to the Committee on Claims:

A bill (S. 766) for the relief of Joseph S. Baynard and others;
A bill (S. 767) for the relief of the heirs of Robert W. Fuller, deceased;
A bill (S. 768) for the relief of George W. Williams & Co.;
A bill (S. 769) for the relief of Francis T. Capers;
A bill (S. 770) for the relief of John W. R. Pope and the heirs of F. P. Pope;
A bill (S. 771) for the relief of the heirs of James B. Seabrook, deceased;
A bill (S. 772) for the relief of the heirs of George Jacob Huthmacher;
A bill (S. 773) for the relief of the heirs of John A. P. Scott;
A bill (S. 774) for the relief of the heirs of Joseph J. Pope;
A bill (S. 775) for the relief of Daniel T. Pope;
A bill (S. 776) for the relief of Robert G. Lamar;
A bill (S. 777) for the relief of Stockton E. Slawson;
A bill (S. 778) for the relief of the heirs of Samuel A. Nelson;
A bill (S. 779) for the relief of Frederick W. Claussen;
A bill (S. 780) for the relief of John F. Werner;
A bill (S. 781) for the relief of the heirs of Charles B. Capers;
A bill (S. 782) for the relief of William H. Connerat and Clarence S. Connerat;
A bill (S. 783) for the relief of the heirs of Robert J. Smith;
A bill (S. 784) for the relief of C. L. Slawson;
A bill (S. 785) for the relief of William Neyle Habersham, survivor, and William Neyle Habersham, as executor;
A bill (S. 786) for the relief of Mortimer W. Venning;
A bill (S. 787) for the relief of William R. Herron;
A bill (S. 788) for the relief of Louisa G. Heyward and others;
A bill (S. 789) for the relief of James D. McDowall, administrator of William D. McDowall, deceased;
A bill (S. 790) for the relief of the heirs and devisees of Henry McKee;
A bill (S. 791) for the relief of John Duncan, survivor;
A bill (S. 792) for the relief of the heirs of Benjamin Chaplin;
A bill (S. 793) for the relief of Thomas G. White, executor and testamentary trustee of the last will and testament of Joseph D. Eddings, deceased;
A bill (S. 794) for the relief of Evalina Ann E. Fripp;
A bill (S. 795) for the relief of Octavus A. White, trustee;
A bill (S. 796) for the relief of Edward M. Capers;
A bill (S. 797) for the relief of William Wilson;
A bill (S. 798) for the relief of the heirs of James Wells;
A bill (S. 799) for the relief of the heirs of Stephen Whitehead;
A bill (S. 800) for the relief of the heirs of Richard N. Kittles;
A bill (S. 801) for the relief of Louisa G. Heyward and others; and
A bill (S. 802) for the relief of the heirs and devisees of John J. T. Pope.

Mr. GORMAN introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims.

A bill (S. 803) for the relief of Benjamin R. White, of Montgomery County, Md., for the use and occupation of his land in Montgomery County, Md., by the military forces of the United States during the war for the suppression of the rebellion.

A bill (S. 804) for the relief of Maria and Mary Reynolds, administrators of the estate of James Reynolds, of Allegany County, Md., for the use and occupation of real estate by the military forces of the United States during the war for the suppression of the rebellion.

A bill (S. 805) for the relief of Charles W. Shreves, of Montgomery County, Md., for the use and occupation of real estate by the military forces of the United States during the war for the suppression of the rebellion, as found by the Court of Claims, under the act of March 3, 1883;

A bill (S. 806) for the relief of Rueben A. Hurley, administrator *de bonis non* of R. A. Hurley, of Montgomery County, Md.;

A bill (S. 807) for the relief of Joseph Redfern and Eliza J. Redfern, his wife;

A bill (S. 808) for the relief of Anna M. Anderson and Charles Y. G. Anderson, executors of George W. Anderson, deceased, late of Washington County, Md.; and

A bill (S. 809) for the relief of Alexander Moffitt.

Mr. GORMAN also introduced a bill (S. 810) authorizing the Secretary of War to donate a certain cannon to the Naval Veteran Association of Baltimore, Md.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 811) for the relief of F. Halverson French; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 812) for the relief of William R. Steinmetz; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 813) for the relief of the owners of the Schillinger patents; which was read twice by its title, and referred to the Committee on Patents.

Mr. HAWLEY introduced a bill (S. 814) for the relief of the representatives of Daniel C. Rodman, deceased, and others; which was read twice by its title, and referred to the Committee on Claims.

Mr. GORMAN introduced a joint resolution (S. R. 22) authorizing the use of any unexpended balance of the appropriation for the reëstablishment of the Wolf Trap, Chesapeake Bay, light-house, and for the reëstablishment of the Solomons Lump, Chesapeake Bay, light-house, as far as may be necessary; which was read twice by its title.

Mr. GORMAN. I move that the joint resolution be referred to the Committee on Appropriations, with the accompanying letter from the Secretary of the Treasury, and that the letter be printed as a document.

The motion was agreed to.

SUPERVISING ARCHITECT'S OFFICE.

Mr. DOLPH. I introduce a joint resolution to which I desire to call the attention of the chairman of the Committee on Public Buildings and Grounds and the other members of that committee and also the Committee on Appropriations. I find in the legislative, executive and judicial appropriation act of last session the following, under the head of "Supervising Architect:"

> And the services of skilled draftsmen, civil engineers, computers, accountants, assistants to the photographer, copyists, and such other services as the Secretary of the Treasury may deem necessary and specially order, may be employed in the office of the Supervising Architect exclusively to carry into effect the various appropriations for public buildings, to be paid for from and equitably charged against such appropriations: *Provided*, That the expenditures on this account for the fiscal year ending June 30, 1894, shall not exceed $200,000; and that the Secretary of the Treasury shall each year in the annual estimates report to Congress the number of persons so employed and the amount paid to each.

I am unable to see the reason for inserting that portion of the proviso which reads as follows:

> That the expenditures on this account for the fiscal year ending June 30, 1894, shall not exceed $200,000.

It does not limit the appropriations. All the expenditures for this purpose are paid out of the appropriations for constructing the buildings. There is no provision here which regulates the amount which may be expended by the Supervising Architect out of any appropriation for this purpose; he may be extravagant

or otherwise, as he pleases; and there would appear to be no practical use of this limitation.

The result of the limitation is that there is not force enough in the Supervising Architect's office to prepare plans and specifications for buildings which have been appropriated for. So I learned from him yesterday morning. He says the fault is with Congress: that if we will give him money enough he will employ the necessary architects and have the plans made.

The sketch plans for the public building at Portland, Oregon, have not yet been made, although the act authorizing the building was passed on the 24th of January, 1891; an appropriation was made at the same session for the commencement of the building, and the site has been purchased, and, I think, $160,000 paid for it. The money appropriated lies idle in the Treasury. I am told by the Supervising Architect that he must take up all the buildings in the order in which the appropriations were made. The result is that on a large number of them nothing is being done whatever.

So, in effect, this proviso enabled the Committee on Appropriations to regulate the amount of money that shall be expended for public buildings. After the Committee on Public Buildings and Grounds has made provision and Congress has made an appropriation for a public building they have stopped all expenditures for the purpose by limiting the amount which may be expended out of the appropriations for this service and other services in the Supervising Architect's office.

I introduce the joint resolution and ask that it be referred to the Committee on Public Buildings and Grounds; and I ask that committee to ascertain, if they can, whether the proviso which I seek to repeal is of any practical benefit.

The joint resolution (S. R. 23) relative to the employment of the services of skilled draftsmen, civil engineers, and others in the office of the Supervising Architect was read twice by its title.

Mr. VEST. The trouble to which the Senator from Oregon has alluded is deeper than would be inferred from the remarks he has made to-day. It has been the policy of the House of Representatives to defeat every bill sent from the Senate for the erection of public buildings that contains an appropriation. They have insisted for a number of years that these appropriations must be controlled by the Committees on Appropriations in the House and Senate. We have repeatedly passed bills making appropriations for public buildings and sent them to the other House, and they either refused to concur and struck out the appropriation or refused to act at all upon them.

The subject to which the Senator from Oregon has referred has been before our committees repeatedly for the last twelve years. The Committee on Appropriations in the House and in the Senate have always taken the position that this is a matter for their jurisdiction entirely, and that after looking at all the revenues of the Government, and determining the amount that may be appropriated for specific objects, they shall say how much should be given to the Supervising Architect's Office. I suggest to the Senator from Oregon that it is a matter in which our committee is entirely powerless. Unless the Appropriation Committee changes the mode of procedure we can do nothing. He has the same information that we can obtain from the Supervising Architect's Office, and that is that the appropriation is insufficient; but if we should come in here and attempt to control the appropriation we would be met immediately by the Committee on Appropriations with the information that we were trespassing upon their jurisdiction.

Now, a single remark as to the Supervising Architect's Office and the force there. I have known for a number of years that the Supervising Architect's Office has needed entire reorganization. It consists of a number of subordinate bureaus or divisions under the Supervising Architect, who is an officer of the Treasury Department. The present Secretary of the Treasury and myself have talked about the reorganization of that Bureau in his Department. Until there is a reorganization it will never have enough force to do the work. It is a defect of organization and not a defect in the number of employés.

In the first place, so long as we pay a miserable pittance of a salary to the Supervising Architect, we shall have this same kind of complaint. We are attempting to get a first-class officer for a fifth-class salary; and you can not expect the best architects in the United States to leave their employment in the larger cities, where they are making $20,000 to $40,000 and $50,000 a year, and come here to Washington City on a salary of $4,500. It is impossible to do it. But the whole Supervising Architect's Bureau ought to be reorganized, and the Secretary of the Treasury told me that he has that in contemplation.

Mr. HALE. Will the Senator from Missouri let me ask him a question?

Mr. VEST. Certainly.

Mr. HALE. Is it not a fact, and has it not been true for years, that we are only enabled to get the services of a competent architect at the head of this great bureau or division for a very short time, and that the compensation which he can get outside is so much in excess of his salary that we can not keep a good man there? Is it not a fact that the whole business of this division has been always underestimated in Congress by the appropriation that has been given?

Mr. VEST. There is no doubt about that, Mr. President; but there are so many instances of that kind, I am hopeless myself of doing anything but to call attention to them. We expect to get first-class Indian agents for $1,200 or $1,500 a year, to leave civilization and take their families out amongst the Indian tribes; but we have never succeeded in doing it, and never will. It is simply impossible to secure a first-class architect at the salary we pay that officer.

Mr. MCPHERSON. Let me inquire of the Senator from Oregon the exact purpose of his joint resolution. If I understand the reading of its title aright, his purpose is to repeal the appropriation which provides for experts of all kinds and efficient aid——

Mr. DOLPH. Oh, no; not at all. I desire that the matter may be understood by the Senate. If there is any good reason for the limitation which I propose to repeal I should like to hear it now or hereafter. If the Committee on Appropriations had a specific purpose in inserting this provision in the act it can be stated. I think the probability is that it came in the bill from the other House, and that somebody had an idea it limited the amount of money to be expended for this purpose.

That is not true. Out of the appropriation in all bills for public buildings the plans and specifications are made. They are to be paid for out of this fund whenever the plans are made, and it will cost no more to make the plans to-day than it will cost five years from now. There is a provision contained in the last legislative, executive, and judicial appropriation act that the Supervising Architect may employ architects, etc., to aid him, but that the amount of expenditure for that purpose in any one fiscal year shall not exceed $200,000. It does not limit any appropriation made by the act, but it prevents the Supervising Architect from expending in his office an amount exceeding $200,000 for plans.

Mr. MCPHERSON. For the employment of outside assistance?

Mr. DOLPH. Not outside assistance, but for all the assistance necessary in providing the plans. The Supervising Architect tells me that this provision should be repealed; that he can not with such a limitation employ sufficient force to make plans for the buildings Congress has provided for.

In the case of the public building at Portland, Oregon, which was authorized on the 24th of January, 1891, two years and a half ago, the sketch plans have not yet been drawn, although $160,000 has been expended for the site of the building, and the lot lies there. The excuse of the Supervising Architect is that he must take up these buildings in the order of the appropriations, and that the limitation of the amount he may expend for plans this year prevents him from reaching the Portland public building and others.

The joint resolution does not add a dollar to the appropriation and does not add a dollar to the cost of the plans; it simply allows the Supervising Architect to employ the necessary employés to make the plans for buildings which have been authorized and appropriated for by Congress.

I say that it may have been thought that this limitation in some way would limit the appropriation; it does not, but it does control the expenditure of money for public buildings by holding back the plans, and thereby holding back the expenditure. I do not think that was the intention of the committee. If it was, that would be one reason for the limitation.

Mr. MCPHERSON. Have any plans been made for a public building at Portland?

Mr. DOLPH. No, sir, because the Supervising Architect says he can not expend over $200,000 for plans.

Mr. MCPHERSON. Has there been an appropriation?

Mr. DOLPH. There has been an appropriation of $160,000 for the site, and appropriation enough to make the plans. We have had a foundation put in, and it has been lying there for over two years.

Mr. ALLISON rose.

Mr. MCPHERSON. If the Senator from Iowa desires the floor, I will yield.

Mr. ALLISON. I was waiting to be recognized by the Chair. Of course I yield to the Senator from New Jersey to continue his remarks.

Mr. MCPHERSON. I only wish to say a single word.

The Senator from Missouri [Mr. VEST] states that there has

been a great need of a reorganization of the office of the Supervising Architect of the Treasury Department. That is apparent to everybody. We have not had a successful administration of that office for some years. I believe, however, that the present incumbent of that office is a man who is entirely competent to reorganize the office upon the very best possible basis to bring about good results, a man of high character and excellent qualifications, and a man of great energy.

I am in sympathy with the purpose of the joint resolution of the Senator from Oregon. I think it the duty of Congress to proceed in a manner which will enable the Supervising Architect not only to reorganize his office upon a firm and a stable and successful basis, but to arm him in every way with a sufficient amount of appropriation in order that his work may be made to show.

So far as the incumbent of the office is concerned, no better ability can be found in this country.

Mr. DOLPH. The Senator does not understand that I made any reflection upon that officer?

Mr. MCPHERSON. I am speaking of some remarks made by the Senator from Missouri, in which he said there was a disposition on the part of the Secretary of the Treasury to reorganize that office and put it upon a little better basis. The Secretary of the Treasury has proceeded in the right direction thus far in the selection of the agent who is to have the responsibility of this great work.

Mr. ALLISON. Mr. President, the limitation on the appropriation in the legislative appropriation act of last year is the usual limitation which has been inserted for many years, the object being to limit the amount to be expended in each year for the purposes of preparing plans, etc. It was supposed that this sum would be large enough, or at least as large as could be economically expended.

Whilst I have not before me the figures of these appropriations from year to year, I have no doubt that the sum of $200,000 is as large a sum as has ever been appropriated for this purpose.

Mr. HALE. Here is a list for the last ten years, if the Senator desires to read it.

Mr. ALLISON. I thank the Senator. Here is the statement: In 1883, $130,000; in 1884, $120,000; in 1885, $140,000; in 1886, $130,000; in 1887 and 1888, $150,000; in 1889, 1890, and 1891, $175,000, and from 1892 to 1894, $200,000.

Mr. DOLPH. The Senator speaks of an appropriation. The matter I have been talking about is not an appropriation at all. It is simply a limitation upon the amount the Supervising Architect may expend out of appropriations for plans for public buildings.

Mr. ALLISON. I have not failed to understand what the Senator proposes. We make these appropriations for public buildings. They may be made as coming from the Committee on Public Buildings and Grounds or they may be made in the regular annual appropriation bills. Latterly, owing to a rule of the House of Representatives, they have been put upon the sundry civil act from year to year, because the House has refused to allow appropriations to be made for specific buildings. These appropriations are now put upon the sundry civil act, and out of these appropriations a certain sum may be expended annually for the purpose of preparing plans, etc. That I understood to be the statement of the Senator from Oregon. If I am mistaken about it he can correct me.

Mr. DOLPH. There is no limitation in the original appropriation.

Mr. ALLISON. Certainly not.

Mr. DOLPH. The Supervising Architect may expend all the appropriation necessary for the plans.

Mr. ALLISON. Undoubtedly he could under the original appropriation.

Mr. DOLPH. But then comes in the general appropriation bill making a limitation on the amount he may expend for this purpose.

Mr. ALLISON. That is as to the amount which may be expended in any fiscal year in the Supervising Architect's Office.

Mr. DOLPH. Out of the appropriations already made.

Mr. ALLISON. Certainly, out of the appropriation already made. Why is this? The Supervising Architect's Office is a limited office, both in its area and in the number of its employés, and there were some years ago—at least it was so stated—some abuses respecting the number of employés in that office. If a person was seeking employment who could find employment nowhere else he was directed to the Supervising Architect's Office. I have no doubt it would be a great convenience to the new administration of affairs which has just come into power, and which has more or less pressure upon it, if this fund could be enlarged to $400,000 or $500,000. Then there would be an opportunity of employing people in the Supervising Architect's Office; but it would be also necessary to enlarge the Treasury Building in order to find room for these new employés, or to rent large buildings outside.

The Senator from Oregon seems to have fallen into the impression that such a provision as that to which he has referred is a new thing upon the appropriation bill of last year, and that it was devised for the purpose of preventing the regular and rapid progress of the public buildings authorized by law and appropriated for.

Respecting the public building at Portland, I must submit to my friend from Oregon, that that building has progressed with as much rapidity as could fairly be expected. It is true the building was authorized in 1891, and there was a limit of cost put upon it, which was wholly unsatisfactory to the Senators from Oregon; therefore no plans could be made for the construction of that building, and it was at their urgent request and instance that, during the last year, we increased the limit of that appropriation, so that I think some $800,000 was appropriated.

Mr. DOLPH. Seven hundred and fifty thousand dollars. I hope, however, the Senator will understand that I merely used the Portland building as an illustration. I have been talking about the propriety of the limitation.

Mr. ALLISON. And I am using the Portland building also for the purpose of illustration, and for no other purpose.

On the passage of the sundry civil act on the 3d of March, we provided for the enlargement of the cost of the building at Portland, the original appropriation not being satisfactory to the Senators from Oregon, but it was as large as we could secure in the Senate, and it was fixed at $750,000. So there was no opportunity for the Senators from Oregon to present their claims for a plan of the building until after the 4th of March.

I am glad to hear the Supervising Architect so well spoken of by the Senator from New Jersey [Mr. MCPHERSON], because I understand he is a citizen of the State of New Jersey, and undoubtedly the Senator speaks from actual knowledge.

The Supervising Architect says very properly that he must take up the buildings which have been appropriated for and were considered prior to the building at Portland, Oregon, and he says also that, if he has money enough, he can make plans for the public buildings authorized at present.

I think, so far as the public buildings are concerned, $200,000 a year for the plans is as much as can be economically expended until there is a reorganization of the Supervising Architect's office. I agree with the Senator from Missouri [Mr. VEST], that we should employ architects outside of the city of Washington, who, with their force in the various cities of the Union, may make plans for public buildings.

So, whilst I do not specially object to the suggestions made by the Senator from Oregon, I can not conceive why it should be necessary for us now, with undue and rapid haste, to double up these appropriations far beyond any point hitherto reached, merely for the purpose of securing plans for public buildings.

Mr. DOLPH. I am not asking for an additional dollar of appropriation.

Mr. ALLISON. Certainly, the Senator is not, and he has not a dollar of appropriation. There is no money appropriated for the building at Portland, Oregon.

Mr. DOLPH. Yes, there is.

Mr. ALLISON. How much?

Mr. DOLPH. There is nearly $100,000 unexpended after the purchase of the lot, and the money is on hand. I do not remember the exact amount.

Mr. ALLISON. Very well; it is not enough to lay the foundation of that building. I submit whether it is worth while for us to enter upon an elaborate scheme of plans for public buildings all over the United States until we are ready to appropriate the money to construct them. There are public buildings in my own State which are in the same condition as the one referred to by the Senator from Oregon, waiting for appropriations. Therefore I do not believe that it is worth while for us in haste to enlarge this expenditure during the present year beyond the $200,000 contained in the legislative, etc., appropriation act of last year, although if it be thought wise by those who now have charge of the public expenditures to enter upon a scheme which will necessitate extensive appropriations next year for public buildings I certainly shall interpose no objection.

Mr. MANDERSON. I rise to a parliamentary inquiry. Is there any question before the Senate, Mr. President? I understand this to be the introduction of a joint resolution for reference.

The VICE-PRESIDENT. The question is on the reference of the joint resolution introduced by the Senator from Oregon to the Committee on Public Buildings and Grounds; and the discussion has been proceeding without objection.

Mr. MANDERSON. If the debate is to be continued, I shall feel constrained to object to the consideration of the joint resolution, which will carry it over until to-morrow.

Mr. VEST. I do not wish to say anything more on this question, but I ask the Senator from Oregon to allow the joint resolution to go to the Committee on Appropriations. All that the Committee on Public Buildings and Grounds could do would be to ask for information on the subject from the Supervising Architect of the Treasury and submit that to the Senate.

Mr. DOLPH. I prefer to have the joint resolution go to the Committee on Public Buildings and Grounds. I think I have a right to get their opinion upon it. The limitation I have referred to was put upon the bill by the Committee on Appropriations, and I think this should go to the committee which originally reports bills for public buildings. I should like, also, to have a statement from the Supervising Architect in regard to it.

Mr. VEST. Our opinion would be worth very little unless the Committee on Appropriations concluded to let the money be appropriated.

Mr. MANDERSON. I shall object to the introduction of the joint resolution under section 1 of Rule XIV.

Mr. COCKRELL. Let it be printed and lie on the table.

The VICE-PRESIDENT. The joint resolution was introduced without objection. It has been read the first and second times; and the Senator from Oregon has asked that it be referred to the Committee on Public Buildings and Grounds. Is there objection to that reference?

Mr. MANDERSON. I object to it.

Mr. DOLPH. Does the Senator object to the reference? I think there will be no more debate upon it.

Mr. MANDERSON. If there be no further debate, I shall not object.

The VICE-PRESIDENT. The joint resolution will be referred to the Committee on Public Buildings and Grounds in the absence of objection.

ISSUE OF ADDITIONAL GOLD CERTIFICATES.

Mr. COCKRELL. I introduce a joint resolution; which I ask to have read.

The joint resolution (S. R. 24) for the issue of additional gold certificates was read the first time by its title, and the second time at length, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby directed, in pursuance of the provisions of section 254 of the Revised Statutes of the United States, to issue certificates, not at any time to exceed 20 per cent beyond the amount of gold coin and bullion in the Treasury, and to use and expend the same in payment of interest on the public debt, and any other demands, obligations, or liabilities of the United States.

Mr. COCKRELL. Mr. President, a word in relation to the joint resolution. Section 254 of the Revised Statutes reads thus:

SEC. 254. The Secretary of the Treasury is authorized to receive deposits of gold coin and bullion with the Treasurer or any assistant treasurer of the United States, in sums not less than $20, and to issue certificates therefor, in denominations of not less than $20 each, corresponding with the denominations of the United States notes. The coin and bullion deposited for or representing the certificates of deposit shall be retained in the Treasury for the payment of the same on demand. And certificates representing coin in the Treasury may be issued in payment of interest on the public debt, which certificates, together with those issued for coin and bullion deposited, shall not at any time exceed 20 per cent beyond the amount of coin and bullion in the Treasury; and the certificates for coin and bullion in the Treasury shall be received at par in payment for duties on imports.

The passage of this joint resolution will give instant relief to the existing panic, and it will be a thing of the past. It will put from $25,000,000 to $35,000,000 of gold certificates in circulation immediately, and add that amount, which is so badly needed, to the reserve in the Treasury.

The VICE-PRESIDENT. What disposition does the Senator suggest in regard to the joint resolution?

Mr. McPHERSON. Let it lie on the table.

Mr. COCKRELL. Let the joint resolution lie on the table and be printed. Objection has been made to it.

The VICE-PRESIDENT. That order will be made, in the absence of objection.

WIDOW OF C. P. CRANDALL.

Mr. MITCHELL of Oregon submitted the following resolution; which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Secretary of the Senate be, and he is hereby, authorized and directed to pay out of the miscellaneous items of the contingent fund of the Senate to Mollie Crandall, widow of C. P. Crandall, deceased, late a messenger in the employ of the Senate, an amount equal to six months' salary as such messenger; said sum to be considered as in lieu of all funeral expenses and other allowances.

VALUES OF EXPORTS AND IMPORTS.

Mr. FRYE. I offer a resolution, for which I ask immediate consideration.

The VICE-PRESIDENT. The resolution will be read.

The Secretary read as follows:

Resolved, That the Secretary of the Treasury be directed to furnish the Senate, for its information, a detailed statement of the values of our exports and imports carried under the several flags engaged in our foreign carrying trade.

By unanimous consent, the Senate proceeded to consider the resolution.

Mr. COCKRELL. For what time does the resolution ask the information?

Mr. FRYE. I am willing to limit it to the last fiscal year.

Mr. COCKRELL. There ought to be some time specified.

Mr. FRYE. I did not notice that omission.

Mr. VOORHEES. Say "during the last fiscal year."

Mr. FRYE. I will modify the resolution by adding "during the last fiscal year."

Mr. COCKRELL. Why not say "during each of the two last fiscal years."

Mr. FRYE. Well, I will say "during the last two fiscal years."

Mr. COCKRELL. No; each of them. Let them be separate.

Mr. FRYE. Very well; I will then modify the resolution so as to read "during each of the last two fiscal years."

The VICE-PRESIDENT. The modification suggested by the Senator from Maine will be made to the resolution. The question is on agreeing to the resolution as modified.

The resolution was agreed to.

OBSTRUCTIONS TO COLUMBIA RIVER NAVIGATION.

Mr. DOLPH submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Secretary of War be, and he is hereby, directed to transmit to the Senate, without unnecessary delay, the report of the Board of Engineers appointed under the provisions of an act entitled "An act making appropriations for the construction, repair, and preservation of certain public works for rivers and harbors, and for other purposes," approved July 13, 1892, to reëxamine the obstructions to navigation in the Columbia River from the navigable waters thereof below Three Mile Rapids to the navigable waters above the Celilo Falls, and to report thereon.

BACK CREEK ROUTE.

Mr. HIGGINS. On the 25th of August I introduced a resolution, which was referred to the Committee on Commerce, requesting the Secretary of War to send a revised estimate and a report of the survey of the Back Creek route, with reference to a ship canal between the Delaware and Chesapeake Bays. I ask that an order be made for the printing of the resolution.

The VICE-PRESIDENT. That order will be made, in the absence of objection.

AMENDMENT TO A BILL.

Mr. DOLPH. I submit an amendment intended to be proposed by me to the bill (H. R. 4) to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes.

I ask that the amendment be referred to the Committee to Audit and Control the Contingent Expenses of the Senate. It provides for the payment of Senate per diem clerks during the recess two years ago, as authorized by a resolution of the Senate. It is a demand which should be paid by the Senate.

The VICE-PRESIDENT. The resolution will be printed and referred to the Committee to Audit and Control the Contingent Expenses of the Senate, in the absence of objection.

PROPOSED FINANCIAL LEGISLATION.

Mr. MILLS. Mr. President, if the Senate is willing, I should like to submit some remarks on the President's message after the routine business of the Senate is through next Wednesday morning.

PURCHASE OF SILVER BULLION.

Mr. VOORHEES. If the morning business is concluded I ask——

The VICE-PRESIDENT. If there be no further concurrent or other resolutions, the morning business is closed.

Mr. VOORHEES. I ask that the Senate proceed to the consideration of House bill No. 1, on which I understand the Senator from Colorado [Mr. WOLCOTT] desires to address the Senate.

The VICE-PRESIDENT. The title of the bill will be reported.

The SECRETARY. A bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. WOLCOTT. Mr. President, it is said that a financial panic is invariably accompanied or followed by a widespread religious revival. Up to this time we are unfortunately without that beneficent occurrence. The ready and complete change of heart, however, on the financial question which we have witnessed in this Chamber gives evidence that this is a time when men are especially open to conviction. And if the Administration, with its petty spoils and patronage has been able to make so many converts, what may we not hope when the assurances of future happiness will be, not for four short years, but for eternity? The misfortune under which the silver men suffer is that the Administration conversion came first. For if the hearts of Senators had first

been impressed with the littleness of the things of this world and the glory of things supernal, the people, who are to be the sufferers, would not have been deserted by their representatives.

Except as patronage may be used to affect the action of Congress, there is no criticism to be made respecting the policy of the Administration. There has been much comment upon the present attitude of the Secretary of the Treasury, because while he represented a constituency in Congress he was an earnest advocate of the free coinage of silver. Such criticism is misplaced. He is a member of the President's household, and committed to carrying out the President's policy, or to withdrawal from the Cabinet. The Secretary of the Treasury is not the only member of the Cabinet who must have radically changed the views of a lifetime in subordination to those of his chief.

Nor is the President of the United States open to stricture because of his message. He has been a consistent and persistent opponent of silver coinage since his first entrance into public life. There has never been a moment's doubt as to where he stood. The platform of his party, it is true, declared in favor of silver, but the platform meant no more to him than the wind that blows. We of the West knew perfectly well last fall that whoever of the two candidates should be successful, we were powerless, and that our reliance must be placed in Congress, which had already on more than one occasion shown its willingness to rise above the personal wishes of the Executive.

The friendship for silver expressed by every member of each House of Congress who has spoken on this question is remarkable and unanimous. No Senator in favor of the unconditional repeal of the Sherman act has failed to announce in solemn words his belief in bimetallism. The statement may be soothing to his conscience, but it serves no other purpose so far as favorable legislation is concerned. The Senators who state that they are bimetallists, but that international agreement is necessary before we can adopt the double standard, misstate the proposition.

International agreement must depend on the attitude of Great Britain. If, then, Great Britain consents to a double standard, they are bimetallists. If she adheres to gold, they are monometallists. The policy of Great Britain, which they are powerless to shape or to control, is the policy they advocate. They are willing to sacrifice not only a great region of our country, whose resources are of infinitely more material value to the East than all our trade with Great Britain, but the welfare and prosperity of every farmer and toiler in the land, in order that we may be in entire accord with Great Britain in our financial policy.

Nor are the friends of silver in the slightest degree carried away by such utterances as those of the Senator from New York the other day. Who is not for us is against us. It would have been far more satisfactory if, instead of arguing in favor of silver and likewise in favor of unconditional repeal, the Senator had argued against silver and then announced his intention of voting against unconditional repeal, and his speech would have been equally logical.

Silver has been compelled to bear everybody's burdens for many months, and it seems now involved in some fashion with the Democratic differences in New York.

The Senator from New York knows perfectly well that free coinage by separate act is impossible during the incumbency of the present Executive, and that any assistance he may desire to render must come now or not at all. Those who believe in the principle of free coinage of both gold and silver care not a bawbee about the local fights in New York, and, for my own part, I prefer an open foe who asks no quarter and gives none, who has been steadily opposed to silver and has never concealed his views, to one who "keeps the word of promise to our ear, and breaks it to our hope."

The most remarkable and most ominous occurrence, however, has been the change of front by the Senator from Indiana [Mr. VOORHEES], chairman of the Finance Committee. For nearly a generation, in season and out, he has posed as a friend of the people. Many and varied have been the remedies he has proposed; but until last week, if consistent in nothing else, he has everywhere and at all times found occasion to denounce the national-bank system and to advocate the free coinage of silver. I have been examining the files of the RECORD for the past decade and longer, with a view of reminding the Senator of the days of which Charles Lamb wrote; those "red-letter days, now become, to all intents and purposes, dead-letter days."

But what is the use? The banks were Molochs and everything else that sounds bad and wicked, and no matter what other gentlemen might do, he would never vote to extend their charters, or enlarge their powers, and looked forward with hope to the time when they would be wiped out altogether. He even opposed the amendment permitting them to issue notes up to 90 per cent of their bonds on deposit with the Treasury. And during all these years the Senator from Indiana has been also apparently the unvarying friend of free coinage. The RECORD contains speech after speech in which he shows the necessity for, and the availability of, the use of silver. One of these speeches was delivered only last year, since the passage of the Sherman act, in which he utters no word of reproach respecting that law, but urges a continued and increasing use of the metal as coin.

This is a brief summary of the utterances of the Senator from Indiana on these subjects. But "his words were writ in water," and the pitiful outcome of it all are the two bills now before us: The bill to permit national banks to issue notes to the par of their bonds, and the bill for the unconditional repeal of the purchasing clause of the Sherman act.

For the first time in the legislative history of either of them, the Senator from Indiana and the Senator from Ohio are in complete accord in financial matters. For a generation they have both served in public life, the one, in public estimation, standing for the masses, the other for the classes, yet both meet at last on common ground! It has not been always so. Since the passage of the Sherman act and just prior to the last Presidential election the Senator from Indiana, in a warm and impassioned article in the North American Review, in favor of free coinage, described his colleague as follows:

> Now, however, those who eighteen years ago wrought under cover for the destruction of one-half the honest, debt-paying money of the American people, are as well known as if a calcium light had been turned on them, and are as universally distrusted by the plain, laboring, and productive masses as if they had been caught in the commission of crime. This feeling of distrust is confined to no one party. The ablest and most distinguished opponent of silver money in the United States, and, more than any other one man, the author of the legislation of 1873 on that subject—

But I suppose the *amende honorable* of the Senator from Indiana yesterday may possibly be held to cover this article as well as the Senator's utterances in this Chamber—

> has been before three national conventions of the Republican party seeking a nomination for the Presidency, and seeking it in vain.
>
> Mr. SHERMAN of Ohio is always to be spoken of with respect as a man of ability and large experience, and more especially so in connection with the finances of the country. It is true that he has been on both sides of every financial issue for more than a quarter of a century past; but it is also true that he has always veered from one point of the compass to the other at the exact time when his services were most valuable to the money power, and most oppressive to the laboring, overtaxed, debt-paying farmers and wage workers of the country.

I hope the Senator from Indiana will not be able to catch up with him. [Laughter.]

> And yet, with all his eminent services in behalf of the financial centers, as they are called, banking corporations, usurers, interest-eaters, and parasites on human labor generally, the leaders of the Republican party in New York have never dared in national convention to cast the vote of that State for him.
>
> The opportunity was presented in 1880, 1884, and 1888, and the weight of obligation which the moneyed interets were under to Mr. Sherman was not denied; but a wholesome fear that the plain people would resent at the polls his hostility to their interests restrained the impulse of gratitude, if, indeed, such a sensation as gratitude is ever known to organized wealth.

But it is different now. The wolf is dwelling with the lamb, and the leopard is lying down with the kid. [Laughter.] This delightful harmony, I fear, will not long continue, and when they arise they will be fewer in number. [Laughter.] There can be but one chairman of the Finance Committee, and without in the least underrating the abilities of the Senator from Indiana, those of us who have watched the course of financial legislation for the past twenty years, commencing with the demonetization of silver in 1873, must be pardoned if we look forward to the resumption of the control of the committee by the Senator from Ohio, and if we recall in this connection old Pharaoh's dream of the lean kine.

In what I have said I beg to be understood as offering no harsh personal criticism respecting the Senator from Indiana. He has been so long the advocate of silver that I can not yet believe he will desert the cause or cast his vote for unconditional repeal. I only venture to remind him, in view of his past utterances, that old Solomon did not belie his reputation for wisdom when he said, "It is better thou shouldest not vow than that thou shouldest vow and not pay."

The report of the Finance Committee, signed by two Democrats and by four Republicans, and not concurred in by four Democrats and one Republican, is bedecked with plumage which it has no right to wear. The issue is clear enough and nobody is deceived by the verbiage of the report.

Silver is to be demonetized—the Sherman law to be robbed of the purchasing clause. There is always a to-morrow, and it is unwise to close our eyes to the character of the proposition.

No man can be a bimetallist in the sense that he believes in the further coinage of both gold and silver by the United States, and advocate the bill. The President of the United States will undoubtedly veto any independent measure for the free coinage of silver, and there is not a Senator in this body who does not believe this to be true. The only possible chance to save silver is to couple any provision looking to a change in the Sherman act with some measure recognizing and establishing silver coin-

age. Any man who will vouch for Mr. Cleveland as a bimetallist would vouch for the man in the moon.

It is urged upon us that we have been called together for a specified purpose, and that it is our duty to accomplish that, and that only, and then go home. It is everywhere admitted that we need further legislation respecting silver; but it is glibly said that we can have that later. Why not now? Congress is in session to deal with the financial question. We are all of us advised as to the situation. We shall never know more than we know now about silver. It is conceded on every hand that the Sherman act had nothing to do with the existing financial panic. Then why not at this time determine the policy which this country should follow, and bring the subject to a finality?

We are told that it is essential that we act quickly. Very true; and if we are all bimetallists and all favor the repeal of the Sherman act, no obstacle stands in the way of speedy action. And I may be permitted to suggest to the gentlemen who are in so great a hurry that if time be of value to them they may, perhaps, secure the repeal of the Sherman act far more quickly by coupling with it some fair provision for silver coinage than in the way suggested by the Finance Committee. It may be true, as the Senator from New York last week foretold with confidence, that the purchasing clause of the Sherman act will be surely and unconditionally repealed; but it is equally true that he may possibly find it necessary after a time to revise his prophecy.

Since this subject was thrashed over during the last Congress two new reasons have been advanced why silver should cease to be either purchased or coined at our mints. They are persistently presented to us by the advocates of the bill reported by the Finance Committee. They are, first, that our abandonment of silver will compel England to agree to an international conference, and to the restoration of silver as a money metal to be freely coined as offered; and the other, that the repeal of the purchasing clause of the Sherman act will restore confidence in our finances and our financial institutions to the people, who have lost faith in both.

We are constantly assured that our abandonment of silver will force England to an international agreement. This may be true. There is not gold enough in the world to do its business, and some day this will be recognized by monometallist countries. But the time is far away. Capital is strong and selfish. This Senate Chamber to-day is the best possible exemplification of its power, and a long period of suffering and of shrinkage will pass before we return to the double standard.

Meanwhile, the sections heretofore devoted to the search for silver will become largely depopulated. The mines will fill with water, the timbers which sustain their walls will rot, the vast industries dependent for success on the mining regions will become bankrupt, and a generation will not serve to renew their prosperity, even after silver may be remonetized. The investments in railroads, mines, smelters, and other property directly and fatally affected by the action recommended by the Finance Committee aggregate more than $1,000,000,000, and they are all to be sacrified that we may make our financial policy in exact accord with Great Britain, the creditor of the world!

The argument is as if one should say, protection is wise, and must be the bulwark of our prosperity. It is threatened year after year by the advocates of free trade. There is one way to settle the agitation finally and forever. Submit to absolute free trade. A few years will show the folly of it. The country will then return to protection, and you will not be again disturbed. I picture the eagerness with which New England would grasp the suggestion, the warm-hearted welcome she would extend to the friends who thus advised her.

Since I have referred to the subject of protection another word may as well be said. There is no analogy between free coinage and protection. They rest on essentially different principles, are based on separate foundations. Yet if this great country, with its enormous area and wealth and population and resources, is to change its monetary policy to follow and to be in accord with that of Great Britain, it alters the whole basis of our relations with foreign countries.

I speak with hesitancy and reluctance; but as the subject now presents itself, if this bill shall pass, and silver be, as it must be, absolutely dethroned and degraded, I know of no reason why any Senator who believes in free coinage should ever cast another vote in favor of protection in any form. If we are to have a steadily appreciating currency and constantly lowering prices, it is better for our farmers and wage workers that they have the opportunity of buying, untrammeled and unrestricted, in the markets of the world. In the light of the proposed policy, bounties are iniquitous, protection an oppression, and free ships desirable. This is an era of experiment. Let us experiment all around.

Even if it were true that our abandonment of silver would, in time, compel other nations to rehabilitate it and renew its coinage, the taking of such a step by this people would, in my opinion, be ruinous and unnecessary. We have a vast area of country, with many and varied resources and constantly increasing needs. Our great cities, the centers of the commerce of the country surrounding them, are remote from, and largely independent of each other. The numberless new enterprises everywhere springing up and the constantly increasing avenues of trade demand a steadily enlarging volume of currency to keep pace with our growing demands.

We produce of gold, available for coinage, less than $18,000,000 annually. We can absorb the silver offered us for coinage without inflation of the currency and without impairing our financial credit at home or abroad. The silver held in Europe is in coin and needed there, and surely not to be returned at a loss. We can not get the gold to furnish the needed increase; and we believe in hard money, gold and silver, in preference to the only other alternative, irredeemable fiat money, based only on credit. The two metals together would furnish us, if our mints were reopened, a stable, enduring, and adequate currency. France for seventy years maintained their parity. With an area seventeen times greater than France, and a vastly larger population and far greater resources, who shall say that the United States can not coin both gold and silver at her mints as offered, and maintain their parity and her own financial integrity?

To those timid people who look to international conference for sanction before they are willing to embark upon the coinage of our gold and our silver, I commend the following excerpt clipped from a recent paper:

> The increase of our population in the brief period of ten years from 1880 to 1890 exceeds the entire population of Mexico; an increase of population in the United States in ten years of more than 30 per cent of the entire population of France, more than 40 per cent of the population of Italy, nearly 70 per cent of the population of Spain; an increase equal to twice the population of Belgium, three times the population of the Netherlands or Europe in Turkey, four times the population of Switzerland, and six times the entire population of Denmark or of Greece.

In the face of such a showing, I can imagine no more cruel, or unnecessary or unbusinesslike proceeding than to hold our whole financial system in abeyance until Europe determines what policy will be satisfactory to her.

The other additional reason for repeal, Mr. President, presented by the advocates of the bill reported by the Finance Committee would be droll, if the times were not tragic. One Senator after another tells us, and the other House echoed with the same statement, that the existing law, known as the Sherman law, has absolutely nothing to do with the present deplorable financial panic, but that some other people, who are not designated by name or calling, think it has; that there is a woful lack of confidence, not in our silver certificates, but in our financial institutions, and that this departed confidence will return if Congress will repeal the purchasing clause of the act of 1890.

A few days since I demonstrated, as best I could, the folly of this statement, and I shall not weary the Senate with a repetition of what I then said. This panic will go down into history as a banker's panic. Months ago the associated national banks, as an organization, began demanding the repeal of the Sherman act. They solemnly assured themselves and the country that they would be ruined if it were not repealed. They charged to silver the export of gold when every dollar that went would have gone if we had never a silver dollar in our coinage. They continued to clamor until the people who had money in the banks drew it out—bills, gold, or silver, it mattered not which, for they knew the dollar stamped by the Government was good for 100 cents. They sought to bring discredit upon the financial policy of the Government; they have succeeded in engulfing themselves. If you ask a banker to-day how the repeal of the Sherman act is to restore confidence to the depositors who have drawn out some $180,000,000, he can not tell you.

Mr. President, the depositors did not complain of the Sherman act, and no one of them drew out his money because of the existence of that law. I have no sort of hostility towards national banks. The system afforded the first basis of confidence in our bonds and has been of vast service to the country. The attitude of the banks towards the Sherman law, however, in connection with some recent occurrences, deserves mention at this time. The banks demand, as I have said, the repeal of the Sherman law. This act is the only one now upon our statute books which permits an enlargement of the currency. In time of panic, such as this, it would seem unaccountable that banking institutions should not desire an increase in the volume of money.

The fact is, however, that when the Sherman act shall have been repealed, the banks intend asking Congress to authorize either an issue of bonds or bills to the amount of one hundred millions or more for the purchase of gold, and they have good reason to believe that a complaisant Finance Committee will authorize a bill for the issue. This would bring temporary prosperity, and aid in the journey toward gold monometallism.

Meanwhile, we are asked to authorize the banks to issue notes to the par value of their bonds deposited to secure circulation, a measure which recent disclosures would indicate is of importance to their depositors as well as to the banks. While waiting for this measure to become law, clearing-house certificates, based on rediscounted paper, furnish an excellent substitute for money.

Nobody was disposed to find fault with this procedure, but when a resolution was offered the other day calling on the Comptroller of the Currency, whose integrity everybody recognizes, to inform us whether the banks were obeying the law or not, an extraordinary incident occurred. The Senator from Maryland [Mr. GORMAN] informed us that, as a matter of fact, all the banks were violating the laws; that if they did not violate the law they would all have to close; and we were urged not to inform ourselves of the facts, but to let the Comptroller alone. No more remarkable statement was ever made. Congress is in session ready to enlarge or change the law if necessary, but we are informed that it is our duty to blind ourselves to the facts, and to our oaths, and to suffer the law to be violated without inquiry or rebuke.

Did it ever occur to the Senator from Maryland that a depositor might have some rights which the law ought to protect? And did it ever occur to the banks that possibly the "lack of confidence" in their institutions might not be wholly due to the Sherman act? In the struggle which is now being fought out on this floor, whatever may be the outcome, we have all learned something of the divinity that hedges around a moneyed institution to an Eastern mind.

A Western point of view is not much valued these days on Wall street, but I venture to suggest to the able financiers of that attractive but expensive locality, that if they will prevent a repetition of such frauds as the whisky trust, and such mismanagement as has been shown in Cordage and other industrials; will remember that the Sherman act, or some kindred measure recognizing silver coinage, must afford them the only avenue possible for an enlargement of the currency which they especially need; will look at a map of these United States and observe that they cover a broad expanse of country, and contain many people with many views; and will so modify their opinion as not to believe that every man who differs with them respecting financial matters must be either a villain or a crank, we will the sooner arrive at that condition of mutual confidence and regard which ought to obtain between citizens of the same country.

The opponents of further silver coinage in the United States are endeavoring to create the impression that there is an overproduction of silver in the world; that silver is cheaply produced at a cost much less than even its present market price as a commodity, and that upon a return to free coinage at the ratio of 16 to 1, the present product would be largely increased. No one of these statements is true, and the falsity of each of them can be readily demonstrated.

When an annual product is not consumed, the measure of its increase must be ascertained by comparison with the stock on hand.

Carefully prepared tables show that in 1872 the world's supply of gold produced since 1492 was $5,453,000,000, and of silver $6,751,000,000. Of the total of these sums 44.68 per cent was gold; 55.32 per cent was silver. At the close of last year the existing stock of gold in the world was $7,610,000,000, and of silver $9,097,000,000. After four hundred years of production the gold composed 45.55 per cent and the silver 54.45 per cent of the two metals. The world's product of gold existing in 1872 has since that year increased 39.55 per cent, while the increase of the stock of silver amounts to 34.77 per cent.

Advocates of the abandonment of further coinage of silver must look elsewhere for reasons why it should be discarded as a money metal. It is not and has never been overproduced. The reasons for its fall in value are not because it is too abundantly furnished, but because the great demand for it must ever be for coinage purposes, and legislation has robbed it of this demand. If gold were demonetized, gold as a commodity would fall equally in value. Talk of over-production! Why, in the twenty years, between 1853 and 1873, the production of gold in the world exceeded the production of silver by $1,441,000,000, but both were equally welcome at the mints, and no disturbance resulted. In the twenty years from 1873 to 1893 the excess of silver produced over gold has been but $190,000,000, yet the gold value of silver decreased 42 cents an ounce. Overproduction has not affected the value of silver. Legislation alone degraded it and destroyed its value; legislation, and legislation alone, can restore it.

Nor is it true that silver is produced so cheaply that there is a great margin between its cost and its coinage value at the old ratio of 129 cents an ounce. It belittles the whole subject to even state the proposition. What has the cost of mining gold to do with its value as coin? As a matter of fact where gold has been found the cost of mining it has been far less than of mining silver. The great proportion of the gold is found in placers and gulches, quickly and profitably produced when discovered in paying quantities. Nuggets valued at thousands of dollars are sometimes found by some prospector or miner in a day. The day's wages or expenses of the man who found the nugget would have no relation to the cost of the gold product, and would have no bearing on the coinage question if it did.

Mr. President, you can not measure its cost in that way. I could take you to a section in Colorado—a county which is the residence of my colleague—one of the few sections of our country that produces gold in paying quantities through the years in fissure veins, and I could take you through a hundred miles of shafts and tunnels and adits and levels and cross-cuts and drifts that have cost from ten to fifty dollars a foot to sink and to drive them, which never produced a dollar's worth of ore—shafts that were sunk for blind veins and did not find them, or were sunk on barren streaks; tunnels that were driven through cross-country, and found nothing at the end of it, drifts and adits driven on the barren portion of the vein.

Are they not to be counted? I can take you over the mountain, just over the hill, to where the placer miners are taking out an ounce a day, worth $20, with wages at $3 a day. Would anybody say that therefore the cost of the production of gold in Gilpin County was $3 an ounce? You must measure the losses with the gains. The mountains of the West are peppered and scarred with shafts and tunnels and prospect holes which brought the miner nothing. Are they not to count? Are you to measure your own standard of value by its cost? You might as well say the value of the $1 bill is the cost of paper on which it is printed.

I have seen a mechanical invention—the Westinghouse, for instance—which has made a vast amount of money, a million dollars; and you might as well say that therefore the profit on mechanical patents is a million dollars. Go down to the Department of the Interior and see thousands and thousands of models of patents that represent the work and labor of years now covered with dust and profitless to everybody; must you not take into consideration the losses as well as the gains? So it is with silver. The sum of all the labor and expenditure that goes into the production of silver in the United States is undoubtedly far greater than the value of the silver produced.

But, Mr. President, as the statement has been so persistently made in this Chamber that the cost of producing silver is so slight (I believe the Senator from Vermont [Mr. MORRILL], who is not now here, made some statement of the astonishingly low price at which silver was produced), a careful investigation was entered into by a committee of leading citizens appointed for the purpose, and I hold in my hand the summary of the result of their investigation, which I ask to have printed at the close of my remarks.

The investigation was most exhaustive. The total silver product of Colorado for 1892 was 24,000,000 ounces. Of this two counties, Lake and Pitkin, produced 40 per cent. The returns from the smelters showed the value of the silver and of the by-products, lead and copper. The two counties were separately tabulated as to production, from the date of their settlement, and the total product of each carefully ascertained. An examination of the records was then made showing the number of claims preëmpted, the cost of sinking the shaft necessary before location, the cost of the survey, and of the filing of the notice of location. The law requires $100 worth of work annually on each claim prior to patent. The number of claims not abandoned was ascertained.

The law further requires an expenditure of not less than $500 of work before patent will issue, and certain expenses of survey, etc., are necessarily incurred in patenting each claim. The number of patented claims was ascertained from the Government land offices, and these sums computed. From the records obtainable of mining and smelting operations full tables were prepared. A summary shows that Leadville has produced in fourteen years, net, $104,515,824, at a cost of $121,521,583, showing a loss in silver mining changed into a fair profit by the value of the by-products. Pitkin County is tabulated in the same way, and I commend the report to the attention of Senators who believe that the cost of mining has any bearing on the question of coinage. Of course, sometimes fortunes are made and are widely advertised, but the failures are numberless and are never counted. Abbot Lawrence, fifty years ago, stated that in Boston out of fourteen merchants who start in business thirteen failed. The commercial agencies will tell you that now the proportion of failures is even greater. The successes are 1 in 18, or 1 in 20. Would you measure the profits of business by the fortunes of your merchant princes.

The assertion is likewise made that if we return to silver coinage there would at once be a much larger production of the precious metals. It is not true. The West has seen the zenith

of its mining industry. The zone in which mines may be found—the mineral belt—is as well or better defined than is the coal belt of Pennsylvania. There is not a square rod of ground within the mining belt that has not been prospected. Everywhere has the hardy miner been searching for the precious metals. There may be other discoveries yet made, but the great mass of the country has been developed and its riches extracted.

You will find, Mr. President, that whatever legislation may hereafter come, if silver shall again be restored to its pedestal, the production of the precious metals, unfortunately, can not much increase. I hope it may. So long as silver is recognized as coin, so long will the courageous prospector search for it, until there are no longer any secrets concealed in the bosom of mother earth.

But, Mr. President, all discussion of the cost of production or of present or future overproduction are beside the mark.

The people of the far Northwest favor the resumption of the free coinage of silver because they believe in the principle of bimetallism. We are not inflationists; we do not advocate fiat money. We believe that, as the Senator from Nevada [Mr. JONES] so aptly put it, the rude obstacles which nature interposes offer a better safeguard for the people than the wisdom or unwisdom of their rulers. We oppose the single standard because there is not enough gold to do the business of the world and furnish its inhabitants with the currency they need.

The history of all times has shown that a scarcity of circulating medium means a continuous fall in prices, depression in business activity, the impoverishment of the people, and a decline in civilization. The last twenty years have but emphasized the experience of the centuries. Silver has not depreciated; gold has appreciated. The double standard relieves the tension which may be caused by the lessened production of the one metal or the increased production of the other. It secures to the debtor at the maturity of his debt money of the value he received when his debt was incurred. The two metals together furnish a standard which has permanency, stability, accessibility, and is a suitable and adequate measure of value.

Mr. President, the question as to whether silver shall by the passage of the bill before us be finally demonetized is national and not local. The claims we urge in behalf of the recognition of silver are not pressed because we of the mountains ask your sympathy for a region which your proposed action would impoverish and ruin. If we represented any other section, with our knowledge of the possibilities of the great West, we would be equally tenacious for the preservation of the white metal as a standard of value. No man removed from the money centers, and realizing the illimitable resources of this Republic and its constantly expanding needs, will ever stand for the contraction of a currency already insufficient.

Our interests, our hopes, and aspirations are identical with those of the other sections of our country which are borrowers and not lenders; with those of the Carolinas, of Alabama and Mississippi, and Arkansas and Missouri, the Dakotas and Washington in the remote Northwest. We demand the coinage of both metals, because the history of our country and of all lands has taught us that they afford the safest and most adequate basis for the currency of the people.

We are not influenced by our environment. It is true that for a generation at least many States, some of them larger in population than any one of three of the New England States, and having greater resources, minerals included, than all of them put together, will suffer if this bill shall become a law, to an extent impossible to describe, and which in our life time can not be repaired; but we can endure it. The strong will survive and the weak will go to the wall. It is the lot of man. But before you complete your work, I beg of you to pause long enough to realize that this is the first time in the history of republics—nay, even of governments—that a people devoted to one of the noblest of human industries, the search for the precious metals of the world, were doomed to destruction by their fellow-men because they produced too much of them.

You ought to be proud that within the limits of our own country the courage and enterprise and industry of your own people have disclosed and developed silver enough and nearly gold enough to satisfy the constantly increasing needs of those metals for coinage purposes. There could be no stronger bulwark of a country's safety than that she produces her own coin for her own people, and is not dependent for it on foreign nations.

If the mining States were alone to suffer by the unconditional repeal which is proposed, we would sacrifice without a murmur our interests to a mistaken policy for the public good; but there is no section of our country you are not likewise devoting to disaster and impoverishment. You are endeavoring to remove one of the corner stones on which the fabric of our Government is based. You are seeking to tear down one of the pillars of the temple of our prosperity. You will find to your sorrow that when the western and southern walls have fallen, the eastern façade will not remain unmutilated and secure.

The words one uses to express a proposition in finance sound cold and formal and dry. But the result of our action at this great crisis must affect deeply every home and fireside in this broad land. Measured against the welfare of a great people, threatened with the misery and suffering which must follow the proposed abandonment of silver coinage, of how slight importance are party lines, and how paltry and sordid do patronage and the favor of the Executive appear. The battle must be fought to an end in this forum. On other occasions the Senate of the United States, in opposition to the wishes of the Executive and a hostile majority in another body, has stood firm and unyielding against party and Eastern clamor.

No sectional horizon obscures our vision. If the contest for the people is to be won, it must be because against the selfish demands of the East are arrayed the united votes of the South and West. The fertile acres of your section wait for the plow of the husbandman; so do ours. You need capital for the development of your great resources; so do we. Both sections alike need fair prices for the produce of the farm, and a stable and sufficient currency.

It is for us, standing together on this great question, to save our common country from greater suffering and impoverishment than even the horrors of war could inflict; and by our united votes to maintain, not alone the standard of both gold and silver contemplated by the Constitution, and consecrated by centuries of usage, but to maintain, as well, the standard of American independence and American manhood. [Applause in the galleries.]

APPENDIX.

SOME FACTS AND FIGURES WITH REFERENCE TO THE COST OF PRODUCING SILVER IN COLORADO.

Colorado produced in 1892 24,000,000 ounces of fine silver, or over 58 per cent of the total production of the United States.

Of this 24,000,000 ounces, the two counties of Lake and Pitkin produced over 40 per cent. In these two counties the mining districts of Leadville and Aspen are located, known to the world as the two largest silver producers of the present time.

Reliable data regarding these two districts ought to furnish conclusions that would be beyond question as to the general cost of producing silver, for the reason that the quantity of mineral and conditions in these camps must give most favorable results to the mine owner.

Leadville produces gold, lead, and copper as "by-product" of her silver mines; while Aspen's output is all silver except a by-product of less than 7 per cent in lead, and because of this difference in the product of the two camps a comparison of the results is interesting.

The history of Leadville as a silver camp began in 1878, and it appears by the certificate of the clerk and recorder of Lake County that from 1st January, 1879, to June, 1893, there were filed in Leadville district 19,449 locations of mining claims. The register of the United States land office certifies to the issuing of 3,803 patents in Leadville district.

By careful inquiry it is found that of these patented claims only 166 have produced ore which has been sold, and of these 166 not more than 85 can be said to have paid in the sense of returning money expended with any profit.

The number of mines now paying (June 1, 1893) does not exceed eighteen.

These facts are from smelters, ore samplers' and ore buyers' records, and from individual inquiry, and are reliable.

If we take the period of this history of Leadville district, 1879-1893, fourteen years, and make up a statement of the business of the district as regards its mines, we should have undoubted results as to the cost of its silver and other ores. So, keeping to the record as closely as possible, we charge the district with cost of its 19,449 locations as required by law, viz:

Each location, labor necessary for sinking discovery shaft and making location	$100.00
Survey for location	10.00
Recording certificate	1.50
	111.50
19,449 locations	2,167,563.00

These figures, of course, exclude the labor and money of the prospector expended in searching for locations, and which would aggregate an amount largely exceeding the legal cost as above set down.

On the 3,803 patents, the statutory fees and expenses are on each patent:

Fee of surveyor-general	$30.00
Fee for patent survey	75.00
Fee for land office	10.00
Fee for publishing notice	10.00
Fee for drawing papers	25.00
Fee for land, average 8 acres	40.00
	190.00
3,803 patents	722,570.00

In this item the $500 worth of work which the law requires to be done on each claim before patent can be had is not charged, as account is hereafter taken of it.

To protect titles to locations the law requires that until patent issues there shall be performed $100 worth of work on each claim in each year.

Of the 19,449 locations, it appears that 25 per cent are valid and subsisting at present time, on which annual assessment work ($100) for an average of ten years has been performed—

Making total expenditure on this account of	$4,860,000.00
Add cost of original location	2,167,563.00
Add cost of patents	722,570.00
Total	7,750,133.00

The expenditure in prospecting and abandoned workings must remain wholly undetermined. Everyone who has any knowledge of a mining camp,

or who has been interested in mining enterprises can testify to the large amount of money that has been expended, and of which no account or record is kept, and it must ever remain an unknown sum to be added to the figures that may be closely ascertained.

In Leadville the mining and smelting operations have been made matters of record, and tables have been compiled and published from year to year, based upon data obtained at the time from original sources, and this data shows that there has been paid out for—

Labor in mines and smelters in the fourteen years (1879–1893)	$70,268,640
For lumber and timbers	7,955,000
Coke	6,521,040
Coal	7,028,520
Charcoal	3,020,000
Hardware and mining supplies	10,000,000
Machinery	3,500,000
Machine-shop work	1,875,000
Hauling ore	3,603,250
	113,771,450
Adding cost of location, patent, and assessment work	7,750,133
Gives a total of	121,521,583

representing actual cost of discovery, location, patenting, operating, mining, and smelting the ores of Leadville district during the fourteen years of its history, no account being taken of the money invested in smelters in the district.

Against this amount charge the district with the money received from its production of silver for the fourteen years, viz:

Year.	Ounces silver.	Average price per ounce.	Money value.
1879	6,004,416	$1.12	$6,724,945.92
1880	8,993,399	1.14	10,252,474.86
1881	7,162,909	1.13	8,094,087.17
1882	7,273,249	1.13	8,218,771.37
1883	9,590,172	1.11	10,645,090.92
1884	7,078,951	1.01	7,149,740.51
1885	8,314,503	1.06	8,813,468.58
1886	8,166,145	.99	8,084,483.55
1887	7,148,968	.97	6,934,498.96
1888	7,895,275	.93	7,342,605.75
1889	8,596,034	.93	7,994,311.62
1890	7,061,093	1.04	7,343,536.72
1891	7,535,526	.90	6,781,973.40
1892	6,676,686	.86	5,741,949.96
Total	107,497,416		110,121,939.29

This total of yearly production (in ounces) is in excess of the figures given by the Director of the United States Mint, being derived from records of smelters, and probably includes some ores from mines outside of Leadville district, which will explain the discrepancy.

The total returns from yield of Leadville mines for the fourteen years in question, in gold, silver, lead, and copper—

Amount to the value of	$179,710,207
Deduct money value of silver product figured on basis (New York quotations) of average yearly price of silver, less 5 per cent as received by mine owners	104,615,842
Leaves value of by-products	75,094,365
So it appears—	
Total cost of production, fourteen years	$121,521,583
Less returns from silver produced	104,615,842
Would show a loss of	16,905,741

But the "by-products," gold, lead, and copper, as above, give a net profit of $58,188,624; clearly demonstrating that if Leadville district had been a producer of silver only, the money returned to the district would not have paid the cost of production on the basis of the prices received from the smelters, and the district was saved from loss by virtue of its incidental products of lead, gold, and copper.

If silver had been worth to the mines during these fourteen years its coin value, the district would have received, in round numbers, $131,500,000, or a profit on its silver production, provided no account is taken of the cost and expenditure in the district involved in "prospecting" and abandoned experiments.

Again, if Leadville had only been a silver-producing camp, the same as Aspen, the cost of the total silver product would have been over $1.13 per ounce.

ASPEN DISTRICT.

A comparison of the data from the Aspen district with the foregoing is interesting, and furnishes conclusions that can not be denied.

The following concise and explicit report, proceeding upon same lines as the Leadville data, can be fully substantiated by proofs in the hands of this committee;

ASPEN, COLO., *July 27, 1893.*

DEAR SIR: In response to your request for data regarding the cost of silver production in this county, a meeting of the principal mine owners and managers was held on the 14th inst. A complete organization was effected, the county was districted, and committees, including about forty of the best known of our citizens, were appointed to secure as complete and accurate data as possible. Blank forms, for reports were printed and furnished, and notices were given out through the public press requesting accurate and prompt returns from all citizens in possession of the information desired, and the undersigned were appointed as a committee to compile the statistics received and report the same.

A strong interest in the work was manifested by all our citizens who are engaged in the mining industry, and a large number of reports have been submitted to the committee. Many of these were authentic statements taken from book accounts, and others were reliable and conservative estimates prepared by persons in possession of a direct knowledge of the facts. All reports have been subjected to careful scrutiny by the committee and, of the total number received, 380 individual reports were considered in the preparation of the results submitted. Necessarily, in the short time occupied in the collection of data, the summary is incomplete, in that a large number of properties upon which large sums have been expended in development without returns have not been considered from lack of reliable data. On the other hand, properties which have produced largely, and at a profit, are all included, as the books of accounts in such cases are easily accessible. It may be assumed, therefore, with entire safety, that the actual cost per ounce of silver produced in this district will be somewhat above the result of the calculations herewith submitted."

A categorical answer of the questions submitted is as follows:

The total number of lode locations to date in the Aspen district, as certified by the county clerk and recorder, is 15,056. Of these, about fifty locations are at Independence, and cover gold leads, leaving total number of silver lode locations, say, 15,000.

The records of the county clerk's office show the total number of patented claims at 1,037; deducting 31 patented gold claims, leaves 1,006 patented silver-lode claims.

The number of patented and nonpatented producers, including all claims which have shipped even 1 ton of ore, is 98.

The number of profit-producing claims (or groups) is 18.

The number of claims or groups now (June 1) paying, 10.

The total production of silver to July 1, as returned by mine reports, is 34,689,451 ounces. Deducting 5 per cent as the loss which ensues from smelting, leaves 32,954,978 as the net production in ounces.

The total cost of production, as tabulated below, is $35,380,507.22, or $1.074 per ounce. The items of cost included consist only of amounts paid for labor, supplies, plant, railroad freight, smelter charges, and a sum of about $425,000 paid out in litigation expense. Purchase price, interest, and the cost of construction of tramways, roads, and public power plants, etc., are not included.

It will be seen that of the whole number of 15,000 locations but 380 cases are reported. After careful consideration and consultation with the mining engineers and others who possess special knowledge upon the point, it is assumed in this report that each location was made at an average cost of $100 for labor, $12.50 for surveying, and $2.50 for recording, or $115 per claim. From the same source of information the conclusion is drawn that of the original number of 15,000 locations, 6,500 are now "live claims," and that an average of not less than eight years' annual labor has been performed on each, amounting to a total expense of $800 per claim. From actual measurement by the deputy mineral surveyor of development work performed upon the patented claims of the district, it is ascertained that the average cost per claim exceeds $1,200. Other expenses of obtaining patent are conservatively estimated at $200, making a total cost to each patented claim of, say, $1,400.

From these estimates the following table is derived:

15,000 locations, at $115 each	$1,725,000.00
1,006 patents, at $1,400 each	1,408,400.00
6,500 "live claims," at $800 each	5,200,000.00
380 claims reported	27,047,107.22
	35,380,507.22
Total number of ounces silver produced	32,954,978
Cost per ounce, $1.074.	

It may be proper to further state that the reliance of the mines of this district is upon the production of silver alone. A few of the mines produce lead; the total amount received for that metal by the mines of the district being estimated at less than $4,000,000, no account of which is made in the figures above presented. No gold or copper is found in the ore.

Respectfully submitted.

FRED. G. BULKLEY,
WILLIAM J. COX,
S. I. HALLETT,
Committee.

Approved:

DAVID R. C. BROWN, *Chairman.*
ELIAS COHN, *Secretary.*
F. T. FREELAND.
D. M. HYMAN.
F. M. COOMBS.
E. M. RAY.
D. W. BRUNTON.
FRANK BULKLEY.

[Here follows certificate of county clerk as to number of locations and patented claims.]

Attention is also directed to the fact that, neglecting one of Aspen's mines of phenomenal richness, the totals given would be as follows:

Total cost	$33,908,508.81
Total ounces silver produced	26,524,843
Cost per ounce, $1.23.	

Neglecting three principal producers will give the following figures:

Total expense	$26,091,381.00
Total ounces silver produced	12,096,496
Cost per ounce, $2.36.	

FRED. G. BULKLEY.
WILLIAM J. COX.
S. I. HALLETT.

SUMMARY.

Leadville, fourteen years:

Total locations	19,499
Total patents	3,803
Total "live claims"	4,874
Total claims that have produced ore	160
Total claims that have paid	85
Total claims now paying	18
Production, ounces silver	107,497,416.00
By-product of silver mines, gold, lead, copper	$75,094,365.00
Expenditure of district	$121,521,583.00
Cost per ounce if there had been no by-product, $1.13.	

Aspen, eight years:

Total locations	15,000
Total patents	1,006
Total "live claims"	6,500
Total claims that have produced ore	98
Total claims that have paid	18
Total claims now paying	10
Production, ounces silver	32,954,978
By-products of silver mines, lead only, something less than	$4,000,000.00
Expenditures of district	$35,380,507.22
Cost per ounce if there had been no by-product, $1.074.	

To CHARLES E. NOBLE, Esq., *Secretary.*

Mr. CAFFERY. Mr. President, the wit of the Senator from Colorado, who has just addressed the Senate, has sparkled and scintillated all along the line of his eloquent discourse. There was once a great wit who used it as his powerful weapon to drive out romanticism, and the name of Cervantes is forever linked with the overthrow of chivalry in Spain. But, sir, he drove out romance with wit. The Senator from Colorado has a harder task to perform than the great Cervantes. He must remove the mighty evil of a depreciated currency by sparkling sally and laughter-provoking humor. He is doomed to signal failure The serious money trouble of the country can not be smiled away as did Cervantesthe chivalry of Spain.

Mr. President, the whole country is face to face with a financial situation unprecedented in any age or in any country. With $63,000,000,000 of wealth, with factory and farm overflowing the country with fabric and with food, with banks entirely solvent and firms entirely prosperous, with a people blessed by Providence beyond the measure of blessings bestowed on other lands and other peoples, we are suddenly arrested in our pursuit of wealth and paralyzed in the midst of our activity.

With abundant currency there is a dearth of the amount necessary to carry on the ordinary business of life, while the securities heretofore held and eagerly sought by foreign holders are returned to our shores for liquidation or parted with at heavy discount. Deposits are drawn from the banks; investors abstain from new enterprises and discontinue old ones; banks are closed with safes full of assets and business men suspend with stores full of goods. The time for the moving of crops is near at hand, and the farmer finds a congested money market. The laborer is paid with promises to pay; and the employer, with a sufficient bank account, can not pay his baker or his butcher.

There is a feeling of uneasiness and insecurity everywhere and in every branch of business; distrust exists where there was confidence, and confusion where there was system. Men are thrown out of employment by the thousands; and already is heard the distant tramp of the army of the unemployed turning toward the Capitol animated by a vague hope of relief.

The picture is neither overdrawn, nor too highly colored. Men ask themselves:

Can such things be,
And overcome us like a summer's cloud,
Without our special wonder?

WHAT IS THE CAUSE OF THIS STATE OF AFFAIRS.

The answer comes in the President's message convening this Congress in extraordinary session. He says:

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government. This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free-silver coinage and those intending to be more conservative.

I am aware that the President has been held up as having surrendered to the "gold bugs," and that political vengeance is threatened against Democrats who sustain the message and who will vote for unconditional repeal of the purchasing clause of the act of July 14, 1890. I know that Democratic faith is measured, in some quarters, by an arbitrary and wholly unwarrantable construction of the Chicago platform. I am aware that some good people are deluded by glittering sophisms, poured out in streams of silvery eloquence, to show that—

We want more money; we want the dollar of the fathers, the money of the Constitution; we want the fraud of 1873 wiped out, and silver remonetized.

By passionate appeals, supplemented by all the graces of oratory, the poor, the unemployed, the farmer whose toil is not thought remunerative, and the artisan whose wages are deemed insufficient, are attempted to be arrayed on this question against capital and corporation; against the man whose "youth of labor" has brought him "an age of ease;" and against the widow, whose scant investment yields but a frugal living. I know there is a disposition to present this question as a struggle between corporate greed and individual poverty; between the Shylocks of society and their victims.

Mr. President, it is a sad thing to see nearly every question turned into one of antagonism between the different classes of our citizens. It is a commentary on our institutions fraught with the most somber forebodings. I deprecate and deplore this line of argument on a question more academic than political, more scientific than moral. The question concerns the poor and the rich alike, the millionaire and the pauper, the man of pleasure and the toiler—every trade and every condition in life.

Denunciation is not argument. Threats of political vengeance fall as harmless on a member of Congress, who, knowing his duty, dare do it, as the heated wind that articulates them.

Mr. President, I will premise my argument by laying down certain axioms of political economy which I assume to be true:

First. That value exists independent of government and can not be created by it.

Second. That after a people advance beyond the barter period they must have a measure of value, which is also a medium of exchange, but not exclusively.

Third. That history shows that the selection of this measure depends on the stage of civilization of the particular people—shells, skins, cattle, copper, etc., preceding the use of gold and silver.

Fourth. That where gold and silver circulate as money under a legal ratio, the cheaper metal supersedes the dearer and drives it out of circulation.

Fifth. That the measure of value must itself have value; hence that an ideal, intellectual measure is impossible.

SKETCH OF FINANCIAL HISTORY OF THE UNITED STATES.

A brief review of the financial history of the United States is in the natural order of my argument at this point.

In 1792 the bimetallic standard was adopted. Mr. Hamilton thought there was a scarcity of gold, and insisted on the double standard, although he favored a gold standard if one standard alone was to be adopted.

Mr. Robert Morris, the great American financier, favored a silver standard. The ratio was fixed by law at 15 ounces of silver to 1 of gold, The market ratio and the legal ratio were equal. In a few years the price of silver declined. The mines of Mexico yielded a large output of silver, and the market ratio fell to about 15½ to 1. The world, at that time, had either the bimetallic or the silver standard. Contemporary writings and speeches are filled with complaints of the departure of our gold. There was but little gold in the infant Republic, but what little there was either was hoarded or was exported. Gresham's law, the law of common sense, began its work on American currency.

Gold was the dearer metal, and it ceased to circulate. Surely, *then* there were no gold bugs conspiring to create a panic. There was no unholy combination of capitalists *then*, confederated to dishonor the dollar of the fathers. It so happened, however, that the fathers obtained the most of their dollars from Mexico, which were a legal tender, and the Mexican dollar ruled supreme over its rival, the gold dollar of Hamilton and the Constitution.

Silver having run out gold, the next step was to bring back the gold. This was done in 1834, a statute of that year raising the ratio to 16 to 1, where it has remained ever since. This brought back gold immediately. Gold was overvalued, as silver had been by the act of 1792, and Gresham's law again went into operation. The value of silver as measured by the market price was in excess of 16 to 1. It was 15 and a fraction to 1.

In 1834 the gold dollar was reduced from 24.75 to 23.2 grains, giving a further undervaluation, and Gresham's law continued its work. Gold alone circulated, even the small pieces of silver change, halves, quarters, and dimes, passing out, as the silver in them was worth more than the legal ratio of 16 to 1. There was no conspiracy then, Mr. President, although gold reigned in the place of dethroned silver.

Again in 1837 the ratio of 16 to 1 was maintained, and the gold eagle was restored to its mintage value under the act of 1792. The grains taken out by the act of 1834 were put back, and the gold eagle stood at 247.5 grains instead of 232 grains. The debasement of the gold dollar under the act of 1834 was 6.26 per cent. Again, under the influence of Gresham's law, silver went out, gold remained; and a nominal bimetallic standard was, in fact, a real gold standard.

Again in 1853, in order to keep small silver change in the country and to maintain gold as the sole standard of value, Mr. Dunham, on behalf of the Committee on Ways and Means, brought in a bill, which was adopted and became a statute, whereby the small coins of silver were debased below the point where they could be profitably melted or exported.

He said in debate:

Another objection urged against the proposed change is that it gives us a standard of gold only. What advantage is to be gained by a standard of the two metals which is not as well, if not much better, obtained by a gold standard I am unable to perceive, while there are very great disadvantages resulting from it, as the experience of every nation which has attempted it has proved. Indeed, it is utterly impossible that you should maintain a double standard. Gentlemen talk about a double standard of gold and silver as a thing that exists and that we propose to change.

We have had but a single standard for the last three or four years. That has been and is now gold. We propose to let it remain so, and to adapt silver to it, and to regulate it by it.

Oh, where then was the Roderick of the Silver clans?

One blast upon his bugle horn
Were worth a thousand men.

Is it possible that the toil-worn and dust-begrimed hosts who are said to stand to-day confronting the corporate power and gold conspirators had no champion then to cast a lance or wield a sword? Where was Jackson in 1837, the hero raised up by Providence to consummate the work of the immortal Jefferson, who sleeps "'neath Monticello's sacred dust"?

Where was Pierce in 1853, when he permitted the precincts of the temple consecrated to the worship of the silver goddess to be profaned by this vandal, this tool of the money power, this

hireling of the gold bugs, this Mr. Dunham, Democrat though he was? The spirit of the knights of the white metal ought to have been abroad in those degenerate days, to wade in blood to to their horses' bridles, or see it seated on the money throne, with the scepter of power over all values here below in its mighty grasp.

Mr. President, the demonetization of silver was as complete and effectual by the statutes of 1834, 1837, and 1853 as if those statutes had so declared *totidem verbis*. Gresham's law, the undeviating law whereby no sane man will pay 100 cents where any less number of cents will answer, operated the demonetization.

The first and fourth propositions are abundantly proved by the foregoing review of our financial legislation. The Government of the United States attempted to create an artificial value by making 15 ounces of silver equal to 1 of gold, and it failed. No governmental power assisted gold to demonetize silver, yet gold asserted its sway. Silver fell, and gold did what the great law of trade and finance compelled it to do—it departed from the country and from circulation. At that time there was no country which especially favored gold. The Shylocks of those days had not fallen down and worshiped it as the supreme deity of money. Everywhere from 1792 to 1816 there was bimetallism or there was silver, and yet the unruly metal parted company with its companion.

A third proposition may be proved as true by our history, viz, that bimetallism, unless the most powerful nations of the earth bind themselves to tie the two metals together by a reasonable ratio, means monometallism. The experience of eighty years, from 1792 to 1873, ought certainly to convince us of this fact. The example of France is in the same direction.

EXAMPLE OF FRANCE.

France, after the adoption of the double standard in 1803, was practically silver monometallic until 1853; after which she was practically gold monometallic.

The advocates of free coinage point exultingly to France for evidence of the beneficent workings of the bimetallic theory. But hear what Mr. Laughlin says:

Since 1803 a legal ratio of 1 to 15½ had been maintained by France without change. Inasmuch as the market ratio had never been as high as 1 to 15½ between 1829 and 1850, but rather nearer to 1 to 16, the French legal ratio gave gold a less value in the form of coin than it possessed in the form of bullion, while silver was given a greater value in coin than it possessed in bullion. As a natural consequence gold disappeared from circulation, and silver took its place; so that by 1850 the main part of the circulation in France consisted of silver.

The discoveries of gold exactly reversed this situation. Gold fell in value. Its relation to silver changed so that the ratio remained 15½ to 1 until 1867. Under these conditions a revolution took place in the French currency between 1853 and 1865. As things then stood the ratio of the mint was still 1 to 15½, while in the market it was lower than that, or somewhere nearer to 1 to 15. As a consequence of this, money-changers quickly saw that an ounce of gold exchanged for 15½ ounces of silver in the shape of coin, but less than 15½ of silver in the shape of bullion. Consequently, as long as this state of affairs existed, and since free coinage existed, there was a stream of gold flowing to the French mint for coinage, while the silver rapidly disappeared from circulation and even left the country.

Everyone knows that France had to stop the coinage of silver, and has not coined a franc since 1879. Indeed, the silver coinage was very much limited after 1873.

From 1792 to 1873 we coined $8,031,000 in silver and $137,000,000 in small silver pieces. We coined under the Bland-Allison act $308,199,262, at a loss to the Government, at present prices, of $87,630,248.

Under the Sherman act we have coined $36,087,000, and, further, have coined of the trade dollars $5,000,000. We have bullion in the Treasury (130,465,000 ounces), which, if coined into dollars, would make $168,294,000. This silver was bought at a loss of $33,574,264.

This shows that over seventy times as much silver has been coined since 1873 as in the eighty years from that date back to 1792. It shows, further, that this enormous purchase of silver has not availed to keep it from plunging lower and lower in the market.

All the commercial nations of the world having gone to a gold basis, we are asked to go to a silver basis, or what is the same thing, to undertake bimetallism at some ratio.

CHARGES OF INCONSISTENCY AGAINST THE PRESIDENT.

I will now, Mr. President, consider the charges of treachery to the Democratic party platform by advocating the repeal of the purchasing clause of the Sherman act, and, later on, the charge of abandonment of silver by the President, or want of entire good faith in the President's message as to silver.

The platform says:

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage; but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin.

The platform must be construed all together. One provision of paramount importance is written all over it, to wit, that we must have real bimetallism. We can not have bimetallism in name, and not in fact. This is not the bimetallism mentioned: "We hold to the use of both gold and silver," and the coinage of both, provided a dollar of silver is equal to a dollar of gold, and this may be effected either by legislation or by international agreement. The platform is careful to provide:

First. For the use of the two metals as standard money.

Second. For their interchangeable equal intrinsic value.

If it can be shown that the coinage spoken of in the platform, carried to the extreme of "free coinage," will destroy one-half of the money of the United States and drive it out of circulation, then the object of coinage is frustrated. "Coinage" in the platform is only a means to an end. The end is the "use of both gold and silver" and "the intrinsic interchangeable value" of every gold and every silver dollar.

It is manifest, Mr. President, that the coinage spoken of is not a substantive purpose, the end of the platform-makers, but merely subsidiary to the great purpose of having the two metals circulate side by side, "with equal intrinsic and interchangeable value."

Now, Mr. President, if anything is clear beyond doubt, and proved both by history and reason, it is that it is now impossible to have free coinage on any ratio that can be proposed, or that is proposed—17, 18, 19, or 20 to 1.

I here make part of my remarks a table showing the prices of silver from 1873–74 to July, 1893. (See Table A, Appendix.)

Silver has fluctuated in ten years from 86 to 56 cents on the dollar. It is idle to tell us of four hundred, or even one hundred years ago, when the legal tie of 15½ to 1 is alleged to have kept the metals at about a parity. We are dealing with facts as they are. The conjectures of silver specialists as to what might have been the case had not silver been demonetized are barren of rational conclusions.

It is clear to an unprejudiced mind that but for the purchases under the Bland and Sherman acts silver would have gone much lower. The United States furnished a compulsory market, and, though silver advanced shortly after the two laws were enacted, the downward tendency again set in, and finally reached the lowest point ever known. The means to accomplish the end, the free-coinage means, can not be employed.

It is astonishing, Mr. President, to hear arguments from men of standing and ability to the effect that free coinage is the be-all and the end-all of the Chicago platform.

SILVER MONOMETALLISM UNDER FREE COINAGE.

If free coinage is established at the ratio of 16 to 1, the object of having both metals is defeated, for we surely will have nothing but silver. If at 20 to 1, the same result will occur, as silver is worth only about 28 to 1. If the ratio should be 28 to 1, we would have either a gold or silver basis, according as gold or silver is overvalued. The alternative of a silver standard is not to be thought of. The United Stated are not going backward a hundred years to grope their way along with the South American States and Mexico.

We would be a subject of derision for all civilized countries. International exchanges would be settled with the money of commerce and of the world. Rates of exchange would be predicated on the market value of silver, with a large margin always calculated against us for possible and not unlikely fluctuations. Cotton would be sold abroad for gold prices and paid for in exchange calculated in silver, with large discount for fluctuation. We would sell in a gold market and buy in a silver market. Besides, the embarrassments and difficulties of domestic exchange would be intolerable. Prices would oscillate up and down in such a way as to make the dollar of the poor man the most uncertain of all measures. Trade would be disordered, the foundation of sound finance shaken, and all the ills of an uncertain and unstable currency precipitated on the country.

No man could foresee or foretell all the disasters which would be likely to flow from the establishment of a silver standard. The advocates of free coinage virtually admit that the country would go to a silver standard if a ratio below the market ratio were adopted. If the market ratio is established, either gold or silver would circulate exclusively.

Who, therefore, stands on the Chicago platform, which declares for the use of both gold and silver? Not the opponents of the repeal of the Sherman act, but the supporters of the repeal.

INTERNATIONAL AGREEMENT THE LAST HOPE OF BIMETALLISM.

Mr. President, the last hope of bimetallism lies in an international agreement among the strong commercial nations of the world. That hope will be destroyed either by continuing the purchase of silver under the Sherman law or by free coinage. Our gold would inevitably disappear from either cause. We would be left in the position of the little boy who found it unprofitable to swap knives with himself, with but one knife to

trade on. We would have no gold to go into an international agreement. We would have nothing to trade on; we would offer the dollar of the fathers in vain for the dollar of the crowned conspirators of Europe. Even republican France would rather keep her gold than let her elder republican ally have it.

Now, Mr. President, I would respectfully inquire why the President's message is construed into an attack on silver? The battle of the standards has raged for years. Heated partisans are ranged on one side or the other. The President could not, without incurring needless antagonism, have announced in terms his adhesion to either side. He has plainly intimated that the policy we were pursuing would destroy bimetallism. Can that be construed into hostility which is in fact a friendly warning of danger? He says:

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement as long as we are willing to continue our attempt to accomplish the result single-handed.

We have failed, single-handed, to maintain a double standard in the past. We are fast approaching a point when our ability to maintain the parity of the two metals is seriously questioned. Our money is gold and silver. The faith of the Republic is pledged to keep the two metals at a parity. The Democratic party will keep that pledge inviolate. The honor of the Republic is involved, and come what may the freemen of this land will hypothecate their labor and their property to make this pledge good.

THE QUESTION A NATIONAL ONE.

Sir, this question is above the plane of party politics. It reaches up to the heights where patriotism stands glowing and sublime. It calls for the exercise of broad statesmanship and high purpose. If the distinguished Senator from Ohio, whose name the harmful act bears, had no other claim to honor and fame than procuring the insertion into that act of the clause declaring it to be the established policy of the country to keep the two metals at a parity, he would deserve well of his fellow-countrymen.

Mr. President, the Senators on the other side of this Chamber whose votes will be cast to repeal the purchasing clause of the act, will show they can rise above politics and bask for a season in the light of patriotism and duty—not Democratic duty and patriotism, nor Republican duty and patriotism, but American duty and patriotism.

ERROR OF FRANCE'S POSITION ON SILVER.

Sir, we are told that France is bimetallic. France carries eight hundred millions of gold and seven hundred millions of silver at par. "We are stronger than France, and can carry twice as much, many times as much silver at par as France does; if she carries so many millions, we can coin unlimitedly all the silver in existence."

This, Mr. President, is a grave error, and misleads the people. It is not a fact that France carries the metals at par by reason of the bimetallic tie of 15½ to 1. France coins no silver, nor has she coined any since 1879. She maintains the parity as we do, by honoring a silver dollar as a gold dollar, by impliedly pledging her faith through her conduct to make every dollar of "equal intrinsic and exchangeable value." It is the confidence of Frenchmen in the good faith and ability of the Government to make good its implied pledge. Our people know our Government stands pledged to the same effect in terms through solemn legislative expression. We carry $615,000,000 of silver on a par with $604,000,000 of gold, with which we also carry the greenback and national bank issues, amounting to $412,000,000. France has only about $81,000,000 of uncovered paper to carry.

Our burden is quite sufficient. If the purchasing clause of the Sherman act is not repealed and free coinage adopted, we would first sustain a loss of one hundred and twelve millions for recoinage of the silver, according to the statement of the Secretary of the Treasury, and the loss from the depreciation of silver nearly one-half. This would entail a loss on our people of at least one hundred and thirty-nine millions.

Fiat money, and money secured by governmental faith and ability and reasonable reserve, are quite different.

The fanciful ratio between two metals is a figment of the brain, and is as unsubstantial as the stuff that dreams are made of.

When Government establishes a ratio between gold and silver and makes them a legal tender, it turns them loose in the community to work out their own destiny. But in comes the law of values, the inexorable law of exchanges. If gold is above the legal ratio in value, it will go where its value is not underrated. If silver is more valuable than the legal ratio, it will go in a similar way. If both metals can be tied together, it is only by the combined action of all commercial nations, whereby a money market will be denied to the dearer metal. Whether the commodity price of the dearer metal will not assert itself is a question of some doubt; but we know that, all other experiments having failed, international combination is the dernier resort.

I make part of my remarks a table prepared by the Treasury Department, showing that in all countries using the bimetallic standard, like Mexico, whatever the ratio, silver is the only circulating medium. I especially direct attention to Mexico and the South American countries. (See Table B, Appendix.)

The fact that gold leaves the country as silver is bought and certificates given for it, is "proof as strong as confirmations of Holy Writ;" that we will be driven to a silver standard by continuing the purchase of silver bullion. One hundred and forty-nine millions of gold have been paid out since May, 1892, to July 15, 1893, in exchange for silver certificates given for the purchase of silver bullion, amounting to $54,000,000.

THE FINANCIAL OPERA.

This is the keynote of the opera of financial discord now being played on the stage of the world.

Notwithstanding that we are being depleted of our gold, not by natural, but unnatural forces, notwithstanding the fact that the President of the United States, as a sagacious, faithful, and vigilant pilot, points out the rocks toward which our financial craft is fast approaching, we see the players in the great opera engaged in enacting parts that would be amusing if not fraught with such dire results. One set of actors solemnly parade before an astonished audience the ghost of the McKinley bill, and with melancholy dirge chant the woes of Columbia springing from the deep damnation of its anticipated "taking off."

Another set, wrapped in the best trappings of popular style, freeze the blood of the spectators with harrowing tales of foul conspiracies and horrid devices of kings, potentates, banks, business men, owners of property, and creditors to prey upon and devour the substance of the widow and the orphan, the poor and the oppressed. Another detachment of actors wind up the procession with the corpse of a "rag-money baby," and with doleful ditty sings of its untimely end and asks that life be restored to the defunct by the mighty power of the god Fiat.

Meanwhile the people, who, in the language of a member of the other House, expecting relief have received nothing but wind, become tired of the show. The men out of employment want work or bread. The factories desire to resume operations; banks want to reopen; the farmer, the planter, the merchant, long for business to revive.

The sound good sense of the American people is at work on the problem of how a 56-cent dollar can be kept at 100 cents on the dollar.

THE PRESENT, NOT THE PAST, TO BE LOOKED TO.

It will not do to tell us what Aristotle thought about money, or what Mr. Jevons says of two cisterns of water connected by a pipe; or what Mr. Laveleye says of the compensatory action of the bimetallic theory; or what Mr. Laughlin says of the multiple standard. This is no relief. Too much silver is the cause of the trouble. Stop buying it, and restore confidence.

Mr. President, it is known that 95 per cent of our domestic exchanges are effected by credit. Credit is based on confidence, and confidence is the outgrowth of our highly developed civilization. I remember to have seen years ago a statement that the distinguishing badge between the civilized and savage man was honesty. And while our civilization is the joint product of intellectual and moral development, it is none the less true that the fraud, the lying, and treachery of a savage would render credit impossible in any social and political organization of our times.

THE RÔLE OF CONFIDENCE IN MODERN EXCHANGES.

Confidence is the psychological aspect of this dry and unpoetic subject. The glittering metal has been, in all ages, a fertile theme for the scorn of the poet and the lash of the satirist. Midas and his hoards, Dives and his feast, have alike been the jest of the pagan and the parable of the Saviour. But, sir, it was reserved for our civilization and our times to infuse into the gold of the miser and the silver of the Shylock the subtile and mysterious influence of the faith of man in man. Without form or substance, intangible, and unseen, it binds together the vast fabric of modern trade with a power, strength, and steadfastness greater than the strength of all the gold and silver bands which this country could produce. Without confidence commerce languishes and business is paralyzed.

To go back hundreds of years and follow the methods of nations in the earlier stages of development would be to surrender our trade and starve our people. We have confidence in each other, God be praised. The Anglo-Saxon and the Anglo-American are its authors. It is their praise. In the midst of an apparently unfeeling, overreaching rush for wealth they have planted a garden of beauty and joy. In that garden, with perpetual fragrance and bloom, grows this flower of confidence, the pride, the ornament, the wonder of the age.

Sir, I am not to be understood as saying that to this want of confidence is to be attributed all of the feeling of distrust grow-

ing out of this situation. The tariff may have something to do with it. The ghost of the McKinley bill may have vigor enough to give a perfunctory kick. Nor do I believe that the panic is entirely the result of a redundant currency, as held by a distinguished member of the other House. We have, according to a table prepared by the Treasury Department, which I make part of my remarks, sixteen hundred millions in round numbers of circulating medium.

We have a per capita circulation of $24.24. The English per capita is $18.24. The French is $40.56. The trade and commerce of France are far behind that of the United States and England. The per capita amount being ascertained by dividing the whole stock of money and circulating medium into the whole population, the result of course gives no idea as to how much money each person possesses.

DISTRIBUTION OF MONEY.

The distribution of money has never yet been found out, nor will it be. The French evidently have the money that suits their financial necessities. Money is a commodity. It flows where it is wanted. People who have anything to exchange for it get as much of it as they require. There is nothing to show we have not enough money to answer the demands of trade. Some sober and deep thinkers say we have too much. The experiment of trying to float money, as you would corks, on the financial waters has failed. Whatever is not needed sinks to the bottom. The fact that we have exported one hundred and forty-nine millions of gold in four months is proof that we have too much.

We have plenty of currency to answer all the needs of commerce and trade under healthy conditions.

Secretary Carlisle was asked recently if the present stringency was due to lack of money. He replied:

No greater mistake could be committed than to assume that the present financial embarrassment is caused by an actual scarcity of money in the country. The fact is that the amount of currency of all kinds in the country, outside of the United States Treasury, on the 25th day of the present month was $58,452,350 greater than the amount outstanding on the 1st day of the month, and $70,294,783 more than the amount outstanding on the 1st day of September, 1892, when business was active and prosperous. There is money enough to transact all the legitimate business of the people, but the difficulty is that it has been withdrawn from circulation and hoarded. The true remedy is to restore confidence and credit, and thus put the money now in the country in circulation again.

WHERE DEPRECIATED CURRENCY FALLS.

Sir, the weight of depreciated currency falls on the very class who, we are told, are demanding the depreciation of silver and the destruction of gold. The language of Webster and of Macaulay, the first the greatest of American statesmen, the second the most brilliant of English historians, is stronger and better than any I could employ. Hear Mr. Webster:

He who tampers with the currency robs labor of its bread. He panders, indeed, to greedy capital, which is keen-sighted and may shift for itself; but he beggars labor, which is honest, unsuspecting, and too busy with the present to calculate for the future. The prosperity of the working class lives, moves, and has its being in established credit and a steady medium of payment. All sudden changes destroy it. Honest industry never comes in for any part of the spoils in that scramble which takes place when the currency of the country is disordered. Did wild schemes or projects ever benefit the industrious? Did irredeemable bank paper ever enrich the laborious? Did violent fluctuations ever do good to him who depends on his daily labor for his daily bread? Certainly never.

Hear Mr. Macaulay:

It may well be doubted whether all the misery which has been inflicted on the English nation in a quarter of a century by bad kings, bad ministers, bad Parliaments, and bad judges was equal to the misery caused in a single year by bad crowns and bad shillings. Those events which furnish the best themes for pathetic or indignant eloquence are not always those which most affect the happiness of the great body of the people.

Will our people listen to these words of wisdom, or be lulled by the seductive songs of the siren of free silver?

THE QUESTION OF GOLD MONOMETALLISM FOREIGN TO THE ISSUE.

It is entirely useless to discuss the question of gold monometallism. Whether there is plenty of gold to answer the world's use for money? Whether the price of gold is to be gauged by its money use, or its money and commodity use combined? Whether the appreciation of gold affects prices? Or prices of commodities affect gold?

All these questions are irrelevant to the issue before us. Around them has raged a battle between the partisans of the single gold standard and the bimetallic standard. The issue before us is, how best we can use both the gold and silver we have, and, subsequently, how best we can supply the currency needed as the growth and population of the country may require. "Sufficient unto the day is the evil thereof."

We are in the position of France. She is occupying an expectant attitude. She holds her seven hundred millions of silver as we hold our six hundred millions.

Germany has about three hundred millions which she has demonetized. The states of the Latin Union have also a large quantity. India has nine hundred millions. We hope to be able to bring all nations to agree upon terms of an international agreement, banding these metals together by a tie that will hold them forever in its firm grasp. It is manifestly impossible for us alone to do so. They are the enemies of silver who urge upon this nation the accomplishment of an impossibility. The effort will ruin us and strike bimetallism its death-blow.

Sir, the money demand, according to a conspicuous advocate of gold monometallism, is an imperious demand and must be satisfied. If this be so, and the world's supply of gold is insufficient for the world's business, silver becomes a necessity. But if we part with our gold the day of deliverance will be delayed, for the nations of the earth will hold fast to the gold foolishly surrendered by us under the operation of the Sherman act. They will thereby be aided longer to maintain the exclusive gold standard.

FASCINATION OF THE CRY FOR MORE MONEY.

It is, Mr. President, a fascinating statement to make to the ordinary man, that "we want more money." He immediately thinks he wants more, but the question is, not what his cupidity suggests, but what trade and business need. I have no doubt, sir, should a depreciated currency ruin the country, depress its trade, and destroy its commerce: should paupers and beggars swarm through our thoroughfares, with dollars as plentiful as blackberries, the multitude would shout in chorus: "More money, more money, more money!"

Sir, in the exuberance of zeal, the silver partisans attribute all the glories of this wondrous age to money, plenty of money. The genius of Galileo or Columbus pales before the beneficent rays emanating from the silver mines of Potosi. And when the descendant of the illustrious Columbus recently visited our shores and saw the mighty works of the great race ruled by the laws made at the Capitol he might have pondered whether it was the result of the genius, the pluck, the brain and brawn of the Anglo-American, or of the gold that lured his great ancestor to find a way to the Indies. By the same glowing imagination, the destruction of the empire of the Cæsars by the Goth and Hun is attributed to a lack of money.

MONEY NOT WEALTH.

Sir, if you would, by some sudden operation of nature, strike all our gold and silver to dust, we would still have our houses and farms, our factories and machinery, our granaries, our warehouses of merchandise, our ships and our railroads, telegraph and telephone lines, and all the appliances of civilization. We would still have our wealth. Money is not wealth. We could easily find a substitute in the shape of substances now unknown to answer the purposes of a measure of value and a medium of exchange. It would be but a cross current in the mighty onward flow of human progress—a moment seen, then gone forever. Our American civilization is founded on the Bible and our Constitution; our wealth on the skill, courage, frugality, and industry of 65,000,000 of freemen.

After we have reached safe ground we can inaugurate a wise system of banking, which will allow the currency to expand to proper limits. I favor a repeal of the tax on State-bank issues, accompanied by such salutary provisions as will guarantee the certainty of their redemption.

LOUISIANA BANK SYSTEM.

In this connection I will read an extract from an editorial in the Baltimore Sun of the 26th of August relative to State-bank notes. The part of the article to which I desire to draw attention is that portion complimentary of the system of banking which was established in Louisiana *ante bellum*, to show the Senate the sound ideas of finance that always obtained in the State which I have the honor in part to represent on this floor. The Baltimore Sun says:

Would the note issues of State banks be well secured? This resolves itself into the question whether State-bank notes can be made safe—whether American experience shows the thing to be practicable. The answer is found in the record of the State banks of Louisiana, Indiana, and Massachusetts before the civil war. These States had banking laws which secured absolutely the safety of note issues. All authorities agree upon this. The Louisiana law is pronounced by experts "eminently scientific" and "a model for other States and countries."

None of the Louisiana banks suspended in the panic of 1857, although most of the banks of the country were temporarily closed by that catastrophe. The notes of the Louisiana banks were not secured by bonds, State or national. Their principal security was a requirement that each bank should have a specie reserve equal to one-third of all its liabilities to the public.

There were other wise regulations that contributed to the unquestionable success of the Louisiana system, but the requirement that the specie reserve should be equal to one-third of the liabilities, whether deposits or notes, was found to be ample. Bonds, as security for notes, were shown not to be necessary.

The Indiana and Massachusetts laws were similarly successful, and their success may be pitted against the argument drawn from the failure of the banking laws and notes of other States. Our forty-four States have only to copy the Louisiana law, say the friends of State banks, to make their State bank-note issues as good as gold.

Mr. Horace White, in an address before the American Academy of Political and Social Science at Philadelphia, the 12th January last, says:

The State of Louisiana had her full share of bank misery in 1837 and later.

Her banks suspended specie payments, and so remained until 1842. In that year the State passed a banking law which was, in nearly all respects, a model for other States and countries.

The principal features of this law were the requirement (1) of a specie reserve equal to one-third of all its liabilities to the public; (2) the other two-thirds of its liabilities to be represented by commercial paper, having not more than ninety days to run; (3) all commercial paper to be paid at maturity; and if not paid, or if an extension were asked for, the account of the party to be closed and his name to be sent to the other banks as a delinquent; (4) all banks to be examined by a board of State officers, quarterly or oftener; (5) bank directors to be individually liable for all loans or investments made in violation of the law, unless they could show that they had voted against the same, if present; (6) no bank to have less than fifty share-holders, having at least thirty shares each; (7) any director going out of the State for more than thirty days, or absenting himself from five successive meetings of the board, to be deemed to have resigned, and his vacancy to be filled at once; (8) no bank to pay out any notes but its own; (9) all banks to pay their balances to each other in specie every Saturday, under penalty of being immediately put in liquidation; (10) no bank to purchase its own shares or lend on its own shares more than 30 per cent of the market value thereof.

This law had one feature which can not be approved. It allowed some loans to be made on mortgage security, but it restricted such loans to the bank's capital. No part of the deposits could be lent except on commercial paper maturing within ninety days. I judge that not many mortgage loans were made by the Louisiana banks, since none of them suspended in the panic of 1857, although most of the banks of the country were temporarily closed by that catastrophe. Mortgage loans are all right in themselves, but they are no part of the banking business.

I think that the Louisiana bank act of 1842 was eminently scientific. It was the first law passed by any State requiring a definite amount of specie to be kept as a reserve. The Louisiana law required no pledged security for the circulating notes of banks, nor did it put any limit on the amount of their issues. All this was covered, and amply covered, by requiring 33 per cent of specie against all liabilities, whether deposits or notes, the balance of the assets to be in mercantile paper having not more than ninety days to run. Under this law Louisiana became, in 1860, the fourth State in the Union in point of banking capital and the second in point of specie holdings. I think, however, that the requirement of a 33 per cent reserve of coin (or, as we say now, of "lawful money") was excessive, and that the 25 per cent in larger cities and 15 per cent in other places required of national banks is ample. It is a matter of history that the Louisiana bank act of 1842 was strictly and intelligently enforced until the city of New Orleans was captured during the civil war.

LOUISIANA ALWAYS SOUND ON FINANCE.

I am proud of the position of my native State on the money question. She has always been sound, and, Mr. President, if my feeble efforts will avail, she always will be. Sorely tempted, she refused, in 1879, to repudiate the principal of her bonded debt. Now the seductive offer is made to debase the national currency, but her Senators on this floor, true to their convictions and the traditions of their State, put aside the insidious proposition.

For a season, a part of her people, overwhelmed with debt, battling against flood and failure of crops, with a long past of disaster behind them and an uncertain future before them, may weary of well doing, may forsake the faith of their fathers, and turn to the worship of the false Mammon that would transform the stones of Hades itself into money, but, sir, it will be only for a season. The scales will fall from their eyes, and instead of breathing threats against those who strive to maintain the ancient prestige of the State, they will, like Saul of Tarsus, be converted to the true doctrine of finance and of wealth.

It may be my fate to feel the temporary weight of the forces of inflation. It may be that the star of my political life, just rising above the horizon, will be eclipsed in darkness by reason of my vote; but, sir, come what may, I shall stand fast to a deep conviction that I would be recreant to my duty and my oath should I add one pang to poverty or one tear to want; should I give the people a currency that would refuse to toil its recompense or to capital its reward.

APPENDIX.

TABLE A.—*Highest, lowest, and average price of silver bullion, and value of a fine ounce, bullion value of a United States silver dollar, and commercial ratio of silver to gold by fiscal years, 1874 to 1893.*

Fiscal years.	Highest.	Lowest.	Average London price per ounce standard, .925.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Equivalent value of a fine ounce based on average price.	Bullion value of United States silver dollar at average price of silver, exchange at par.	Commercial ratio of silver to gold.
	Pence.	*Pence.*	*Pence.*

TREASURY DEPARTMENT, BUREAU OF THE MINT, *August 16, 1893.*

During the delivery of Mr. CAFFERY'S remarks—

The VICE-PRESIDENT. The Senator from Louisiana will suspend for a moment. Under the rules, the hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. VOORHEES. I move that the Senate proceed to the consideration of the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been re-

ported from the Committee on Finance, with an amendment, to strike out all after the enacting clause and insert:

That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

After the conclusion of Mr. CAFFERY'S remarks—

Mr. CULLOM. I believe two or three Senators have announced that they will speak on Tuesday and Wednesday of next week. I therefore take it for granted that this question will probably not be disposed of before that time. In view of that fact, I shall ask the leave of the Senate, immediately after the morning business on Monday next, to submit some remarks pertinent to the bill before the Senate.

ORDER OF BUSINESS.

Mr. PEFFER. I move that the Senate proceed to the consideration of Order of Business No. 7, on the first page of the Calendar.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The Senator from Kansas moves that the Senate proceed to the consideration of the resolution heretofore submitted by him.

Mr. VOORHEES. Of course——

The PRESIDING OFFICER. The Chair will state to the Senator from Indiana that the motion of the Senator from Kansas is not debatable. If there is no objection, however, the Senator from Indiana will be recognized by the Chair.

Mr. VOORHEES. I desire to accommodate those who wish to speak on this subject, but I do not desire to waste any time. I do not know what better we can do, perhaps, unless somebody wishes to occupy the time in the discussion of the pending measure, than to take up some ordinary business; but I give notice now that if I find that discussion is exhausted at any time, I shall ask for a vote. I can do no less.

Mr. CULLOM. Allow me to say in this connection that I shall be glad to join the Senator from Indiana in securing a vote at any time, whether I have had an opportunity to make a speech or not.

Mr. VOORHEES. I am aware that the intention is to indulge in a good deal more debate, and I would not take advantage of a situation like this for a moment. I may as well say now as at any stage that I trust there will be a liberal allowance of time for full, intelligent discussion, and after it is manifest that discussion of that kind is through, and the discussion from that time on is merely for the consumption of time, I shall insist upon a vote at every opportunity that presents itself.

I repeat, there will be no disposition to interfere with Senators who wish to occupy the time in the discussion of this measure, but there will be interference with the purpose of Senators to delay for merely the sake of delay in the face of the situation in the country as it now stands.

With these remarks I feel like yielding to the Senator from Kansas for some ordinary business. What is the character of the business he wishes to call up?

The PRESIDING OFFICER. The Secretary will state the order of business.

The SECRETARY. Order of Business No. 7, a resolution by Mr. PEFFER directing the Secretary of the Treasury to inform the Senate as to violations of law by national banks of Boston, New York, and Philadelphia.

Mr. VOORHEES. There is a motion I believe pending to refer that resolution to the Committee on Finance.

The PRESIDING OFFICER. The question first is on the motion of the Senator from Kansas to proceed to the consideration of the resolution.

Mr. SHERMAN. That carries with it a consideration of the motion to refer.

The PRESIDING OFFICER. If the Senate decides in favor of the motion of the Senator from Kansas, then the question as to the reference of the resolution will be before the Senate.

Mr. CULLOM. As I remember, there is a motion pending, submitted by the Senator from Indiana [Mr. VOORHEES], to refer the resolution to the Committee on Finance.

The PRESIDING OFFICER. That will come before the Senate if the Senate votes to proceed to the consideration of the resolution.

Mr. HARRIS. The question now is, will the Senate proceed to consider the resolution at this time.

The PRESIDING OFFICER. The Senator from Tennessee has correctly stated the parliamentary condition.

Mr. HARRIS. And if the Senate decides to consider the resolution, the first question is, Will the Senate refer it?

Mr. PEFFER. Upon my motion I demand the yeas and nays.

Mr. CULLOM. To take up the resolution?

Mr. PEFFER. To take it up. I understand there is objection. I withdraw it if there is none.

Mr. CULLOM. Mr. President——

The PRESIDING OFFICER. The question is not subject to debate. The Senator from Illinois will be recognized if there is no objection. The Chair hears none.

Mr. CULLOM. I was simply going to suggest that perhaps there would be no objection to taking up the resolution, provided there is a vote taken to refer after it is taken up.

The PRESIDING OFFICER. The question is on the motion of the Senator from Kansas to proceed to the consideration of the resolution.

Mr. VOORHEES. If the resolution displaces for a single moment the bill which has been made the order of business this afternoon I shall contest it at every inch.

The PRESIDING OFFICER. The Chair will hold that if the motion of the Senator from Kansas is adopted by the Senate it displaces House bill No. 1.

Mr. VOORHEES. Then I hope the Senate will vote down the motion of the Senator from Kansas. Let us understand whether we are to branch off upon side issues and minor points raised by anybody who sees fit, or whether we shall attend to the business that is confessedly in hand.

Mr. PEFFER. Then let us have a yea-and-nay vote.

Mr. TELLER. Mr. President——

The PRESIDING OFFICER. Is there objection to the Senator from Colorado addressing the Senate? The motion is not debatable. The Chair hears no objection, and recognizes the Senator from Colorado.

Mr. TELLER. I wish to make a suggestion to the chairman of the Committee on Finance. He does not want his bill displaced, and I have no disposition myself to displace it at this time, as I think there are several Senators who want to proceed to speak on it within a day or two. I suggest that he agree that it be laid aside informally and then taken up just as it was this morning without opposition. I do not suppose there will be any opposition to his calling it up again.

Mr. VOORHEES. Inasmuch as nobody wishes to address the Senate this afternoon I am perfectly willing for any proceeding that does not displace the bill, but I do not intend to have it displaced as the regular order of business if I can help it; that is all. I accept the suggestion of the Senator from Colorado.

Mr. TELLER. If nobody objects, let the bill be laid aside informally for the purpose of taking up the resolution of the Senator from Kansas, with the understanding that when the chairman of the committee calls up the bill nobody will object to it. Certainly I shall not object to it.

Mr. HARRIS. It will remain the unfinished business.

Mr. VOORHEES. It is to remain as the unfinished business.

The PRESIDING OFFICER. The Chair would hold that the phraseology used by the Senator from Kansas in making his motion displaces House bill No. 1 if the motion is agreed to. If the Senator from Kansas desires to call up his resolution and asks that the bill be informally laid aside for that purpose, the Chair would then rule that such action on the part of the Senate would not displace House bill No. 1.

Mr. CULLOM (to Mr. BEFFER). Ask unanimous consent.

The PRESIDING OFFICER. As the motion is stated by the Senator from Kansas, it would displace House bill No. 1.

Mr. HARRIS. Unquestionably.

Mr. KYLE. I should like to ask what is the unfinished business?

The PRESIDING OFFICER. House bill No. 1.

Mr. KYLE. I see on to-day's Calendar Senate bill 453 is put down as the unfinished business.

Mr. VOORHEES. At 2 o'clock House bill No. 1 was taken up on motion.

Mr. PEFFER. I desire to state that it is not my purpose to discuss the resolution unless there is an insistence upon referring it to the Committee on Finance; that my purpose now is to have it disposed of according to the wishes of the Senate. Let us go on record upon it, whether we are in favor of adopting the original resolution without any reference, or whether we want to refer it to the committee. I do not care to add any remarks upon it at this time, unless it is insisted that it shall go to the Committee on Finance.

Mr. VOORHEES. If the Senator from Kansas adheres to the words in which he put his motion, and which the presiding officer says will displace the pending order of business, I shall insist that the Senate vote down the motion to take up his resolution.

TRANSACTIONS OF NATIONAL BANKS.

Mr. PEFFER. At the suggestion of the Senator from Colorado, I see no parliamentary obstacle in the way of modifying the motion I made, to a request that the pending business be temporarily laid aside in order that the resolution may be taken up, with the understanding that if that request is objected to I shall then renew my motion.

The PRESIDING OFFICER. The Senator from Kansas asks that the unfinished business, the bill now before the Senate, House bill No. 1, be temporarily laid aside for the purpose of taking up and considering a resolution which will be read.

The Secretary read the resolution submitted by Mr. PEFFER on the 22d instant, as follows:

Resolved, That the Secretary of the Treasury be directed to inform the Senate—

First. Whether and in what respect the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.

Second. Whether said banks are paying depositors' checks promptly in lawful money.

Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law, for the loan of money or in discounting notes and bills.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Kansas? The Chair hears none and the resolution is before the Senate for consideration. The question is on the motion to refer the resolution to the Committee on Finance, on which the yeas and nays have been ordered.

Mr. MITCHELL of Oregon. I desire to inquire if the Senator from Kansas has modified the resolution or does the resolution stand as originally introduced?

Mr. PEFFER. It stands as originally introduced.

Mr. MITCHELL of Oregon. That being the case, I shall vote to refer it to the Committee on Finance, because I am decidedly opposed to the resolution in its present form.

Mr. FRYE. Is the question on a reference?

The PRESIDING OFFICER. It is. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. DOLPH (when his name was called). I have a general pair with the senior Senator from Mississippi [Mr. GEORGE], who does not appear to be in the Chamber, and therefore I shall not vote.

Mr. HARRIS (when his name was called). I am paired with the Senator from Vermont [Mr. MORRILL]. If he were present, I should vote "yea."

Mr. PUGH (when his name was called). I am paired with the senior Senator from Massachusetts [Mr. HOAR]. I do not know how he would vote on this motion. I should vote "nay" if he were present.

Mr. McPHERSON (when Mr. SMITH'S name was called). I desire to state that my colleague [Mr. SMITH] is paired with the Senator from Idaho [Mr. DUBOIS]. At least I am so informed. I do not know whether the Senator from Idaho has voted.

The PRESIDING OFFICER. The Senator from Idaho has voted.

Mr. McPHERSON. My colleague would vote "yea" if present.

The roll call was concluded.

Mr. DUBOIS (after having voted in the negative). I voted inadvertently. I see that the junior Senator from New Jersey [Mr. SMITH] is not present. I am paired with him, and therefore withdraw my vote.

Mr. DAVIS. I am paired with the Senator from Indiana [Mr. TURPIE].

Mr. CAMERON. I am paired with the Senator from South Carolina [Mr. BUTLER].

Mr. PLATT (after having voted in the affirmative). I am paired with the Senator from Virginia [Mr. HUNTON]. I voted supposing that he is in the Chamber, but I do not see him and I withdraw my vote.

The result was announced—yeas 35, nays 21; as follows:

YEAS—35.

Aldrich,	Frye,	Lodge,	Ransom,
Allison,	Gallinger,	McMillan,	Sherman,
Blackburn,	Gibson,	McPherson,	Squire,
Caffery,	Gordon,	Mitchell, Oregon	Stockbridge,
Camden,	Gorman,	Mitchell, Wis.	Vilas,
Carey,	Gray,	Palmer,	Voorhees,
Cullom,	Hale,	Pasco,	Washburn,
Dixon,	Hawley,	Power,	White, La.
Faulkner,	Higgins,	Proctor,	

NAYS—21.

Allen,	Irby,	Perkins,	Vest,
Bate,	Jones, Nev.	Pettigrew,	Walthall,
Call,	Kyle,	Shoup,	White, Cal.
Cockrell,	Lindsay,	Stewart,	
Coke,	Manderson,	Teller,	
Hansbrough,	Peffer,	Vance,	

NOT VOTING—29.

Berry,	Dolph,	Martin,	Roach,
Brice,	Dubois,	Mills,	Smith,
Butler,	George,	Morgan,	Turpie,
Cameron,	Harris,	Morrill,	Wilson,
Chandler,	Hill,	Murphy,	Wolcott.
Colquitt,	Hoar,	Platt,	
Daniel,	Hunton,	Pugh,	
Davis,	Jones, Ark.	Quay,	

So the resolution was referred to the Committee on Finance.

DEATH OF REPRESENTATIVE MUTCHLER.

Mr. CAMERON. Mr. President, I ask that the resolutions which came from the House of Representatives relative to the death of my late colleague in that House be laid before the Senate.

The PRESIDING OFFICER. The Chair lays before the Senate resolutions from the House of Representatives, which will be read.

The Secretary read as follows:

IN THE HOUSE OF REPRESENTATIVES, *August 8, 1893.*

Resolved, That the House has heard with deep regret and profound sorrow of the death of Hon. William Mutchler, late a Representative from the State of Pennsylvania.

Resolved, That the Clerk be directed to communicate a copy of these resolutions to the Senate, and send a duly attested copy to the widow of the deceased.

Resolved, That as a further mark of respect to our deceased colleague the House do now adjourn.

Mr. CAMERON. Mr. President, I offer the resolutions which I send to the desk, and I desire to accompany them with the statement that at some appropriate time in the future I shall address some remarks to the Senate in reference to my late colleague in the House of Representatives.

The PRESIDING OFFICER. The resolutions submitted by the Senator from Pennsylvania will be read.

The Secretary read as follows:

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. William Mutchler, late a Representative from the State of Pennsylvania.

Resolved, That as a mark of respect to the memory of the deceased, the Senate do now adjourn.

The PRESIDING OFFICER. The question is on agreeing to the resolutions.

The resolutions were unanimously agreed to; and (at 3 o'clock and 13 minutes p. m.) the Senate adjourned until to-morrow, Friday, September 1, 1893, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

THURSDAY, *August 31, 1893.*

The House met at 12 m. Prayer by Rev. ISAAC W. CANTER, of Washington, D. C.

The Journal of the proceedings of yesterday was read and approved.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. TALBOTT of Maryland, until Monday, on account of important business.

To Mr. SICKLES, for one week, on account of sickness.

WITHDRAWAL OF PAPERS.

Mr. WHITE, by unanimous consent, obtained leave to withdraw from the files of the House papers in the case of George C. Abbey, there being no adverse report.

PRINTING FOR COMMITTEE ON FOREIGN AFFAIRS.

Mr. McCREARY of Kentucky. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution I send to the desk.

The resolution was read, as follows:

Resolved, That the Committee on Foreign Affairs be authorized to have printed all documents for the use of said committee that they may deem necessary in connection with subjects referred to that committee.

The SPEAKER. Is there objection to the present consideration of this resolution?

Mr. RICHARDSON of Tennessee. Mr. Speaker, it seems to me that these printing privileges are being extended very far. The law provides that printing, where it exceeds $500 in cost, can only be done upon a concurrent resolution, and I observe that there is no limit named in this resolution, or in some others that have already been passed. Heretofore it has been customary to grant this privilege to the Committee on Appropriations and the Committee on Ways and Means only, and I do not think we ought to extend it much further.

Mr. McCREARY of Kentucky. Mr. Speaker, I will say to my friend from Tennessee that during the ten years I have been in Congress this privilege has always been granted to the Committee on Foreign Affairs. If he desires to have a provision inserted in the resolution that the cost shall not exceed $500 I have no ob-

jection, because, in fact, it will not reach anywhere near that amount.

Mr. HOPKINS of Illinois. That is not necessary, because if the cost does exceed that amount a concurrent resolution will be required.

Mr. MCCREARY of Kentucky. Yes. I will say to my friend from Tennessee that this is a copy of the resolution that has been adopted every Congress since I have been here.

Mr. RICHARDSON of Tennessee. I will not object in this case, but I do not think this privilege of printing ought to be extended so far as we have been extending it this session.

The resolution was adopted.

EASTERN JUDICIAL DISTRICT OF KENTUCKY.

Mr. GOODNIGHT, by unanimous consent, introduced a bill (H. R. 6) to create the eastern judicial district of Kentucky, and to change the present judicial districts of Kentucky, and fix the time and places for holding courts in said districts; which was read twice, referred to the Committee on the Judiciary, and ordered to be printed.

SETTLERS IN OKLAHOMA.

Mr. FLYNN. Mr. Speaker, I ask unanimous consent to introduce a bill and have it referred to the Committee on Public Lands.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. LIVINGSTON. I would ask the gentleman why he makes that request at this time? Is he sick or compelled to go away?

Mr. FLYNN. This is a bill affecting settlers out there, and which requires action prior to the 22d day of September. Therefore I ask leave to introduce it now, so that the committee may have an opportunity to consider it without delay.

Mr. LIVINGSTON. We have a great many bills on this side that we would like to get in.

Mr. FLYNN. I understand that; but this case is urgent.

The SPEAKER. The Clerk will report the title of the bill.

The Clerk read as follows:

An act granting settlers on certain lands in Oklahoma Territory the right to commute their homestead entries, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

The bill (H. R. 5) was accordingly read twice, referred to the Committee on Public Lands, and ordered to be printed.

ORDER OF BUSINESS.

Mr. CATCHINGS. Now, Mr. Speaker, I shall have to object to any further unanimous consents. I call up for further consideration the report of the Committee on Rules.

THE RULES.

The SPEAKER. The Clerk will report the pending amendment.

The Clerk read as follows:

Amendment by Mr. PICKLER to an amendment proposed by Mr. HOOKER of Mississippi:

Strike out "eleven," and insert in lieu thereof "nine," so as to make the paragraph read:

"On Rules, to consist of nine members."

The question was taken on the amendment; and the Speaker declared that the noes seemed to have it.

Mr. PICKLER. I ask for a division.

Mr. HOOKER of Mississippi. Mr. Speaker, I rise to a question of order.

The SPEAKER. The gentleman will state it.

Mr. HOOKER of Mississippi. Would it be in order for me now, as the mover of the original amendment, to accept the amendment of the gentleman from South Dakota?

The SPEAKER. The House is voting upon that amendment. If the House adopts it that will settle the question.

Mr. HOOKER of Mississippi. But if I should accept it that would dispense with the necessity of a vote.

The SPEAKER. The Chair thinks that when the House is dividing the gentleman can not accept the amendment.

Mr. HOOKER of Mississippi. Then that will put me to the necessity of moving to reconsider.

The SPEAKER. The gentleman can do anything that the rules permit him to do.

The House divided; and there were—ayes 57, noes 89.

Mr. PICKLER. I ask for the yeas and nays on this question.

The yeas and nays were not ordered; only eleven voting therefor.

So the amendment of Mr. PICKLER was rejected.

The SPEAKER. The question now recurs on the amendment of the gentleman from Mississippi [Mr. HOOKER], which the Clerk will read.

The Clerk read as follows:

In the clause relating to the Committee on Rules strike out the word "five" and insert "eleven", so as to read, "On Rules, to consist of eleven members."

Mr. KILGORE. Mr. Speaker——

The SPEAKER. Debate is exhausted.

Mr. KILGORE. Is it in order to offer an amendment to the amendment so as to strike out "eleven" and insert "seven?"

The SPEAKER. That motion would be in order.

Mr. KILGORE. I make that motion.

The question being taken on Mr. KILGORE'S amendment to the amendment, it was rejected; there being—ayes 33, noes 91.

The question recurred on the amendment of Mr. HOOKER of Mississippi.

The question was taken; and there were—ayes 48, noes 95.

Mr. HOOKER of Mississippi. I call for the yeas and nays.

The yeas and nays were not ordered, only 19 voting in favor thereof.

So the amendment was rejected.

The SPEAKER. If there are no other amendments to be offered to Rule X, the Clerk will begin the reading of Rule XI.

The Clerk proceeded to read Rule XI, when

Mr. CATCHINGS said: Mr. Speaker, if there are no amendments to be offered to this section I will ask that it be passed without reading.

The SPEAKER. The gentleman from Mississippi [Mr. HOOKER], as the Chair understands, desires to offer an amendment.

Mr. BOATNER. I have an amendment which I wish to offer to Rule XI.

Mr. CATCHINGS. Then I ask that the reading be dispensed with down to the point where these amendments will come in.

Mr. HOOKER of Mississippi. It would be more in order to read the whole rule.

The SPEAKER. The Clerk will report the proposed rule.

The Clerk, proceeding to read Rule XI, read the following:

2. To the revenue and the bonded debt of the United States; to the Committee on Ways and Means.

Mr. KILGORE. I move to amend by inserting after the word "revenue" in the clause just read the words "and such measures as purport to raise revenue." The object of this amendment is to prevent the squabbles which have so frequently taken place in this House in regard to the jurisdiction of particular committees. Measures are often presented here which, on their face, purport to raise revenue, a provision on that subject being introduced for the purpose of giving them a standing in the House and securing right of way.

Mr. DINGLEY. I suggest to the gentleman that the language of his amendment does not change the effect of the proposed rule, but is simply a less appropriate way of expressing the idea already conveyed.

Mr. KILGORE. No, sir. Frequently bills are presented here which on their face purport to raise revenue, but which, notwithstanding that fact, are referred perhaps to the Committee on Appropriations or the Committee on Agriculture, which committee thus gets control of the subject. Now, if bills of this character are sent to the Ways and Means Committee that committee would treat them as they deserve to be treated under such circumstances.

The question being taken on the amendment of Mr. KILGORE, it was agreed to there being—ayes 52, noes 9.

The Clerk, continuing the reading of Rule XI, read the following:

51. All proposed action touching the rules and joint rules and order of business shall be referred to the Committee on Rules.

Mr. HOOKER of Mississippi. I move to amend the clause just read by striking out the words "and order of business:" so that the clause will read:

All proposed action touching the rules and joint rules shall be referred to the Committee on Rules."

Mr. Speaker, this amendment is in keeping with the suggestions which I had the honor to submit to the House a few days ago during the general debate on this subject, and also in keeping with the remarks which I submitted yesterday. The Committee on Rules in its original appointment was, as I understand, invested simply with the authority to present rules for the consideration of the House, and I can not see why there should be given to this committee any more than to any other committee the power to indicate to the House what should be its order of business.

There is certainly no reason why this committee, the smallest committee of the House in point of numbers—consisting of two members from the Republican side and two from the Democratic side, with the Speaker *ex officio* acting as chairman—should have the right to supersede or overule the action of all the other great committees of the House, as for instance the Ways and Means Committee, the Appropriations Committee, or the Judiciary Committee, by indicating upon report to the House what measures coming from those committees should have a hearing.

It is a misnomer to call this a "Committee on Rules." It is to be invested with the power to determine what measures the

great committees of the House—the Committee on Appropriations, the Committee on Ways and Means, or the Committee on the Judiciary—shall bring before the House for its consideration. It divests the committees of their own power. You ought to change the name, sir, of this committee, therefore, and call it the "steering committee" of the House—the committee that is to determine by the voice of five men, and its report to this House, what measures shall be heard, how long they shall be heard, and when the vote shall be taken upon them.

I am aware that the argument has been frequently made heretofore, as it has been made on the floor during the discussion of this code of rules, that the Committee on Rules is in itself powerless to accomplish anything unless it be sustained by a majority of the House. That, of course, is true. But the Committee on Rules has, you will admit, the power to withhold any report whatever upon this question or any other question that may be submitted to them; and all questions relating to the order of business are committed to them by this provision of the rule, inasmuch as you confer upon them the power to determine the order of business.

The majority of the House would not have the right to vote on any question or to determine for itself what should be the order of business unless this committee can be induced to make a report and bring it before the House for action. It sits in the Speaker's room; it is a committee of five; it has few or no hearings, that I have ever heard of, to determine as to what should be done; but of itself, without any regard to what may be the wish or the action of the House, in that committee is to be lodged the power to determine what measures shall be taken up and considered and what shall be set aside.

In the face of the great interests committed to the important committees of this House, notwithstanding the labor that they may have bestowed upon measures of public importance, they are to be absolutely powerless, and this committee under this section 51 of Rule XI is privileged, without any previous examination whatever, to determine the order of business; not that its particular functions should extend to the question of the rules of this body, but absolutely to all matters of business coming before it.

The clause to which the amendment is applied provides that—

All proposed action touching the rules and joint rules, and order of business, shall be referred to the Committee on Rules.

The amendment I offer seeks to strike out from this clause the words "and order of business."

Now, I say that to allow this committee to determine for all of the other great committees of the House what shall be the hearing given by the House, and the order in which that hearing shall be had, the length of time to be given in the discussion of the measure, and what time the vote is to be called, is to deprive the other great committees of the House of the power to introduce and take charge on the floor of the measures which have been committed to them during the session. I think, therefore, the clause should be amended as I have suggested, that these words should be stricken out and the Committee on Rules confined to its legitimate, specific scope of duty without the privilege of going beyond it.

Because, Mr. Speaker, if the Committee on Rules may exercise this important, this vital function as to one measure it might do it in regard to all matters that in the judgment of the five gentlemen composing this committee think the House should consider or refuse to consider, and whatever may be the will of the majority of the House, unless their judgment—the judgment of the Committee on Rules—is exercised in conformity with the will of the majority, and they can be induced to make a report, even the majority of the House would not be able to say what measures should be considered.

How much more would it subserve the interests of legislation and the public interests to permit the chairmen of the great committees of Ways and Means, Judiciary, Appropriations, and other committees to report the bills from their respective committees and take charge of them upon the floor of the House in such order as the House itself may determine? But this proposition embodied in the rules is a proposition to take away the power which is lodged in the great committees of the House and leave it to the Committee on Rules with power to absolutely tie the hands of all of the other committees at their will.

When you have witnessed the operation of this rule awhile you will understand what that power means. You will understand that it means simply that five members of the House, constituting the Committee on Rules, have relegated to themselves by the rules of the House all the powers of the 356 members constituting this body, as well as all of the various committees of the House. So that in point of fact if all this power is given to the Committee on Rules, every member of the House and every committee will have to submit to its action as to whatever report the committee may see fit to bring forward, or to take no action if it chooses to make no report at all.

But it may be said that they have the right to have a vote by a majority in the House at any time. They will, Mr. Speaker, if the Committee on Rules makes a report. But suppose the other case, an important bill, for instance, from the Committee on Ways and Means or the Committee on the Judiciary, and the steering committee conclude that they will give some other measure preference, or that they will not make any report in regard to its consideration at all. I ask, how can you get it up? Is it not a wiser plan instead of relegating this important power to five men to leave it to the great committees of the House themselves to make reports and let the House determine for itself the question of consideration?

Mr. Speaker, I can not see the necessity for clothing the committee with this extraordinary power. The Committee on Rules, according to its original and legitimate functions as constituted by the previous Houses of Congress, was simply a committee for the purpose of reporting a code of rules for the House. It eventually became a standing committee, because experience had demonstrated the fact that sometimes during a session of Congress there was necessity for a change of the rules, and hence it was made permanent.

But really in almost all legislative bodies, whether the National Congress or the Legislatures of the States, the committee ought to be *functus officio* after having presented and adopted a set of rules for the government of the body. But if instead of that an addition is made to their power, authorizing them to report an order of business for the body, then you give them not only an unwarranted power, but you rob the other committees of powers which should properly belong to them in all legislative bodies.

[Here the hammer fell.]

Mr. CATCHINGS. Mr. Speaker, if my colleague had read paragraph 57 of the rule under consideration, he would have seen that about ninety-nine one-hundredths of all that he had stated is utterly without foundation. The burden of his complaint is, that the Committee on Rules, if these rules should be adopted as we have reported them, would have the right to relegate to a subordinate position all the great committees of this House; and he dwelt several times upon the Appropriations Committee and the Committee on Ways and Means.

Now, Mr. Speaker, as long as my friend has been a member of this House, he seems not to have learned that the Committee on Elections, the Committee on Ways and Means, the committees having jurisdiction of appropriations, the Committee on Rivers and Harbors, the Committee on Public Lands, the Committee on Enrolled Bills, the Committee on Printing, and the Committee on Accounts, which committees have jurisdiction of nine-tenths of all matters of legislation which ever come before this House, have the express power conferred upon them to report at any time; and he has overlooked the fact that it has been repeatedly ruled by Speakers of this House that any committee which has the power to report at any time has the right at any time to make a motion that this House proceed to the consideration of measures reported by it.

There has never been a time when the Committee on Rules has undertaken to control business reported from these committees. They have had a hearing by simply exercising the right which these rules confer upon them; that is to say, to rise and move that the House proceed to consider measures reported by them. So, it is not true, Mr. Speaker, that the Committee on Rules can control in the least degree those committees which, as I have said, have jurisdiction of nine-tenths of all legislation which is ever proposed to this House. The Committee on Ways and Means, the Appropriations Committee, the Committee on Rivers and Harbors, and all these great committees, never seek assistance from the Committee on Rules. They do not need it. They are above the Committee on Rules. They have the right in spite of the Committee on Rules to ask this House to proceed to the consideration of their measures. So that the burden of my friend's complaint is utterly without foundation.

Now, Mr. Speaker, as to those committees which have not this high privilege it is absolutely essential, if we would have an orderly conduct of business, that somewhere or other the power should be vested to decide which committee should take up business as against other committees; and I wish to say, Mr. Speaker, for the benefit of new members, who have not had an opportunity to witness the manner in which the business of this House is conducted, that only with reference to the most important bills does the Committee on Rules ever undertake to bring special matters before the House. All that the Committee on Rules ever does is to bring in a special order fixing one day or two days for the consideration of bills reported, we will say, by the Judiciary Committee; but it leaves it entirely to that committee to say what bills shall be brought to the attention of the House.

Mr. BOATNER. Will the gentleman allow me to ask him a question?

Mr. CATCHINGS. Certainly.

Mr. BOATNER. If the amendment of the gentleman from Mississippi [Mr. HOOKER] be adopted, would any committee of the House have jurisdiction of any resolution looking to the order of business?

Mr. CATCHINGS. None whatever. The gentleman proposes to turn the House loose, with no power vested in anybody or in any committee to bring order out of disorder. But, as I was saying, Mr. Speaker, the power with which the Committee on Rules is vested is never exercised for the purpose of bringing before this House any special bill, or any special legislation, unless it involves some great measure in which the whole great country is concerned.

[Here the hammer fell.]

[Cries of "Vote!" "Vote!"]

Mr. HOOKER of Mississippi. Mr. Speaker, I wish to say only a few words, and I will not occupy the time if anyone else desires to speak. To illustrate what I mean by the amendment I propose, suppose the Committee on Appropriations should introduce a resolution that on a certain day such a bill, reported by the Committee on Appropriations, should be considered for such a length of time, and at such an hour there should be a vote upon the bill. That is directing the order of business, is it not? Under this rule would it not go to the Committee on Rules, to determine whether they would report in favor of it or not?

Suppose a resolution was introduced from any one of the great general committees to fix a particular time for the consideration of a particular bill. A member of the Committee on Rules rises and says, "Here is a rule which you have adopted, declaring that all orders of business shall be referred to the Committee on Rules." Would it not go to the Committee on Rules? Would not the Speaker rule, and be bound to rule, that it should go to the Committee on Rules? Because you have provided not only that all questions with reference to a change of the rules or an alteration of the rules shall go to the Committee on Rules, but also that all questions as to order of business shall go there.

Suppose a conflict arose between two of the great committees of the House with reference to the question of ordering a particular time for the consideration of measures reported by them, and the point of order was made that under the rules adopted you have to refer that question to the Committee on Rules to to say which one of those committees shall have the right of way. Would it not be a good point of order, and would not the Speaker have to require that it should be referred to the Committee on Rules to consider an order of business?

So I say that if the rules are availed of—either by any member of the Committee on Rules or any other member of the House, who makes the point of order when a proposition is made, that a report from the Committee on Appropriations or upon any other matter shall be considered upon a certain day and debated under the order of general debate for such a time and under the five-minute rule for such a time—it takes away the power to determine such a question and vests it exclusively in the Committee on Rules. The point of order being made, you can not adopt such a resolution on the floor, because you have adopted clause 51 of Rule XI, that all proposed action touching the rules, the joint rules, and order of business, shall be referred to the Committee on Rules.

It will be observed that it uses the copulative conjunction "and," so that an order of business, if there should come a contest as to what should be considered, must of necessity, under these rules, if you adopt them, go to the Committee on Rules and await their report.

And no other committee would have the right to interpose, because, under the rules, you have given to the Committee on Rules the right to direct and manage the order of business, have you not? If that is not the effect of your language, then it ought to be changed; if that is the effect of your language, then you ought to have in the Committee on Rules all the propositions for any order of business with reference to the affairs or reports of any committee.

Mr. OUTHWAITE. Will the gentleman yield to me for a question?

Mr. HOOKER of Mississippi. Yes.

Mr. OUTHWAITE. Under your proposition, will you explain to the House how, if two committees were contending for a time for the consideration of a bill, it would be disposed of?

Mr. HOOKER of Mississippi. Any one of you members of the Committee on Rules might move that it be referred to the Committee on Rules, and then it would have to go there.

Mr. OUTHWAITE. Then why not let it go to the Committee on Rules in the first instance?

Mr. HOOKER of Mississippi. That is what I am objecting to, giving you this additional power. You know full well, and every member of the Committee on Rules knows full well, that it would clothe the Committee on Rules with the right to determine what should be considered and what should not be considered.

Mr. STOCKDALE. That could be determined by a majority of the House.

Mr. HOOKER of Mississippi. The House would, by a majority vote, adopt the report of the Committee on Rules as a matter of course, as they always do. The House would have the right to determine on the report of the Committee on Rules, but the Committee on Rules might not make any report at all. If the Committee on Rules did make a report, then the majority of the House would have the right to say whether that report should be adopted or not.

[Here the hammer fell.]

The SPEAKER. The question is on the amendment offered by the gentleman from Mississippi.

The question was taken; and the Speaker announced that the noes seemed to have it.

Mr. HOOKER of Mississippi. I call for a division.

The House divided; and there were—ayes 28, noes 97.

So the amendment was rejected.

Mr. GROSVENOR. I want to suggest, Mr. Speaker, whether the House may not misunderstand the politics of the gentleman because he sits on this side of the House.

Mr. STOCKDALE. I desire to offer an amendment to the same paragraph.

The Clerk read as follows:

After the word "rules" in paragraph 51, page 13: "And the Committee on Rules shall report to the House within three days on any proposition referred to it, upon request of one-fifth of the members present and voting, which shall be ascertained at the request of any member making such motion, which shall be put by the Speaker without debate."

Mr. STOCKDALE. Mr. Speaker, I do not know that that amendment is well worded for the object intended. It was stated on the floor the other day by the gentleman from Maine [Mr. REED], which is true, that this Committee on Rules could go out at any time. I want to circumvent that by introducing some means in the rules by which we can get them back. [Laughter.]

In the last Congress I noticed that there were petitions circulated among members on this floor, and signed largely, to get the Committee on Rules to report certain propositions or to give an opportunity for a bill to be heard on this floor. I believe that this House is entitled to have a report, either favorably or adversely, when a certain number of members shall request it, without having to beg for it by petition. I do not believe that they should be required to petition any committee to do a thing which the House has a right to have done.

As I conceive by that amendment, any member on this floor could move that the Committee on Rules be required to report in whatever manner they desired, and the Speaker would be required to put that motion without debate, and if one-fifth of the members present and voting should call for a report from the Committee on Rules they would be required to make it within three days.

Mr. CATCHINGS. Mr. Speaker, I only wish to say a very few words in reply to my colleague. I do not think his amendment ought to be adopted, and I say that in the interests of the business of the House. It is very often the case that a dozen resolutions will go to the Committee on Rules at a single time from different committees, all seeking assignment of days for consideration of their business. These resolutions will fix, perhaps, the same days.

Now, it is impossible that the Committee on Rules should report back all these resolutions unless they report them back adversely; whereas if they are allowed to hold them until they can see an opportunity they will report the resolutions, but change the days. If required to report them in three days, the consequence will be that nine-tenths of them will simply be reported adversely, and the committee will have to reintroduce them. I do not think there is any point in the amendment, and I hope it will be voted down.

Mr. STOCKDALE. Mr. Speaker, I would like to add a word. There may be a point in it and the Committee on Rules have not seen it.

Mr. CATCHINGS. Possibly.

Mr. STOCKDALE. Now, if the Committee on Rules will remember, there were petitions circulated in the House in the last Congress for the Committee on Rules to make a report, which was not made.

Mr. LIVINGSTON. It was not a majority of the Democrats.

Mr. STOCKDALE. I did not hear the gentleman.

Mr. OUTHWAITE. The gentleman from Georgia said that it was not signed by a majority of the Democrats.

Mr. STOCKDALE. Well, then, we could never get a report from the Committee on Rules unless we have a majority of the Democrats on this floor. Now, I want to say, and I am thor-

oughly in earnest in this proposition, we have a right to have a report from the committee. Every other committee is required to make a report within a reasonable time.

Mr. DINGLEY. There is no rule requiring a committee to report.

Mr. STOCKDALE. They are often required by resolution to report.

Mr. DOCKERY. There is, only, in the case on resolutions of inquiry.

Mr. STOCKDALE. It is not to be supposed that the House will be unreasonable with the Committee on Rules. There is no other committee in the House that has so much importance in the House.

Other committees have their own business to attend to. The House can call on them to report if it wants to. But when anything is referred to this committee the House can not move until it acts. Now, my colleague [Mr. CATCHINGS] can not say that this would require the Committee on Rules to report large numbers of these resolutions adversely on account of want of time, because this amendment does not go to the extent of requiring them absolutely to report back in three days; it only requires that they shall report within three days, if the House by a vote of one-fifth shall require them to do so.

The amendment of Mr. STOCKDALE was rejected.

The Clerk read as follows:

57. The following-named committees shall have leave to report at any time on the matters herein stated, viz: The Committee on Rules, on rules, joint rules, and order of business; the Committee on Elections, on the right of a member to his seat; the Committee on Ways and Means, on bills raising revenue; the committees having jurisdiction of appropriations, the general appropriation bills; the Committee on Rivers and Harbors, bills for the improvement of rivers and harbors; the Committee on the Public Lands, bills for the forfeiture of land grants to railroads and other corporations, bills preventing speculation in the public lands, and bills for the reservation of the public lands for the benefit of actual and bona fide settlers; the Committee on Enrolled Bills, enrolled bills; the Committee on Printing, on all matters referred to them of printing for the use of the House or two Houses; the Committee on Accounts, on all matters of expenditure of the contingent fund of the House.

Mr. SPRINGER. Mr. Speaker, I offer the amendment which I send to the Clerk's desk.

The Clerk read as follows:

Insert after the word "harbors," in the second line from the bottom of page 13, "the Committee on Banking and Currency, bills relating to banking and currency."

Mr. SPRINGER. Mr. Speaker, this amendment simply puts the Committee on Banking and Currency in the list of those that may report at any time. I have conferred with members of the Committee on Rules, the gentleman from Mississippi [Mr. CATCHINGS] and the gentleman from Ohio [Mr. OUTHWAITE], and they have no objection to the amendment, and I hope it will be adopted.

Mr. KILGORE. I wish to ask the gentleman from Illinois whether it is not understood that when a committee is given the right to report a measure at any time it also has the right of way for that measure.

Mr. SPRINGER. This would make the reports of the Committee on Banking and Currency privileged, the same as the others.

Mr. KILGORE. The Committee on Coinage, Weights, and Measures is a very important committee, and, in the absence of its chairman, I wish to ask the gentleman from Illinois to accept an amendment giving that committee the same right.

Mr. SPRINGER. I think, Mr. Speaker, that each of these propositions ought to stand upon its own merits, and that we should deal with them one at a time. If the gentleman thinks proper he can move that afterwards.

Mr. DINGLEY. Mr. Speaker, I do not desire to make any objection to this proposition if it is approved by members of the Committee on Rules, who are somewhat responsible for the conduct of the business of this House; but I desire to call attention to the fact that the original intention in the adoption of the provision giving certain committees the right to report at any time (which carries with it the right to have the matter considered at any time) was to confine it to committees whose business was absolutely essential to the carrying on of the Government. Formerly this privilege was confined to the Committee on Appropriations and the Committee on Ways and Means, together with the Committee on Rules, but there has been a tendency within a few years to extend this privilege to some committees that are not charged with business of such immediate importance.

I know of no reason why the Committee on Banking and Currency should be given the privilege of reporting and of having its bills considered at any time, which would not be an equally good reason for giving that privilege to almost any other committee of the House—to the Committee on the Judiciary; to the Committee on Coinage, Weights, and Measures; to the Committee on the Merchant Marine and Fisheries, and to a dozen others that I might mention.

I do not, however, rise to object, but simply to point out this tendency. I desire to call the attention of gentlemen who are more particularly responsible for the conduct of the business of the House than I am to the view that this is inevitably leading to the clogging of the business of the two great committees that are charged with the measures necessary to the carrying on of the Government. Those are the only two committees, together with the Committee on Rules, in my opinion, that ought to have this privilege of reporting at any time and having their measures considered at any time by the House; and if this process of extension is tolerated there is no telling where it is going to stop.

I suggest to gentlemen who are specially responsible for the conduct of the business of the House that this is a tendency which they can not put their foot upon at too early a period, because if it is carried to the extent to which it certainly will be carried unless it is stopped now, it will lead practically to a paralysis of that portion of the business of the House that is absolutely necessary to the conduct of the Government.

Mr. CANNON of Illinois. Mr. Speaker, I am heartily in sympathy with the amendment offered by my colleague [Mr. SPRINGER]. I am in sympathy with it for the reason that now our friends on the other side of the House are not only in power here and in the Senate, but they also have the Presidency, and the responsibility for legislation rests upon them. The time has come when they can no longer fold their hands and say, "No, no." And this is especially true in this matter of the currency.

If justice is to be done to the business interests of the country, to the industrial interests, in fact, to all the interests of the country, the time has come when you gentlemen must either take the financial system that you find and adopt it without amendment, or must take it and amend and improve it; or, if that is not agreeable to your policy, must wipe it out, and put some better or worse system upon the statute book. The country demands a policy in this matter of the currency. Therefore, I repeat, I am in harmony with my colleague's amendment. The committee of which he has the honor to be chairman should be given the power to report at any time, that power carrying with it the right to insist upon consideration of the measures reported. I shall vote for the amendment.

Mr. CATCHINGS. Mr. Speaker, my colleague on the committee [Mr. OUTHWAITE] and myself did inadvertently assent to the suggestion of my friend from Illinois [Mr. SPRINGER], but I confess that after hearing the remarks of the gentleman from Maine I am considerably shaken in my opinion as to the wisdom of it. Of course, there will not be the slightest difficulty in the Committee on Banking and Currency getting all the hearing and all the consideration they desire from this House. We all recognize the necessity of doing something looking to the reformation of our currency.

But there is a great deal of truth in what my friend from Maine [Mr. DINGLEY] says, that if we are to extend this privilege to one committee we must extend it to another, and to still another; so that presently we shall have all the committees in collision, and friction and delay in the transaction of the public business will be the consequence. We would have constant contests on this floor between different committees competing for the consideration of their respective measures. I am inclined to think my friend from Illinois had better withdraw this amendment. There will not be the slightest trouble in his obtaining the consideration he may desire for the measures of his committee. But after listening to the gentleman from Maine [Mr. DINGLEY] I beg leave to say that I do not believe it would be wise to adopt the amendment proposed.

Mr. SPRINGER. I am sorry the distinguished gentleman from Mississippi [Mr. CATCHINGS] did not listen to members on this side of the House as to the policy of adopting this proposition, without taking advice from the other side.

Mr. CATCHINGS. I always listen with great respect to the gentleman from Maine [Mr. DINGLEY] on matters affecting practical legislation, for I will say here what I have often said in private, that I regard him as one of the best practical legislators that I ever knew.

Mr. SPRINGER. I also have great respect for the gentleman from Maine, who made the suggestion against my amendment, but I wish to remind the gentleman from Mississippi that this side of the House is responsible for the legislation of Congress——

Mr. CATCHINGS. "The gentleman from Mississippi" does not need any reminder of that kind.

Mr. SPRINGER. And, therefore, we should take advice of our friends in matters of this kind.

Mr. CATCHINGS. Your admonition is entirely superfluous.

Mr. SPRINGER. The gentleman from Maine, I have no doubt, spoke in perfect faith in making his suggestion; but I hope the House will adopt this amendment, because I believe it a proper one, and one which should be adopted.

The proposition is simply that the Committee on Banking and Currency shall have the right to report at any time—the same

right which is given by these rules to the Committee on Ways and Means, the Committee on Appropriations, the Committee on Public Lands, the Committee on Rules, and the Committee on Accounts. You give to the Committee on Accounts, which is charged with the duty of auditing the accounts of this House, the right to report at any time; but it seems that the committee which is charged with the duty of looking after the accounts of all the people and the money of all the people must stand aside and come in upon the same footing as the least important committee of the House.

Mr. REED. Perhaps some of us have a rather more tender interest in the accounts of the House than we have in the business of the people at large.

Mr. SPRINGER. I hope the House will give my amendment its approval, and declare by the vote that this committee shall be placed on an equality at least with the Committee on Accounts.

Mr. ALLEN. I would like to ask the gentleman from Illinois why the Committee on Coinage, Weights, and Measures should not also have this right?

Mr. SPRINGER. No proposition of that kind is pending. My amendment stands by itself. After it is disposed of, the gentleman from Mississippi [Mr. ALLEN] or any other member can offer a similar proposition with reference to any other committee.

Mr. DINGLEY. If this amendment is to be adopted, there is no reason why the Committee on Coinage, Weights, and Measures, the Committee on the Judiciary, and half a dozen other committees should not have the same right.

Mr. SPRINGER. I am the chairman of only this one committee. I presume the chairman of other committees or some members of those committees will look after their own business.

Mr. CATCHINGS. Mr. Speaker, I do not know what I have ever done since I have been a member of this House which should make it necessary for me to be reminded that the Democrats are in charge of this House. Nor do I know of anything ever done by the gentleman from Illinois [Mr. SPRINGER] which justifies him in assuming to lecture me upon that or any other subject. I believe myself to be quite as good a Democrat as he is; and I do not know that I am greatly his inferior in any other particular.

I did state that I had listened with a great deal of interest and instruction to the gentleman from Maine, as I generally do, for I find he can instruct me on many subjects. He is a painstaking, careful, thoughtful legislator, known to be such by this whole House without reference to politics. I did think the observations submitted by him on this subject were worthy of consideration. There was nothing partisan in them. They were observations looking to the orderly consideration of the business of the House, and for one I am very much obliged to the gentleman for making the remarks that he did. I think they were sound and wise, and I do not now believe there is any necessity for the adoption of this amendment.

Mr. SPRINGER. I hope the gentleman from Mississippi will not assume for one moment that I had any desire to lecture him as to his duties on this floor. That is not my business. The gentleman stated to me before this amendment was moved that he had no objection it; and I regret that he did not advise me of his change of view before addressing the House on the subject, because I desire in all these matters to act in perfect good faith. The gentleman from Mississippi having assured me that there would be no objection to the proposition, I submitted it; and I was somewhat surprised when he stated that he had given his assent inadvertently. In what I was led to say, I intended no reflection whatever upon the gentleman.

Mr. GROSVENOR. Mr. Chairman, I move, *pro forma*, to strike out the last word of the amendment, so that I may occupy a few minutes in debate. The House having practically agreed that the Committee on Rules shall control the business of the House (and that is really what we must come to—I do not object to it), there is no reason why we should now single out a particular committee and give it power and privilege and precedence over other committees.

If there should arise an emergency which the ingenuity of the chairman of this particular committee can not surmount, he can appeal to the Committee on Rules, which committee can authorize the bringing in of a bill and instantaneous consideration of it. And should public confidence fail to be established by what we have already done, the Committee on Rules can say that within one minute after a bill has been reported to the House the previous question shall be considered as ordered, and we will have a vote on it and do what we can further to restore public confidence. If, however, this committee is to be given privileges, why, necessarily there are several other committees, I have no doubt, which would like to share in the usufruct of that sort of rule.

Mr. KILGORE. Mr. Speaker, I desire to offer an amendment to the amendment of the gentleman from Illinois.

The SPEAKER. The amendment will be read.

The Clerk read as follows:

Add to the amendment just read the words: "the Committee on Coinage, Weights, and Measures, bills relating to coinage."

The question was taken; and on a division there were—ayes 49, noes 76.

Mr. KILGORE. On that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 138, nays 97, not voting 118; as follows:

YEAS—138.

Alderson,	De Armond,	Kem,	Paynter,
Aldrich,	Denson,	Kilgore,	Pickler,
Alexander,	Dinsmore,	Kribbs,	Richardson, Mich.

So the amendment to the amendment was agreed to.

The following pairs were announced:
Until further notice:
Mr. TUCKER with Mr. RUSSELL of Connecticut.
Mr. DUNPHY with Mr. WEVER.
Mr. EDMUNDS with Mr. LOUDENSLAGER.
Mr. LOCKWOOD with Mr. VAN VOORHIS of New York.
Mr. CAMPBELL with Mr. BELDEN.
Mr. ENLOE with Mr. BOUTELLE.
Mr. HATCH with Mr. HARMER.
Mr. GRAHAM with Mr. LINTON.
Mr. BRANCH with Mr. SETTLE.
Mr. SHELL with Mr. MARSH.
Mr. COCKRAN with Mr. SHERMAN.
Mr. MAGNER with Mr. CHICKERING.
Mr. RUSK with Mr. AITKEN.
Mr. MAGUIRE with Mr. HEINER.
Mr. TALBOTT of Maryland with Mr. COOPER of Wisconsin.
For this day:
Mr. BYNUM with Mr. WALKER.
Mr. GOODNIGHT with Mr. SCRANTON.
Mr. CRAIN with Mr. HOUK of Tennessee.
Mr. O'FERRALL with Mr. O'NEILL of Pennsylvania.
Mr. PENDLETON of West Virginia with Mr. PAYNE, until Monday next.
On this vote:
Mr. BERRY with Mr. SWEET.
Mr. ABBOTT with Mr. BROSIUS.
Mr. ENLOE. I am paired with the gentleman from Maine [Mr. BOUTELLE]. If he were present I should vote "aye."
Mr. O'NEILL of Pennsylvania. I am paired with the gentleman from Virginia [Mr. O'FERRALL]. If he were present I should vote "no."
The result of the vote was then announced as above recorded.
The question recurred on the amendment as amended.
Mr. TRACEY. I rise to a parlimentary inquiry: If the change in the rule here proposed shall be adopted by the House, would it give to these committees the right to have their measures considered when reported?
Mr. SPEAKER. It will; that is the purpose of extending this privilege to them.
Mr. BROWN. Mr. Speaker, if it is in order, I move to strike out from that amendment all the committees included in it except the Committee on Coinage, Weights, and Measures.
The SPEAKER. That would strike out the Committee on Banking and Currency.
Mr. BROWN. Is that the only other committee?
The SPEAKER. The only one.
Mr. BROWN. Then I withdraw the motion.
Mr. OATES. Mr. Speaker, the inquiry of the gentleman from New York was as to whether this provision of the rule would give those committees the right to have matters considered when reported. It would give them that right unless the House itself chose to consider some other matter.
The SPEAKER. If it is a privileged report it stands like any other privileged matter, like a bill reported from the Committee on Ways and Means, or Appropriations, for instance. It can be considered when called up unless the question of consideration shall be sustained by the House.
The question is on the amendment as amended.
The question was taken; and on a division there were—ayes 102, noes 58.
Mr. COOMBS. I call for the yeas and nays.
The yeas and nays were not ordered.
So the amendment as amended was agreed to.
Mr. SPRINGER. Would it be in order to move to reconsider the vote just taken and lay that on the table?
Mr. HOOKER of Mississippi. I have another amendment to the paragraph found on page 14.
The SPEAKER. The amendment will be read.
The Clerk read as follows:

Amend on page 14, the second paragraph of Rule XI, clause 57, by striking out from the word "it" in line 10 down to and including the words "disposed of" in line 16.

Mr. KILGORE. I want to submit an amendment to the clause which the Clerk has just finished reading.
The SPEAKER. The gentleman from Mississippi [Mr. HOOKER] is recognized for an amendment.
Mr. KILGORE. I understood that amendment to be on a subsequent clause.
The SPEAKER. It is not. It is on the same clause.
Mr. HOOKER of Mississippi. Mr. Speaker, the clause which I propose to strike out is found on page 14 of the rules, as reported from the Committee on Rules, and is in these words:

It shall always be in order to call up for consideration a report from the Committee on Rules, and pending consideration thereof the Speaker may entertain one motion that the House adjourn; but after the result is announced he shall not entertain any other dilatory motion until the said report shall have been fully disposed of.

My objection to this grant of power to the Speaker embraced in these rules is founded upon the fact that it will become necessary for the Speaker of this House to pass upon the question as to what constitutes a dilatory motion, and I do not want to invest the Speaker with that power, and I do not want him to be embarrassed by the possession of it, for he might find himself in the same category as did the distinguished gentleman from Maine [Mr. REED] in the Fifty-first Congress, and he might refuse to entertain any proposition upon the ground that it was a dilatory motion; and I do not want the present Speaker of the House to be put in that embarrassing position.
Mr. MILLIKEN. Will my friend allow me to ask him a question?
Mr. HOOKER of Mississippi. Yes.
Mr. MILLIKEN. Does not this rule in fact give to the Speaker of the House all the powers that were exercised by the Speaker of the Fifty-first Congress, only in rather a clandestine way, instead of doing it in a straightforward manner?
Mr. HOOKER of Mississippi. No; I do not think so, Mr. Speaker. I do think, however, that the language which I propose to strike out does clothe the Speaker with the power, and not only clothes him with the power, but makes it an imperative duty upon his part to pass upon what is a dilatory motion, and I therefore think this power ought not to be conceded. Under this rule you give the Speaker the right to entertain one dilatory motion, a motion to adjourn; but after the result is announced—

he shall not entertain any other dilatory motion until the said report shall have been fully disposed of.

He is invested with the power, therefore, to determine what motions are dilatory.
I am very frank to say, Mr. Speaker, that I not only want to relieve the Speaker of that duty imposed upon him by this rule, as it will come up in actual practice, but I should like very much to go a little further than that, if I had the power of offering amendments here, and relieve the Speaker of the power and duty of appointing committees at all, and leave it as it is left in the other legislative body, the Senate of the United States, where they elect their own committees. That is the true way, and the way which I hope will finally be reached in this House. I believe that the committees intrusted with the management of the great questions which come up for consideration here ought to be selected by a vote of the House itself.
And we are not without a precedent in this connection. Nearly one hundred years ago a proposition was made in this House to elect the Committee on Elections, because it was composed of a particular number of members, and they believed it was the duty of the House to elect them, and they were elected. I will give the reference to the history of the matter. It is found in the Twenty-third Congress. The Committee on Elections were voted for in the House by a *viva voce* vote, and thus elected and thus constituted.
I want to relieve the Speaker of the extraordinary power with which this clause invests him, to determine what is a dilatory motion, and I want to relieve him of the further duty of having to decide that question, which may be an embarrassing one.
I do not know what the decision might be. I am aware that the honorable gentleman who fills the chair would decide according to the best of his ability; but I am unwilling to clothe him with this power. I am unwilling to embarrass him with this assumption of authority which we saw in the Fifty-first Congress. I am unwilling that he should take his position in favor of determining a motion to be dilatory which might be necessary for the purpose of expressing the opinion of the majority of the House, and in which the majority of the House might concur in voting by saying: "You shall not vote on that question, for in my judgment it is a dilatory motion."
This is clothing the Speaker with a power with which he has never been clothed and with which he never ought to be clothed and imposing upon him a duty which he ought not to be required to perform. Any rule which proposes to suppress the right of a Representative to make motions pertinent to the subject-matter under consideration is, in my judgment, an unwise one, and I would not adopt, in this House or in any other House, rules which would require the Speaker to make such a decision.
[Here the hammer fell.]
Mr. OUTHWAITE. I will ask that the Clerk report the amendment before I reply.
The proposed amendment was again read.
Mr. OUTHWAITE. Now, Mr. Speaker, listening to the remarks of the gentleman from Mississippi, one would suppose that his motion was simply to strike out the word "dilatory." He directed his remarks entirely to that idea. The purpose of his amendment, however, is simply to strike out any possibility of

the Committee on Rules doing any business. He proposes to strike out the only clause of the rule that recognizes that the Committee on Rules can present business to the House and call up for consideration. Part of the language which he proposes to strike out is, "it shall always be in order to call up for consideration a report from the Committee on Rules."

The weak feature in the gentleman's case is, he did not discuss at all this proposition. If you want a Committee on Rules, and I think this House has by its repeated votes decided in the affirmative to have one, it must be clothed with the opportunity of presenting its business to the House. Then follows these words, which the gentleman from Mississippi [Mr. HOOKER] wishes to strike out:

Pending consideration thereof, the Speaker may entertain one motion that the House adjourn, but after the result is announced he shall not entertain any other dilatory motion.

Upon the use of the word dilatory I must say that it is different from calling upon the Speaker to determine the motive of any member in making a motion. It distinctly refers to a motion for delay, and it has been so construed.

Mr. REED. What does a dilatory motion refer to except for delay?

Mr. OUTHWAITE. I have known Congresses in which the Speaker seemed to think that a call for the yeas and nays, which is guaranteed by the Constitution, might be regarded as a dilatory motion.

Mr. REED. When was that?

Mr. OUTHWAITE. In the Fifty-first Congress. I will refer to the RECORD.

Mr. REED. I never heard of it, and I was there most of the time. [Laughter.]

Mr. OUTHWAITE. I have a recollection of an occasion in which the Chair declined to entertain that motion, for I participated in it. I then asked the House that those in favor of ordering the yeas and nays should rise, and on this side every man arose; still the Speaker was not willing to entertain the motion. The gentleman from Ohio, who is not here present but is now governor of Ohio, then suggested to the Chair that it might be well for him to entertain the request for the yeas and nays.

Mr. McKinley said: "I hope there will be no objection if they want the yeas and nays." I will call attention to the fact that this sentence has had a judicial construction—has been passed upon by the Speaker I mean. The same words are used in that portion of the rules which relate to the suspension of the rules, and it has been passed upon by Speakers before. The word "dilatory" is left in the rules of the last Congress, and it was permitted so to remain. It has been used in the rule on suspensions for many Congresses.

Mr. REED. No; this is not a rule of the last Congress.

Mr. OUTHWAITE. I mean we permitted the word "dilatory" to remain in this rule, because by construction it was understood to relate to matters pertaining to suspension of the rules in which the same language is used.

Mr. REED. Does the gentleman know the origin of the rule relating to suspension?

Mr. OUTHWAITE. Which rule?

Mr. REED. The rule relating to suspension, in which dilatory motions are spoken of?

Mr. OUTHWAITE. I do not recollect the origin.

Mr. REED. I remember it very distinctly. It was a rule passed by a Republican Congress, and met the usual protest by the Democratic minority, and was adopted by them the next time.

Mr. OUTHWAITE. Well, it has been adopted. It is the rule.

Mr. REED. It was formed in the usual way. The Republicans adopted it, the Democratic party kicked against it, and then adopted it at the next time. That is the usual way.

Mr. OUTHWAITE. I do not see what that has to do with its construction as used in this rule.

Mr. REED. Certainly. It shows that it was first made by a Republican construction and afterwards adopted by the Democratic party.

Mr. OUTHWAITE. I think, Mr. Speaker, I have said all I desire to say as to the motion of the gentleman from Mississippi, going a little further than he has done as to its effect and purpose, and therefore it is objectionable.

Mr. HEPBURN. I desire to call the attention of the gentleman to a possible difficulty that may arise under this rule. This rule is to the effect that a motion to adjourn is a dilatory motion. It provides that the Speaker may entertain one motion to adjourn, but after the result is announced he shall not entertain any other dilatory motion until the report shall have been fully disposed of.

Now, suppose that a motion to adjourn is made. Suppose that it should be developed that the House is without a quorum. I insist under this rule there can be no motion made to adjourn, although it may be in the best possible faith, until you do procure a quorum and dispose of the report.

Mr. OUTHWAITE. There is another rule which does not permit the House in the absence of a quorum to proceed to do business, and provides how the members present shall proceed. There is another rule, if the gentleman will permit me to conclude my reply, which provides what motion shall be in order when no quorum is present.

Mr. HEPBURN. You have said here by the use of the word "other," that in this condition of affairs a motion to adjourn is a dilatory motion. You have said that in your rule.

Mr. OUTHWAITE. What is the direct and practical suggestion which the gentleman makes as to the rule?

Mr. HEPBURN. I have not suggested anything; but it seems to me that in this form it creates the possibility of difficulty.

Mr. REED. The Chair can decide whether the motion is a dilatory motion or not, and the difficulty disappears. That is what he does every time.

Mr. OUTHWAITE. Mr. Speaker, as to the proposition of the gentleman from Iowa that this might prevent the House from taking proper action in case it were developed on a motion to adjourn that a quorum was not present, there is another portion of the rules, as I said before, which provides what the action of the House shall be in such a case. It is a general rule of construction that you must construe these rules as a whole. There never has been any experience of such a question as the gentleman from Iowa makes arising practically, and it is not likely to arise practically.

Mr. HOOKER of Mississippi. If I leave in the first two lines of this paragraph, will the gentleman from Ohio [Mr. OUTHWAITE] vote for my amendment striking out the remainder of the paragraph?

Mr. HOLMAN. I think those two lines ought to be retained.

Mr. HOOKER of Mississippi. Mr. Speaker, I ask consent to modify my amendment so as to leave in the first two lines of the paragraph and strike out all after the word "rules" down to and including the words "disposed of."

Mr. DINGLEY. You want to allow the right to filibuster against a report of the Committee on Rules the same as against anything else.

Mr. HOOKER of Mississippi. Certainly.

Mr. DE ARMOND. Mr. Speaker, I presume I may say there are two ways in which it is thought the House can get to a vote upon a pending question. One is by lodging in the Speaker the power which here, in the first instance, is transferred to the Committee on Rules and afterwards remitted to the House itself. The House has decided not to strike out the provision giving the Committee on Rules authority to report upon the order of business in the House. Having decided that the committee should be the agency to report to this House, so that it may follow its own judgment upon the order of business, it seems but natural and I think is necessary, that the power here given to the committee, or rather to the House, to act upon the report of the committee be retained.

Now, while there may be objection to the phraseology of this rule, yet in view of the construction given to it in the last House and the practice under it, there can be no doubt or obscurity in regard to its meaning. The meaning, in the light of what has been done under the rule, is that when a report shall have been submitted to the House by this Committee on Rules nothing but the consideration of that report shall be in order save and except alone one motion to adjourn. Then there is submitted to the House directly for its decision the proposition contained in the report of the Committee on Rules. Then the House is enabled to determine whether or not the course suggested by the Committee on Rules shall be adopted.

While this method may not be free from objection, and may be open to criticism, I am very free to say, sir, that I think it affords a better way of arriving at a result than that of committing to the Speaker the determination of these matters which are remitted, through the Committee on Rules, to the House itself.

Mr. Speaker, the rules, as I understand them, are to general parliamentary law what legislative enactment is to the common law, in a state or country wherein the common law prevails. We are not entirely without parliamentary law independent of the rules, but general parliamentary law is supplemented and changed and amplified by means of rules. After the adoption of the rules the entire code which we have is general parliamentary law, with such changes, modifications, or additions as may be made in the rules.

And permit me to say, Mr. Speaker, in regard to a subject much discussed here, that I think in this consideration is found the key by which we may ascertain whether or not the Speaker

of the House in the Fifty-first Congress erred when he concluded that general parliamentary law gave him authority to count a quorum in the absence of a rule providing for the counting of a quorum. The Supreme Court has decided that a rule for the counting of a quorum, as the Speaker of that House counted it, is constitutional. The Supreme Court has not decided, for that was not before the Supreme Court, what the condition was or what the situation would be in the absence of that rule.

Now, in the absence of rules, the House should have been governed by general parliamentary law. General parliamentary law upon that subject was the conclusion, the concensus of opinion, fairly derived from the practice of the House and the rulings of former Speakers with reference to the matter of ascertaining the presence of a quorum upon a yea-and-nay vote.

There can be no complete lapse of law. General parliamentary law was not general parliamentary chaos, in the absence of all specific rules; but that system, complete or incomplete, as you please, which had been evolved, primarily and particularly, out of the practice of this House and the decisions of the Speakers who had presided over the House. Now what were they? The practice of the House and the rulings of the previous Speakers upon this question of ascertaining a quorum were, that when upon a yea-and-nay vote the presence of a quorum is not disclosed by the responses of the members whose names are called, it is settled, conclusively settled for the time being, that a quorum is not present; that there is not a quorum here engaged in doing business; that the House has found itself without a quorum.

Now, without asking whether or not those decisions were wise—waiving that question—withoutsaying whether or not those decisions should have been made, without going into a discussion whether or not that practice should have prevailed, it is history that these decisions were made and that this practice did prevail. That being true, I submit, Mr. Speaker, that the Speaker of this House in the Fifty-first Congress found himself (in the absence of rules, before rules were adopted, and when the House was governed by general parliamentary law) with a law established, as the common law grew up, by practice and decisions in the House, the law declaring that the presence of a quorum is only to be ascertained or established on a roll call by the responses of the members upon a yea-and-nay vote.

[Here the hammer fell.]

Mr. DE ARMOND. I would like just a moment or two more.

The SPEAKER *pro tempore* (Mr. RICHARDSON). If there is no objection, the gentleman will proceed.

There was no objection.

Mr. DE ARMOND. I was saying that such having been the decision of the House and the decisions of the Speakers who had passed upon the question, and having been the uniform practice when the question arose in the House, therefore, in the absence of rules changing it, the general parliamentary law was that the presence of a quorum when the roll is called is ascertained only by and from the responses of the members.

This being true, I think it may be fairly said—the conclusion seems irresistible—that when questions arose such as arose upon the West Virginia election contest, and the Speaker of the House assumed to count a quorum in the absence of rules, he did it—I am not going into questions as to motives, but into the fact—he did it in violation of the principles of general parliamentary law, as they had been established upon that subject. Later a rule was adopted working such an innovation in general parliamentary law as to authorize the counting of a quorum. The question whether that rule could be adopted without violating the Constitution, came up before the Supreme Court in the Ballin case, and was decided by that court in favor of the view entertained by the then Speaker of the House, that such a rule could be made, and when made was binding and could be executed.

In the absence of a rule, however, there was neither precedent in the practice of this House nor authority in the decisions of its Speakers upon which that course could be predicated; but under the practice of the House and the decisions of the Speakers, the presence of a quorum—I will not play upon the word "presence"—the presence of a quorum to do business—the power of the House to do business as having present a majority of its members—could be ascertained only under general parliamentary law—a yea-and-nay vote being taken—by the responses of the members themselves.

Mr. REED. Mr. Speaker, I am very glad every time I notice the movements of pain and uneasiness on the part of individual Democrats on the subject of the decision of the Supreme Court which so conclusively covers the subject here in dispute. It shows that their mental processes are "catching on," somewhat dimly and vaguely, but gradually and surely, to the absolute truth of the matter. And the time will arrive when even the gentleman from Missouri will understand the point of the decision of the Supreme Court. I do not expect to "gild refined gold" by explaining it myself; I do not desire to "paint the lily" by many observations upon the subject.

But the gentleman from Missouri is somewhat recently here, and in his statement of the rules which usually govern the House in the absence of any rules explicitly adopted he has been drawing upon his constructive powers, because it so happened that until very recently everybody thought, as erroneously as was thought about a quorum, that the House—this present House—could project itself into futurity and govern the next House, or that the past House could govern the living House—the dead the living. But in the process of time it came to the minds of almost everybody that that could not be so, that a dead House could not rule a living House, and, consequently, in the absence of rules explicitly adopted by the existing House, we were relegated to general parliamentary law. The dispute, the primary dispute was whether the quorum required to do business was a voting quorum or a present quorum.

That was the sole question before the House; and that question was decided by the Supreme Court of the United States and has been so decided by the supreme court of every State of the Union where the question has come up. Now, if the Supreme Court of the United States and the supreme court of every State that has ruled upon the question has so decided, and no living soul of any authority has ever decided the other way, is it not pretty apparent that it is a present quorum that is required by the terms of the Constitution?

Well, now how shall we proceed to ascertain its presence? Why, you ascertain it precisely the same way you ascertain how many men have voted on a side; the Speaker counts just as in the case of a division, as he has done from time immemorial; and to-day the Speaker of the House of Commons, the parent society, so to speak, of all legislative bodies, counts personally the quorum. Why, there is and can be no possible question about the matter whatever.

It is perfectly true that the decision of the Supreme Court of the United States turned upon a rule of the House because gentlemen did not dare to risk it on anything else. They raised the question, however, on the rule, and it was determined on that rule; but preliminary to that the court had to determine the fundamental principle itself involved, whether the present quorum did consist of a voting quorum or not. And the court had no hesitancy or doubt whatever on that question. None at all. They determined the whole case. And the question of the counting of the Speaker was ratified by the House on an appeal. What greater power could there be to determine that question? Why, the Speaker must take the initiative in all cases of points of order arising; he must decide all of them, and it is for the House to ratify or disapprove such action on appeal. I do not see how there can be any confusion in the minds of gentlemen on that point. It is perfectly plain.

Now, recollect that this thing is the citadel of this whole business. Every other point, everything else has been given up and the question has been made on this one point. You will notice that I do not reply to insinuations like that of the gentleman from Ohio in reference to the right of the House on the yeas and nays being denied or refused, or the insinuation of the gentleman from Louisiana recently that hats and coats and canes were counted in the cloak room. I did not reply to such vague insinuations when they have been made heretofore. But if somebody specifies a time and gives distinctness to such assertion, I will be ready and willing as I have always been to reply. But if anybody supposes that these absurd, childish stories, which were good enough for a Democratic campaign when the people were a good deal wrought up on such questions, are worthy of consideration at this time, they do injustice to the respectability of the debaters or the subject which is before the House.

Mr. BOATNER. Does the gentleman from Maine recollect that the present Speaker of the House announced on the floor of the House that on one occasion within his personal knowledge he had been counted as present by the then Speaker of the House at a time when he was not in the building at all, but was at his hotel?

Mr. REED. I think it likely. I recollect a statement of that kind which was answered at the time.

Mr. BOATNER. And at various times the statement was made that hats, coats, and canes had been counted.

Mr. REED. I met all statements at the time they were made.

Mr. BOATNER. The gentleman remembers the circumstance as to the Speaker.

Mr. REED. And my answer is on record, full and conclusive. I met it then, as I am ready and willing at all times to meet any definite questions, and the gentleman will find that the response to it was definite and conclusive.

[Here the hammer fell.]

Mr. DE ARMOND. If the House will indulge me for a mo-

ment, I wish to pursue somewhat the question suggested in regard to the method of ascertaining the presence of a quorum to which I was referring. As I understand it, when the yeas and nays are called there is a result announced, so many yeas and so many nays, or so many yeas and no nays, or so many nays and no yeas, as the case may be. The point is made of no quorum. Now, before the adoption of rules by the Fifty-first Congress, the point of "no quorum" being made, the Speaker proceeded to count gentlemen in their seats, or supposed to be in their seats, to a sufficient number to make them, with those who had answered to their names and voted, equal to a quorum of the body.

The point of my contention is that in the absence of this rule, which was subsequently adopted, the Speaker had not power or the authority to do that. And with all due deference to the gentleman from Maine, I can not think he has shown that he had any such power or authority. Whether he did or did not have it can not depend upon the adoption of the rule, for the rule itself was not then in force, was not adopted until afterwards. If the Speaker had the power to do as he did it was under general parliamentary law. Whether, then, he had the power or not depended on what general parliamentary law, in the absence of this particular rule, was on that special point.

Mr. REED. Will the gentleman indulge me for an interruption?

Mr. DE ARMOND. Certainly.

Mr. REED. Who is the ultimate judge of what is general parliamentary law? Is it not the assembly itself?

Mr. DE ARMOND. Well, as to that I will answer the gentleman——

Mr. REED. And that question is preliminary to another.

Mr. DE ARMOND. As to what is general parliamentary law I presume that everyone who has occasion to pass upon the question is himself the judge.

Mr. REED. But is not the assembly itself the judge of what is parliamentary law?

Mr. DE ARMOND. When the question is remitted to the assembly, I admit that the assembly is the ultimate judge.

Mr. REED. Now, I having made that objectionable ruling, and having made the count, and that having been appealed from, and the matter being submitted to the assembly, and the assembly having ratified that, is there any room for argument?

Mr. DE ARMOND. There is room for argument, as I look at it, Mr. Speaker. The question then becomes a question between the Speaker and the assembly which ratified it, if the Speaker was wrong. There are certain principles of parliamentary law. Parliamentary law is not so shadowy and so vague as to be what some speaker, or some assembly, in deciding some question, says it is. There is a distinction between the decision of a speaker and the decision of an assembly ratifying his decision and parliamentary law.

I am discussing what parliamentary law was, not according to the decision of the Speaker or of the assembly over which he presided, because that did not make general parliamentary law a bit more than a decision of a court would make the common law then in force. What I am discussing is, what was general parliamentary law when the Speaker assumed to make his decision, and when, as he says, the assembly ratified that decision.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. REED. I hope the gentleman may have more time. He kindly permitted me to interrupt him.

The SPEAKER *pro tempore*. How much time does the gentleman want?

Mr. DE ARMOND. I would like five minutes.

The SPEAKER *pro tempore*. The gentleman from Missouri [Mr. DE ARMOND] asks five minutes more. Is there objection?

There was no objection.

Mr. DE ARMOND. Mr. Speaker, I have been endeavoring to make this distinction, that general parliamentary law, like the common law, is an exisiting, subsisting thing, and is not simply some man's judgment of it.

Mr. WILLIAM A. STONE. Will the gentleman yield for a question?

Mr. DE ARMOND. Yes.

Mr. WILLIAM A. STONE. Do you doubt this, as a proposition of law, that a deliberative body may adopt a rule to count those present, although not voting, in determining a quorum? Do you doubt that?

Mr. DE ARMOND. I am not discussing that question. I understand that to have been settled by the decision of the Supreme Court in favor of the contention that it can be done.

Mr. WILLIAM A. STONE. You have no doubt about the propriety of that, or about the fact that that is parliamentary law?

Mr. DE ARMOND. No; I am not discussing that proposition.

Mr. REED. That is one point cleared up.

Mr. DE ARMOND. The point I am trying to make clear, and the point gentlemen seem to get away from constantly, accidentally or otherwise, is that before that rule was adopted there was no rule and no principle of parliamentary law known to this body by which there was authority to count a quorum.

Mr. WILLIAM A. STONE. Suppose that was done before there had been any rule adopted, and yet if the body in which it was done, after it was done, ratified it, did not that make it good parliamentary law?

Mr. DE ARMOND. No; not according to my idea of the law.

Mr. WILLIAM A. STONE. Did it not give it the same force and effect as if this body had first adopted the rule?

Mr. DE ARMOND. I will answer the gentleman's question. There is a certain principle of the common law, say, and a question comes up before a court, turning upon the proper application of that principle of the common law. The judge errs in regard to it. Later a Legislature, having the power to make laws, changes the provision of the common law, so that under the statutes it would be proper and correct to reach the decision which was reached by the court in the absence of the statute. I say the statute does not cure the erroneous decision of the court.

Mr. WILLIAM A. STONE. Will you allow me to ask another question?

Mr. DE ARMOND. Certainly.

Mr. WILLIAM A. STONE. Before any rules were adopted, the body was acting without rules?

Mr. DE ARMOND. Yes.

Mr. WILLIAM A. STONE. And its will, whatever it may have been, constituted the rules. Then, the members present, being counted, although not voting, and the matter being submitted on an appeal to that body, and that body ratifying the action taken, does not that take away the legal criticism as to the validity of the act, absolutely and completely?

Mr. DE ARMOND. No; I think not.

Mr. WILLIAM A. STONE. Where is there any room for question as to the legality of the act, based on the fact that it was not supported by parliamentary law, in the absence of rules?

Mr. DE ARMOND. The gentleman's contention would amount to this——

Mr. WILLIAM A. STONE. I say until the rules were adopted, the ratification was the act of the body.

Mr. DE ARMOND. The gentleman's contention would amount to this, that whatever the law may be, when a decision is made by the Speaker of the House and ratified by a majority of the members, that that becomes the law——

Mr. WILLIAM A. STONE. Oh, no——

Mr. DE ARMOND (continuing). Moves away and sweeps aside the provisions of the law, and that there is no such thing as parliamentary law then, except the will of the body acting at the time.

Mr. WILLIAM A. STONE. Will you permit me again. I understand the Supreme Court decided that if the body adopted that as a rule it was valid.

Mr. DE ARMOND. I understand the decision of the Supreme Court to be that the House could adopt such a rule.

Mr. WILLIAM A. STONE. Now, if the Supreme Court has so decided, if the body have adopted that action as a rule, and it became valid, does not that invest the decision with the ratification of an act, and the rule make it equally valid?

Mr. DE ARMOND. No, sir; it does not, just for this reason. There is a difference between having a law and proceeding under and according to it, and proceeding contrary to law. You can not have a law made authorizing a thing already done in the past; because you can not authorize past things. You can not authorize in the future, under any law, what was done in the past contrary to the law.

The SPEAKER *pro tempore*. The time of the gentleman from Missouri has expired.

Mr. REED (to Mr. DE ARMOND). How much more time does the gentleman desire?

Mr. DE ARMOND. It will all depend upon the number of interruptions.

Mr. REED. I ask that the time of the gentleman may be extended.

Mr. BOATNER. A parliamentary inquiry, Mr. Speaker.

The SPEAKER *pro tempore*. The gentleman from Maine asks unanimous consent that the time of the gentleman from Missouri be extended five minutes.

Mr. BOATNER. Before that question is put I desire to make a parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. BOATNER. The question is, What reference does this debate have to the motion under consideration?

The SPEAKER *pro tempore*. Does the gentleman make that point of order?

Mr. BOATNER. I make that point of order.

The SPEAKER *pro tempore*. The Chair sustains it. Is there objection to the request of the gentleman from Maine that the gentleman from Missouri be allowed to proceed for five minutes?

There was no objection.

Mr. DE ARMOND. I am aware that I was not addressing myself very closely to the question before the House, but discussing the general question as to how power here shall be exercised and where it shall be lodged.

I was on a particular point, and I go back to it. And I shall be very glad to hear from any gentleman upon it, as none of them have discussed it. The point I make is this: That general parliamentary law stands on the same footing as the common law; that the rules of the House are to general parliamentary law what legislation in an act of a State Legislature is to the common law. I say that when the Fifty-first Congress met, and before the rules were adopted, the House was without rules, and that what the Speaker then decided and what the House itself did afterwards to ratify his decision was not necessarily parliamentary law. It was a decision of the question, but it was not necessarily according to general parliamentary law.

What was general parliamentary law upon this point? I simply have to repeat what I said before, to make myself clear. General parliamentary law was what had been established as to the way of ascertaining whether there was a quorum here or not to do business, and as to whether the House was in a condition to do business when the roll had disclosed by the answers of members that less than a quorum had answered. Then by the decision, among others, of a predecessor of the Speaker in the Fifty-first Congress, and a great Speaker, too, from the State of Maine, and by the practice of the House, it had been determined, and became part and parcel of the body of general parliamentary law, that when a quorum was not shown by the yeas and nays when taken, it was conclusively ascertained that there was not here the necessary constitutional body to do business.

Now, does anybody doubt that it is practice and decisions which make general parliamentary law; or that they would be of the body of general parliamentary law in this House until a rule had been made changing it? There was no way of respecting general parliamentary law but to follow the precedents and decisions, and by them there was no way to determine the presence of a quorum to do business except that which had been decided to be and taken as the sole way—the responses of the members on a yea-and-nay vote. I concede that general parliamentary law is subject, of course, to change, as by a rule of the House.

There, sir, I stand; there is no dodging, no getting away from it. I concede to the decision of the Supreme Court all that is in it: That a rule can be made for counting a quorum; that a rule was made for counting a quorum, and that legislation, under the forms of law after that quorum had been counted, stands. But the Supreme Court did not decide directly, did not inferentially decide, did not argumentatively decide, and did not intimate, that in the absence of such rule a quorum could be ascertained except by the method established by general parliamentary law, as I have stated it. While I am fresh in this House, and concede that I had not the honor of membership of the Fifty-first Congress, I may say that the Speaker of the House, in my judgment, when he assumed to count a quorum after the practice and the rulings had been the other way, and before his quorum-counting rule was adopted, stood without any law; and the ratification of his act, lawless as it was at the time—I say that in no disrespectful sense—the ratification of that lawless act by the House, made a House by his quorum-counting, could not make it any more lawful. It was still in violation of general parliamentary law as we had had it established, and it had no rule or practice of the House to rest upon or support it.

Mr. REED. Mr. Speaker, we are making some progress. The gentleman from Missouri [Mr. DE ARMOND] I think is more amenable to treatment than he was when he began. Let us distinctly understand how much is admitted and where we are. In the first place it is admitted that the Supreme Court decided that a present quorum was the quorum required by the Constitution. Other Speakers preceding the Speaker of the House in the Fifty-first Congress had decided that a voting quorum was necessary. Therefore those two sets of people, the former Speakers and the Supreme Court, are in direct conflict, and does anybody doubt who goes to the wall?

Mr. DE ARMOND. Will the gentleman permit a question?

Mr. REED. Surely.

Mr. DE ARMOND. Did not the Supreme Court recite that there were several ways by which the presence of a quorum might be ascertained, by a roll call, by a count, as was done by the Speaker subsequently under the rule? They held that the question of how a quorum should be ascertained was a matter that could be determined, and that it had been determined by the Fifty-first Congress in a certain way.

Mr. REED. Now, then, let me go on. The proposition is that the Supreme Court is on one side and the Speakers of the House preceding the Fifty-first Congress on the other. In that conflict I respectfully but firmly push the other Speakers to the wall. The Supreme Court having decided that a present quorum is the constitutional quorum, the question is, how shall the body determine that thing? Prior to any special rule regulating the ascertainment, how shall the fact be got at?

Here is an actual House of Representatives, legally constituted, a House with a present quorum, and, under the Constitution of the United States, that is the House of Representatives. But certain members deliberately refuse to answer to their names. Is the body powerless to ascertain the jurisdictional fact, a fact that lies at the very foundation of its exercise of power? Can it not take cognizance of the presence of members who are actually and visibly present?

Well, if it is going to do that, how shall it do it? Why, this House has one representative for all, and he sits there in the Speaker's chair. He counts the votes, in the absence of any regulations to the contrary; he counts members as they rise up and sit down; he determines and announces to the House the count; he even announces whether there is a majority one way or the other by the sound of the voices of the members.

Now then, the Speaker of the Fifty-first Congress counted members who were visibly present. Those members objected to being counted; said they ought not to be counted, because former Speakers had held that members must answer before they could be counted. But they were counted; and thereupon an appeal was taken to the body. The body sustained the action of the Speaker and pronounced it correct. Now, was that in accordance with parliamentary law or not? If by "parliamentary law" the gentleman from Missouri [Mr. DE ARMOND] means his view of it, why, after what he has said here I concede that that was against general parliamentary law. [Laughter.] But if he means that unwritten law by which every assembly is guided, whether it be the Congress of the United States or any other body, he must mean a parliamentary law by which every decision of a Speaker can be questioned, but when questioned and put to the test of the House, and decided upon, is *res adjudicata* and forever at an end. That is general parliamentary law. Why, look at the decisions of the present Speaker of the House, on the question of allowing before the reading of the Journal, a report to be made from the Committee on Rules.

Mr. Carlisle, his predecessor, had decided on the same language that certain motions could not be made, and that decision was so firm, in my judgment, and so much in accordance with general parliamentary law, that the Fifty-first Congress for two weeks endured a filibuster which consumed from two-thirds to three-fifths of every working day at a time when we needed all the days. Yet, rather than overthrow that decision, the Speaker of the House permitted that filibuster to go on.

[Here the hammer fell, but by unanimous consent Mr. REED'S time was extended five minutes.]

The decision in question here, the decision of the Speaker of the Fifty-first Congress, was submitted to the judgment of the House of Representatives. It may have been contrary to general parliamentary law as the gentleman from Missouri understands general parliamentary law, but when that decision was ratified by the House there was an end of it. The proper tribunal had disposed of it, and while he and I may think that that was correct or incorrect, we have no right to blame anybody about it. We may criticise it from the point of view of our own ideas of parliamentary law; we may say that it was contrary to a decision of Mr. Carlisle; we may say anything about it that we please, but it is a question which has been settled and disposed of; as a legal question the whole matter is ended.

Why, sir, what difference does it make whether a special rule is established by this body or a general rule? This body has full power—it exercised it in the case of the Wilson bill and it was proposed to be exercised in the case of these rules—of establishing a special rule to govern a particular case. It makes no difference whether a general rule is established or whether the House ratifies in each particular instance what has been done; in either case the decision of the House is final and binding.

Now, then, let us recapitulate what progress has been made. First, the doctrine that a voting quorum is necessary has been exploded; the doctrine that a present quorum is sufficient has been established. And I want gentlemen to understand the fullness of that establishment. Not a living man who ever sat on the supreme bench of any State in this Union has ever said a word to the contrary, and the gentleman from Missouri [Mr. DE ARMOND] himself admits it, and every Democratic lawyer in this House admits it.

We have settled that. Second, we have settled that in this particular instance the method which was adopted is the im-

memorial method adopted away back in past times—sanctioned incidentally by all the rules of the House—by the rules of previous Houses, although no rules of the existing House had been adopted—because the Speaker is expected to count in such cases and to count a quorum, which is a remnant of the old custom coming down to us from the English Parliament. A quorum having been counted in that way, and the count having been submitted to the only tribunal that had any right to decide upon its validity, and that tribunal having decided that the Speaker was right, his action in that particular case is *res adjudicata*. It is moreover sustained on fundamental principles which no man can gainsay. Now, if that is not a complete disposal of the matter, only time can make men comprehend it.

Mr. DE ARMOND. Will the gentleman yield for a question?

Mr. REED. I will.

[Here the hammer fell, and Mr. ALDERSON obtained the floor.]

Mr. REED. I shall be very glad to yield to the gentleman from Missouri for any question.

Mr. DE ARMOND. I hope the gentleman from West Virginia [Mr. ALDERSON] will give way for a moment.

Mr. ALDERSON. I will do so if I do not lose my right to the floor.

Mr. REED. Mr. Speaker, I believe my time was not out.

The SPEAKER *pro tempore*. It was just out.

Mr. DE ARMOND. With the consent of the gentleman from West Virginia I wish to put a question or two to the gentleman from Maine. Do I understand that gentleman to controvert the proposition that the decision of the Supreme Court rests upon the fact that a rule had been adopted for the counting of a quorum, before the legislation which was then called in question?

Mr. REED. Not at all. The legislation in question having been passed under that rule, the rule was brought in question by the people who contested it.

Mr. DE ARMOND. Will the gentleman answer me this question: Were there not two questions with regard to that rule—first, whether it was within the constitutional power of the House to adopt it——

Mr. REED. Yes.

Mr. DE ARMOND. And, second, whether or not the judiciary in passing on this question could sufficiently respect such a rule as to respect the conclusions reached under it, both of which questions were decided affirmatively? Is not that correct?

Mr. REED. I would not undertake to sanction the exact use of words by the gentleman from Missouri.

Mr. DE ARMOND. Now, I will ask the gentleman whether it had not been decided (so far as there were any decisions on the subject theretofore), before the decision of the gentleman from Maine as Speaker, that the presence of a quorum when the roll is called is to be determined by the responses of members.

Mr. REED. Oh, Speakers had repeatedly decided that way.

Mr. DE ARMOND. Such having been the decisions, I ask the gentleman from Maine whether those decisions did not become a part of the general parliamentary law governing this body?

Mr. REED. The answer is plainly no.

Mr. DE ARMOND. There is where the gentleman and I differ.

Mr. REED. The answer is plainly no. Those Speakers, when they decided that question, decided also that a voting quorum was required instead of the present quorum; and that ruling has been upset by the Supreme Court.

Mr. DE ARMOND. Did not the Supreme Court in discussing this matter speak of different methods of ascertaining a quorum—one by a roll call and another the method adopted by the gentleman from Maine as Speaker; did it not say that either method was proper when sanctioned by the House, by rule, and that it was within the province of the House to determine by rule by which method the presence of a quorum should be ascertained?

Mr. REED. Then if the Supreme Court decided that the method was right if it had the sanction of the House, and the method that was adopted had the sanction of the House, that ends the question.

Mr. DE ARMOND. But the Supreme Court did not decide that the method in itself was right, but that the House by its rules could determine which method it would adopt.

Mr. REED. I will allow the gentleman to state that position for himself if it suits him.

Mr. DE ARMOND. Let me ask the gentleman from Maine this question: Does not general parliamentary law consist of the principles which are recognized as governing deliberative bodies, together with the practices and decisions which have prevailed in such bodies?

Mr. REED. The practices and decisions of that particular body, but not of the preceding bodies.

Mr. DE ARMOND. But do not these practices and decisions as a whole make what is known as general parliamentary law?

Mr. REED. They do not, speaking of the House: not of the preceding bodies. The gentleman, if he will allow me, is making this error: We have repudiated, only very recently repudiated, the former usage of the House in this regard. We have repudiated the idea that the House was governed by the rules of its predecessor; and I can recollect when it was a heresy to say that it was not. I was guilty of heresy myself for a while, but nevertheless it was heresy. We have now, however, as I have said, repudiated that idea.

Now, the gentleman is endeavoring to get us back to the rules of the last House by inference, and that we have to establish these rules as a part of the parliamentary custom of this body, when in the very nature of the case they are in derogation of the custom. And to use his own simile that the common law is governed by statute, common parliamentary law is modified by the rules of the House, and your trying to incorporate into the parliamentary law the rules of the last House is of just the same force and effect as if you were trying to incorporate into the common law statutes not yet enacted.

Mr. DE ARMOND. I beg pardon. The gentleman misapprehends or misunderstands my position.

I do not claim that the rules of any particular House are binding on a succeeding House, but that the general practice and the decisions, on questions not governed by rules and until the adoption of rules, must go to make up the general parliamentary law.

Mr. ALDERSON was recognized.

Mr. REED. By those principles recognized as general parliamentary law by the body itself.

Mr. DE ARMOND (continuing). And when by the rulings of the Speakers and the practice of the House it had come to pass that the question of whether the House had a quorum and was in condition to do business, was determined on yea-and-nay vote, by the responses of members that much of general parliamentary law was established.

And did not these rulings of the Speakers rest upon general principles and not upon any rule?

Mr. REED. I think it is the ruling of the Speaker on a rule. That is my recollection. But I do not intend to evade the question. Admitting the gentleman's premises, when I was Speaker in the Fifty-first Congress I made a decision or overruled an appeal; but in every instance it was sanctioned by the body itself. In that event there is the end of it.

The SPEAKER *pro tempore*. The time of the gentleman from Missouri has expired.

Mr. DE ARMOND. My point is that when this decision had been made a number of times——

The SPEAKER *pro tempore*. The gentleman from Missouri is out of order. The gentleman from West Virginia has been recognized.

Mr. ALDERSON. Mr. Speaker, I stated when I allowed the gentleman from Missouri to proceed that it was not to be taken out of my time.

Mr. REED. I hope the gentleman from West Virginia will have an extension of his time.

Mr. BOATNER. I move that the gentleman from West Virginia have his time extended.

The SPEAKER *pro tempore*. The gentleman from West Virginia has been recognized.

Mr. ALDERSON. Mr. Speaker, it has been argued here that it is proper to intrust in the Speaker the power and right to count a quorum, and that the rules reported to this House should vest such authority in the Speaker. In answer to that contention, I beg leave to have read to the House a few extracts from the records of the Fifty-first Congress, from which it will be seen that it is unwise and unsafe to place such power in the hands of any man.

The fact that opportunity would be offered, by mistake or design, to make a false record, should make us pause before we indorse such a bad precedent. And whether such false record should result from preconcerted design on the part of the presiding officer, temporarily in power, arbitrarily or recklessly to beat down opposition and carry through measures antagonistic to the interests of the country, or whether it came from lack of knowledge of the facts or inadvertence, can make no difference so far as effect is concerned.

What has been done may again be done; and, as a warning to this House against placing in the hands of a Speaker such unprecedented power, I ask the Clerk to read the following extracts from the RECORD of the Fifty-first Congress.

The Clerk read as follows:

On January 29, 1890, Mr. OUTHWAITE made the following statement, which was not disputed:

"I wish to state to the Chair that I was not present in the House when my name was called, and the Chair is therefore stating what is not true. It is not for the Chair to say whether I shall vote or not, or whether I shall answer to my name when it is called."

Mr. REED. That is an extract which is not correct. The

gentleman from Ohio [Mr. OUTHWAITE] will himself bear witness that it was stated publicly at the time that it was an error, and the error was corrected. That is true.

Mr. ALDERSON. That is cut out of the CONGRESSIONAL RECORD.

Mr. REED. Improperly, as it does not tell the whole truth.

Mr. ALDERSON. The gentleman can place the other in and tell the whole story, if he thinks there is more of it. I ask the Clerk to continue the reading.

The Clerk read as follows:

The proceedings of February 5, 1890, contain the following:

"Mr. STONE of Missouri. Mr. Speaker, I did not hear that portion of the Journal read which announces the names of members present and not voting on the last yea-and-nay vote yesterday; but I take it to be the same as appears in the RECORD, and if so the Journal is incorrect. The statement in the RECORD is that I was present and not voting on this last call. As a matter of fact I was in the northwestern part of the city at the time looking for a house——

The SPEAKER. The present occupant of the chair was not in during the time that record was made up.

Mr. STONE of Missouri. And I ask that the Journal be corrected.

The SPEAKER. The Chair is informed that it is the name of the gentleman from Kentucky, Mr. STONE, that appears in the Journal.

Mr. STONE of Missouri. Then I ask that the RECORD be corrected.

The SPEAKER. The correction will be made as suggested by the gentleman.

Mr. STONE of Missouri. Mr. Speaker, I rose this morning to a question of privilege and asked that the Journal of the House might be corrected, supposing that it corresponded in its statements with those contained in the RECORD. I had examined the RECORD and found that I was reported as being present in the House on yesterday, when the last yea-and-nay vote was taken, and refused to vote. The Speaker thereupon announced to the House, upon examining the Journal, that it appeared in the Journal that Mr. Stone of Kentucky, was present and did not vote, and that it did not appear that I was present. I subsequently examined the Journal personally, and find that I am recorded as being present at the time and refusing to vote.

Now, I have, and all of the House have, the most implicit confidence in any statement the Speaker makes, but there was evidently some misunderstanding. A misstatement has been made by the Journal clerk to the Speaker, or the Speaker has misinformed the House of the fact. I want to have the Journal corrected to show the real fact

The SPEAKER. The Chair will state to the House that the examination which the Speaker made of the Journal was made of a portion which was handed to him containing certain printed statements which had been pasted upon the Journal. It is customary to make up the Journal in that manner. Supposing that that was the paragraph which was referred to by the gentleman from Missouri, and finding the name of the gentleman from Kentucky [Mr. STONE] therein, the Chair replied as the House heard. It is one of those accidents that sometimes occur when information is got hurriedly for a member, without there being any reason to suppose that the information was furnished to the Chair with anything but good faith.

Mr. STONE of Missouri. The Speaker none the less announced me present, or it would not have so appeared; and the Journal has been approved with my name in it as being present when I was in the northwest portion of the city hunting a house in which to live, having recently been burned out.

The SPEAKER. The Chair is unable to state how it occurred, as the Speaker was not in the Chair when the record was made.

Mr. STONE of Missouri. I suppose the blind eye of the Chair happened to be on this side of the House. [Laughter.]

The SPEAKER. The Journal will be corrected in accordance with the statement of the gentleman from Missouri, without objection.

There was no objection.

In the proceedings of June 21, 1890, we find the following:

Mr. FORMAN. Mr. Speaker, I rise to a question of personal privilege.

The SPEAKER. The gentleman will state it.

Mr. FORMAN. I have been as diligent, perhaps, as most members of the House in the discharge of my official duties; but I am the last man to accept credit for anything which I do not believe I deserve On the 2d day of this month I obtained leave of absence for ten days. On the 4th I was in Springfield, Ill., and yet on that day action was had on the administrative bill here, and I was counted by the Speaker and the Clerk as being present in this Hall and refusing to vote. The Journal of the 4th instant shows the same as the RECORD, and I desire that the proper correction shall be made, as I do not want to impose upon my constituency by being at home and being recorded here at the same time. [Laughter and applause on the Democratic side.]

The SPEAKER. The gentleman is put down as present and not voting upon the Journal at the time he specifies. The gentleman states that he was not present.

Mr. FORMAN. No, sir; I was in Springfield, Ill., on that day.

The SPEAKER. Without objection the Journal will be corrected to correspond with the statement of the gentleman.

Mr. SPRINGER. It was not a matter for objection; he has a right to have it corrected.

The SPEAKER. The Chair hears no objection, and the Journal will be corrected.

The following extracts are from the proceedings of the House of Representatives of February 20, 1891:

Mr. MCMILLIN. I demand a recapitulation of the vote.

The vote was recapitulated.

The SPEAKER. On this question——

Mr. MCMILLIN. I notice that the name of Mr. OATES of Alabama is recorded among the names of those present and not voting. I make the point that he is not here, and has not been in the Hall this morning.

The SPEAKER. Does the gentleman state of his personal knowledge that it is an error?

Mr. MCMILLIN. I state from my personal knowledge that Mr. OATES has not been in the Hall this morning.

The SPEAKER. H s he not been in the cloakroom?

Mr. MCMILLIN. He may have been there. He has not been in the Hall. I am so informed, and I have no doubt my information is correct.

The SPEAKER. The Chair thinks that the cloakroom is a part of the floor of the House; but in order that there may be no occasion for any question, the name of Mr. OATES will be erased, there being an ample number.

* * * * * * *

Mr. MCMILLIN. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. MCMILLIN. Was the name of the gentleman from Louisiana [Mr. BOATNER] called as among those present and not voting?

The SPEAKER. It was.

Mr. MCMILLIN. That is an error.

The SPEAKER. He is in the cloakroom.

Mr. MCMILLIN. He was not in the House, and he has not been in the cloakroom as I am informed since this roll call began. I make the point of order——

The SPEAKER. That is the information the Chair has.

Mr. MCMILLIN. The Chair's information is erroneous, then.

The SPEAKER. It is the information at the Clerk's desk.

Mr. MCMILLIN. The information at the Clerk's desk is inaccurate, then; and I challenge the counting of that vote.

The SPEAKER. The name is not necessary to make a quorum, therefore there is no need to settle the fact in the affirmative, and the correction will be made on the statement of the gentleman from Tennessee. On this question the yeas are 156 and the nays are 4, and, a quorum being present, the order is carried, and the House will proceed to the consideration of the Senate amendments.

We find the following in the proceedings of the same body of February 21, 1891:

Mr. TURNER of Georgia. Mr. Speaker, on the motion to recommit to the Committee on Rules the resolution reported yesterday by the gentleman from Illinois [Mr. CANNON] I did not vote; yet the Journal seems to show that I was present in the Hall and refused to vote. The fact is that when the Speaker had decided that the yeas and nays had been ordered on that motion, a colloquy ensued between the gentleman from Tennessee [Mr. MCMILLIN] and the Speaker as to the right of the gentleman from Tennessee to demand tellers on the yeas and nays.

During that colloquy I went to the cloak room, took my hat and coat, and escaped, with whatever dignity I could command, to the barber shop. [Laughter.] Yet I am reported in the Journal, on the authority of the Clerk, or a page, or the Speaker, whoever it may be—I do not censure anyone because I know there was great confusion in the Hall—I say, notwithstanding my absence at that time, I am reported in the Journal as having been present in the Hall and refusing to vote on that call of the yeas and nays.

Then a motion followed for the previous question; and after I had passed between the tellers on the question of taking the yeas and nays upon that motion, and before the count by tellers was concluded, I left the Hall through the front door, and the yeas and nays were not called until I was in the hands of that gentleman who ministers to us in the bath room. [Laughter.] On both occasions I am recorded as having been present and refusing to vote.

Now, Mr. Speaker, whatever credit attaches to me for this procedure on my part, and which I have endeavored to describe, I desire to have with my constituents; and I ask that the Journal be corrected by the omission of my name from these two lists of delinquents.

* * * * * * *

Mr. CLEMENTS. Mr. Speaker, the Journal recites the fact that upon the vote on ordering the previous question on the order proposed yesterday morning, a number of gentlemen were present and not voting, amongst them my name being included. The names of other gentlemen were also read. I went between the tellers on the demand for the yeas and nays on the previous question. I went out of the Hall and was not in it again for two hours. I was not here while that roll call was being had. I ask unanimous consent therefore, that my name may be stricken from that list.

The SPEAKER *pro tempore*. Is there objection?

Mr. BAYNE. I object to the unanimous consent.

* * * * * * *

Mr. BLANCHARD. I am recorded in the Journal, and also in the RECORD on page 3282, as being present in the House when the yea-and-nay vote was taken on the question of ordering the previous question yesterday. I was not in the House when that vote was taken. I had left the Capitol and had gone to one of the hotels of this city, and yet I was counted as present by the Speaker or the Clerk——

Mr. TRACEY. Or by a page.

Mr. BLANCHARD. Or by a page. And the RECORD and the Journal in recording me as present perpetrate a palpable falsehood.

Mr. MCMILLIN. Do I understand you to say you were not here during the vote?

Mr. BLANCHARD. That is what I said. When the vote was taken on ordering the previous question I was not in the Hall of the House. Before my name was called the first time I had left the Capitol building and repaired to a hotel of this city near the Capitol, and I did not return to the Hall of the House until the evening session for pensions began.

* * * * * * *

Mr. CRISP. Mr. Speaker, on page 3202 of the RECORD my name is recorded as one of those present and not voting. I desire to say that that record is incorrect. I was present and went between the tellers on the demand for the previous question, I believe it was——

Mr. MCMILLIN. On the demand for the yeas and nays.

Mr. CRISP. On the demand for the yeas and nays. I went between the tellers, went back to the cloakroom, immediately took my coat and went out, and before the beginning of the roll call I was out of the building, having left it. I merely desire to say this, so that the House and the country may understand the method in which the presiding officer of this House makes up and falsifies this record.

Mr. MCMILLIN. The record is false in a number of particulars, as other gentlemen here can testify.

* * * * * * *

Mr. WILSON of Missouri. I desire to say, Mr. Speaker, inasmuch as the gentleman from Ohio has yielded to me for the purpose of making a statement, that on yesterday I passed between the tellers and immediately left the Hall, and after I had left the Hall I heard the first name on the roll called. This morning I find I am recorded as having been present, when in fact I was not in the Hall.

* * * * * * *

Mr. OATES. Mr. Speaker, all I wish to say is that the only time I was in the Hall yesterday was when the tellers were called for on the yeas and nays. I passed through the tellers and passed out of the House, and as I was leaving the cloakroom I heard the Clerk begin to call the yeas and nays. I was not in the House at all afterwards.

* * * * * * *

Mr. GEARY. You decline to permit me to correct the record as to myself. I was not here. I was not here until 2 o'clock.

* * * * * * *

Mr. MCMILLIN. I say that you are trying to deceive the people, and you can not palm off this fraudulent record upon the people. This Journal you propose to approve begins with falsehood, continues in falsehood, and ends with falsehood.

Mr. ALDERSON. Every statement made by each of these gentlemen on this occasion remains to this day uncontradicted;

and yet they were not permitted to have the false record corrected, which showed them to be present when they were absent. On the same day other gentlemen, counted to make up a quorum when absent, addressed the Chair, but were not recognized. Thus it appears that eleven gentlemen, two of them twice each, were admittedly counted as present when absent. Every gentleman who was a member of the Fifty-first Congress knows that such incidents were almost of daily occurrence. The unreliability and uncertainty of a record thus made up is self-evident.

I have not called attention to these matters to provoke an apology from any defender of the bad rule to which I have referred, and worse applications of it, but simply to recall the attention of the House and of the country to the proceedings and practices which the Democrats here so vigorously and properly denounced, and the country so emphatically repudiated. [Applause on the Democratic side.]

Mr. REED. Mr. Speaker, this is only another echo of the minority of the Fifty-first Congress. Those echos are dying—not musically, but dying. In due time we shall have the end of them; because there is no method so satisfactory of disposing of anything which has passed the period of ripeness and usefulness as exposing it to the common air. [Laughter on the Republican side.] The gentleman from West Virginia [Mr. ALDERSON] is not a novice in this business. His noble voice was uplifted in the last Congress in a similar line of observations. He was then told that if he would compact his statements and make them definite they would be answered.

After two years of strong mental effort, after two years of enormous examination, and by the assistance of typewriters and clerks, he has evolved the remarkable production to which you have listened this morning. [Laughter on the Republican side.] I hail the rising State from which he comes. To have two statesmen, one to lead the House and the other to bring up the rear in this manner, is too much glory for a State "made outside the Constitution." [Laughter.]

I feel called upon to say this much, because the gentleman has added to his collection, which he has carefully made, the assertion that these things were of daily occurrence. Do you suppose that he would not have piled the present record full of it had that been true? On the contrary, he has got everything there is, and I am very glad to answer him and to meet it at once.

Now, mark the foundation; because sometimes the difficulties in this life arise from not understanding precisely what is to be met. Understand that the first charge is of accidental error, and that the system is to be condemned because there were accidental errors. Now, that necessarily implies that the other system was free from errors—that under the other system no mistakes were made. And yet the members of the last Congress can recollect one time when the Speaker, in the confusion of a night session, came very near deciding that a vote could not be recapitulated which the next morning turned out to be a false vote.

Why, a great many things are liable to happen in the confusion of this House, and I can produce here and have published instances where votes were absolutely changed by the false record of the Clerk. A gentleman from my own State, Gen. Plaisted, came down here in front and distinctly voted one way. He was recorded the other way, and the proposition was carried against him, and the next day it was brought up, correction made, the action of the House reversed, and nobody used any unhandsome language about it. Why? Simply because party spirit was not running high.

Now, I encountered a good deal of high party spirit. I never bore any ugly feelings on account of it. When men are angry they do things that gentlemen ought not to do, but it ought not to be treasured up against them; but the hoarded malice of a couple of years is not commendable [laughter], and if you will search the records of this House you will find in every Congress just as many mistakes as were made in counting a quorum, and in no instance did one of those cases change the result, while in repeated instances in other Congresses the result was changed by the mistakes of the Clerk.

In other words, human institutions are human, and there is liability of mistake, and nobody fails to understand that.

Now, let us come to another occasion in which several gentlemen participated. If that was a mistake, it was a mistake in judgment as a parliamentarian and as a lawyer. I believed that there was some time when every member must be considered as present who was present at all. You and I know that when we take a yea-and-nay vote, members go in and out, and it often happens that at no particular instant of time is there a quorum present here in the Hall or in the cloakroom. Nevertheless, we go on with our vote, in the supposition that at a particular time the majority were there.

Well, now, what particular time must be taken? In my judgment—and that is a judgment which I think is justified by the practices of other legislative bodies—the point of time at which the House must be considered as having a quorum or not having a quorum is the moment when the question is put to the House. From that moment everybody who was there at that time is constructively present all the time, and everybody who comes in is constructively present all the time.

Now, gentlemen on the other side adopted this interesting device: They would call for the yeas and nays, and when granted them, they would still demand tellers on the yeas and nays. Then they would pass between the tellers and rush out of the House. Now, the question is when they were present in a parliamentary sense. In my judgment—and I have seen nothing to change it, although I shall change it if I see anything—these men were present to constitute this body a legal body at that time.

That is the reason no correction was made in that case. I make this explanation, because party passion has very greatly subsided, and men of sense have an opportunity to look at this thing clearly in the face, free from feeling; and I am entirely certain that no member of this House charges those of us of the Fifty-first Congress with dishonest purpose or intention. We took our view on this subject. Thus far it has been sustained; and in due time it will be sustained throughout.

I want to say another thing to this House. There were periods of very great confusion, because party spirit ran high: and whatever mistakes might have been made were made in the hurry and rush of the moment, and mistakes which are liable to be made and are made by any Speaker. Take, for instance, that case in regard to Mr. OUTHWAITE, cited by the gentleman from West Virginia, who disingenuously left out the exculpatory circumstances in connection with it. I am in a condition to state to the House how this occurred. It was the first time that a quorum had been counted. The gentleman from Ohio sat very near where he now sits. I had seen him from time to time, and when his name was called I made a stroke with my pencil at his name, and, looking up and seeing that he was not here, I crossed that out.

When I came to read the names several gentlemen were occupying the floor, rather multitudinously. I am not saying it with any intention to reflect upon any member then present, but there was something in the nature of an uproar, and when I read the names I did not at the moment notice that this sign had been stricken off; but I showed it to the gentleman from Ohio immediately afterwards and the correction was made.

Now, I do not really think I need say anything more to the House in reply to what has been said, except simply to express my gratitude to the gentleman from West Virginia [Mr. ALDERSON] for kindly bringing these matters forward.

Mr. OUTHWAITE. Mr. Speaker, debate upon this proposition has taken a very wide range. It is over an hour since the amendment was offered by the gentleman from Mississippi [Mr. HOOKER] to this clause of the rule; and I ask now, by unanimous consent, that the House take a vote upon it.

Mr. HOOKER of Mississippi. Oh, no; I want to be heard.

Mr. WHEELER of Alabama. I want three minutes. [Cries of "Vote!"]

Mr. HOOKER of Mississippi. I trust that I may be heard. I do not want to be heard in reply to anything that has been said in the debate which has just closed, but I want to be heard on the significance of my amendment.

Mr. OUTHWAITE. I ask unanimous consent that debate upon this amendment be closed in ten minutes.

Mr. HOOKER of Mississippi. I object.

Mr. WHEELER of Alabama. Debate of an hour has been occupied by two or three gentlemen.

Mr. OUTHWAITE. I move the previous question on the amendment.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. HOOKER of Mississippi. Division.

The House divided; and there were—ayes 147, noes 24.

So the previous question was ordered.

The SPEAKER. The question is on the amendment of the gentleman from Mississippi.

Mr. HOOKER of Mississippi. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. The gentleman will state it.

Mr. HOOKER of Mississippi. I want to know whether the motion of the gentleman from Ohio for the previous question was to limit the debate to ten minutes or on the amendment?

The SPEAKER. On the pending amendment.

Mr. HOOKER of Mississippi. You want to cut off all debate. That is the way you gentlemen from the Committee of Rules are going to do. That is just what I expected.

The amendment was again reported.

The question was then taken on the amendment, and the Speaker announced that the noes seemed to have it.

Mr. HOOKER of Mississippi. Division.

The House divided; and there were—ayes 10, noes 144.

So the amendment was rejected.

Mr. BOATNER. I offer an amendment to the pending paragraph.

The Clerk read as follows:

Amend paragraph 57, Rule XI, by adding: "And when the chairman of a committee, or any member of the House having a bill in charge which is under consideration, moves the previous question on a pending amendment, or engrossment and third reading, or final passage of the bill, the Speaker shall submit the question to the House without entertaining any motion against the same. If the motion is agreed to the question shall then be put on the proposition to which the motion for the previous question applied, and no motion shall be entertained against the same except one motion to recommit, with or without instructions; which motion shall be decided without debate.

Mr. REED. I suggest to the gentleman that he modify that by adding after the word "proposition" the words "or propositions."

Mr. BOATNER. I accept that suggestion.

Mr. BROWN. And, Mr. Speaker, I suggest to the gentleman from Louisiana that after the word "bill," he insert the words "or report."

Mr. BOATNER. I will accept that amendment also. Mr. Speaker, the amendment which I now offer is the same to which I called the attention of the House in general debate on yesterday. It involves the question of whether this House will, at the inception of its organization, abdicate its constitutional function and duty of legislating, or whether it will preserve to itself the right which is held by every legislative body in America except the House of Representatives, to bring itself to a final vote upon any question which comes before it for consideration.

I believe, sir, that in every Legislature, in every city council, in every board of county commissioners, in fine, in every deliberative or municipal body in America except the House of Representatives, the majority may, under the operation of the previous question, assert its will upon any question that comes before it for consideration. It is reserved for the House of Representatives alone to insert provisions in its rules which make it impossible for a majority of the body to exercise its will upon any subject unless the Committee on Rules will report a cloture, or an order of business under which the House can act.

The preceding section of this rule, to which I offer this amendment, authorizes the Committee on Rules to report at any time a resolution fixing the order of business, or fixing the time for the consideration of any measure, the time when the previous question shall be considered as ordered, and the time when the vote shall be taken, and providing that after that the Speaker shall not entertain any dilatory motion against it. That rule is effectual and satisfactory, and it works well with all that class of legislation in regard to which, the gentleman from Mississippi [Mr. CATCHINGS] said to-day, in addressing the House upon another amendment, the committee feels justified in exercising this authority. Legislation of great political importance, which the majority of the House considers as a matter of political duty, will demand at its hands and will receive a resolution of cloture.

But the ordinary current of business which may affect one part of the Union or another, however important it may be to the interests concerned, may be antagonized in this House by a few gentlemen or by a clique, and may be defeated, notwithstanding the fact that a large majority of the House may be in favor of its adoption.

Now, I think, Mr. Speaker, that as a matter of right every member upon this floor who secures a favorable report from a committee of the House, or who secures from the Committee on Rules the right to have his measure considered, is entitled, as a matter of representative right, to obtain a vote and to have the judgment of the House upon that measure; and when you go to the extent of putting manacles upon your own hands, restricting your judgment and your action by putting it in the power of one man, or of a set of men, to prevent your passing your judgment upon that measure, you are to that extent abandoning the representative duty which you assumed when you took your place on this floor.

It is argued by the gentleman from Indiana [Mr. HOLMAN] and by the gentleman from Texas [Mr. KILGORE] that the amendment which I propose is bad because it will facilitate legislation, because it will render it easy to pass ill-advised legislation; by which, Mr. Speaker, is meant that it will facilitate legislation which does not meet their approval; by which is meant that legislation which does not meet the approval of the minority upon this floor is bad and ought not to be crystallized into law. But I say that when you come to consider the safeguards that are thrown around legislation by the other provision of this rule there is no reason to suppose that the adoption of this amendment will facilitate hasty or ill-advised legislation.

In the first place, Mr. Speaker, every measure that is introduced into this House has to run the gauntlet of a committee. The committees have been increased in membership. They are composed of representative gentlemen, who are supposed to be familiar with the subjects which are to come before the several committees to which they are assigned. There rigid examination and exhaustive debate is allowed. Then each measure comes into the House, and it must secure the co5peration of the Committee on Rules, or else it must come up in the regular order of business, and when it comes up for consideration, if this amendment be adopted, gentlemen can not shirk their duty and run away with the idea that it will be filibustered and defeated anyhow. They will know that once it is taken up for consideration it must be disposed of by the House.

It will devolve upon members of the committee the higher duty and responsibility of examining more carefully the bills which they present. It will devolve upon every member of the House the higher duty and responsibility of informing himself as to the merits of any measure coming before the House, because he must go to his constituents under the responsibility of having voted yea nor nay on the bill.

[Here the hammer fell.]

Mr. BYNUM obtained the floor.

Mr. BOATNER. I would like a few minutes more.

Mr. BYNUM. If the gentleman from Louisiana desires to proceed I will give way and ask unanimous consent that he be allowed five minutes additional.

The SPEAKER. Without objection, the gentleman from Louisiana [Mr. BOATNER] will proceed.

Mr. BOATNER. Mr. Speaker, the amendment which I offer does not antagonize the preceding provision in these rules, which confers upon the Committee on Rules great authority—an authority which they ought to possess and ought to exercise. My amendment is in harmony with that provision. It is intended only to take away from that committee the responsibility of the enactment of all legislation in this House, to relieve them from the necessity of reporting a cloture or refusing to report a cloture upon matters upon which the party may be divided, or upon matters of mere business legislation in regard to which the political power of the House ought not to be asserted.

This proposition will enable us to consider the vast volume of business legislation which annually comes before the House; it will enable us to discharge our duties to our constituents, the duties which the Constitution imposes upon us. I hope, Mr. Speaker, that no gentleman on this floor will by his vote on this occasion render it impossible for him to bring to a final vote in this House any measure in which his constituents may be vitally interested.

Mr. DOCKERY. If I understand it correctly, this proposition will allow a cloture upon any private bill.

Mr. HOLMAN. Upon everything.

Mr. DOCKERY. The gentleman's proposition seems more drastic than the Reed code of rules.

Mr. BOATNER. The proposition is to give the same force and effect in this House to the previous question that it has everywhere else—in every legislative body in the world except the House of Representatives.

Mr. HOLMAN. How about the Senate?

Mr. BOATNER. The Senate has no previous question. I am speaking, of course, of any legislative body that has the previous question.

Mr. BYNUM. Mr. Speaker, I did not intend to participate in the debate on the consideration of these rules. I was perfectly content to accept the report of the committee and to vote to sustain that report, although it contains some things which probably, if I had been assisting in the formulation, I would have changed. But, taking them all together, I think they come as near answering the demands and meeting the approbation of the House as any set of rules which could well be framed.

While I am opposed in the main to filibustering, I want to say that the filibuster is not an unmitigated evil. There are times when he serves the country well. While we may sometimes lose our temper and very often become in a measure disgusted with those who are obstructing legislation, we ought to be careful not to go to the other extreme and so modify our rules that all restraints are removed. I submit that the measure proposed by the gentleman from Louisiana is fraught with very dangerous consequences. As the gentleman from Missouri has said, the proposition amounts simply to allowing a member who has charge of a bill to move cloture at any time he may see fit.

Now, with all due respect to committees, I wish to say that I have not the utmost confidence in the reports of committees. Committees are very often mistaken. They are often misinformed. They do not always come in here with perfect measures. It is not till bills are upon the Calendar that they are ex-

posed to the eyes of the public and the scrutiny of the press. Why, sir, we all recollect that in the Fifty-first Congress, under the cloture, there was passed in this House a bill with reference to the boundaries of Oklahoma which included within that Territory the whole of Panhandle of Texas. A bill to reform our judiciary was put through under whip and spur and it was afterwards found that it abolished the jurisdiction of the Supreme Court of the United States and left that august body without a single case on its docket.

Things of this kind are liable to occur at any time with the very best committees. I say, therefore, we ought not here to favor a proposition allowing any committee to come in here at any time and gag the House upon a measure which the committee may think perfect, but which deliberate discussion might prove to be very defective. Such a proposition is very dangerous, and I trust this House will reject the amendment and stand by the report as presented.

Mr. HOPKINS of Illinois. Mr. Speaker, I do not agree with the sentiments expressed by the gentleman from Indiana [Mr. BYNUM] as to the dangerous character of the amendment proposed by the gentleman from Louisiana. On the contrary, the experience I have had on this floor during several Congresses leads me to regard this proposition as a very wise measure, and one which in the interest of economy, and of the public service should be adopted.

The gentleman from Indiana says that filibustering is not an unmitigated evil. I will not stop at this time to controvert that proposition, but I will say to him that the committee having a bill in charge can exercise the same forbearance and the same discretion that would be exercised by the Committee on Rules, to whom this proposed code gives authority far greater than it is proposed to clothe the committees of the House if this amendment is adopted.

Now, let us look at the situation for a moment. Under our rules, as thus far adopted, certain classes of legislation are sent to one committee or another. The Committee on Appropriations, has charge of the great appropriation bills; the Committee on Ways and Means, of revenue bills; the Committee on the Judiciary, of matters relating to that subject; the Committee on Rivers and Harbors, of the improvements in rivers and harbors. Now, if this House has confidence enough in the committees as formed to permit them to perfect legislation in their committee rooms, why not, when those committees come into the House, clothe them with power to secure action on this proposed legislation by asking for the previous question after a reasonable time has been granted for debate?

The argument of the gentleman from Indiana [Mr. BYNUM] is based on the idea that the committee having a bill in charge would, without giving reasonable time for debate or consideration, demand the previous question and bring the House to a direct vote upon it. My experience in this House leads me to a different conclusion. My experience is that the committee having the bill in charge would give ample opportunity for all parties interested to discuss any amendments that may be proposed, and that the committee having the bill in charge would be anxious to listen to anything that would perfect the legislation, or would satisfy them that the interests of the public would be better subserved by amending or modifying or changing in some shape the proposed legislation.

Mr. DALZELL. Let me suggest to the gentleman, also, that if the committee did undertake to cut off debate the House can always refuse to order the previous question.

Mr. HOPKINS of Illinois. Certainly, as the gentleman from Pennsylvania pertinently remarks, if the committee having the bill in charge undertakes to cut off debate, it is always in the power of the House itself to vote down the proposed motion and allow a further discussion. So that this motion for the previous question can only be exercised effectually to cut off debate when the interest of the House demands it, and can only be operative when a majority of the House favors immediate action on the legislation, and believes that ample opportunity had been granted to all of the advocates or opponents of the bill to present all of the features it embodies fully to the House.

But, sir, if this amendment of the gentleman from Louisiana is adopted it stops this unnecessary and criminal waste of time, this filibustering system that has disgraced this House in past Congresses. It places it within the power of the committee having the matter in charge to say to one individual, or a number of individuals, who simply entertain captious objections to the proposed measure, that those objections must be expressed in a legitimate way by a vote in the House, and that the dilatory and wasteful expenditure of time must stop, and that the House shall be permitted to vote on the bill or amendments, or the merits of the measure whatever it may be without further delay.

Now, as I have said, this is the time of all times for the members of this House to protect themselves against the captious, unnecessary, and criminal filibustering that has been indulged in heretofore on this floor. We know in the past some men have made reputations on that practice and that practice alone. We know, too, it is against the best interests of the country; and I trust that members on both sides of the House will unite in engrafting this amendment on the code of rules, and thus enable the House to transact any business that may come before it.

The adoption of the amendment does not interfere with the privileges of the Committee on Rules at all. The Committee on Rules regulates the order of business and gives precedence to the committees in the consideration of legislation, and such legislation as in the judgment of the Speaker and his associates on that committee will best subserve public interest; and after that authority is granted, and after that committee has the floor, this amendment gives to such committee in charge of the measure the power to call for a vote on the merits of the question after full and fair discussion.

[Here the hammer fell.]

Mr. RICHARDSON of Tennessee. Mr. Speaker, it occurs to me that this is the most unwise proposition presented here that I have ever known or heard of in the House. I am surprised that my friend from Louisiana who has proposed it is its author, for he is usually a careful legislator.

Mr. BOATNER. Will the gentleman allow me a moment?

Mr. RICHARDSON of Tennessee. Well I have but a few moments myself.

Mr. BOATNER. I will not take a second. I will reply by saying that I have not been here long enough to grow so great that I have lost all interest in all legislation except of a political character. That is the reason I want——

Mr. RICHARDSON of Tennessee. Well now I decline to yield to the gentleman for a speech. He can take the floor in his own time.

But I repeat, this seems to me the most unwise proposition for cloture that I have ever known. Now, suppose a committee brings in a proposition, or bill, if you please, and without a moment's debate moves the previous question, how is the House to be informed as to the character or merits of the proposition?

Mr. SPRINGER. The House can vote it down.

Mr. RICHARDSON of Tennessee. Yes; but it will be said, here is the report of a committee in favor of it; why should the House vote it down? But without one word of debate, without an opportunity to throw any light on the question at all, or an opportunity for dilatory motions, you are compelled to come to a direct vote on the merits of the proposition.

It seems to me that if we had had such a cloture rule as this in the Fifty-first Congress, it would have been going much further than even we did go at that time. It may be that my friend will insist that no committee of the House would move to close debate without an opportunity to have light shed on the subject by others than the members of the committee reporting it. But we must not only look to the committees of this House, but we must look to the committees of other Houses, possibly the north House, and while they would not be bound by a rule we now adopt, it might go a long way in the furnishing of argument in favor of the same rules in that body.

I would not be willing to put that power in the hands of some committees (without referring to any particular Houses) that existed in the past. I would not be willing, I say, to put that power in the hands of some committees that I have known, and whose operations I have witnessed since I have been a member of this body.

Mr. Speaker, gentlemen here have spoken of the power of committees. They have inveighed against the power given to the Speaker to constitute these committees. They say it puts in his hands an immense power when you permit him to name the committees of this House, and so it does. It is a vast power; greater, possibly, than that possessed by any other officer of this Government, the President not excepted, so far as shaping the legislation of this country is concerned. But when you increase and magnify the power of the committees of this House by giving them this additional authority, you thereby increase correspondingly the power lodged in the Speaker. You make him that much greater in his authority and in his power.

So far as I am concerned, Mr. Speaker, I think that the old rule, which gives the chairman of the committee, or the member of the committee who has charge of a measure, the right to move the previous question, in his discretion, ought to be sufficient power. He may make the demand for the previous question, and it has been very rarely the case since I have been a member of this House that there has been any filibustering against the demand for the previous question when made by a gentleman having charge of a measure under consideration. I think the rule as we have had it for many years is sufficient, and I earnestly protest against the innovation proposed by the gentleman offering this amendment.

Mr. CATCHINGS. Mr. Speaker, I desire to express the hope that this amendment will not be agreed to by the House, and I wish to premise what I shall say by the statement that my friend from Louisiana [Mr. BOATNER] is entirely correct when he says that if it be adopted it will not militate in the slightest degree against the power of the Committee on Rules. Hence, no man can suspect that in opposing this amendment I have or can have any interest whatever as a member of the Committee on Rules.

It is true, Mr. Speaker, that the majority should rule in this House as elsewhere, but it is necessary that the majority should rule only when its conduct is based upon information deliberately acquired. I know of nothing more valuable to the American people than the freedom of debate which has ever been practiced in this House. Many times, since I have been a member of this House, I have seen the majority, under the influence of free debate, alter its opinion and refuse to pass bills which it would have passed without debate. I have seen many a measure, seemingly proper and wise, shown by freedom of debate to have been crudely conceived and improperly framed.

Mr. Speaker, no set of rules can be justified which does not make allowance for absolute freedom of debate upon the part of the minority of this House. And when I say minority I do not mean a political minority.

Now, if this amendment should be adopted, there would be no reason why the member having charge of a bill should not demand the previous question before there had been any substantial debate upon it whatever; and we all know the power of these great committees. It would be possible, and we would see it done, that these great appropriation bills and other bills would be put through under whip and spur without debate and without the power to offer amendments.

Very few bills ought to pass which can not pass without a cloture. While it is proper and right that the power should be vested somewhere to put an end to dilatory proceedings, so that the House may transact business, that is a power that should rarely be exercised. I wish to invite the attention of gentlemen present, especially of new members of this House, to the fact that while we possessed the power of cloture in the last House, on no single occasion was it exercised.

I wish to repeat that very few bills deserve to pass which can not pass after they have gone through the ordeal of discussion, so that the House may have a full understanding of them.

Mr. BOATNER. Will the gentleman permit a question right there?

Mr. CATCHINGS. Yes.

Mr. BOATNER. Does the gentleman recollect that on one occasion in this House the filibustering lasted two days on the approval of the Journal, and that the measure which was being filibustered against could not even be spoken of and debated on the floor of this House?

Mr. CATCHINGS. Unquestionably; and there would come in the opportunity for the proper exercise of the power vested in the Committee on Rules——

Mr. BOATNER. But the Committee on Rules did not bring in that cloture.

Mr. CATCHINGS (continuing). Not for the purpose of putting a cloture on the bill before the House, or which it was designed to bring before the House, but simply for the purpose of removing this obstruction, so that the House might enter upon the consideration of that bill. To make use of that power to prevent filibustering, so as to permit the House to proceed to the consideration of business, is a very different thing from putting a cloture in force which applies to the actual engrossment, third reading, and passage of a bill. Mr. Speaker, this is a cloture which goes far beyond anything ever suggested to the American Congress before.

Mr. REED. Will my colleague on the committee permit me to ask him what difference there is between this and the motion for the previous question, which has always been entertained by the House prior to the invention of filibustering?

Mr. CATCHINGS. The answer is obvious, and the distinguished gentleman from Maine would not have asked the question if he had paid proper attention to this amendment? Ordinarily, notwithstanding the demand for the previous question, we have certain motions which can be made which will postpone the operation of the previous question; so that this House can not be driven ordinarily even to voting upon the previous question, or to voting upon the passage of the bill, should the previous question be ordered.

But here it is proposed that any member having charge of a bill, when it has been under consideration say but five minutes, may make a motion, which the Speaker is obliged to entertain, forbidding the entertainment of any other motion, that cloture shall be applied to that measure. Thus the House is to be brought to the question of passing the measure without an adequate opportunity for debate.

Mr. REED. But it seems to me that it can not be done without a majority of the House.

Mr. CATCHINGS. I understand that, Mr. Speaker; and I opened my remarks by saying that whenever this House has deliberately considered a question and reached a conclusion, of course it ought to have a right to register its conclusion by a vote and to have it enacted into law.

Mr. REED. How is it going to do it?

Mr. CATCHINGS. Just as we have passed laws since the foundation of the Government. I want to say, in passing, that very few bills presented deserve to become law, and I think they ought not to become law until after this House has had a full opportunity to discuss and dispose of them. Since I have been here I have seen filibustering destroy very little legislation that did not deserve to be destroyed. It is true that we sometimes become restive because some measure in which we are interested is defeated in that way. It is true that bills are defeated that ought to become laws, but these instances are exceedingly rare.

I heard one of the ablest and most experienced men in this House say when this amendment was talked about that if it should be adopted it means cloture—not once a month, not once a week, not once a day, but every hour of the day—and we shall be flooded with improper legislation, which this House on proper consideration would not enact.

It excels anything in the shape of cloture ever suggested since I have been a member of this House, and I look with great trepidation on the result of it becoming a part of the rules of the House.

Mr. SPRINGER. Mr. Speaker, members will all concede that this is a very important proposition. I do not think, however, that it ought to be regarded as a departure from well recognized and established parliamentary proceedings. The fact is it is a return to the policy of our fathers, and it simply gives to the previous question the weight which it had in this Government during the first hundred years of its existence. If gentlemen will turn to the rule of this House and a rule now pending and to be acted upon later, they will find this language:

RULE XVII.

PREVIOUS QUESTION.

1. There shall be a motion for the previous question, which, being ordered by a majority of members present, if a quorum, shall have the effect to cut off all debate and bring the House to a direct vote upon the immediate question or questions on which it has been asked and ordered.

Mr. BOATNER. What is the rule?

Mr. SPRINGER. That is the rule on page 19 of the pamphlet.

Mr. BYNUM. That is, after it is ordered.

Mr. SPRINGER. Now, so far as I know, all the experience and practice in this body up to the Forty-seventh Congress, I believe, was to regard a motion for the previous question as one which carried with it the right to bring the House to a direct vote on the question pending; and up to the Forty-seventh Congress the Committee on Rules did not exercise the right which it now exercises of bringing in special orders. That committee had confined itself up to that time to the duty of bringing in general rules; and this departure was made and has grown into a system allowing this committee to bring in all special orders.

But that authority does not conflict with this. Prior to recent years this provision was regarded as one intended to bring the House to a direct vote. Filibustering is a modern invention. It was not the policy of our fathers, and was never resorted to in the British House of Commons until a few years ago. Now, we have reached a point at which no legislation can be transacted in this body if one member is opposed to it; in other words, most of the legislation must be by unanimous consent of everybody or we can have no legislation at all unless the Committee on Rules bring in an order and provide for a cloture which permits us to take a vote upon it.

Now, the gentleman from Mississippi [Mr. CATCHINGS] has stated this would throw down all the barriers for careful legislation. I want to call the attention of the House to the fact that it does not relate to business in the Committee of the Whole at all, nor does it relate to any bill that has come up before the House in the regular way or by an order brought in from the Committee on Rules; and it does seem to me that when the Committee on Rules brings in a special order and gives a committee the right to have considered their measures for one or two days, that that committee ought to have the privilege of bringing those measures to a vote. I have known committees to have two days assigned to them for the consideration of measures, and every hour of that time was frittered away by filibustering, and the committee at the end of two days came out where they went in, without accomplishing anything.

I believe as much as anyone in careful legislation; I believe in

guarding legislation; but I have confidence in my colleagues upon this floor, I have confidence in the Representatives of the people here, that they will not adopt a motion for the previous question unless they understand what is behind it, and are ready to vote. And when a majority of this House is of the opinion that there has been sufficient debate upon any question, I hold that that majority then has a right to assert itself. Now, this is not returning to the rules of the Fifty-first Congress——

[Here the hammer fell].

Mr. KILGORE. The other day I submitted some observations to this House upon the rules of the Fifty-first Congress, which seem to be very sacred in the eyes of a great many gentlemen participating in this discussion. I want to supplement what I said then by a reference to the universally accepted law or theory upon which all written rules and all written constitutions are founded. Written rules and constitutions were devised for the purpose of imposing limitations upon authority, whether that authority was exercised by the king, lords, and commons, or by the king in his own person, or by a majority of anybody assembled for the purpose of considering public questions.

That is the universally accepted theory upon which all written rules proceed. We have seen in this discussion what we saw in the Fifty-first Congress for the first time in the history of this Government, that theory entirely and completely reversed. The principle upon which the rules of the Fifty-first Congress were founded was not to impose limitations upon the power of the majority, it was not to regulate the course and conduct of the majority, but it was to muzzle and tie the hands of the minority; and that is the theory upon which every proposition rests that has been urged here, looking to increasing the stringency of these rules.

A majority, Mr. Speaker, can take care of themselves. They do not need any rules. "General parliamentary law" is sufficient warrant for the exercise of authority by the majority. They can take care of themselves. They can take care of their legislation. Rules and written constitutions, I repeat, are made to impose limitations upon the power of majorities, and have no other purpose. All rules, even those regulating procedure, are for the same purpose, and that is the effect of them.

Now, sir, the whole theory, the whole contention of those gentlemen who wish to make encroachments upon the power of the minority here is that the minority ought to have its hands tied, and that rules ought to be devised to stifle its voice in this House. They have talked about "filibusterers." Now, sir, that is a term of reproach to apply to any gentleman. [Laughter.] A filibusterer is defined by the dictionary to mean a pirate, a buccaneer. [Laughter.]

[Here the hammer fell.]

Mr. KILGORE asked unanimous consent to continue his remarks, but objection was made.

Mr. WHEELER of Alabama. Mr. Speaker, the framers of our Constitution had a purpose in every line and word which we find incorporated in that instrument. Those great men, Washington, Franklin, Madison, and other almost as distinguished members of the convention which framed our organic law considered and carefully weighed every expression from the preamble to the closing article. The Constitution provides, section 5 of Article I, that—

> The yeas and nays of the members of either House shall, at the desire of one-fifth of those present, be entered on the Journal.

The Constitution does not say that the name shall be entered. It says that the yeas and nays shall be entered on the Journal. To be explicit, the Constitution provides that those members who vote "yea" shall be recorded as voting "yea," and that those who vote "nay" shall be recorded as voting "nay."

The Constitution also says:

> Each House shall keep a Journal of its proceedings and from time to time publish the same.

Mr. OUTHWAITE. Mr. Speaker, I want to make a point of order against going into that discussion again.

Mr. WHEELER of Alabama. The gentleman will certainly wait until he finds out the pertinency of my remarks. [Laughter and applause.]

Mr. OUTHWAITE. I am afraid I shall have to wait too long. [Laughter.]

Mr. WHEELER of Alabama. On this very same question the gentleman from Maine [Mr. REED] spoke nearly an hour. If his remarks were in order certainly a brief reply to his argument is also in order.

Mr. OUTHWAITE. Mr. Speaker, I make the point of order that the remarks of the gentleman are not germane.

Mr. WHEELER of Alabama. I will endeavor to so conduct my remarks as to make them germane. [Laughter.] The rule under discussion and the pending amendment involve the question of cloture, and I wish to consider the relation which the Constitution bears to this question.

The SPEAKER. The Chair hopes the gentleman from Alabama will proceed in order.

Mr. WHEELER of Alabama. I think the Speaker will admit that the line of argument I have indicated is clearly pertinent to the question, and that the point of order made by the gentleman from Ohio [Mr. OUTHWAITE] is not well taken.

There were three great purposes on the part of the framers of our Constitution in enacting this provision. The first was to make it certain that all who voted had a right to exercise that privilege. The second was to make a record of votes upon important questions in order that these records could be used as either a guide to be followed or a warning to be shunned by the members of future Congresses. A third purpose in requiring the yea-and-nay vote to be recorded was to definitely fix the responsibility upon members of Congress.

I have heard it suggested that cases have arisen when members of Congress have voted differently when their votes were to be recorded than they would if the vote was *viva voce* or by division or tellers. [Laughter.] For instance it has been hinted that some gentlemen members of this House who voted for the repeal of the Sherman law possibly would not have voted that way but for the fact that their votes were to be recorded. [Laughter and applause.]

Some of the votes last Monday recorded expressions upon a great public question quite variant from what might have been expected, judging from former and very recent views which the voters were understood to entertain. So marked and obvious was this, that there seemed to be a constraint seldom witnessed in this body. It seemed as though some members from the rural sections of our land who voted against silver were not recording their views and individual judgments. At least it seemed they were not absolutely confident. They seemed, at least, to entertain doubts.

Mr. COOMBS. How about the votes of the other side?

Mr. WHEELER of Alabama. I do not think any member from a rural district, especially if from the South or West, who voted for silver coinage, has any doubt regarding the propriety of his vote.

I wish to particularly say that I do not question that every member who voted for repeal exercised his best judgment, but many gentlemen seem to entertain views different from the views they entertained a few months or even a few weeks ago.

Now, Mr. Speaker, the argument and assertion that has been made by the distinguished gentleman from Maine, that it has been the custom in parliamentary bodies from time immemorial to count a quorum, certainly ought not to go by unchallenged. But even supposing that that was done in other countries, it would afford no justification for it to be done under our Constitution? Supposing, for example, that that had been the rule in the Credit Mobilier days. More than one-half of the members of this House may have had stock in that corporation, and therefore they would not have been legally authorized to vote upon the question, and with that rule the minority could have voted and the House would have passed a law by members sitting in their seats and having themselves counted.

Take an extreme case. Suppose a case where every man in this body excepting one was interested in the question under consideration, and therefore could not vote. In that case this one man could vote yea, while 180 or 190 members sitting in their seats could be counted, and thus a quorum be counted and a bill enacted into law. Thus one vote might take away the liberties of our people or might deplete the Treasury.

The statement of the case shows that counting a quorum is in violation of the letter and the spirit and the purpose of the Constitution.

Story, on the Constitution says:

> The object of this clause is to insure publicity.

Of course this means publicity as to the votes of the members.

Mr. SIMPSON. Will the gentleman allow me a question?

Mr. WHEELER of Alabama. Yes, sir.

Mr. SIMPSON. I am somewhat of a new member myself, and do not profess to be very conversant with the rules. I would like to ask the gentleman whether, under the constitutional provision, we have not the right to send the Sergeant-at-Arms anywhere in the Union in order to bring into this House an absent member?

Mr. WHEELER of Alabama. Yes, sir; there is no question upon that point.

Mr. SIMPSON. Then after we get him here have we not the right to count him?

Mr. WHEELER of Alabama. No, sir. [Laughter.] By no means as it was done in the Fifty-first Congress. A bad measure may sometimes be defeated by members declining to vote.

Mr. SIMPSON. Well, then, what do we bring him here for?

Mr. WHEELER of Alabama. It is the duty of the Sergeant-at-Arms to obey the orders of the House, but when members reach this Hall they can and should exercise their judgment. If they can accomplish good by voting they should do so; if remaining silent is the only way they can defeat a vicious law, they most certainly should decline to vote.

The SPEAKER. The time of the gentleman from Alabama has expired. [Laughter.]

Mr. WILSON of West Virginia. Mr. Speaker, it seems to me that the proposition of the gentleman from Louisiana [Mr. BOATNER] takes so great a step forward, and is in itself so radical and so fundamental, that the House, especially this side of the House, ought to consider it very carefully before venturing to vote for it. I believe that the experience of members generally is, that while extreme ebullitions of what is called filibustering shall be effectually repressed, the scheme of rules embodied in the report now under consideration throws all necessary safeguards around the House to enable it to escape from improper and prolonged resistance on the part of a minority. The fact that we do have to resort to occasional amendments of the rules under the teachings of experience is no reason, Mr. Speaker, that we should ever cut loose from the great fundamental idea that this is a deliberative body.

Gentlemen seem to be possessed with the idea that the sole work of the House of Representatives, in its open public sessions, is to pass upon measures—measures prepared in the secrecy of committee rooms, examined and debated out of sight of the public; and that we are to become more and more a mere enacting body to vote on such measures whenever anybody demands the previous question, without that deliberation which is and must ever be the foundation of wise and just law.

Why, Mr. Speaker, gentlemen forget, it seems to me, that one of the chief functions of the House of Representatives is the debating function—as important as the enacting function. We meet here; bills are introduced; propositions are brought forward that may have a great temporary public sentiment behind them, and if under the whip and spur of the previous question we are forced to vote, we obey what we suppose to be the popular sentiment and enact them into law. But if by sufficient deliberate debate we can become convinced ourselves that they ought not to pass, we gather confidence that we can correct or withstand the temporary popular demand for their enactment.

Now, I want to appeal to my fellow members on this side of the House. We on this side have always been tender of the liberty of the individual, have always contended here and elsewhere that rules are made not for the protection of a majority, which can ordinarily take care of itself, but for the protection of a minority. I want to appeal to my Democratic brethren to go very slow before by their votes they put into our code of rules so extreme and so undemocratic an amendment as this.

Mr. Speaker, is it an unusual thing in this House to see the opinions and ideas of members changed, revolutionized, under an adequate and enlightened discussion of a public measure on the part of a minority that had examined it more carefully than those who, on the spur of the moment, had approved it in committee?

Mr. Speaker, the Democratic idea always has been that the fewer laws we make the better for us; and a very wise man has said that the very best laws ever put on the statute books are the laws that repeal previous enactments. [Applause.]

[Here the hammer fell.]

Mr. BOATNER. Mr. Speaker, before commencing my remarks I send to the desk a modification of the amendment I have offered. Sir, it is a favorite expedient of the adroit lawyer, the adroit politician, or the adroit debater to misrepresent the scope and object of the proposition which he combats, and to ascribe to it properties or qualities which it does not possess. Any gentleman listening to the impassioned and eloquent remarks of the gentleman from West Virginia would suppose me to be proposing to strangle debate in this House, to muzzle freedom of expression, and to compel members to vote as I would have them vote, contrary to their will and in ignorance of the matters which they are called upon to decide.

Why, Mr. Speaker, such a contention is not only not supported by the resolution I have offered, as shown by its text, but is absolutely absurd on its face. Sir, if this is undemocratic, it is undemocratic for the House of Representatives to retain the power of the previous question, as it is understood in general parliamentary law, as it is understood in every parliamentary body in the world that has adopted the previous question; and are we to understand that this is the only body on earth, Mr. Speaker, that has an accurate appreciation of the democratic idea of the previous question?

Why, sir, the gentleman from West Virginia [Mr. WILSON] would have the House believe, or understand, that I propose a measure here that would absolutely destroy all freedom of debate. Has the gentleman ever known an important measure carried through this House under the whip and spur of the previous question? Does the gentleman credit the majority of the members of this House with such stupidity and inattention to their duties, such an absurd disregard of the obligation of their oaths and the responsibilities devolving upon them, that they will sustain a demand for the previous question and be compelled to vote upon a measure that they do not understand?

Why, the gentleman talked of protecting the rights of the minority. It is the majority that is asking protection against the tyranny of the minority. It is the majority asking for debate, for an opportunity to explain, for an opportunity to understand and act upon the measures that come before the House. It is the majority which is asking for the exercise of the intellectual forces which control, or should control, legislation, and not simply that physical force which is wielded by the filibusterer who stands in this Hall obstructing, not only action upon all matters of legislation, but every effort to explain or make them understood. This is a Government of majorities. That is the theory of our Constitution.

Mr. Speaker, the filibusterer is contrary to the genius and spirit of our institutions. I am ready to meet the filibusterer here in argument at any time. I am ready to hear him tell the House and the country why he does not favor legislation: I am ready to hear him explain his opposition to any measure that may be presented; but, sir, I am unwilling that the filibusterer shall say to me, "You shall not tell the country why you favor or oppose any proposition on which the House may desire to pass its judgment. You must yield your intellectual force in that direction to the physical force that I control."

Why, the gentleman from West Virginia, Mr. Speaker, misapprehends the scope and misapprehends the object of the resolution. Do these gentlemen understand, the gentleman from Indiana [Mr. BYNUM], the gentleman from West Virginia [Mr. WILSON], the gentleman from Mississippi [Mr. CATCHINGS], or other gentlemen—do they understand or imagine that they can direct me and the other members of this House in the line in which we ought to go, as far as our duties here are concerned? Does each and every one of them think he knows better than I do, or better than the ordinary members of this House, what subjects of legislation ought to be permitted to come up and obtain consideration on the floor of this House?

Mr. Speaker, I respectfully dissent from that view of the subject. I respectfully beg leave to dissent from the idea that I came here to exercise my legislative functions under the direction and supervision of the gentleman from West Virginia, the gentleman from Indiana, the gentleman from Mississippi, or any other gentleman here. I came to this body as the representative of a constituency, a constituency which has rights and which has privileges, and for whom I propose to speak at all times and on all occasions in this Chamber.

I came here under an obligation to them to bring to this House and test its sense on every measure which conserves their interests and which the Constitution and the rules of this body permit of consideration before it. I came here believing it to be my duty to present to this House and obtain its candid judgment on all of these measures. I did not come here believing that one or two men or any clique or minority should have the power to effectually tie up this body and prevent action upon any subject, except as they may dictate.

Why, sir, the whole argument degenerates into a plea of minority; it degenerates into a plea of *non compos mentis;* it degenerates into a confession that a majority of the members of this House, each of them representing a large mass of the people in the United States, are unwilling to trust themselves with power and prefer to place in the hands of this or that individual, or any clique of individuals in the House, the mere physical weapon to balk their efforts and prevent an opportunity to exercise the constitutional right to vote on a question and determine its fate by a majority of the members of this body.

Mr. KILGORE. May I interrupt the gentleman for a question?

Mr. BOATNER. Yes.

Mr. KILGORE. Is this not a majority pleading the baby act on this question?

Mr. BOATNER. No; not at all.

I stand here in the interest of a majority protesting against incorporating a provision in our rules which will have the effect of giving the *ipse dixit* to you, of giving you the veto power upon all legislation that may be introduced here which does not in itself commend your approval.

[Here the hammer fell.]

The SPEAKER. The time of the gentleman has expired.

Mr. BOATNER. I would like to have five minutes longer.

The SPEAKER. In the absence of objection the gentleman will proceed for five minutes longer.

There was no objection.

Mr. BOATNER. Now, sir, as a matter of course I have no personal interest in this amendment. I have no more interest in it than any other gentleman on this floor; but I object, and seriously object, to being put in the position of asking anything of the House which is contrary to the principles of the party to which I owe allegiance.

Why, sir, the gentleman had an experience only a few days ago, when, if the principle he advocates—the principle of the protection of the rights of the minority—had prevailed in this House, he could not have passed a measure which was considered by him and his associates and by the Executive as one of prime importance.

Why, sir, if a rule is good at all it must be good to its full extent. If it is contrary to Democratic principles to permit the chairman of a committee to call the previous question and obtain a vote upon a bill which he brings into this House, it is wrong that the previous question shall ever be ordered, so as to have the effect of cutting off debate and amendments and dilatory motions; and if that principle had been applied here the act repealing the Sherman law would now be under consideration instead of having passed this House. The very rules which you have under consideration would be here until the regular session, if anybody saw fit to oppose them.

If, sir, you were not proceeding now under the general principles of parliamentary law, where the motion for the previous question does have the effect that I want to give it under the rules—if you were not proceeding, I say, under the principles of parliamentary law which permit that motion to cut off debate and to cut off amendments, the regular session of Congress would find you still considering the rules under which you are to do the business of the next session.

In my judgment it is absolutely wonderful, it is amazing, that here in the blaze of the nineteenth century the greatest representative body on earth should be seriously considering whether it will trammel itself so that it can not perform the functions and duties for which it was elected, or whether it will reserve to itself the power which is possessed by every other legislative body to do these things.

Mr. BYNUM. Will the gentleman allow me to interrupt him?

Mr. BOATNER. Yes.

Mr. BYNUM. I want to call the gentleman's attention to this, that the chairman or member in charge of the committee would be under the necessity, under this rule, of calling the previous question the very moment he presented his bill to the House; because if he yielded the floor and those opposed to him once got possession of the floor for debate they could filibuster as against the call for the previous question.

Mr. SPRINGER and others. Oh, no.

Mr. BOATNER. I beg the gentleman's pardon; and in concluding my remarks I want to call attention to an amendment which I have offered, which provides that when a bill or report has been under consideration, under general debate for two hours or more, then the motion can be made. Under that amendment which I offer a proposition must be open to general debate two hours or more before the motion is in order.

Now, I want to ask the gentleman from Indiana [Mr. BYNUM], who declares that he is unwilling to trust the great committees, who calls the attention of the House to the great power vested in these committees and to the abuse of it which could be made under this rule—I ask him which one of the chairmen of these committees he mistrusts and is afraid of? I ask him if he has ever known the Appropriation Committee or the Committee on Ways and Means, or any other great committee, to bring a bill into this House and to demand the previous question upon it without first having general debate?

Mr. BYNUM. This does not apply to them.

Mr. BOATNER. I ask him what bills raising revenue or appropriating any public money can be considered by this House until they have passed through the Committee of the Whole, where they are open to exhaustive debate and to amendments?

Mr. BYNUM. You are correct about that. That point does not apply to them. It applies to bills which do not receive their first consideration in Committee of the Whole.

Mr. BOATNER. Now, to sum it all up, these gentlemen who are the heads of committees, these gentlemen who expect to control legislation, who expect to have things their own way, are perfectly satisfied to have a rule which binds up every other member, which takes away the right of every other member to his just share in the control of the legislation of this country, but which gives gentlemen who are the heads of committees the control to say what bills shall come before the House and what bills shall not; what bills shall come to a vote and what bills shall not.

I am here to say that, in my judgment, we all stand on an equality on this floor, and that when a bill has received fair consideration by a committee, when it has been reported to this body, when under an order of the Committee on Rules it is taken up for consideration, that we have a constitutional right to have that bill voted upon by the House, and that any limitation upon the power of the House to come to a direct vote is tantamount to an abrogation and an abdication by the House of an essential part of its legislative functions.

[Here the hammer fell.]

Mr. CATCHINGS. Mr. Speaker, the gentleman from Louisiana [Mr. BOATNER], in the excitement of discussion, threw out an intimation which I am sure upon reflection he will regret.

Certainly he does not believe, Mr. Speaker, that the gentleman from West Virginia [Mr. WILSON], the gentleman from Indiana [Mr. BYNUM], or myself entertain the slightest desire to control his action or his judgment in the least degree. It is simply an attempt, Mr. Speaker, to have this House adopt for itself a code of rules which shall govern him and govern ourselves, so that we shall all be upon the same footing and the same plane; and when these rules are adopted, Mr. Speaker, no special privileges will be given to any one member of this House over another. My friend was a little unkind, but I forgive him, for I know he spoke his words under excitement when he intimated in the debate that it was the purpose of any of the three of us who reported these rules to unfairly and improperly exercise any control upon his judgment or his action.

I do not know, Mr. Speaker, that I can add anything to what was so well stated by the gentleman from West Virginia [Mr. WILSON], except that I will make this observation, that if this amendment proposed by the gentleman from Louisiana [Mr. BOATNER] be adopted there would be opened up a magnificent field for the log-roller. How easy it would be for gentlemen having measures to come before the House to make a bargain among themselves that they would mutually sustain each other in obtaining the previous question and force bills to a determination. It would afford the log-roller an excellent opportunity to exercise his skill and ingenuity.

But, Mr. Speaker, I believe that it is an unsafe proposition. I believe that the effect of it would be to stifle the freedom of debate, which I regard as the most valuable right of any member of this House. I myself have very often altered my own judgment of measures pending upon this floor after listening to the speeches made by gentlemen on the other side of the question, and the majority must rule here as everywhere in the last analysis under our form of Government. I have seen gentlemen here and elsewhere in the excitement of debate, perhaps prompted by party feeling, say and do things which in their calmer moments they regretted.

Mr. Speaker, there are but few measures which can not stand the test of deliberation and discussion which ought to be enacted into laws in this country.

Mr. BOATNER. If the gentleman will allow me right there. I have amended the resolution or amendment so that the motion is not in order until the bill or report shall have been under general debate for two hours or more.

Mr. CATCHINGS. I want to make this remark also. Mr. Speaker, that in the rules of the Fifty-first Congress, which we regard as extremely radical, there was nothing provided in the effort for the closing of debate and forcing prompt action upon measures so sweeping as that which is now proposed to this House. Now, while in the last Congress it was with very considerable difficulty we could get gentlemen on this side of the House to consent to the adoption of even the moderate provision we put in the rules for cloture, now we are seriously asked to put it in the power of every committee which has a bill before this House to demand cloture.

Why, sir, we have reached a point where men may tremble in contemplation of what might happen if we should adopt such a rule as that now proposed. I wish I had authority to repeat the name of the distinguished member of this House who said to me, in discussing this amendment, that if it should be adopted we should have cloture in this House, not once a month, not once a week, not once a day, but every hour of the day.

Mr. Speaker, we assuredly do not wish to put such a provision in the permanent rules of this House; and now, Mr. Speaker, I believe debate is exhausted and I will call for the previous question on the amendment.

Mr. REED. I hope the gentlemen will withdraw the demand for a while.

Mr. CATCHINGS. I withdraw the demand for the previous question, as the gentleman desires.

Mr. REED. Mr. Speaker, I hesitate somewhat to trouble the House, it having so patiently listened to me so much to-day. I do think we ought to know precisely what we are doing and not confuse the issue by extraneous matters. What we are proposing to do is simply to restore the previous question of the fathers. While I am not violently in love with a thing because our fathers

were for it, I can use the argument when I am appealing to a set of gentlemen who are fond of the actions of our fathers. [Laughter.] The principles which governed our fathers in this matter are embodied in the amendment presented by the gentleman from Louisiana [Mr. BOATNER].

The gentleman from West Virginia [Mr. WILSON] proceeds, unintentionally I have no doubt, to confuse the matter by making a fancied resemblance between debate and delay. Debate is one thing; delay by filibustering is another. What he has said as to the propriety of debate everybody will admit, and what he has said as to the impropriety of delay by filibustering will be generally admitted. Now, how shall we come to a happy medium whereby debate may be encouraged and filibustering suppressed? Surely there is only one way, and it is to restore to the majority of the House of Representatives the power to determine when debate shall cease.

What are you going to do? Somebody is going to be invested with this power, either the majority or the minority, and which do you Democrats believe in? [Laughter.] Do you believe that the majority should have the power, or do you believe that the minority should have the power? Do you believe that the old member, skilled in the art of vetoing, should control this business and make cowards of us all, or that the House of Representatives should in manful fashion meet the question?

But gentlemen say there is danger of somebody coming in here and moving the previous question and rushing a bill through with lightning speed, and with little or no debate. Let us look abroad and see how mankind generally are affected by such a rule. Why, you can not find an assembly outside of this where it is not dangerous to propose the previous question.

In the Legislature of Maine, where I had my first legislative experience, it was always with fear and trembling that a man would undertake to suppress debate. That was because the general public sense was against it, and that same general public sense will operate freely here as soon as it is ascertained and determined that filibustering can not be indulged in. As soon as the power of the House to stop debate is accepted and admitted, then the largest legitimate range will be allowed to debate from a sense of fairness, for while this is a large and at times a pretty turbulent assembly, I have never known its fairness appealed to in vain.

And, Mr. Speaker, I believe that we are on the way to sounder principles and sounder practice of debate when we restore to the House the power which has been taken away from it by a few filibusterers—"filibuster" being a Spanish name for a land pirate. [Laughter.] Let us not confuse honest debate with that miserable bastard business by which one man stands here and sets up his will against the will of all of us.

I know, and so do you, that we are all the embodiment of absolute wisdom [laughter], but this is a world in which we have got to live and let live; and it may happen, even to the gentleman from Texas [Mr. KILGORE], that on some occasion the wisdom of 355 other gentlemen may be on a par with his, or possibly just a little shade better. [Laughter.] Let us take hold of this thing without prejudice and with a little common sense.

Mr. WILSON of West Virginia. Mr. Speaker, I simply want to say, in reply to the gentleman from Maine [Mr. REED], that it is not a question of repressing filibustering. I believe we are all of one mind that so far as filibustering is concerned we will bring it within the narrowest limits that are consistent with the rights of the minority. But this is a question of adequate and instructive discussion in this House. We all know that it is no uncommon thing for bills to come to us after very slight and hasty consideration by the committee reporting them.

They are sometimes referred to a single member of the committee for examination; on his report are approved by the committee, it may be with little careful or painstaking discussion in the committee room, and are then put upon the Calendars of this House with the recommendation of the majority, or of the whole committee, in their favor. A proposition may be a very plausible one on its face It may be some of that legislation to which I referred a while ago, behind which seems to be a temporary or passing public sentiment, genuine or factitious, I care not which, and, in the brief period for debate allowed under the rule proposed by the gentleman from Louisiana, it will be utterly impossible——

Mr. BOATNER. Will the gentleman permit a question there?

Mr. WILSON of West Virginia. I would like to finish my sentence, but go ahead.

Mr. BOATNER. The gentleman had got to the point where my question came in. Does the gentleman from West Virginia think it is necessary to keep these filibustering motions in full force against every measure not reported upon by the Committee on Rules in order to preserve freedom of debate?

Mr. WILSON of West Virginia. I believe, Mr. Speaker, that it is necessary for the minority in this House to have some rights by which they can compel a reasonable agreement to a reasonable time for debate on any proposition that is brought forward. I believe that, and I believe, too, as we must all admit, notwithstanding the great wisdom which the gentleman from Maine would attribute to us collectively, that measures not infrequently come before this House with regard to which nine-tenths of the members have not been able to form any correct or intelligent opinion, and upon which, if they are forced to a vote with the single hour of adverse criticism, which may be all they could secure under the proposition of the gentleman from Louisiana, they would cast their votes either blindly under the leadership of the committee, or still more blindly under mistaken notions which a little deliberate discussion on both sides would free them of.

As I said before, gentlemen lose sight of the fact that we are here to make just as few laws as we can and to have just as much wise and intelligent discussion upon those laws as we can have. We may in two hours do that which in two days' discussion, or one day's discussion, we should never think of doing at all. When a law goes upon the statute book it remains there to work its mischief until under the orderly procedure of a subsequent Congress it may be brought up for repeal.

Mr. SPRINGER. This does not refer to the proceedings in Committee of the Whole.

Mr. WILSON of West Virginia. No, Mr. Speaker, but not all of the legislation that affects most vitally the property and the liberties of the people goes through the Committee of the Whole.

Mr. Speaker, this is all I care to say in reply to the observations of the gentleman from Maine.

Mr. CATCHINGS obtained the floor.

Mr. BOATNER. I submit to the gentleman from Mississippi [Mr. CATCHINGS] whether, as the mover of this proposition, I ought not to have the right to close the debate.

Mr. CATCHINGS. I yield to the gentleman if he wishes to speak.

Mr. BOATNER. Mr. Speaker, I wish merely to refer to the argument of the gentleman from West Virginia that the preservation of the right to filibuster is necessary in order to secure the right of debate. That argument proceeds upon the hypothesis that a majority of this House is so ignorant or so careless of its public duties that it will vote for an important measure without giving fair opportunity for discussion. I think the gentleman from West Virginia has no right to send out to the country any such opinion of the membership of this House.

Mr. WILSON of West Virginia. Has it not often been done?

Mr. BOATNER. Why, sir, so far as my observation goes, while many of us in this House seem not to be very great men, it is very rarely that a man is elected to Congress who has not very considerable standing at home. It is very rarely that a man receives the suffrages of the number of people necessary to elect him a Representative without being a responsible man, a conscientious man, a man in whom the public has confidence.

Then, sir, when an argument is made against this proposition upon the sole ground that members of this House are so careless of their public duties or so ignorant of the matters coming before them for debate that they will support a motion for the previous question, and thus cut off discussion upon a measure on which the people ought to be informed, I think the argument is one which ought not to be addressed to the judgment and discretion of this House—an argument which does not comport with the dignity of the greatest legislative body on earth, with a membership representing the most vital interests of the American Republic.

I repeat that under the amendment which I have offered the previous question can not be moved until a bill has been under general debate for two hours or more; and when the previous question has been ordered by a vote of the majority of the House, a motion is then in order to recommit the bill with or without instructions, which motion is to be submitted without debate. In fine, Mr. Speaker, this is merely a proposition that a majority of this House shall hold in its hands the power to execute the duty which members have been sent here by the people to perform—to legislate to a finality upon matters brought before the House by any of its authorized committees.

Mr. TURPIN. I would like to ask the gentleman from Louisiana a question. Does he not think there is too much legislation anyway——

Mr. BOATNER. I really can not say that I do. I have seen many measures upon which the most important interests of large areas of the country depended excluded from fair consideration—debate not permitted—the House denied the right of knowing what was in those measures, by the coercive power, the mere physical force of some man who chose to say, "This bill is wrong, and I will not permit the American Congress to consider it."

Mr. TURPIN. The gentleman undertook to answer my question before I had finished asking it. I was about to ask him whether he did not think that the most important legislation of the Fifty-third Congress will be the repeal of laws already in force——

Mr. BOATNER. Well, that is legislation.

Mr. TURPIN. Is not the most important legislation demanded of us the repeal of the errors of previous Congresses? Do you not think that one of the most pressing duties we have to perform in this Congress is to undo what was done by a previous Congress in the passage of the Federal election laws——

Mr. BOATNER. That may be so.

Mr. TURPIN. And the McKinley bill, and the passage of the repeal act, for which we were called in extraordinary session? In other words, are we not here to undo the errors of the great men who have been spoken about, who passed these acts in previous Congresses?

Mr. BOATNER. I do not dispute the correctness of what the gentleman says.

Mr. OUTHWAITE. Mr. Speaker, I now call the previous question.

Mr. REED. Does the gentleman propose to close this matter up to-night?

Mr. OUTHWAITE. I thought we might get through with it now.

Mr. REED. I do not think we ought to take a vote this evening. If the gentleman insists upon a vote, I move that the House adjourn. I have no objection to the previous question being ordered.

The SPEAKER proceeded to put the question on the motion to adjourn.

Mr. REED (while the question was being taken). If it is understood that we shall merely order the previous question to-night without taking a vote on the pending proposition, I will withdraw the motion to adjourn.

Mr. OUTHWAITE. Very well; I have no objection to that understanding.

The SPEAKER. The motion to adjourn is withdrawn. The question is on ordering the previous question.

The previous question was ordered.

ASSISTANT CLERK TO COMMITTEE ON CLAIMS.

Mr. BUNN. Mr. Speaker, I ask unanimous consent to introduce a resolution for reference to the Committee on Accounts.

The SPEAKER. The title of the resolution will be read.

The Clerk read as follows:

A resolution directing the Clerk to assign an assistant clerk to the Committee on Claims.

There being no objection, the resolution was referred to the Committee on Accounts.

CLERK TO THE COMMITTEE ON MILITARY AFFAIRS.

Mr. OUTHWAITE. Mr. Speaker, I ask unanimous consent to introduce for reference a resolution of the same character.

The SPEAKER. The title will be read.

The Clerk read as follows:

Resolution to provide an assistant clerk to the Committee on Military Affairs.

There being no objection, the resolution was referred to the Committee on Accounts.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. BARTHOLDT, for the rest of the week, on account of important business.

To Mr. BRATTAN, until Tuesday next, on account of important business.

To Mr. GOODNIGHT (on motion of Mr. CARUTH), indefinitely, on account of illness.

To Mr. GOLDZIER, for three days, on account of important business.

To Mr. HICKS, for ten days, for attendance at the Grand Army of the Republic national encampment and the Columbian Exposition.

To Mr. MAGUIRE, for three days, on account of important business.

To Mr. MARSHALL (on motion of Mr. TYLER), for three days.

WITHDRAWAL OF PAPERS.

By unanimous consent, leave was granted to Mr. BRYAN to withdraw from the files of the House the papers in the case of John F. Adams, there being no adverse report.

And then, on motion of Mr. DOCKERY (at 4 o'clock and 50 minutes p. m.), the House adjourned.

SENATE.

FRIDAY, *September 1, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

MEMORIAL ADDRESSES ON THE LATE SENATOR STANFORD.

Mr. WHITE of California. Mr. President, I desire to give notice that on Wednesday, the 13th day of this month, I shall submit appropriate resolutions touching the death of my late colleague, Senator Stanford, and that I shall ask at that time for the consideration of the same.

PETITIONS AND MEMORIALS.

Mr. TURPIE presented a memorial of Liberty Assembly, Knights of Labor, of Fort Wayne, Ind., remonstrating against the repeal of the so-called Sherman silver law, unless a substitute be passed placing the silver dollar in the position it occupied previous to the year 1873; which was ordered to lie on the table.

Mr. WALTHALL presented a petition, signed by a large number of business men and other citizens of Canton, Miss., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. PEFFER presented a petition of citizens of Independence, Kans., praying for the free and unlimited coinage of silver at the ratio of 16 to 1; which was ordered to lie on the table.

Mr. PEFFER. I have here a somewhat peculiar document, signed by George C. Huckstaff, but I think it would come under the head of petitions. It is a proposition to amend the Constitution of the United States in certain respects. I will state very briefly its substance. There are some five different articles of amendment suggested to be proposed to the Constitution. They all relate to the general subject of the Government preparing paper money and delivering it without cost to the several States for the purpose of being loaned to the citizens of the several counties in the States, under State jurisdiction. I move that the paper be referred to the Committee on the Judiciary.

The motion was agreed to.

Mr. PROCTOR presented a petition of sundry citizens of Wilmington, Vt., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. MCMILLAN presented a petition of 39 firms and citizens of Detroit, Mich., praying for the immediate and unconditional repeal of the silver-purchasing clause of the so-called Sherman act; which was ordered to lie on the table.

Mr. LODGE presented the petition of Carlos Bachelder, president of the Conway (Mass.) National Bank, and other citizens of Conway, Mass., praying for the repeal of the silver-purchasing clauses of the so-called Sherman law; which was ordered to lie on the table.

Mr. HUNTON presented a petition of the Locomotive Builders and other like associations of Richmond, Va., and a petition of business men, merchants, and bankers of Norfolk, Va., praying for the unconditional repeal of the purchasing clause of the so-called Sherman silver law; which were ordered to lie on the table.

Mr. KYLE presented a petition of the Crow Creek settlers, of South Dakota, praying for the enactment of legislation to reimburse all settlers driven from their lands; which was referred to the Committee on Public Lands.

Mr. HARRIS. I send to the desk one of the stereotyped printed petitions headed, "Get signed and send to your Senator or Representative without delay. Attach additional sheets as required." The petitioners pray for the unconditional repeal of the Sherman silver act. It is signed by 26 citizens of the city of Jackson, Tenn.

I send to the desk a similar stereotyped petition, somewhat modified, signed by a very large number of citizens of Bristol, Tenn., and citizens of Virginia, praying for the repeal of the silver-purchasing clause of the Sherman act, provided a law shall be enacted for the free coinage of silver at the ratio of 16 to 1, and provided that the 10 per cent tax on the issues of State-bank circulation shall be repealed.

Mr. COCKRELL. I should like to ask the Senator from Tennessee if those provisos were printed in the original petition, or were they written in?

Mr. HARRIS. I stated that the stereotyped petition was modified by the signers by adding those provisos.

Mr. COCKRELL. That shows that they knew what they were doing.

Mr. HARRIS. I move that the petitions lie on the table.

The motion was agreed to.

Mr. PASCO presented the petition of R. Wilson and 16 other citizens of Gainesville, Fla., praying for the repeal of the silver-

purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. VILAS presented the petition of Hon. Philetus Sawyer and 24 other citizens of Oshkosh, Wis., and the petition of W. P. Lindeman and 20 other citizens of Viroqua, Wis., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which were ordered to lie on the table. table.

He also presented the petition of Mrs. Jennie M. Hunt, of Washington, D. C., praying for the passage of a bill to compensate her for injuries received by the falling of an elevator in the Post-Office Department; which was referred to the Committee on Claims.

Mr. PERKINS presented a petition of sundry citizens of Oakland and other cities in California, praying for the free coinage of silver; which was ordered to lie on the table.

Mr. MITCHELL of Oregon. I present three several petitions, signed by some 500 citizens of Union County, Oregon, praying that the law known as the Sherman silver-purchasing act be repealed by substituting therefor a law for the free coinage of silver. I move that the petitions lie on the table.

The motion was agreed to.

Mr. MITCHELL of Oregon. I also present a petition of sundry citizens of Oregon, praying for the passage of a law repealing what is known as the Sherman silver-purchasing act, and that such law shall contain a clause making silver and silver certificates full legal-tender for all debts, public and private. I move that the petition lie on the table.

The motion was agreed to.

Mr. MITCHELL of Oregon. I also present a petition of citizens of Portland, Oregon, numerously signed, praying for the passage of an act granting pensions to dependent survivors of the Whitman and Cascade massacres of 1847 and 1856, and to the dependent heirs of parents who were killed by Indians on the frontier settlement. I move that the petition be referred to the Committee on Indian Affairs.

The motion was agreed to.

Mr. MITCHELL of Oregon presented a petition of citizens of Umatilla County, Oregon, praying for the enactment of legislation to refund $1.25 an acre to those persons who paid $2.50 an acre for preëmptions and commuted homesteads on Government lands within the limits of the grant to the Northern Pacific Railroad; which was referred to the Committee on Public Lands.

Mr. CAREY presented a memorial of the American Bimetallic League of Cheyenne, Wyo., remonstrating against the unconditional repeal of the so-called Sherman silver law; which was ordered to lie on the table.

W. H. WARD.

Mr. KYLE, from the Committee on Patents, to whom was referred the bill (S. 45) for the relief of W. H. Ward, reported it without amendment, and submitted a report thereon.

BILLS INTRODUCED.

Mr. GALLINGER introduced a bill (S. 815) to incorporate the Washington Traction Company of the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. FAULKNER introduced a bill (S. 816) for the relief of Mrs. Ann E. Heiskell; which was read twice by its title, and referred to the Committee on Claims.

Mr. VILAS introduced a bill (S. 817) for the relief of Jennie M. Hunt; which was read twice by its title, and referred to the Committee on Claims.

Mr. PASCO (by request) introduced a bill (S. 818) for the relief of the estate of Andrew E. Hodges, late of Florida; which was read twice by its title, and referred to the Committee on Claims.

Mr. MITCHELL of Oregon introduced a bill (S. 819) providing for the survey of the land described in an act of Congress approved July 5, 1866, granting the land therein mentioned to the State of Oregon, to aid in the construction of a military wagon road, which land was subsequently, on the 24th day of October, 1866, granted by the State of Oregon to the Willamette Valley and Cascade Mountain Wagon Road Company; which was read twice by its title, and referred to the Committee on Public Lands.

PURCHASE OF SILVER BULLION.

Mr. TELLER submitted the following resolution, which was read:

Resolved, That the Secretary of the Treasury be, and he hereby is, directed to furnish the Senate with a statement giving the aggregate amount of silver bullion purchased under the act of July 14, 1890, during the month of August, 1893, together with the cost thereof, the amount, date, and price of each purchase, and the name of the vendor. Also, the aggregate amount of silver bullion offered for sale during the said month of August, the amount, date, and price of each offer, and the name of the person making such offer.

Mr. TELLER. I ask for the present consideration of the resolution.

Mr. VOORHEES. I can see no objection to it, if the Senator wants immediate action.

Mr. TELLER. We have the report for July, and I simply want it for August.

The Senate, by unanimous consent, proceeded to consider the resolution.

Mr. TURPIE. I should like to add one additional inquiry there. I move to amend by adding "and how paid for."

Mr. TELLER. I have no objection to those words being put in, but the statute provides how it shall be paid for. It can only be paid for in Treasury notes. So I do not think it is necessary to put in those words.

Mr. TURPIE. I should like to have the inquiry go in.

Mr. TELLER. I have no objection, if the Senator suggests that amendment. Let the words "and how paid for" be added.

The amendment was agreed to.

The resolution as amended was agreed to.

PERSONAL EXPLANATION.

Mr. MITCHELL of Oregon. Mr. President, when the vote was taken on Monday last on the resolution as to the admission or nonadmission of John B. Allen to a seat in this body under appointment from the governor of the State of Washington, I was necessarily absent from the Senate. I was paired on the Mantle resolution and the pair was announced. On examining the RECORD I find that my pair was not announced upon the vote on the Allen resolution. As a matter of fact, however, I was paired with the Senator from Pennsylvania [Mr. QUAY]. Although in the pairs that were announced I was not announced as being paired, and was absent, I desire to state that as a matter of fact I was paired, and that had I been here I should have voted against the admission of Mr. Allen. I would have voted, of course, the same way in both cases.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. O. L. PRUDEN, one of his secretaries, announced that the President had on this day approved and signed the act (S. 50) in aid of the California Midwinter International Exposition.

PURCHASE OF SILVER BULLION.

The VICE-PRESIDENT. The morning business is now closed.

Mr. VOORHEES. House bill No. 1 was yesterday made the order of business, and will come up at 2 o'clock as the unfinished business, but in the meantime I ask the consent of the Senate to take it up at this hour for the purpose of obliging the Senator from North Carolina [Mr. VANCE], who wishes to address the Senate upon the bill. I do not understand that this course will interfere with its place as the regular order of business at 2 o'clock.

The VICE-PRESIDENT. It will not, the Chair understands.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," the pending question being on the substitute reported by the Committee on Finance.

Mr. VANCE. Mr. President, the metallic money of the world is estimated at about $7,500,000,000. About one-half of this is silver, which is full legal-tender money, and in addition thereto there is about $550,000,000 of subsidiary silver in use in the different nations of the world. This money is the means by which the world's exchanges are effected and their values measured. It is needless to say that the great law of supply and demand has operation and effect in regard to this money, as in regard to everything else. When money is abundant prices are high; when money is scarce the prices of all products are low. Therefore, he that increases the abundance of money benefits production and enhances prices and wages, and he that contracts or diminishes the amount of this money depreciates everything which is for sale, including wages, though by reason of combinations and defensive measures in many parts of the world wages are affected less than products.

The effect upon the condition and well-being of mankind which would follow the destruction of one-half of this currency—it is impossible accurately to describe. The imagination of a poet would be required to portray its misery; and only he who wandered through the horror-laden mazes of the Inferno, or he that exulting in still sublimer song portrayed the wretchedness of man's disobedience and fall, could adequately set forth the evil, the suffering, and the sorrow which would come to mankind if their wages and the prices of all their products were decreased in the proportion that would follow the destruction of one-half of the world's money. Yet, this process of destruction has been going on quietly since 1872, the result of which we see in prices

lower in many things than have ever been known within the memory of man.

Great Britain led off in the demonetization of silver so early as 1816, in consequence, as is said, of her great debts to the Jew Rothschilds, to meet which she made gold her only standard of money, reducing silver to subsidiary circulation. After the great Franco-Prussian war Germany was induced to adopt the gold standard. So great then became the pressure upon adjoining nations that the Latin Union, which had been formed for the purpose of maintaining silver within the boundaries of France, Belgium, Switzerland, Italy, and Greece, were compelled to cease coining silver and devote all their efforts to the maintenance of that which they had coined. About the same time the United States ceased coining, by a fraud in legislation, when silver, which at that moment was at a premium over gold, began to decline, and has continued to decline ever since.

In 1878 the indignation of the people forced its remonetization, and under the operation of the Bland law, coinage was resumed at a rate of not less than $2,000,000 a month and not more than $4,000,000, at the discretion of the Secretary of the Treasury. Of course, this discretion was exercised against silver, as it always has been, and only $2,000,000 a month was coined; but it stayed the downward course of silver, and the common people received it gladly.

At the beginning of this year, 1893, it was coined for legal-tender purposes in none of the leading commercial nations of the European world, to but a limited extent in the United States, and in India it was coined freely. It is remarkable that in the United States and in Germany in 1873, when it was demonetized, silver was at a premium; and in 1816, when Great Britain demonetized it, it was likewise at a premium.

In June of this year the British-India council, anticipating, as was said, the action of the Government of the United States in repealing the Sherman law, which it was supposed would render silver next to worthless, suddenly stopped the coinage of the silver rupee, and announced that the government would itself coin limited quantities, as the public needs might require. Then the effort to have the coinage altogether stopped in the United States began, aided by the influence of the moneyed power of all the world and our own Government.

Silver lives now, so to speak, only in the United States—here among the people who recognized it as money when they established their constitutional form of government it makes its last stand. If its coinage is stopped now, it ceases to live throughout the commercial nations of the earth, and drops out of sight. The repeal of the Sherman law, without any substitute providing for the continued coinage of silver, is the end of silver money for this generation, except as subsidiary coin, unless, indeed, a great revolution of the people should restore it, as was done after the fraudulent demonetization of 1873.

Then the trouble of the defenseless begins; the glory of the capitalist is exalted; the fatness of the usurer waxeth, and woe be unto him who is in debt! One-half of the money of the world being destroyed, the exchanges of the world's productions among its inhabitants devolves upon the other half—the price of the remaining money, gold, goes up—that is to say, the price of every product and every day's work goes down. Let no man doubt that this movement is the result of a conspiracy, a combination among the money-holders of the world. Our own Secretary of the Treasury has said so. It has been announced again and again in the British House of Commons, and I have nowhere seen it denied.

The intent of this combination is to increase the value of the gold in the hands of those who hold it, and to increase the values of all securities, personal and governmental, by making them payable in gold, which are likewise held by these conspirators. The method of attack on this last remaining stronghold of silver was by the creation of a panic. The only statutory enactment which binds us to the use of silver and makes us a bimetallic people is what is known as the Sherman law. Under the operation of this law, 4,500,000 ounces of silver per month was required to be purchased and coined until the 1st of July, 1891, after which time only so much was to be coined as was necessary to redeem the notes issued for its purchase.

These were called Treasury notes, and any technically intelligent man would naturally suppose that when a law required the purchase of silver bullion and the issue of Treasury notes in payment thereof, and provided for the coining of that bullion into silver dollars for the purpose of redeeming those notes, payable in either gold or silver at the discretion of the Secretary of the Treasury, it was meant for him to exercise that discretion in favor of silver, when the interest of the public and the condition of the Treasury required it. It was construed differently, and parties would procure those Treasury notes and present them to the Treasury, where they were invariably redeemed in gold.

This gold was shipped abroad in many cases, because a scramble was going on in Europe for gold. The demonetization of silver had already produced its inevitable effect, and the gold supply was not sufficient for those communities; hence, much was shipped from this country—mostly obtained by the means of Treasury notes. It is quite true that it could have been obtained just as easily by the presentation of greenbacks, by the presentation of gold certificates, by the presentation of bonds or the coupons upon said bonds, or by the presentation of national-bank notes. In fact, there was not an obligation of the Government outstanding but what was reducible to gold.

Yet these men who were desirous of creating a panic chose to attribute the departure of gold alone to the Sherman law, and with loud-mouthed clamor they declared there was danger of the Government being reduced to a silver basis and discharging its obligations in silver coin. Some foreigners believed this, and sent over a few of our securities and put them upon the market for realization. This created such alarm among those who held these securities and feared for their margins, that the clamor, which began in a false pretense, ended in a howl of real terror. Their deposits were rapidly withdrawn and they justly suffered. They brought such pressure to bear upon the President as induced him to call an extra session of Congress in the dog days for the simple and sole purpose of repealing this law.

In the midst of this clamor it was ascertained that we had largely overtraded and the balance was against us in Europe, which caused the gold to go out; and so soon as wheat and cotton began to pour into the market the tide was turned, and the gold began to come back and continues to come back to this day. But, determined to pursue their warfare for the demonetization of silver, and enable them to refute the arguments which the gold coming in every day furnished, they put the necessity for the repeal of the law upon the fact that they had lost "confidence:" that there was a want of confidence in the ability and disposition of the Government to pay its debts in gold; whereas it was only the depositors who had lost confidence in the banks.

Those of New York being parties to the conspiracy, of course contracted their circulation, refused money on the usual terms, which caused the stopping of some factories and the stagnation of some business enterprises, and some distress among small dealers and workingmen. Never was there a more senseless clamor or a more criminal disturbance of public confidence. Every dollar of our currency that we had before was still here, and the Sherman law was adding to it at the rate of $50,000,000 per annum; in fact, one speaker in the House of Representatives, more candid than the rest, declared that the want of confidence was produced by a too great abundance of money and not by a scarcity.

When the danger of resorting to the gold standard was pointed out by showing that the production of gold is slightly decreasing, and not near keeping pace with the increasing demands of commerce and population, we were told that although the amount of gold produced from the earth was not increasing, that there was an extraordinary amount of it held in private hands in Europe and America. That tells the whole story—the decreasing supply, and the extraordinary holdings in the hands of the conspirators—silver, the only rival of gold, being wiped out, the world would be at the mercy of those who held the yellow metal. And so the attempt is now made to give the finishing touch to silver by this panic, more fraudulent than was the legislation of 1873; and, though $40,000,000 of gold has come in within the last thirty days, and continues to come, and will come just so long as we keep foreigners in our debt, they keep up their clamor for repeal. If the Sherman law sent out gold, it surely has brought it back. If not, what has made it return?

If the fact of its going is due to that law, the fact of its returning is equally proof that it is due to that law; and the fact that in the midst of this clamor the resources of our country are so great as to be able to check the outflow of gold and to turn the tide in the home direction, ought to restore confidence to every man whose confidence is worth securing—even to the loud-mouthed stock gambler and the other "confidence men" who are managing and steering this panic.

But they refuse to be comforted, and at this moment, as I talk, banks which had shut down for the want of currency have reopened for business, enterprises suspended temporarily are starting up again, and the Sherman law continues to feed the reaction at the rate of $50,000,000 per annum added to the currency. It looks as though they were afraid their panic would pass away and be exploded before they could get silver destroyed. But all the argument in regard to the uses and advantages of silver money are conceded; so, too, are all the blessings which attend bimetallism, and all the evils which would be upon the country by the destruction of one of the great factors of exchange, and I need not further discuss them.

The discussion is further narrowed by the fact that all parties

profess bimetallism, how sincerely is doubtful, and have declared for the use of both gold and silver in their platforms and their speeches and public professions. Even the author of the much-abused and maligned law that they wish to repeal says he is a bimetallist; so do all the Republican Senators on this floor, every one; likewise the author of the bill to repeal that law and those on the Democratic side who agree with him—all claim to be devoted bimetallists; some, however, on conditions well known to be impossible, some on conditions known to be improbable, and other some on conditions available in all things except as to time. They say, "Not now; the stringency is too great; at some other time we will do the thing that is right by silver. Go thy way, at a more convenient season I will call for thee." [Laughter.]

I have even heard it intimated that the President himself is a bimetallist, but this is not authentic, and those who know that he generally does his own talking and announces his own position will receive this with many grains of allowance. So, then, the advantages of a currency founded on both metals, the dangers and distress which might arise from the demonetization of silver, all being acknowledged, it only remains for us to inquire—supposing we are in good faith—whether the bill before us pursues the only way, or the best way, or any other way at all to promote, establish, and maintain the bimetallic use of silver as an equal coördinate part of our currency.

Mr. President, human endeavor runs much in ruts. There has never been a robbery imposed upon the American people in the shape of a tariff on any article, from a darning needle to a steel rail, from a 25-cent wool hat to a $500 shawl, that has not been imposed in the name and for the benefit of the laboring people alone. [Laughter.] The idea that the capitalist was to be benefited by such tariff exaction was always scouted as altogether untrue. Strange to say, this impudent and unblushing lie always found some believers—such is the credulity of mankind. The same tactics are resorted to in this discussion of the financial question.

Knowing the popularity of silver money with the great masses of the people, speakers in this House and the other sing the same praises of bimetallism, from the invocation to the doxology of these services, coupled with the solemn averment that they are the best and truest friends of that system to be found, and that unconditional repeal is the only true road to attain it. [Laughter.]

With all the grave pledges of their party platforms, State and national, staring them in the face, as well as their own speeches, promises, and votes in the recent past, blowing trumpet-tongued against the deep damnation of the taking-off of silver, they clamor all the fiercer and all the louder that the only way to save silver is to repeal the one law on our statute book which gives it life.

Mr. President, in the presence of a position so defiant of logic and of fact, it is hard to speak plainly without appearing to violate those courtesies which are not only required by parliamentary law, but which are urgently demanded by our feelings of personal respect and regard for each other. It is my earnest desire not to do so.

One member of the House met with great applause when he said that the bill to repeal unconditionally comes not to destroy but to save silver. The like sentiment has been uttered in this Chamber again and again, and those who have uttered it would, no doubt, feel greatly offended if their sincerity was impugned. Certainly I shall not do so, but I must point out what I regard as their inconsistencies. They declare they love silver money, bimetallism; therefore they slay it. They want both metals; therefore they abolish one. They want gold and silver coined on terms of equality, according to their platform, and so they stop coining silver in order the better to restore it.

They want to maintain the parity between the two metals, therefore they cut the only cord that holds silver up and permit it to drop out of sight in the abyss, displaying thereby the same wisdom which was displayed by the Irishman who was going down the shaft of a mine in a bucket, and got scared. He shouted: "Haul me up, boys, haul me up! If you don't haul me up, may the devil fly away with me if I don't cut the rope!" [Laughter.] Those of us who claim to be likewise true friends of silver, but who are misguided by our weak judgments, appreciate this love and tender care, and deplore it.

Truly they must love silver much, since they chastise it much. We will suppose a man is ill and on his bed—the kind physicians doctoring him in vain—he slowly sinks, his pulse is low and feeble. Finally a bolder physician comes in who practices on the heroic theory, and he says to the others, "You are all wrong and wasting time in trying to restore this man by nursing and stimulating him; he will never get up in that way in the world. Let us try a new plan; let us cut his throat and take a new start; we can adopt other remedies for his restoration to life after that." [Laughter.]

Now, he that believes it will be easier to resurrect the dead body of silver into the full manhood of free coinage than it will be to keep in the life it already has and strengthen it by the legislation which we solemnly promised the people at Chicago, fourteen months ago, let him vote for unconditional repeal; I shall not. I shall try common sense a little while longer. If it be indeed decreed that silver money is to perish, and the world of the producers and the poor is to undergo the travail and suffering and the sorrow of the road which leads to a single gold standard, it shall not be my fault; it shall not be said of me, "Greater love hath no man than this, that a man killed his friend that he might save his life." [Laughter.] Great, indeed, must be the love of these men for silver, that they would chasten it even unto death.

But they deny that the repeal of the Sherman law means the death of silver, and I accord full sincerity in this belief to all who are and have been real friends to silver. There is no telling what a man can not bring himself to believe if much depends on it. But can there be a doubt of this? Let us see. It stops the coinage of silver in terms; there is no doubt about that much. It will also cause a great fall in the bullion price of silver; neither can there be any doubt of that. In fact, it is admitted; but just how great that fall will be is somewhat conjectural.

The stoppage of not all coinage, but free coinage in India alone, caused a fall of about 20 cents an ounce, and Lord Lansdowne said that the action of the Indian council was a defensive measure made necessary by the expected action of the United States in repealing the Sherman law and ceasing to coin it altogether. This shows that the expected fall consequent on our legislation was to be great, as it necessitated this important move by the council of India. The fall will certainly be equal to that which followed the action of the Indian council. In my opinion it will be even greater, for our annual purchase of silver exceeded the coinage of India.

After we shall have repealed the silver-purchase law and substituted nothing to uphold it as a money metal, silver will, in my opinion, sink to the level of the demand which is created by its use in the arts and the necessity of occasionally replenishing the subsidiary or token money of the countries so using it, estimated at about $555,000,000, as before stated, or about one-eighth of the silver money now in use. Seven-eighths of the demand, therefore, being thus abolished, natural economic laws would justify us in saying that the price would be reduced in the same proportion; but to the figures thus arrived at must be added whatever would be created by the demand for its use in the arts.

Will not our remaining silver dollar participate in this decline? If, while sustained by a coinage law and made a legal tender, our dollar is denounced as dishonest and as only having a bullion value of 53 cents, what will be said of it when the bullion of it is worth only about 30 cents? If now, our own Secretary of the Treasury will not tender it in discharge of silver obligations, what will become of it in the trading world when it strikes the bottom: and what must be thought of a Senator or Congressman who asserts that immediately after its repeal our remaining dollar will become equal to a gold dollar, and the parity will be complete? Is that what the Chicago platform meant, that you should make silver dollars so scarce that the parity with gold would be equal? Is that what it means when saying "We hold to the use of both gold and silver?"

If so, then all the world is bimetallic, for all use both, and the people were deceived. Did it mean by coining no silver that we should thereby make no discrimination against either metal? Did the platform mean that we should first cut off the coinage of silver and then show no discrimination, but coin equally of both? After that, when the platform said, "That the dollar unit of all coinage of both metals must be of equal intrinsic and exchangeable value," did it mean that we must first reduce by hostile legislation the intrinsic or bullion value of silver so low as to render the carrying out of that pledge an impossibility? And when it says that this intrinsic and interchangeable value is "to be adjusted through international agreement," did it mean that we should first increase the disparity to the extent of making silver worth only about 30 cents an ounce, or 40 to 1 of gold, in order to facilitate the task of getting foreign nations to agree to coin it with us at 15½ to 1?

And failing in that, when the platform goes on to say, "or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals in equal power of every dollar at all times in the markets and in the payment of debts," did it mean that these legislative safeguards should be applied whilst the silver dollar was still alive, so as to help to maintain its parity with gold, or after its coinage was stopped and its intrinsic value was reduced so that it was virtually dead? Was it an invitation to the nuptial ceremonies of the two metals, or was it a notice to attend the funeral of silver? And did it mean that

it should be good in payment of the public debts, or only debts among private parties and the small fry?

Was that a wink with a golden eye to the bondholder and a broad, silver smile to the common people, who love the old dollar? And when the platform denounced the Sherman law as "a cowardly makeshift," did it mean a makeshift for free coinage of silver, or the use of gold?—a makeshift for bimetallism or monometallism? "Under which king, Bezonian? Speak or die!" [Laughter.]

If the framers of that plank meant that it was a cowardly makeshift for the free coinage of silver, is not the bill for its repeal, without a line in its place, a greater coward and a worse makeshift? Is not the coinage of 54,000,000 ounces per annum nearer to free coinage than the coining of none? If it was meant that it was a cowardly makeshift for gold monometallism, is not the language of the platform itself both a cowardly and a lying makeshift for the truth?

Finally, if the language of the platform taken altogether means only that we are to oblige the bankers, bondholders, and stockbrokers first, by unconditional repeal of the Sherman law, accompanied only by a short stump speech in the belly of the act, saying that it is our policy at some future time—the Lord knows when—to do something further—the Lord knows what [laughter]—in the direction of carrying out the other promises of the platform—are not the makers and upholders of that declaration of policy and purposes open to the charge of insincerity and of so framing words as to deceive the people whose suffrage they were seeking?

If such an interpretation of the platform as is contended for here by those who will vote for repeal, and presumably by the President, had been announced during the campaign of last year, I am quite sure Mr. Cleveland would not have carried my State by 50,000 votes, and I believe he could not have carried a single, solitary electoral vote south of the Potomac River—not one. But it is said that there is no abandonment of the Chicago platform in the unconditional repeal of the Sherman law, but only a postponement, and that the bill itself contains a reaffirmation of those promises.

Mr. President, I wonder if in any of our political literature, rich as it is in ingenuity and device, full as it is of eloquence and true genius, overburdened as it is with with every conceivable and inconceivable form of wildcatism and humbuggery which a hundred years of free government, wherein men of all opinions have had a chance to ventilate them, have produced—I wonder, I say, if anything is to be found on all its pages approaching in absurdity to the incorporating in this bill of a part of the Chicago platform? Was there ever a cat trotting through the tangled thickets of the Alleghenies, or roaming over the barren wilds of the Rocky Mountains, so wild and untamable as this cat? [Laughter.] Was there ever any bug discovered and classified by science with a hum equal to the hum of this bug? [Laughter.]

The representatives of the Democratic party assembled in convention in Chicago in 1892, as they had done in St. Louis in 1888, and before that in Chicago in 1884, and made certain pledges to the people that they would make certain financial reforms if the people would only put them in power where they could enact laws. Among other things, the last convention held at Chicago pledged the American Democracy that if intrusted with power they would enact such laws as would repeal the Sherman act—secure us the use of both gold and silver in our currency—coin it on equal terms, and maintain the parity of the two. These promises were contained in one paragraph, and consistently with good faith are not separable. They constituted a scheme by which the financial policy of the country was to be reformed, and honor and fair dealing require it to be carried out together.

Well, the people trusted and believed; the Democrats were put in power, and Mr. Cleveland, though known to be personally hostile to the use of silver, was elected because the people believed that he would carry out in good faith the promises made for him in the platform, and to which he had acceded in his letter of acceptance.

For the first time in thirty-three years the Democratic party was intrusted with the power of enacting laws. Now, in fulfillment of these promises, the first thing which is done is to yield to the clamor of the capitalists hostile to silver, and anticipate the regular session of Congress for the sole purpose of stopping the coinage of silver and nothing more.

Accordingly, the House, hastening to obey, has sent such a bill over to this body, and anticipating its action, the Finance Committee had introduced a similar bill for its repeal, so that we have two bills pending before us on the subject of the Sherman law, and the repeal is likely to be carried out in some shape. By the way, I have never known a Senator more anxious for the undoing of that action than that Senator. It is a confession that he is wrong and it is an appeal from his conscience and seems to say to the court, "Hurry up, judge; I am a great criminal; let there be no delay; do not even let the jury have water." [Laughter.]

But what about the remainder of the platform? The same bill—almost the same strokes of the same pen could have inserted an additional provision looking in the direction of coining silver on equal terms with gold, maintaining its parity, etc. But instead of that we give the stock brokers and the gamblers and the banks by this bill all they want, and we put off the American people with still another promise. We pay the gold bugs cash and pay the people with another paper promise redeemable at the option of the makers. [Laughter.]

Now, if the promises at Chicago were not good, how would the promises inserted in the law become any better. It might, indeed, be good for another promise, and so on *ad infinitum*, as we see tickets on steamboats sometimes, "Good for six days at the bar:" only there the drinks are paid for already.

How long are we to postpone the people? How long dare we do it? No one says what we are to give them in fulfillment of our pledges after repeal. There is no intimation that anything more is to be given in the message which the President addressed to us; not a whisper.

He does intimate a little that in due time we will take hold of the McKinley tariff law, but as for anything more for silver—say nothing but good of the dead. *Requiescat in pace*, "or words to that effect." [Laughter.]

Even those promises contained in the bill given in renewal are of so general a nature that they may be easily evaded as amounting to nothing definite. In a court of law they would be held void for uncertainty. If it is really our intention to enact these laws as we promised, why not do it now?

We are in possession of the entire lawmaking department of the Government. The same power which can enact this bill into a law could so enact other things promised, if only "Barkis is willin'." In fact, there would be a greater power in the hands of the Democracy if this bill were coupled with provisions carrying out the platform, for, in that case, I do not suppose there is a Democrat in either House that would refuse to support it. I repeat, if we are in good faith, why not do it now? "Now is the accepted time," and "now is the day of salvation;" "to-day, if you will hear the voice of the people, harden not your hearts"—"here is water, what doth hinder me to be baptized"?

Is it to be done hereafter? Who says so with authority to speak. Who says so with authority to give an assurance that it can be done at all if postponed. Is it not about all many can do to give assurance of their own votes a little way ahead? How do we know that when some other bill comes up for the benefit of capital these threadbare and contemptible promises to pay will not pop up again like Jack in a box as a substitute for the performance? If we let go what we have before we get something else in exchange, how shall we justify ourselves to that portion of our constituents who are supposed to have common sense? Why can not the bankers and stockbrokers wait for the repeal of the Sherman law until the remaining legislation which we have promised to enact shall be prepared and ready?

The last excuse for its repeal, except the true one, which they do not give, has been knocked from under them. They know it did not take gold from this country, because in the face of their protestations they see that gold is returning in obedience to well-known laws of trade, and all that they now hang upon is that they have not "confidence" in the Government of their country that it will redeem its obligations in gold. That is equally false as the other; they know that every dollar that is due from the Government of the United States that is properly and honestly redeemable in gold coin will be so redeemed. They see the Secretary of the Treasury, with the approval of the President, every day redeeming silver obligations in gold, even where his discretion permits him to redeem in silver.

Now, if asked why I can not trust the future for the enactment of those laws which ought to come concurrent with the repeal of the Sherman act, my answer—and with much more truth than theirs—is, I have no confidence. When a man promises me that if I will put him in a position which will enable him to do so he will pay me a thousand dollars, and when I have performed my part of the contract and put him in that position and he refuses to pay me, and applies his money to some other purpose, and proposes to promise me the same thing again, I refuse to accept his promise as that of an honest and responsible man; my confidence is gone.

The Senator from Georgia [Mr. GORDON], who the other day entertained us with a very eloquent speech with a most illogical conclusion, demanded to know why we halt between conditional and unconditional repeal. He says:

> If the friends of bimetallism are strong enough to impose conditions on the repealing bill, will not that same strength suffice to enact bimetallism in a separate bill?

Mr. President, I will tell you why I halt between conditional

and unconditional repeal. Unconditional repeal is unconditional surrender. In the first place, by conditional repeal we unite the Democratic party, or at least all true friends of bimetallism. I know that they all came here, as I did, hoping, praying, that some compromise could be found between them and the President, the chief of our party, by which they could stand with him. By the proposition of unconditional repeal that is impossible.

In the next place, if we repeal without doing other things which we promised the people at Chicago we would do, neither that Senator nor any other can give assurance that these other things will ever become a law in separate bills. The Senator must know that every gold monometallist in the House voted for unconditional repeal as everyone in this body will, and against the coinage of another silver dollar at any ratio whatever—including the resurrection of the Bland-Allison act of coining 2,000,000 a month. Where then can be found evidence of the strength for a separate bill, favorable to silver in that body? It has been tested; ours has not. And should such a bill pass that body and this one, can that Senator give us any assurance that it would not meet its death blow elsewhere? We have every reason, as he has, to know that it would; therefore, as it seems to me, to vote for unconditional repeal, in the face of these undeniable facts, amounts to an unconditional surrender, a giving up of the cause of silver, which we all profess to love, and an abandonment of our promises to the people that we would do everything to maintain it that was necessary to be done by legislation. The Senator also says that it is perfectly immaterial whether the panic was caused by legitimate arguments or was caused by the machinations of designing men; he says the results are upon us and we must deal with them.

It is quite true, Mr. President, that if the panic is upon us we must do the best we can to evade its dangerous consequences; but if there should be any suspicion, as he intimates there is, that it was produced by designing men for a manifest purpose, it strikes me that it is neither prudent nor agreeable to common sense for us to hasten to do the very thing which the designing men have designed. It simply means this, as put by the Senator: Some people say there is a pit dug hereabouts to entrap us. Now, it is perfectly immaterial to me whether there is any pit here or not. I am going to jump in anyway. If there is no pit there, all right; if there is one, when I plunge in I will know it.

Now, these Senators who sacrifice their cherished convictions for the taking of this leap, it seems to me, must be under a great panic, indeed. That gallant gentleman was not wont to be stampeded by the popping of a cap. I can not refrain from quoting some of the eloquence of that Senator, which meets not only with my approbation, but highest admiration as a literary performance:

> Mr. President, I come now to our next promise to place gold and silver upon the same footing. It is safe to say, I think, that bimetallism was the most popular, if not the most potential, factor in the last campaign. It was the one plank common to all national platforms. It was the one force which made itself felt under all conditions and placed its seal on every party's banner.

That is true. He then goes on to say:

> It is true, sir, that these protestations and promises antedated the election; and it may be interesting hereafter to compare votes in Congress with votes in conventions, or party action in Congress with party promises in platforms. I fear, sir, that the contrast would put to shame the wonder-inspiring patent-medicine advertisement, "Before and after taking."

Mr. President, I am greatly tempted to say that I fear the Senator from Georgia has digged a pit into which he will fall himself when he votes for unconditional repeal, and that his course will be condemned out of his own mouth. "And I," said the wild-eyed, long-haired man who accompanied the temperance lecturer, "I goes along to serve as a frightful example." [Laughter.]

I will not be stampeded into giving this death blow to silver. If the emergency of the time be so great as to call for concessions on the part of the silver men, it is also necessary that the gold men should concede something. Giving and taking is fair, but when one side is to do all the giving and the other side gives nothing in return then it amounts to a surrender.

I do not believe in half the allegations of public distress and danger which are constantly thrust upon us. I believe that in thirty days from this time all obstructions to the business of our country will have passed away. The financial papers all say now that the worst is over, and from day to day they cite from every quarter of the country evidence of renewed activity and returning business.

The Financier of New York, a paper, I presume of high authority in bank circles, announced day before yesterday that the banks of New Orleans, Memphis, Mobile, Galveston, and other places in the South report that there will be currency sufficient to move the cotton crop. Like a gorge of ice in a river, once the first obstructing block breaks loose, the whole mass begins to move and the blockade is gone. Let my good and valued friend from Georgia take heart, and stand by the object of his love and mine a little while longer. To insist upon repeal right now, in the face of the admitted fact that the Sherman law is not the cause of the trouble which the country is feeling, is an acknowledgment that it can not be repealed without some substitute in cold blood and in times of reasonable prosperity. It must be done now—right now, or not at all.

Suppose, sir, that we were to take these promises in the bill that at some day the remainder of the platform will be carried out, what assurance have we that a bill to provide for either the free coinage or the limited coinage of silver could become a law? Is there any indication by any vote of the House of Representatives upon the passage of the bill that such a bill would meet its approbation? Is there anything in the message of the President or in all his public utterances, or is there any spokesman here authorized to speak for him who can give us his assurance that such a bill would meet his approbation?

Mr. President, we know that it would not become a law; and it strikes me, sir, that to permit the passage of this bill without attaching some other legislation to it—knowing that that other legislation could not be secured independently and by itself—that we consciously surrender and turn our backs upon all the pledges we have made to the people. It strikes me, sir, that if we do this we must do it with our eyes open to the consequences; we must do it knowing that we are subjecting ourselves to the serious accusations of our constituents.

It seems to me, sir, that the great Democratic party, which I have always supported because I believed it to be not only correct in its theories of government, but devoted to the interests of the common people, the masses of the land—it seems to me, I say, that if we pass this bill now unconditionally, that this great party will then cease to be the people's friend and become the subservient tool of combined capital, and will constitute itself in its legislation the lineal and legitimate successor of the thirty-three years of that Republican rule which we have always heretofore denounced as building up the combinations and corporations which have well-nigh absorbed the wealth of our country.

I speak plainly upon this subject, Mr. President, because I feel deeply. I am too old—I have been too long in public life, I have been too greatly trusted and honored by the people of my State—to make myself a party now to anything which appears to me may be construed as a want of faith to public professions.

Let Senators consider for a moment the hopelessness of securing further legislation if it can not be secured in conjunction with this repeal. If capital is once satisfied by the repeal, then to trust to its influence to secure what we want—what the people want—is just an appeal to the bowels of omniverous Mammon. As well might we appeal to the mercy of the hungry tiger, as well might we deprecate the unsatisfiable appetite of the tapeworm.

The people know this, Mr. President. Of course I impugn the motives of no Senator: they are as honest as I am, I hope, if they are, then they are fairly honest men [laughter]; but I am obliged to impeach the judgment of those who would take this course. I think it a sad and fatal mistake. The honest way is the best way, as we all agree, if we can find it, and it seems to me the fairest way of interpreting this platform is to construe it as the people understood it—as we taught them to understand it, through the press and upon the hustings and in every way by which we urged the campaign, and as I believe its authors honestly intended it to be understood, and that was to repeal the purchasing act and do all other things necessary toward the preservation and upholding of silver money before or concurrently with the abolition of its only hold on life. I think the carrying out of the first pledge and stopping would make the redemption of the others impossible and the whole scheme look like a fraud.

What shall those other things be? If I could have my preference, one should be the free and unlimited coinage of silver money at a ratio of 16 to 1. Is this an impossibility? Far from it. The mistake of the Sherman law was that it was only a partial coinage of silver, and therefore still left a large quantity of metal on the market for which there was no demand, and which only served to constantly drag down the bullion price. I believe the power and resources and wealth of this land to be sufficient to coin and keep afloat on a parity with gold all the silver of the world which would probably come to it to be coined.

The price of any article, of course, depends upon the demand for it and the supply. The chief demand for silver, as of gold, is and has been its character as a metal of which money is made. It is not the use that is made of it in the arts that gives it its chief value, but the fact that it is used as money in all nations of the world to a greater or less amount. When you destroy it as a money metal you take away the chief demand for it, and, of course, lower its price.

Now, supposing, what is hardly supposable, that when we establish free coinage at the ratio of 16 to 1, that all the silver of

the world, coined and uncoined, were pouring into the United States, in a very short time all the nations which use subsidiary coin would be out of silver; all the nations which use silver as a full legal tender, and all the peoples of the world who use silver in the arts and for industrial purposes, would find themselves in the same condition, and would have to come to the United States for their supply of silver. They could buy it from no man here for less than its coining value; therefore, throughout the world, it would at once become equal to gold, and it would follow that we would soon have to supply the demand for it in every country.

So soon as its bullion price began to approach that of gold, the latter would come halfway down to meet silver going up, then it would rapidly flow out to supply the coin demand of the world, which would once more become bimetallic, as it was twenty years ago. No man possessed of any silver in other countries would sell it for less than the coining price in America, and so England would have to pay for the silver with which she supplies India the coining price in the United States, and India would be compelled to be supplied with silver, for there is not $900,000,000 of spare gold in the world to replace India's silver money.

It is said that the production would be so great if there was free coinage and silver was at its normal price per ounce that the world would soon be flooded with it. I do not believe that. There is nothing in the statistics to show that that would be the case. During the period of one hundred years, from 1792 to 1892, the production of gold in the world was $5,633,908,000—the production of silver was $5,104,961,000, a difference of only about $500,000,000 and that in favor of gold; and we might go further back if the insufficient statistics of the Dark Ages could be depended upon, and show generally that the production of the two metals would average about the same.

For what reason is it held, then, that this ratio of production of the two metals will not continue to the end? Is not nature consistent with herself? If the digging into the earth for 4,000 years have shown that there exists in her bosom on the average about fifteen times as much silver by weight as of gold, why should we doubt future development from an accidental departure now and then of either metal from the average proportion of forty centuries?

Surely the gold-standard men should give a better reason for distrusting nature than some bankers' "want of confidence."

A great impetus was given to silver in the era immediately following the discovery of America and the opening of the famous mines of Mexico and South America. Discoveries of gold at the same time kept that metal pretty well up with silver.

A great impetus was also given to gold by the discoveries in California and Australia, which made gold forge largely ahead of silver in the amount of production; and this continued, making silver at a premium above gold, until within the last twenty years, when the development of the mines in Colorado and Nevada have put silver ahead in the amount of production.

The production of silver in the United States in the past fiscal year, measured by its coining value, was $74,989,900; its market value, $50,750,000, whilst the production of gold was $33,000,000. Of this sum nearly one-half of the gold was used in the arts, or $16,616,000, while of silver there was used in the arts more than one-eighth, or $9,106,000, leaving altogether of gold and silver for currency purposes only $81,000,000 for that year, of which about $64,000,000 was silver. A large amount of this was exported to supply other countries. The total silver production of the world in 1892 was $196,605,000, in round numbers.

I have no reliable estimate of the amount of silver used in the world per annum for industrial purposes, but I have never seen it stated at less than 27 per cent, and I do not think that far out of the way; if anything, it is under that mark. This would make in the neighborhood of $53,000,000 of the annual production of the world, leaving something near $143,000,000 for currency purposes. This would give us about $143,000,000 of silver per annum to dispose of, provided we adopt the free coinage and all of the silver of the world should come here except that which is used in the arts.

But we know that this is not reasonable or possible; we know that the subsidiary coinage of foreign countries would not come here, and that much silver would be required to supply that. We know that much more of it would be required to coin silver in those countries where it is still legal tender, and, inasmuch as the price would go up to the coining value in the United States, we know that that fact would induce many nations to coin more and make it a legal tender.

Mr. President, I always have believed that if we were to resort to the free coinage of silver we should have very little more silver to dispose of than we have had to dispose of under the purchases of the Sherman law; and I always have believed that under that law, if silver had had a fair trial by a friendly Government and friendly officials, there would not this day have been the outcry against it that there is, and it would not have been held up as a sample of what our danger would be if we resorted to free coinage.

The idea so sedulously put forth that we can not give silver or anything else a value by law is false. I fancy there is not a manufacturer in the United States who has grown rich by high tariff who accedes to that proposition. It is true the law of supply and demand controls the bullion price of silver as of other things, but it is also true that the demand is in the control of the Government. Silver has never at any time within the last hundred years fallen in consequence of more being produced than there was any demand for—it has always been depreciated by legislation which reduced the demand.

In the time when the world was filled with gold from the mines of Australia and California there was no unfriendly legislation against gold, therefore it depreciated very little. The increase of enterprises, enlarged commerce, and production absorbed it all, as I have said, and the world was benefited thereby. So, but for unfriendly legislation, would it be with silver. If every dollar dug out of the earth was immediately coined and put in circulation, it would impart the same activity to the world's industries, and would in the same way stimulate its energies, that the great production of gold did.

It is also lamentably true, as our people can testify to their sorrow, that every time a blow has been stricken at their silver money it has also stricken the price of their wheat, their cotton, and their grain, and everything else they had to sell. The most reliable English authorities that I have consulted say "that from the year 1873, when in consequence of the demonetization of silver in the United States and in Germany, the prices of goods began to fall, and amounts at this time on the average of goods to about 7 shillings to the pound, or one-third, with every prospect of that fall continuing." The same authority, John Hill Twigg, says that "the only protective means of stopping this fall, is to restore the old law of coining silver as freely as gold and let people pay their debts in either metal at the choice of the debtor."

Mr. COCKRELL. Will it interrupt the Senator to give a statement of the production and coinage of gold and silver of the principal countries of the world from 1873 to 1892?

Mr. VANCE. I do not know that it would, sir. I have almost concluded, and if the Senator will permit me I will take his statement and insert it as a part of my remarks.

Mr. COCKRELL. I was going to read the statement.

Mr. VANCE. Very well.

Mr. COCKRELL. The production of gold was $2,210,961,206, while the coinage of gold was $2,787,714,679, or $576,753,473 more than the entire production of gold. The production of silver was $2,400,760,533, while the coinage of silver in the world during the same period was $2,322,603,351, leaving only about $78,000,000 of silver uncoined during the whole time.

Mr. VANCE. I am much obliged to the Senator for his statement. It is in the line of my remarks.

An ingenuous writer in the Journal of American Politics for September, 1893, Mr. George Canning Hill, estimates upon a very reasonable basis that the loss of Southern planters on cotton alone, from 1873 to 1890, has been at least $83,000,000 per year, or $1,410,000,000 in seventeen years. For the same period he estimates the loss of the wheat-growers of the United States at $100,000,000 per annum, or $1,700,000,000 for the seventeen years. These are samples of what has been inflicted on the people by the wicked war on silver money; and the estimate may be continued by a consideration of all other leading articles of production of field and forest and mine.

Nor is gold more stable as a standard than silver. Hear what a distinguished English statesman says. Mr. Balfour, in October, 1892, used the following wise and timely language, showing that gold is less stable than silver:

> But there is another point, namely, the utility of our monetary system as a permanent record of debts and obligations, lasting through long periods of time. Can we claim that great quality for a standard which monometallists admit has appreciated in some fifteen to sixteen years no less than 30 to 35 per cent, and of whose appreciation no man living can prophesy the limits? A monetary standard of which this can be said does not fulfill the very elementary qualities which we require in a monetary standard.
>
> I have no desire for inflation. Give me a standard that will remain constant and I ask no more, but do not put me off with a standard which rises 35 per cent in fifteen or sixteen years. If I have to choose, if I am given the unwelcome choice between a standard which appreciates and a standard which depreciates, between a system under which prices are lowered and a system under which prices are raised, then, in the interest of every class in the community, not excluding the owners of fixed debts, give me a standard which depreciates and give me prices which rise.
>
> Of all conceivable systems of currency that system is assuredly the worst which gives you a standard steadily, continuously, and indefinitely appreciating, and which, by that very fact, throws a burden on every man who desires to promote the agricultural or industrial welfare of his country, and benefits no human being whatever, except the owner of fixed debts in gold.

It is a well-known fact that greater fluctuations in the supply of gold have been experienced in the history of the two metals

than has ever occurred to silver. From 1851 to 1871, a period of twenty years alone, the gold produced in California and Australia amounted, by careful estimate, to at least $2,500,000,000, a sum that was about equal to the world's stock already on hand. In twenty years the gold supply of the world was doubled—a thing that never happened to silver—yet the whole of it was quickly absorbed in the circulation of the world, and no attempt was made to demonetize gold. There were a few men, about as wise in their generation as those who have recently tried to degrade silver, who did speak of demonetizing gold; but it was not done, except in one or two small European states.

It is strange to me that this is not perceptible to every thinking man, and it is still stranger to me that men will undertake to prove the impossibility of our maintaining the value and parity with gold of an honored silver dollar, supported by the law and pledged faith of a great nation, by constantly citing the example of the difficulty of maintaining a discredited and abused dollar with all the world and its own Government at the head denouncing it as dishonest.

We must take into consideration, also, in arriving at a fair conclusion on this subject, the possibility of maintaining silver on a free-coinage basis, that even should the supply of silver supposed to exist in our mines within reach of the miners be as great as it is alleged to be, yet the total production would not keep pace with the increase of the population, of commerce, of railroad lines, the growth of cotton, of grain, or of pig iron in the United States. To calculate upon a supply of silver or anything else upon the basis that population and human energy will stand still in our country is, of course, erroneous. I reckon, likewise, it will have to be admitted that in regard to stability silver, measured by the chief products of commerce, has been infinitely more stable than gold, and these staple products are the true measurers of both gold and silver and not one for the other.

Complaint is sometimes made in this Chamber, as elsewhere, of the hardship attending the fact that capitalists have to be governed like other people, and that it is hard for a man's earnings or accumulations to be subjected to the casualties and incidents of a Presidential or Congressional election. There seems to be an idea that, so far as capital is concerned, Prince Bismarck was right when he said that "man could not be governed from below."

And a Mr. Horace White, who assumes to be an authority on financial questions, said in the Forum of August, 1893, that it was perhaps happy for a people like India that its high finances should be directed only by a few, all of which means that the man who has only a debased silver dollar or a token 50-cent coin in the world should not be permitted, through his Representatives here, to have any say in the laws which are required to govern capital, or in other words, he should not be allowed to dabble in "high finance." I do not subscribe to such doctrines. If we are Democrats we will not believe it or utter it, but try to treat every man as having an interest in this Government and a right to participate therein, and endeavor with all our power to educate him in his great duties.

Mr. President, I fancy that those who are shouting over the action of the House of Representatives in passing the bill to repeal this law without conditions, and are glorifying the President for calling us together and giving us a message containing no recommendation except to repeal this law—I fancy they little know what is before them. The doctrines of Prince Bismarck and Horace White have not yet become a part of the common law of America; thank God, there remain others to be consulted besides those professors of "high finance."

It was said that the string of the bow of Ulysses warned him of approaching danger by singing a song of battle and of strife. Let me say to those conspirators against the welfare of the common people, that before they shall finally succeed in their unhallowed designs, and drive them through "the valley of the shadow of death" to attain the single gold standard, in order that the conspirators may grow rich on human suffering, they will see many a field of political battle and hear the roar of much political strife.

In this fair land the thunderbolts of Jove dwell still with those whose voice is as the voice of God, and the bow of Ulysses is yet in the people's hands, and its quiver is filled with death-dealing darts. Its strings will yet sing many a song of battle to awaken the sleeping people, and upon every plain and in every valley and upon every mountain side, from shore to shore of our inclosing seas, they will spring to their feet at the calling of that music, with a light of conflict on their faces and the resolve of victory in their hearts. In that day it would be better for some of those who have joined in the fight against the money of the poor "that a millstone had been hanged about their necks and they had been cast into the midst of the sea."

Many a defeated statesman of this great fight, when he looks into the faces of those who overthrew him in that strife, will be surprised to behold not the faces of his old political enemies, but those of his own indignant neighbors and heretofore friends, who will say to him, "We followed your example: we loved you and believed the best way to serve you was to kill you."

Surely the fountains of the great deep of humanity are broken up and the hearts of men are stirred within them as they have never been stirred before since civil war. The great fight is on; the power of money and its allies throughout the world have entered into this conspiracy to perpetrate the "greatest crime of this or any other age," to overthrow one-half of the world's money, and thereby double their own wealth by the enhancing in value of the other half, which is in their hands.

The money changers are polluting the temple of our liberties. "To your tents, O Israel!" [Applause in the galleries.]

The VICE-PRESIDENT. The pending question is on agreeing to the amendment reported by the Committee on Finance to House bill No. 1. The bill and amendment will be read.

The Secretary read the bill and the amendment of the committee.

Mr. VOORHEES. If there is no further debate proposed at this time, I ask for a vote on the substitute reported by the Committee on Finance to the House bill as it reached this body.

Mr. TELLER. Oh, no; I should think——

Mr. ALDRICH. Let us have the yeas and nays.

Mr. PEFFER. Mr. President——

Mr. VOORHEES. I will say in addition, if the Senator from Kansas will allow me a moment, notices have been given of speeches intended to be made next week. There is not a Senator in this body who does not know that I desire every Senator who in good faith wishes to occupy the time of the Senate to have his opportunity in full; but I can not take the responsibility, nor will I attempt to do so, to be a party to delay, mere delay; and when a vacancy in talk has been reached, I shall want that vacancy filled by a vote.

I say this with the profoundest respect for the desire of every gentleman to be heard; but situated as I am and with my appreciation of the demands of the country I can not be a party to the delay of a single hour by waste of time in this body. If Senators are not ready to go on at this time with the discussion I trust we are ready to go on with a vote.

Mr. PEFFER. So far as I am personally concerned I do not desire to postpone action upon this measure a minute after I have done all that I can do honorably and inside of parliamentary rules to defeat the measure; or, if that can not be done, to so amend it as that it shall provide a substitute in the way of the free and unlimited coinage of silver at the ratio that the people of the country have understood we promised to fix. I have submitted two amendments, both of which I expect at the proper time to propose to the bill. One of them I offered in the form of a bill yesterday and gave notice that I would propose it as an amendment to the substitute of the Committee on Finance. I should like to have it come in between what is properly a section of the bill and the platform attachment. If it is in order, I wish now to offer the bill I introduced yesterday as an amendment.

Mr. ALLISON. I suggest to the Senator from Indiana in charge of the bill, and the Senator from Kansas as well, that the orderly method of procedure, probably, would be to substitute the amendment proposed by the committee for the House bill, and then that would be amendable; otherwise we shall be going on amending the House bill and then finally taking a vote upon the substitute, which would strike out all amendments, if amendments are inserted. I merely suggest this as an orderly mode of procedure. If the Senator from Kansas desires to offer an amendment, his amendment would be in order after the adoption of the substitute. Of course, it is in order for him to move to amend the substitute or the original bill, but I think we had better have amendments pending either to one or the other text, so that we may understand what is the provision of the bill at every stage of it.

The VICE-PRESIDENT. The Chair will state to the Senator from Iowa that the Senator from Kansas, the Chair understands, proposes an amendment to the amendment reported by the Committee on Finance.

Mr. ALLISON. Very well; he proposes an amendment to the substitute.

The VICE-PRESIDENT. It is to be proposed as an amendment to the substitute or amendment, whichever it may be called. The Chair will ask the Senator from Kansas if he has stated correctly.

Mr. PEFFER. In order that there may be no misunderstanding about it let me state that I understood the Senator from Indiana to propose a vote immediately upon the pending measure. I have no sort of objection to substituting the amendment of the Finance Committee of the Senate for the text of the House bill. I merely want to save whatever right I have to offer an amendment to the substantial proposition contained in

both measures; that is all. I agree with the Senator from Iowa that it would be the orderly proceeding to substitute the amendment proposed by the Committee on Finance for the House bill, and if that be the intention, so that I shall not then be cut off from the privilege of moving to amend the amended bill, I have no objection to the substitution.

Mr. VOORHEES. I shall ask that the substitute reported by the Finance Committee be adopted by order of the Senate; and then the Senator from Kansas or anybody else may offer amendments to the same when they choose. We shall then be in proper form.

Mr. PEFFER. That course is entirely satisfactory to me.

Mr. HARRIS. I rose for the purpose of suggesting to the Senator from Kansas that if his purpose is to offer an amendment either to the substitute reported by the committee or to the text of the House bill the usual order of proceeding, and I am not sure if it is not the only parliamentary one, is to offer his amendment pending those measures. Both the text of the House bill and the substitute reported are open to amendment, and he can offer his amendment now before final action is taken upon the amendment, if he chooses to do so.

Mr. PEFFER. With the suggestion of the Senator from Indiana, I prefer taking the other course, and that the substitution be made, so far as I am concerned. I lose no right by it.

Mr. COCKRELL. I shall object to adopting the substitute until we have discussed the two measures. I think there are provisions in the House bill which are far superior to anything in the amendment of the Senate committee.

But this repeal—

The House bill says—

shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

Mr. VOORHEES. Let me ask the Senator from Missouri one question. Do I understand the Senator from Missouri to say that he will vote for the House bill?

Mr. COCKRELL. Not at all. I am comparing that language with what the Senator from Indiana and the Finance Committee propose in lieu of it.

Mr. HARRIS. Will the Senator from Missouri yield to me for a single moment? The Senator from Indiana suggested that the substitute reported by the Finance Committee might be acted upon now, and then the bill would be open to amendment. Does he mean to waive the parliamentary right he would have in that case to hold the text of that substitute as not amendable in any way except by addition, or does he mean that it may be amended in any way any Senator may choose to offer and a majority of the Senate favor?

Mr. VOORHEES. I suppose that under the parliamentary rules of this body, with which I am nothing like so familiar as my friend from Tennessee, it would be amendable, as any other measure pending before this body, and so far as I am concerned I shall give my consent that it shall be so amendable.

Mr. CULLOM. As an original bill.

Mr. HARRIS. If the Senate will so consent, then I have no objection to proceeding in any line the Senate may choose.

Mr. VOORHEES. I shall ask the consent of the Senate, and I shall interpose no technical objection to any amendment the Senate may see fit to vote to attach to the bill.

Mr. HARRIS. I desire to state to the Senator from Indiana that if the substitute is to be amended, I think upon an examination of the rules, and the parliamentary law that controls, the substitute so agreed to would not be amendable in any way except by adding additional sections.

Mr. VOORHEES. May I ask the Senator from Tennessee, with his superior parliamentary knowledge, might not that technicality be waived so that the substitute, when once before the Senate, would stand amendable as any other measure?

Mr. HARRIS. By unanimous consent, yes; otherwise, no.

Mr. FAULKNER. Will the Senator from Missouri permit me a moment?

Mr. COCKRELL. I yield to the Senator from West Virginia.

Mr. FAULKNER. Would not the object and purpose of all parties to this controversy be accomplished by doing what has frequently been done in the Senate, treating the substitute of the committee as the original text, which would then allow amendments to it in the second degree?

Mr. ALLISON. That is precisely the suggestion I made to the Senator from Indiana, that the substitute should be adopted *pro forma* and stand as the original bill. Of course that would allow any words to be stricken out or any words to be added to it.

Mr. HARRIS. If such agreement by unanimous consent can be made it is all right and ought to be satisfactory to everybody.

Mr. VOORHEES. That is what I understood I was asking, concurring entirely with the Senator from Iowa.

The VICE-PRESIDENT. Will the Senator from Indiana state again his request in order that the Chair may ask if there is unanimous consent?

Mr. VOORHEES. My understanding now is that the substitute may stand as the original proposition and be amendable. So I inferred from the statement of the Senator from Iowa, for which I am much obliged to him. To that I give my consent and ask the unanimous consent of the Senate.

The VICE-PRESIDENT. Is there objection?

Mr. COCKRELL. I object. I can not let an agreement of that kind be made on such an important question as this unless every Senator is present. Now, Mr. President——

The VICE-PRESIDENT. There is objection. The Senator from Missouri will proceed.

Mr. COCKRELL. I was giving the reasons why I object. I read the language in the House bill:

But this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law.

Now, the amendment reported by the Senator from Indiana from the Finance Committee says:

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States in the markets and in the payment of debts.

There is the difference of midnight darkness and the noonday sun in these two declarations; and I do not therefore consent that the first one shall be laid aside until we have discussed it. It will come up properly in the discussion of the measures.

Mr. ALLISON. I do not wish to discuss at this time, or at any time I know of, the relative merits of these two propositions, but I wish to call the attention of the Senator from Missouri to the proposition as it comes to us from the House of Representatives, on page 2, lines 14 and 15:

But this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined.

Mr. COCKRELL. I read that twice and called the attention of the Senate to it.

Mr. ALLISON. I know the Senator did. I read it again, if the Senator will allow me, with a view of calling his attention to that phraseology.

Mr. COCKRELL. Certainly.

Mr. ALLISON. The repealing clause in no sense affects or impairs the value of the silver dollars coined, but by inserting this proviso it leaves a question of doubt whether that portion of the Sherman law stands which requires the Secretary of the Treasury to coin the bullion into dollars. It provides that nothing shall affect the dollars coined.

If the proviso is intended not to affect the bullion in the Treasury, then it should say so. The proviso, as it comes to us from the House of Representatives, is imperfect in its phraseology, because by implication it deals with the bullion in the Treasury, which the law of 1890 declares shall be coined from time to time as the exigencies of the Treasury or the redemption of the notes require. So I submit that when we come to scan the phraseology of the House provision we see that it is materially defective in the very things which some of us, at least, require as respects the execution of the Sherman law.

Mr. COCKRELL. Will the Senator from Iowa now permit a question? Where is there any provision in the substitute of the Senate Committee on Finance which would authorize the coinage of the bullion still in the Treasury and not coined in pursuance of the mandate of the law of July 14, 1890?

Mr. ALLISON. There is no provision in the substitute of the Senate committee which in any sense touches the bullion in the Treasury or provides what shall be done with it. We simply propose to repeal so much of that section of the act as requires the purchase of silver bullion and so much of it as requires the coinage of such purchase into silver dollars. I understand the Senate committee's substitute (and if it is not clear I wish it to be so made) to deal with nothing except the purchase clause of the Sherman act, so called; and it leaves intact and in full force and effect every provision of the law of 1890 as respects the bullion heretofore purchased and the duty and power of the Treasury Department to coin it, as exigencies require, for the redemption of the notes that have been issued under that law.

Mr. COCKRELL. Does not the Senator from Iowa know there

have been intimations made, and that in sources not friendly to silver, that if the repeal of the Sherman act was secured it would leave silver demonetized—that it would leave the coin silver no longer a legal tender? A paper as ably conducted as the Washington Post, in commenting upon the coinage of France, stated that the French silver coins were maintained at par by reason of the fact that they were redeemable in gold; and the attempt has been made to create the impression throughout the country that we could only maintain the legal-tender value and power of the coin silver by redeeming it in gold. Ought there not to be a distinct declaration upon that question, that the legal-tender quality of coin silver, and the right—the duty, I might say—of coining the silver bullion in the Treasury shall not be affected by this repeal?

Mr. ALLISON. Certainly it should not be affected; and in my view the insertion of that reservation excludes all other ideas as respects the coinage of the bullion in the Treasury. Therefore, for myself, to remove a doubt, I desire that the Senate committee's substitute, the phraseology of which I regard as absolutely clear upon that point, shall be inserted. So I submit to the Senator that he examine very carefully the phraseology of the bill as it came to us and see, if it is to be retained, whether there should not be added language providing that nothing shall impair other things as well.

So far as I understand it, neither of the provisions affects in the slightest degree the silver dollars already coined. They are a legal tender. They stand upon the laws that have been passed hitherto, which are in no sense repealed. Therefore, the phraseology inserted in the House bill is wholly unnecessary, and it might as well be stricken out as retained. But if it is retained, I submit that there should be other exceptions inserted as well, in order that there may be no implication against the clause except the one we intend.

Mr. COCKRELL. I apprehend there will be no question about what is the real legal effect of the repeal of the purchasing clause of the Sherman law. The Sherman law of 1873 (which did demonetize the silver dollar, which did not permit its coinage, and a subsequent law took away from it its legal-tender quality) was abrogated by the law of 1878, the Bland-Allison law. That law, in a provision not connected with the coinage clause of it, made the standard silver dollars to be coined under it and those previously coined a full legal tender in the payment of all debts, public and private. When we passed the existing Sherman law, the act of July 14, 1890, we repealed only the purchasing clause of the Bland-Allison law, and therefore left in full force the provision of the Bland-Allison law which gave to the silver dollars previously coined and those coined under it full legal-tender quality. Now, if we repeal simply the purchasing clause of the Sherman law, we do not affect the legal-tender quality of the standard silver dollar; we do not affect the legal-tender quality of the subsidiary silver, so far as that is concerned. The coin silver will be left in the situation it is now, precisely; there is no question about that, as a matter of law; but as a matter of information and impression throughout the country it is entirely different.

Mr. ALLISON. If the Senator will allow me just one moment more, I will ask him what he understands to be the necessity of inserting the words "but this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined"? Why insert that clause? Is there anything in this proposed enactment that in any sense impairs the standard dollars heretofore coined? But if we insert those words, what is to become of the standard dollars hereafter coined under the Sherman act? By implication that clause of the act of 1890 would be impaired.

Mr. COCKRELL. There is no question in the world but that that clause is a very defective one. I am not pretending to vindicate or defend it; but the other is no less defective. If the Senator from Iowa had noticed the exact point I made, it was more upon the second part—"and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law."

Mr. ALLISON. That pledge is contained in the Sherman act, and is not proposed to be repealed. Why reinsert it?

Mr. COCKRELL. You propose to insert here a principle entirely different. In the last clause of the substitute you insert a different principle, as I hold, both from the Sherman law and from the House bill.

Mr. ALLISON. That may be a proper criticism.

Mr. COCKRELL. I will read it to the Senator and he will see. The House bill says:

> And the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

There is nothing in that language to the effect that the faith and credit of the United States are pledged to maintain the market, commercial, metallic value of 412½ grains weight of standard silver, 9 parts fine, as the equivalent of the full-fledged silver dollar, with legal-tender power in the payment of all debts, public and private, and as absolute money. Now, what does the amendment of the Senate Committee on Finance provide?

> And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals—

If it had stopped there it would have been all right—

> and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

In other words, that is a pledge to maintain the metal, demonetized, degraded, 412½ grains of silver, 9 parts fine, simply as a metal, without any function or right or privilege of coinage or of money upon a perfect equality with 25.8 grains of gold, whether coined or bullion, because gold in coin and in bullion has equal rights, equal power, and equal authority. Twenty-five and eight-tenths grains of gold, 9 parts fine, is a dollar just as absolutely as if it were coined. It has all the functions that the coin has. Therefore, gold as a metal is money. It is coined because you can take it to the mint and have it coined free of charge, or you can take it to a subtreasury and receive for it a gold certificate which is a legal tender in the payment of all debts, public or private.

Mr. ALDRICH. Gold certificates are not a legal tender.

Mr. COCKRELL. Gold certificates will get the gold, which is a legal tender. So it is the same thing practically. How is it with silver as a metal? As a metal, a commodity, merchandise, an article of trade and traffic, it is upon a perfect equality with iron and lead and zinc and copper and wheat and corn and oats and bacon. It occupies precisely the same position. It has not one solitary function or privilege or power of money that gold has. You can not take it to the mints and have it coined into anything. They will not touch it. You can not take it to a subtreasury and there get anything in lieu of it—a certificate, or anything else. You can only sell it as you would sell lead or as you would sell wheat or any other commodity. Now, it is an absolute impossibility for a mere metal of any kind which is a commodity, merchandise, to have the same power and be on an equality with coin of another metal. Gold is money. It has all the functions and privileges of money as a metal and as coin.

Mr. PEFFER. At this point I should like to ask the Senator a question.

Mr. COCKRELL. Certainly.

Mr. PEFFER. It may be important in the future discussion. I wish to inquire whether the Senator from Missouri desires to be understood as saying that gold simply as gold in its ordinary form as a metal is money, or whether it is money only after it has been coined into what the law describes as money?

Mr. COCKRELL. I understand the question of the Senator from Kansas, and it is a very important question. I will answer it. Gold metal is money practically, according to its value in coinage. Now, I will tell you why.

Mr. PEFFER. Then, if the Senator will permit me to ask him a still further question, I will put it in the form of a hypothecated case. Suppose I owe to the Senator from Missouri $10, and I take to him a piece of gold, standard but simple gold, can I compel him to accept that piece of gold in payment of the $10 debt?

Mr. COCKRELL. Oh, I know; as a matter of course not.

Mr. PEFFER. That is all.

Mr. COCKRELL. As a matter of course not. I was going on to explain why gold metal is money. That is the proposition. It is money in the United States because as a metal it has the functions and privileges of money. It has the right to be coined at the mints free of any charge to the holder. It has a right to be deposited in a subtreasury and a gold certificate issued in lieu of it, and that gold certificate gets from the Treasury a gold coin. Therefore, in all the transactions of business, where strict, legal technicality is not required, gold bullion is gold money. But when it comes to a legal, technical question as to what is legal tender in the discharge of a debt which the creditor is unwilling to accept and which the debtor tenders, then gold bullion would not answer as money.

Now, why is it money elsewhere? Gold bullion is money in London; it is money in England; it is money in Germany; it is money in France; it is money in nearly all the nations of the earth. Why? Because they give to it as a metal the same functions they give to it as a coin. They give it free coinage. It is there to be coined free of charge or exchanged for other metal already coined.

Therefore, I say that gold metal is money. It has the functions of money; it answers the purposes of money; its weight and fineness determine its value; and the value in the coin and in the metal is created by law.

Talk about the intrinsic value of gold. How will you estimate it? How will you estimate the intrinsic value of gold that was gathered in Mexico and South America and all over the world prior to the seventeenth century? How was it gathered? It was gathered by conquest and slavery. It was gathered by robbery and by war. In the acquisition of gold here upon the soil of America—North America and South America—thousands and millions of human beings were sacrificed in order that their golden trinkets might be taken and that they might be carried back as captives and as pledges to the European powers. Why talk about its intrinsic value? Nearly half the gold of the world that is now in existence or that was in existence at the beginning of the present century, was spoliation, robbery; and those who held it never expended one particle of labor in its production.

Talk about intrinsic value in gold! It has no more intrinsic value than lead—not a particle. Take away from gold the qualities and functions and privileges given it by law, and it would dwindle 75 per cent of its present value, at the very lowest calculation. Let the United States, let the nations of Europe, let the nations now giving gold money functions, take away from gold all the functions and privileges of money and prohibit its use as a money metal, and where would the intrinsic value of gold then be? I want some one to answer that question. Where would the intrinsic value of gold then be?

Mr. GRAY. Will the Senator permit me to ask him a question?

Mr. COCKRELL. I yield with pleasure to the Senator from Delaware.

Mr. GRAY. I take it to be true, as I have often heard it stated in the course of this debate, or read where I have not heard, that both gold and silver, and especially silver, have been in use as money and as a medium of exchange for a great many centuries. That is true, I believe?

Mr. COCKRELL. Oh, yes; for centuries before Christ.

Mr. GRAY. Abraham, I think, paid for the field of Machpelah with silver shekels. I ask the Senator from Missouri if that silver had no intrinsic value at that time, what gave it its value? Was there any law to give it value then?

Mr. COCKRELL. There was custom, which was law among the tribes then existing, which recognized it as money.

Mr. GRAY. What was the origin of that custom?

Mr. COCKRELL. Simply because it was convenient for use.

Mr. GRAY. Was it not because of the universal desire for the metal, either silver or gold—silver in that case?

Mr. PEFFER. Will the Senator from Missouri pardon me a moment?

Mr. COCKRELL. In one moment. It was what was considered a precious metal. It did not rot. It did not waste away like other metals in that respect. It was prettier to look at. It was more malleable. Therefore they gave it the functions of money. By common consent it was legal tender.

Mr. GRAY. If the Senator will pardon me, at that remote day there was no law creating silver, as the silver with which that field was paid for, money, but it did serve the purpose of buying that field, as the Senator has just said, because custom, that is, usage, the universal desire of mankind for that medium, had made it valuable.

Mr. COCKRELL. We do not know what the laws then were in regard to legal tender. The question of legal tender or the creation of money is a very interesting one. Those laws have have passed out of existence. All we know is that silver was treated as money, and it was its money use that gave it its value. That is what I say is true to-day. It is the money use for gold and silver that gives them their value. If you take away from gold its money use you take away from it 75 per cent of its value; and when we took away from silver its money use we took away its greater value. I now yield to the Senator from Kansas.

Mr. PEFFER. Mr. President, I wish to ask the Senator from Missouri, who seems to be very well informed upon this subject, whether it is not a fact that at the early period to which the Senator from Delaware referred, silver had not attained a generally recognized commercial value, put in the form of shekels; whether it is not true that when the purchase of the burying ground was made, the silver was weighed out, 400 shekels, and whether it was not stated at the time that it was current money with the merchants, that it had a commerical value, and that at a certain weight a shekel was current money with the merchants? I ask whether that is not the truth?

Mr. COCKRELL. Not exactly in the language the Senator uses, not simply as an article of commerce or as a commodity. It is true that silver was weighed, but that was to determine the amount. The silver was not then placed in blocks, nor was it in coins or disks, but was simply in bulk and had to be cut. Therefore it was weighed, and much of its value depended upon its purity. It was not used then simply as an article of commerce; it was not used as were iron and lead, except when they had monetary functions. Its value then was as a medium of exchange, and that was given to it by reason of its use as money. You can not go back in the history of the world to a time when the value of the precious metals did not depend upon their use as money.

Mr. ALLEN. Will the Senator from Missouri permit me to ask him to read a few paragraphs from the volume which I hold in my hand, which I think will be of interest in this discussion?

Mr. COCKRELL. My good friend from Nebraska asks me to read from Macleod on Elements of Economics. I shall read from page 230:

ON THE ERROR OF THE EXPRESSION INTRINSIC VALUE.

We must now say something about an expression which has been the source of enormous confusion in economics; which has especially obscured the comprehension of the subject of credit, and no progress can be made in the science until it is entirely exterminated.

All ancient writers clearly understood that the value of a thing is something external to itself, and we have not found in them any trace of such confusion of ideas as intrinsic value.

It is not easy to determine when the unfortunate expression "intrinsic value" came into use. But it arose in this way; When people thought about value, they looked to some quality of a thing as its value. They therefore gradually began to speak of intrinsic value. So long ago as 1696 an able writer, Barbon, pointed out the confusion which had arisen from mistaking the absolute qualities of an object for the quantity of things it would exchange for:

"There is nothing which troubles this controversy more than for want of distinguishing between value and virtue.

"Value is only the price of things; and that can never be certain, because it must be at all times and in all places of the same value. Therefore, nothing can have intrinsic value.

"But things have an intrinsic virtue in themselves, which in all places, have the same virtue; the loadstone to attract iron, and the several qualities that belong to herbs and drugs, some purgative, some diuretical, etc. But these things, though they may have great virtue, may be of small value or no price, according to the place where they are plenty or scarce; as the red nettle, though it be of excellent virtue to stop bleeding, yet here it is a weed of no value from its plenty. And so are spices and drugs in their own native soil of no value but as common shrubs and weeds, but with us of great value, and yet in both places of the same excellent intrinsic virtue.

* * *

"For things have no value in themselves; it is opinion and fashion brings them into use and gives them a value."

Barbon thus puts his finger on the very phrase which is the curse and the bane of economics at the present day—the expression intrinsic value—which is confounding an intrinsic quality with an external relation.

The following passage from Senior shows how easily able men are betrayed into this error. He says: "We have already stated that we used the word value in its popular (?) acceptation as signifying that quality in anything which fits it to be given and received in exchange, or, in other words, to be lent or sold, hired or purchased."

"So defined, value denotes a relation reciprocally existing between two objects."

Now, the quality of a melon which fits it to be sold is its agreeable flavor; its flavor, therefore, according to Senior, is its value, and so defined, he says it means that it costs 5 cents. That is, he defines the quality of a thing to be its price.

Smith, however, is the principal author of the confusion on this subject in modern times. As we have pointed out in a previous chapter, he begins by defining the value of a thing to be the thing it will exchange for; he then suddenly changes his idea of value to the quantity of labor expended upon obtaining the thing itself. Thus, the quantity of labor necessary to produce it came to be considered as the value of a thing, and then value came to be called intrinsic. This unhappy phrase, intrinsic value, meets us at every turn in economics; and yet the slightest reflection will show that to define value to be something external to a thing, and then to be constantly speaking of intrinsic value, are self-contradictory and inconsistent ideas. And it came to be held that labor is necessary to and is the cause of all value.

It is not the cost of production, it is not the intrinsic quality which gives to gold and silver the value they possess to-day. Take away from both metals all the rights, privileges, and powers with which the law invests them, and they would sink to a much lower level than any other minerals. I doubt whether they would be as high in value as nickel.

Mr. PALMER. I desire to ask the Senator a question to simplify this rather abstruse subject.

Mr. COCKRELL. Certainly.

Mr. PALMER. In the Senator's judgment, if gold and silver were deprived of their use as coins, would they sink to an equal market value? Is that what he means?

Mr. COCKRELL. I mean that if to-day gold were demonetized the world over, its purchasing power, its market and commercial value, or any other kind of value of which you may speak, aside from its value as money, would not be worth half what it is to-day.

Mr. PALMER. As compared to silver, what would the value of gold probably be?

Mr. COCKRELL. It would be as low as silver.

Mr. PALMER. That is the point upon which I wanted information from the Senator.

Mr. ALLEN. Gold would be lower than silver.

Mr. COCKRELL. That may be. It would certainly be as low as silver.

The idea of production having absolutely anything to do with the monetary value of the precious metals is a mistake, in my

judgment. The stock which was on hand at the beginning of the present century was principally obtained by bloodshed, robbery, and spoliation. There never was what we call free mining, practically, until about the time of the opening of the mines in California. Since that time the mines in the United States have been practically free. You can acquire the ownership of them and everything of the kind. In other countries the mines have been largely free; and the cost of production has something to do now with the value of gold, as has the cost of producing anything else.

But one thing has been demonstrated. Gold and silver are not like other commodities or metals. You can produce iron or lead or copper in unlimited quantities, beyond the capacity of the world to use for monetary purposes, but the history of the world, from the earliest ages to the present time, shows that gold and silver never have been produced in greater quantities than the business of the world demanded for monetary purposes. I challenge anyone to point to a solitary nation on the face of the earth, from the time Adam was driven out of the Garden of Eden up to this time, where gold and silver were in greater abundance than the business of the particular community demanded for monetary purposes. The Infinite Creator has distributed the precious metals in the bowels of the earth in such a manner that the labor of the entire world, devoted to their acquisition, can not bring them forth in greater abundance than the world can use for monetary purposes. They can not be produced in that way, though they may be produced at some time in greater abundance than at others.

All this discussion about the depreciation of silver relatively to gold only brings up afresh the same question which arose after the discovery of gold in California, when the cry was, "We are being flooded with gold: gold is depreciating in value relatively to silver," and the nations of the earth were warned against the overflow of gold. Even England was besought to change her standard from a single gold to a single silver standard, and Germany, one of the great nations of Europe—and I was astonished that the distinguished Senator from North Carolina [Mr. VANCE] did not note the fact to-day—demonetized gold and established a single silver standard. Germany established the single silver standard in 1857 because there was an overflow of gold, because the world was deluged with gold, and a single silver standard was also established by other nations of Europe. This was done because silver was much more valuable than gold at that time.

Now the cry is turned against silver, and the chances are that inside of thirty-five years, or one lifetime, from to-day gold may be more abundant than silver or silver much scarcer than gold. It is not fixed that the production will be in the same ratio for the next twenty-five or thirty years.

I wish it, however, to be distinctly understood that the value of the precious metals is given them by law. The functions and uses of money constitute their value to-day, and you can not separate that value from their mere commodity value.

Mr. President, I did not know when I commenced my remarks that the Senator from Oregon [Mr. DOLPH] desired to address the Senate, or I should not have said a word.

Mr. ALDRICH. I do not know that I quite understand the attitude, whatever it may be, of the Senator from Missouri [Mr. COCKRELL]. I understood him in advance to object to the substitute suggested by the Committee on Finance because he thought the language of the House bill was preferable. As I now understand him—and the distinguished Senator from Iowa [Mr. ALLISON] has very properly called attention to the fact—the language of the House bill would necessarily throw some doubt upon the status of silver hereafter to be coined.

I understand the Senator from Missouri now to say that the language of the House bill is defective; but his principal objection is to the substitution of the language used in the substitute proposed by the Senate committee for the language of the bill as it came from the House, and I understand him specially to object to these two provisions. He objects to the words, "equal intrinsic and exchangeable value;" and he objects, further on, to the provision at the top of the third page—

And the equal power of every dollar at all times in the markets and in the payment of debts.

Do I state the Senator from Missouri correctly when I say that he objects to that part of the provision reported by the committee?

Mr. COCKRELL. If the Senator wants me to answer whether I object to the detached sentences which he has read in order that he may undertake to get a little technical quibble upon me, I say no.

Mr. ALDRICH. Not at all. I wanted to know the Senator's position.

Mr. COCKRELL. I object to the proposition which undertakes to make the metal silver the equal of the money gold. That is the point I object to.

Mr. ALDRICH. The Senator read with considerable emphasis the portion of the amendment of the Committee on Finance which I have just read. I do not believe, in a general way, that it is desirable to incorporate into legislation the whole or any part of a party platform, and I do not consider myself the authoritative exponent of the Democratic platform adopted at Chicago. As I understand it, as explained by various Senators on the other side of the Chamber, the portion of that platform which relates to the silver question was in two parts. The Democratic party were pledged, first, to repeal the Sherman law; and, second, to the free coinage of both gold and silver under certain conditions. Now the Senator from Missouri and those who sympathize with him say that if the first part of the platform is to be carried out, the second part must also be carried out.

The language which the Senator from Missouri objects to so strenuously is taken *in hâc verba* from the second part of the Chicago platform; and the Senator not only finds himself quarreling with the first part, which proposes to repeal the Sherman law, but with every provision of the second part of that platform which the Senator from North Carolina [Mr. VANCE] and the Senator from Missouri have so ably defended upon this floor. I do not say that for this reason alone this declaration should be made. The Senator from Iowa, who sits in front of me [Mr. ALLISON], and I agree to the terms of this declaration, because it expresses our views upon the silver question and our opinion as to what is the duty and what should be the policy of the Government of the United States; but I suggest to my friend from Missouri, if he wishes to be understood, as my friend from North Carolina said, to be a Democrat, he ought to stand upon some part of the national Democratic platform, which has been so freely discussed in this Chamber.

Mr. COCKRELL. I knew that the distinguished gold monometallists on the Republican side of the Chamber were equal to almost any emergency in this world. I knew when this session began that they would assume the mastership and leadership of the Democratic party; that the distinguished Senator from Ohio [Mr. SHERMAN] would head the procession for the express purpose of bringing the Democratic party back to the place he left the country in 1873, on a single gold standard. It would be a glorious achievement for that distinguished statesman to be enabled to say that, after the lapse of twenty years, after one of the fiercest struggles the world has ever beheld, he had brought the dominant party down upon its knees upon his platform, and made them readopt what he had established in 1873.

That would be a plume in his crown. He is entitled to be the champion of the Republican party and its leader in the next contest if he succeeds in what he has undertaken; and I suppose the Republican party will succeed if the distinguished Senator from Rhode Island [Mr. ALDRICH], the Senator from Maine [Mr. HALE], the Senator from Ohio [Mr. SHERMAN], the Senator from Iowa [Mr. ALLISON], and others are permitted to tell us when we are Democrats and when we are not [laughter]; if they are to be permitted to tell us what is Democracy and what is not; if they are to be permitted to tell us what is our platform and what is not our platform. The Senator from Rhode Island need not be uneasy about my getting off the Democratic platform.

Mr. ALDRICH. The Senator is already off.

Mr. COCKRELL. Not at all. That question will not be determined by the protectionist, gold monometallist of Rhode Island. A better, a nobler, and a grander tribunal will determine that.

Mr. PALMER. I do not wish to interrupt the Senator from Missouri, but I should like to ask him a single question, with his consent.

Mr. COCKRELL. Certainly.

Mr. PALMER. I ask whether, if the word "intrinsic" were stricken from the amendment proposed by the committee, and the word "exchangeable" were retained, that would be satisfactory to him, according to his views of what is a sound financial policy?

Mr. COCKRELL. That would depend upon what the Senator meant and what he intended when he used the word "exchangeable." I can not say. The word is used in too many different senses for me to say that whatever interpretation my friend from Illinois should be disposed to give it would be satisfactory to me.

What I mean emphatically is this: That you must endow the two metals with the equal functions of money before they can ever be upon an equality. If to-day 412½ grains of silver metal, 9 parts fine, were in the markets of the world as a commodity, as merchandise, equal in value to 25.8 grains of gold or a coined gold dollar, and the United States should give to that silver metal the additional function and power of money, admit it to free coinage and make it a legal tender, then its metal value

would go above its coinage value, just as it has done time and again.

Mr. ALDRICH. Will the Senator allow me to ask him a single question?

Mr. COCKRELL. Certainly.

Mr. ALDRICH. I should like to know whether the Senator is in favor of coining both gold and silver into money of equal intrinsic and exchangeable value?

Mr. COCKRELL. That is not the technical question. I had not gotten through with the Senator as the leader of the Democratic party. [Laughter.] That is a nice position; it is admirable; and I think the world must stand aghast in wonder and admiration when they behold the scenes transpiring in the Senate, when they behold the Senator from Rhode Island, the Senator from Ohio, and other distinguished Republican Senators placing themselves in the front ranks, with plumes upon their heads, as leaders of the Democratic party and defenders of its platform and its Administration, and then one after the other turning somersaults following the distinguished Senator from Ohio to see which of them can first get to the unconditional repeal of their own iniquitous and infamous legislation. I denounced that legislation upon the floor of the Senate in 1890, and pointed out to Senators exactly what would be its result.

I told you then how the law would be construed, but not one of you then dared to get up and say that my interpretation of that law was just or proper. Oh, no; I was denounced for misconstruing the law. You all said my construction was not just, that the law could not be interpreted in that way, that it could not be treated as I said it would be, and yet it was so treated. You said it was a panacea for all the ills to which human flesh was heir; you complimented it in your platform; you said it was a blessing which the country had received; and I hold in my hand that beautiful little campaign document, which was in the pockets and the hands of every little Republican speaker throughout the length and breadth of this land. It was used in all the little school houses. Here it is. It went out with the sanction of the national Republican committee, and it told of the glorious achievements of the Republican party in power. Let me read from it:

The national platform upon which this Republican Congress was chosen, and which it was therefore commissioned by the people to execute, declared in favor of these reforms:

First. A Federal election law.
Second. Tariff revision in conformity with the policy of protection.
Third. The restoration of silver to its money uses."

"The restoration of silver to its money uses!"

Mr. ALDRICH rose.

Mr. COCKRELL. The Senator will please wait a few minutes until I get through. I want him to have an unbroken dose, and not take the medicine in broken doses.

Mr. ALDRICH. I wish the Senator from Missouri would answer my question.

Mr. COCKRELL. It proceeds—

Fourth. Just pension legislation.

The Senator can not digest it if he gets it in little broken doses. It might affect him very seriously. He may be able to take it all at once.

Fifth. The revival of the American merchant marine, etc.

These are the principal points, and it goes on to elaborate them:

The grand old party.
It is true to the flag.
Prosperity assured.

The McKinley bill—its motive and effect.
It surrounds the farmer with sure guarantees of better times.
It assures the mechanic of more work and higher wages.

But I want to get to the silver part of it. Here was the old star-spangled banner unfurled and the grand old party inscribed upon it:

It is true to the flag.
Silver at $1.20.
Its money uses are fully restored by Republican action.
The United States Treasury richer by $90,238,000 by silver's rise.

What is that? The United States Treasury richer by the rise in the price of silver. The same gentlemen who paraded that before the people of the United States are talking about the loss to the taxpayers by the depreciation of silver. "Consistency, thou art a jewel."

Mr. PEFFER. I should like to inquire of the Senator from Missouri whether the document from which he is reading was sent out as a public document to the people?

Mr. COCKRELL. It was sent all over the country.

Mr. PEFFER. Under the frank of any public officer?

Mr. COCKRELL. I do not know whether it was sent out franked or not. I can not say as to that.

Mr. ALLISON. That could not be.

Mr. HARRIS. What is the document?

Mr. COCKRELL. The little Republican campaign book which epitomizes and summarizes everything and which was put in the hands of all the stump speakers throughout the country, that they might be informed as to all the catch phrases.

All American cereals have grown in value, too.

Oh, yes, wheat ran up. Where is it now?

And, as usual, the Democracy obstructed.

In its last national platform the Republican party declared this doctrine:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

In conformity with this pledge, the Republican Congress has passed, against the unanimous opposition of Democratic members, a silver bill, than which there has been no more useful and inspiring act since the resumption of specie payments—

Let the Senator from Rhode Island think of that—

no more useful and inspiring act since the resumption of specie payments. It provides, in brief, that the Secretary of the Treasury shall purchase 4,500,000 ounces of silver per month, at the market price, and issue in payment therefor legal-tender Treasury notes, redeemable in coin. This affords an annual increase in money of over $60,000,000. The Democratic-Bland act, under which the value of silver fell to the lowest figure it has ever reached, and the value of farm products to figures shockingly disastrous, afforded an annual increase of $24,000,000. But this money was of doubtful reputation. It was money that was good to-day and bad to-morrow. The money provided by the present Republican Congress is as good, and must in all circumstances remain as good, as any money the world has ever seen.

Yet you come and tell us now that your iniquitous measure has caused the present depression, you confess before the world that you are responsible for the present depression, that you are responsible by your legislation for the loss of confidence on the part of the people of the United States, and for the panic; do you not?

Mr. GRAY. I wish to ask the Senator whether the silver plank in the Republican platform of 1888 is in the pamphlet from which he is reading? I should like the Senator to read it, if he has it.

Mr. COCKRELL. I understand this pamphlet refers to that. I had the platforms of all the political parties on my desk yesterday, but forgot to bring them from home this morning. I shall not do so any more, because I may need them. [Laughter.] I remember the Republican platform of 1888 charged the Democratic party also with attempting to demonetize silver.

Mr. ALDRICH. My friend from Missouri evidently needs at his desk a copy of the last Democratic platform adopted at Chicago.

Mr. COCKRELL. Oh, I have that. But I was going back to the platform of 1888. I have a part of it, but not the whole of it.

Mr. GRAY. I hope the Senator will read it again.

Mr. COCKRELL. It reads:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

Mr. ALDRICH. I understand my friend from Missouri is now joining in a crusade of that kind. I understand that is exactly the position taken by him; that the same Democratic Administration is engaged in an attempt to demonetize silver.

Mr. COCKRELL. Not at all.

Mr. ALDRICH. It is the same thing exactly.

Mr. COCKRELL. Not at all.

Mr. VOORHEES. Will the Senator from Missouri yield to me?

Mr. COCKRELL. In a moment. I merely wish to say in conclusion to my good friends on the other side of the Chamber, do not make yourselves quite so conspicuous in the front ranks of this procession for the repeal of your own infamous act. [Laughter.]

Mr. VOORHEES. I move that the Senate proceed to the consideration of executive business.

Mr. PEFFER. Will the Senator from Indiana withdraw his motion long enough to enable me to offer an amendment, so that it may be printed?

Mr. VOORHEES. Yes, sir.

Mr. PEFFER. I propose an amendment to the pending bill to be inserted at the end of what may be properly called the first section, the legislative feature of the bill, and following in between that and what I call the platform attachment.

Mr. VOORHEES. Let the amendment be printed.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The amendment intended to be proposed by the Senator from Kansas will be printed in the absence of objection.

Mr. HARRIS. And lie upon the table.

The PRESIDING OFFICER. And lie upon the table.

Mr. HANSBROUGH. I desire to offer an amendment to the pending bill, which I ask may be printed.

The PRESIDING OFFICER. In the absence of objection, the amendment will be ordered to lie on the table and be printed.

EXECUTIVE SESSION.

Mr. VOORHEES. I now renew my motion that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After twenty minutes spent in executive session the doors were reopened, and (at 3 o'clock and 45 minutes p. m.) the Senate adjourned until to-morrow, Saturday, September 2, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate September 1, 1893.

CHIEF JUSTICE, OKLAHOMA.

Frank Dale, of Oklahoma Territory, to be chief justice of the supreme court of the Territory of Oklahoma, vice Edward B. Green, to be removed.

ASSOCIATE JUSTICE, OKLAHOMA.

Henry W. Scott, of Oklahoma Territory, to be associate justice of the supreme court of the Territory of Oklahoma, vice Frank Dale, nominated to be chief justice of said court.

SECRETARY OF NEW MEXICO.

Lorion Miller, of Albuquerque, N. Mex., to be secretary of New Mexico, vice Silas Alexander, to be removed.

COLLECTORS OF INTERNAL REVENUE.

Ben Johnson, of Kentucky, to be collector of internal revenue for the fifth district of Kentucky, to succeed Albert Scott, resigned.

Richard B. Morris, of Kansas, to be collector of internal revenue for the district of Kansas, to succeed Cyrus Leland, jr., removed.

James W. Murphy, of Wisconsin, to be collector of internal revenue for the first district of Wisconsin, to succeed Henry Fink, resigned.

Albert L. New, of Colorado, to be collector of internal revenue for the district of Colorado, to succeed J. M. Freeman, resigned.

James E. North, of Nebraska, to be collector of internal revenue for the district of Nebraska, to succeed John Peters, resigned.

Joshua D. Powers, of Kentucky, to be collector of internal revenue for the second district of Kentucky, to succeed John Feland, resigned.

Charles H. Rodes, of Kentucky, to be collector of internal revenue for the eighth district of Kentucky, to succeed A. R. Burnam, resigned.

Murray Vandiver, of Maryland, to be collector of internal revenue for the district of Maryland, to succeed F. Snowden Hill, resigned.

COLLECTORS OF CUSTOMS.

Thomas J. Black, of Oregon, to be collector of customs for the district of Willamette, in the State of Oregon, to succeed James Lotan, removed.

Benjamin P. Moore, of New York, to be collector of customs for the district of Alaska, in the Territory of Alaska, to succeed Edwin T. Hatch, removed.

August Ross, of Wisconsin, to be collector of customs for the district of Milwaukee, in the State of Wisconsin, to succeed Jerome A. Watrous, removed.

James C. Saunders, of Washington, to be collector of customs for the district of Puget Sound, in the State of Washington, to succeed Andrew Wasson, removed.

Charles M. Wallace, of Virginia, to be collector of customs for the district of Richmond, in the State of Virginia, to succeed John W. Fisher, resigned.

Samuel F. Webb, of Arizona, to be collector of customs for the district of Arizona, in the Territory of Arizona, to succeed George Christ, removed.

SPECIAL EXAMINER OF DRUGS, ETC.

Erasmus D. Fenner, of Louisiana, to be special examiner of drugs, medicines, and chemicals in the district of New Orleans, in the State of Louisiana, to succeed David M. Lines, removed.

NAVAL OFFICER OF CUSTOMS.

Jeff B. Snyder, of Louisiana, to be naval officer of customs for the district of New Orleans, in the State of Louisiana, to succeed John F. Patty, removed.

SURVEYOR OF CUSTOMS.

S. D. Ellis, of Louisiana, to be surveyor of customs for the port of New Orleans, in the State of Louisiana, to succeed William L. McMillan, removed.

Felix G. Rudolph, of Kentucky, to be surveyor of customs for the port of Paducah, in the State of Kentucky, to succeed John R. Puryear, resigned.

REGISTERS OF LAND OFFICES.

Frank P. Alexander, of Greenville, Tex., to be register of the land office at Alva, in Oklahoma Territory, a newly established office.

Wilson M. Hammock, of Hartsville, Tenn., to be register of the land office at Woodward, in Oklahoma Territory, a newly established office.

James E. Malone, of Juneau, Wis., to be register of the land office at Perry, in Oklahoma Territory, a newly established office.

Robert W. Patterson, of Macon, Ga., to be register of the land office at Enid, in Oklahoma Territory, a newly established office.

Edward Phillips, of Natchitoches, La., to be register of the land office at Natchitoches, La., vice Louis Dupleix, to be removed.

RECEIVERS OF PUBLIC MONEYS.

Robert H. Allen, of Iuka, Miss., to be receiver of public moneys at Alva, in Oklahoma Territory, a newly established office.

John J. S. Hassler, of Forest City, S. Dak., to be receiver of public moneys at Enid, in Oklahoma Territory, a newly established office.

Joseph H. King, of Anniston, Ala., to be receiver of public moneys at Perry, in Oklahoma Territory, a newly established office.

David H. Patton, of Remington, Ind., to be receiver of public moneys at Woodward, in Oklahoma Territory, a newly established office.

INDIAN AGENTS.

Robert M. Allen, of Marion, Ill., to be agent for the Indians of the White Earth Agency, in Minnesota, vice Charles A. Ruffee, to be removed.

Peter Couchman, of Le Beau, S. Dak., to be agent for the Indians of the Forest City Agency, in South Dakota, vice Frank Lillibridge, to be removed.

Beal Gaither, of Toledo, Oregon, to be agent for the Indians of Siletz Agency, in Oregon, vice T. J. Buford, to be removed.

James A. Smith, of Jackson, Miss., to be agent for the Indians of the Yankton Agency, in South Dakota, vice Everett W. Foster, to be removed.

Edward L. Thomas, of Kiowa, Ind. T., to be agent for the Indians of the Sac and Fox Agency, in Oklahoma Territory, vice Samuel L. Patrick, to be removed.

Henry E. Williamson, of Fort Smith, Ark., to be agent for the Indians of the Quapaw Agency, in the Indian Territory, vice Thomas J. Moore, to be removed.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 29, 1893.

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY.

Thomas L. Thompson, of Santa Rosa, Cal., to be envoy extraordinary and minister plenipotentiary of the United States to Brazil.

CONSULS.

Samuel Thanhouser, of Atlanta, Ga., to be consul of the United States at Matamoras, Mexico.

Marshall P. Thatcher, of Detroit, Mich., to be consul of the United States at Windsor, Ontario.

Charles Schaefer, of Sedgwick, Kans., to be consul of the United States at Vera Cruz, Mexico.

Charles H. Benedict, of St. Paul, Minn., to be consul of the United States at Cape Town, Africa.

George W. Bell, of South Bend, Wash., to be consul of the United States at Sydney, New South Wales.

Frank H. Brooks, of Chicago, Ill., to be consul of the United States at Trieste, Austria.

Anthony Howells, of Massillon, Ohio, to be consul of the United States at Cardiff, Wales.

James A. Demorest, of Plainfield, N. J., to be consul of the United States at Brockville, Canada.

George Horton, of Chicago, Ill., to be consul of the United States at Athens, Greece.

Frederick W. Kickbusch, of Wausau, Wis., to be consul of the United States at Stettin, Germany.

William F. Kemmler, of Columbus, Ohio, to be consul of the United States at Horgen, Switzerland.

Harvey Johnson, of Atlanta, Ga., to be consul of the United States at Antwerp, Belgium.

George W. Savage, of Rahway, N. J., to be consul of the United States at Dundee, Scotland.

Lars S. Reque, of Decorah, Iowa, to be consul of the United States at Rotterdam, Netherlands.

John Patton, of Detroit, Mich., to be consul of the United States at Amherstburg, Ontario.

Bennington R. Bedle, of Jersey City, N. J., to be consul of the United States at Sheffield, England.

Otto H. Boyesen, of Grand Forks, N. Dak., to be consul of the United States at Gothenburg, Sweden.

CONSULS-GENERAL.

Victor Vifquain, of Lincoln, Nebr., to be consul-general of the United States at Panama, Colombia.

Joseph G. Donnelly, of Milwaukee, Wis., to be consul-general of the United States at Nuevo Laredo, Mexico.

Wendell A. Anderson, of Lacrosse, Wis., to be consul-general of the United States at Montreal, Canada.

Irving B. Richman, of Muscatine, Iowa, to be consul-general of the United States at St. Gall, Switzerland.

Daniel W. Maratta, of Fargo, N. Dak., to be consul-general of the United States at Melbourne, Australia.

Alfred D. Jones, of Raleigh, N. C., to be consul-general of the United States at Shanghai, China.

PROMOTIONS IN THE REVENUE-CUTTER SERVICE.

First Assistant Engineer Edward F. Hedden, to be chief engineer in the Revenue-Cutter Service.

Second Assistant Engineer Eugenious A. Jack, to be first assistant engineer in the Revenue-Cutter Service.

APPOINTMENT IN THE REVENUE-CUTTER SERVICE.

William E. Maccoum, of Maryland, to be a second assistant engineer in the Revenue-Cutter Service.

CHIEF JUSTICE OF ARIZONA TERRITORY.

Albert C. Baker, of Arizona Territory, to be chief justice of the supreme court of the Territory of Arizona.

ASSOCIATE JUSTICE OF ARIZONA TERRITORY.

Owen T. Rouse, of Arizona Territory, to be associate justice of the supreme court of the Territory of Arizona.

ASSOCIATE JUSTICE OF UTAH TERRITORY.

Harvey W. Smith, of Utah Territory, to be associate justice of the supreme court of the Territory of Utah.

SOLICITOR OF INTERNAL REVENUE.

Robert T. Hough, of Ohio, to be solicitor of internal revenue.

REGISTER OF THE LAND OFFICE.

Edward G. Spilman, of Huntington, W. Va., to be register of the land office at Kingfisher, in Oklahoma Territory.

MARSHALS.

Nat M. Brigham, of Utah Territory, to be marshal of the United States for the Territory of Utah.

Edward L. Hall, of New Mexico, to be marshal of the United States for the Territory of New Mexico.

Hewson E. Lannan, of Delaware, to be marshal of the United States for the district of Delaware.

William K. Meade, of Arizona Territory, to be marshal of the United States for the Territory of Arizona.

UNITED STATES ATTORNEYS.

William H. Brinker, of Washington, to be attorney of the United States for the district of Washington.

John W. Judd, of Utah Territory, to be attorney of the United States for the Territory of Utah.

William Perry Murphy, of South Carolina, to be attorney of the United States for the district of South Carolina.

Everett E. Ellinwood, of Arizona Territory, to be attorney of the United States for the Territory of Arizona.

COMMISSIONER OF CUSTOMS.

William H. Pugh, of Ohio, to be commissioner of customs.

COLLECTORS OF CUSTOMS.

Thomas M. Crocker, of Michigan, to be collector of customs for the district of Huron, in the State of Michigan.

Theodore R. Lore, of New Jersey, to be collector of customs for the district of Bridgeton, in the State of New Jersey.

INDIAN INSPECTOR.

John W. Cadman, of Jackson, Mich., to be an Indian inspector.

INDIAN AGENT.

Ralph Hall, of Carrington, N. Dak., to be agent for the Indians of the Devils Lake Agency in North Dakota.

POSTMASTER.

Thomas B. Garrett to be postmaster at Fort Smith, in the county of Sebastian and State of Arkansas.

HOUSE OF REPRESENTATIVES.

FRIDAY, *September 1, 1893.*

The House met at 12 o'clock m. Prayer by Rev. ISAAC W. CANTER, of Washington, D. C.

The Journal of the proceedings of yesterday was read and approved.

EXPLANATION OF A PAIR.

Mr. CAMPBELL. Mr. Speaker, I rise to a question of personal privilege.

The SPEAKER. The gentleman will state it.

Mr. CAMPBELL. I desire to make a brief statement in reference to my pair and the vote taken on yesterday. I am paired with my colleague from New York [Mr. BELDEN], but there is some misunderstanding as to the matter, and on yesterday I refrained from voting on a ground that I was not sure was correct at the time. I understand since that my colleague [Mr. BELDEN] would vote in the same way I should have voted on that question. I should have voted against the amendments both of the gentleman from Illinois [Mr. SPRINGER] and that of the gentleman from Texas [Mr. KILGORE].

I desire to make this explanation in justice not only to the House and my constituents, but to the people at large.

LEAVE OF ABSENCE.

By unanimous consent, indefinite leave of absence was granted to Mr. BLAND on account of sickness in his family.

EULOGIES ON THE LATE REPRESENTATIVE CHIPMAN.

Mr. WEADOCK. Mr. Speaker, I desire to offer, by consent, at this time a resolution with reference to the order of business fixed for to-morrow.

The SPEAKER. The resolution will be read.

The Clerk read as follows:

Resolved, That the special order for 2 o'clock Saturday, September 2, be postponed to Friday, September 15, 1893, at the same hour.

The SPEAKER. The Chair will state that this order refers to the eulogies on our deceased brother, Judge Chipman.

Mr. REED. What is the date?

The SPEAKER. Friday, September 15.

Mr. REED. We have reason to believe that the country indulges great hopes that it may be relieved of us entirely by that time. [Laughter.]

The SPEAKER. Of course, if the House is not in session at the time the order will fail.

There being no objection, the resolution was considered and agreed to.

ASSISTANT CLERK, COMMITTEE ON NAVAL AFFAIRS.

Mr. CUMMINGS, by unanimous consent, submitted a resolution providing for an assistant clerk to the Committee on Naval Affairs; which was referred to the Committee on Accounts.

YELLOWSTONE NATIONAL PARK.

Mr. HARTMAN. Mr. Speaker, I ask unanimous consent to introduce a bill, which I ask to have referred to the Committee on Irrigation of Arid Lands.

The SPEAKER. The gentleman from Montana [Mr. HARTMAN] asks unanimous consent to introduce a bill the title of which will be read by the Clerk.

The Clerk read as follows:

A bill (H. R. 7) to establish the boundaries of the Yellowstone National Park, and for other purposes.

The SPEAKER. The gentleman from Montana asks unanimous consent that this bill be referred to the Committee on Arid Lands. Is there objection?

Mr. DINGLEY. Is that the committee to which such a subject should go?

Mr. HARTMAN. I will simply state that my reason for asking that it be sent to the Committee on Arid Lands is, that I am a member of that committee, and can personally give it more attention if it is referred to that committee than I could if it was referred to another committee.

The SPEAKER. Under the ordinary rule of the House, proposed to be adopted, this bill would go to the Committee on Public Lands.

Mr. DINGLEY. I personally feel considerable interest in maintaining the boundaries of the Yellowstone National Park.

Mr. HARTMAN. I will say to the gentleman from Maine that the purpose of this bill is to define and protect those boundaries.

Mr. DOCKERY. I think this bill should take the usual course.

The SPEAKER. Objection is made; and unless there be objection to the bill taking the course suggested, it will be referred to the Committee on Public Lands.

There was no objection.

THE LATE HON. JOHN G. WARWICK.

Mr. OUTHWAITE. I wish to introduce a resolution for reference.

The SPEAKER. The gentleman from Ohio asks unanimous consent to introduce a bill for reference, the title of which will be read by the Clerk.

The Clerk read as follows:

Resolution providing for the printing of eulogies on the late Hon. John G. Warwick.

The SPEAKER. Without objection this will be referred to the Committee on Printing.

Mr. LIVINGSTON. I demand the regular order.

THE RULES.

The SPEAKER. The regular order is demanded, which is the consideration of the proposed rules. The previous question has been ordered on the pending amendment offered by the gentleman from Louisiana [Mr. BOATNER], which amendment the Clerk will report.

The Clerk read as follows:

Amend paragraph 57, Rule XI, by adding: "And when the chairman of a committee, or any member of the House having a bill or report in charge which is under consideration, and upon which general debate has proceeded for two hours or more, moves the previous question on a pending amendment, or engrossment, third reading, or final passage of the bill, the Speaker shall submit the question to the House without entertaining any motion against the same. If the motion is agreed to the question shall then be put on the proposition or propositions to which the motion for the previous question applied, and no motion shall be entertained against the same except one motion to recommit, with or without instructions; which motion shall be decided without debate.

The SPEAKER. The question is upon agreeing to this amendment.

The question being taken, the Speaker announced that the noes seemed to have it.

On a division (demanded by Mr. BOATNER) there were—ayes 75, noes 107.

Mr. BOATNER. I demand the yeas and nays.

The yeas and nays were ordered.

Mr. SMITH of Illinois. I ask to have the amendment again reported. In the confusion on this side of the House we could not hear it.

The amendment was again read.

The question was taken; and there were—yeas 96, nays 131, not voting 126; as follows:

YEAS—96.

So the amendment was rejected.

Mr. BUNN. Mr. Speaker, I desire to say I am paired with the gentleman from Nebraska [Mr. BRYAN]. Were he present he would vote "aye," and I would vote "no."

Mr. MORSE. Mr. Speaker, I desire to say that upon this question I am paired with my colleague [Mr. MCETTRICK]. If he were present he would vote "no," and I would vote "aye."

The following pairs were announced:

Until further notice:

Mr. MARSHALL with Mr. HICKS.

Mr. GOODNIGHT with Mr. BURROWS.

Mr. CAPEHART with Mr. BROSIUS.

Mr. STEVENS with Mr. RANDALL.

Mr. TALBOTT of Maryland with Mr. COOPER of Wisconsin.

Mr. MCGUIRE with Mr. HEINER.

Mr. RUSK with Mr. AITKEN.

Mr. MAGNER with Mr. CHICKERING.

Mr. COCKRAN with Mr. SHERMAN.

Mr. SHELL with Mr. MARSH.

Mr. BRANCH with Mr. SETTLE.

Mr. GRAHAM with Mr. LINTON.

Mr. HATCH with Mr. HARMER.

Mr. ENLOE with Mr. BOUTELLE.

Mr. LOCKWOOD with Mr. VAN VOORHIS of New York.

Mr. EDMUNDS with Mr. LOUDENSLAGER.

Mr. DUNPHY with Mr. WEVER.

Mr. TUCKER with Mr. RUSSELL of Connecticut.

Mr. PENDLETON of West Virginia with Mr. PAYNE, until Monday next.

Mr. MCETTRICK with Mr. MORSE, until Wednesday next.

Mr. JONES with Mr. SCRANTON, until Thursday next.

For this day:

Mr. SOMERS with Mr. BELDEN.

Mr. OATES with Mr. HITT.

Mr. ELLIS of Kentucky with Mr. WALKER.

Mr. CRAIN with Mr. O'NEILL of Pennsylvania.

Mr. COOMBS with Mr. SWEET.

Mr. O'NEIL of Massachusetts with Mr. COGSWELL.

Mr. BRYAN with Mr. BUNN on the pending question.

The result of the vote was then announced as above recorded.

Mr. GROSVENOR. Mr. Speaker, I offer an amendment to come in at the end of clause 57.

The Clerk read as follows:

Provided, That the authority thus given shall not entitle the Banking and Currency Committee to be privileged to report a bill to repeal existing legislation relating to the tax on State bank circulation only at such time as the committee is authorized to report bills under the general rules of the House.

Mr. GROSVENOR. Mr. Speaker, the House on yesterday——

Mr. SPRINGER. I reserve a point of order on that.

The SPEAKER. The gentleman can not reserve a point of order on that. He must state his point of order now.

Mr. SPRINGER. I make the point of order that the proposition is in conflict with the previous action of the House, and that we can not recur to the previous action without unanimous consent. It is an amendment to an amendment already agreed to and passed, and would only be in order at the time the other

amendment was pending. It changes entirely the provision of the rule as already agreed to.

Mr. DINGLEY. We have not finished this paragraph.

Mr. SPRINGER. We have passed that part of it. The proposition was only in order when the subject was before the House, and if it were in order now we could never complete the consideration of the rules. In my opinion the amendment could only be entertained as an amendment to the amendment, which has already been agreed to.

The SPEAKER. It seems to the Chair that this is a proviso that is proposed to be added. The Chair does not see why it should not be in order, as the House has not passed from the paragraph. The Chair overrules the point of order.

Mr. GROSVENOR. Mr. Speaker, I only want to say to the House that the vote on yesterday, which was a yea-and-nay vote, resulted in giving to the Committee on Banking and Currency a power which I, for one, am not willing they should have, and which will, in my judgment, be construed everywhere as being an expression of the House upon the question of the passage of a bill to repeal the tax upon the circulation of State banks. It is an unheard-of power; that is to say, it is putting a privilege into the hands of this committee which has not been customary, at a time when their jurisdiction will extend to this especial legislation.

Now, I am not anxious to know how the House stands on this question, but I am anxious that those who are opposed to this repeal shall not in this way put themselves upon record apparently in favor of bestowing this unusual power, at an unusual time, to an unusual committee. I suppose, or assume, that a great many votes were cast in favor of that innovation as a sort of attack upon the Committee on Rules; but the student of the record of Congress will not understand that there has been a little tendency here to break into the report of the Committee on Rules; and there can be no possible explanation of the vote on yesterday it seems to me, excepting that one thing alone, or else that the House was inadvertent or indifferent at the time.

It may be that it happened, sir, much as the successful attack upon the option bill by the gentleman from Texas [Mr. KILGORE] was worked out. I do not think that the House really expressed its opinion that the option bill ought to go to the Committee on Ways and Means and ought not to go to the committee that had so long cared for it and so earnestly supported it until it had become almost the foster-child of the Committee on Agriculture.

Mr. HOPKINS of Illinois. Will you allow me?

Mr. GROSVENOR. I will allow you anything.

Mr. HOPKINS of Illinois. In reference to the rule adopted in the amendment you speak of, that was engrafted upon the rules by the amendment of the gentleman from Texas, is it not still within the power of the House, when the option bill is presented here, by a vote of the House to have it referred to the Committee on Agriculture and give that committee full jurisdiction.

Mr. GROSVENOR. I suppose, as a matter of technical right, the House has the right by a proper proceeding to revolutionize its rules one by one; but, nevertheless, the country and the intelligent observer will understand all these movements to mean something, and not that the House is going stumbling along and happening on and doing things that they do not mean anything by.

I do not care about the option bill; I do not know that I am on either side of it; I do not care whether it go up or down; and I do not care whether it goes to the Committee on Commerce or to the Committee for the Suppression of the Alcoholic Liquor Traffic; but I insist just this far: That when you do a thing which is out of the usual custom of the House it will be attributed, justly and properly attributed, to a purpose. I know of no other legislation that is of possible importance that the Committee on Banking and Currency should report at any time unless it be to carry out the Democratic platform, to repeal the tax on State-bank circulation.

That is a branch of the Democratic policy. It is not supported by the entire Democratic party, but it is a cardinal feature and tenet of the platform of the Democratic party adopted at Chicago. And I am not willing that by mere sheer inadvertence, as I believe, that this extraordinary power shall be given to this committee upon a proposition of this character. That is the reason I offer this amendment, Mr. Speaker.

[Cries of "Vote!"]

Mr. CANNON of Illinois. Mr. Speaker, I want the indulgence of the House for a moment. I voted for this amendment to the rule yesterday, stating at the time my reason for so doing. The Committee on Banking and Currency at this time, during this session of Congress, is intrusted with legislation, or the preparation of legislation, for report and consideration to the House of very great importance.

I think I need but state the proposition to have everybody assent to it. Our Democratic friends have a large majority in this House, and have come into power upon a platform that pledges them, among other things, to repeal the tax upon State-bank circulation. Whether they will do it or not I do not know. Whether they will stand by their platform I do not know. I hope they will not, and for one I shall not assist, by vote or otherwise, to enable them to do it. But if, in carrying out the pledges by which they got power, they stand by their obligations and do that to which their platform pledges them, I certainly am not to blame.

My friend from Ohio can not put the blame upon me, nor can he assume it himself, unless he votes for it when the time comes. The fault was in giving the Democrats power under that and other pledges. But there is much important legislation outside of the repeal of this tax which will have to be disposed of. For instance, there is the matter of providing an increase of the circulation of the national banks to the par value of the bonds, and various other important matters. Now, I do not believe the action yesterday was misunderstood. I submit to the gentleman from Ohio that it is an unusual thing to pick out a single measure and except it from the operation of a rule, and, as an original proposition, without the suggestion of the gentleman from Ohio, I certainly would not assent to it.

There can not be sufficient consideration given to this subject if there is to be a test vote here and now. I would cheerfully vote for an amendment, if the gentleman pleases, upon the same ground, prohibiting the Ways and Means Committee from having the right of way for any proposition to repeal the existing laws to raise revenue; but that would of course bring up the whole tariff question. I think such legislation would be a mistake akin to a crime, in the present condition of the country. Still, if the gentleman is going to insist upon his amendment, why not also let us have an amendment raising the question whether the Ways and Means Committee is to have the right of way here for the consideration of such legislation as I have suggested.

Mr. GROSVENOR. Just one word in reply, Mr. Speaker. The Ways and Means Committee from time immemorial has had the right of way to report legislation touching the revenues. There is nothing unusual or special in that provision, which we all agree is a proper one. The gentleman from Illinois and myself stand exactly together. If this proviso goes into the rules, this other legislation, whatever it may be, will come up as a matter of privilege, and I think yet that we ought not to place ourselves in the attitude of promoting or facilitating, by our vote, the right of the Committee on Banking and Currency to introduce the special legislation I have indicated whenever they see fit.

Mr. CANNON. If the vote upon my friend's amendment is to be a test vote committing members for or against the repeal of the tax upon State-bank circulation, I ask him whether he thinks it is fair to present the question in that way to a great many Republicans who are absent and who have had no idea of its being presented in that way? There is but one opinion on this side of the House on that subject. If the gentleman thinks it is of enough importance to "smoke out" the other side of the House on this question and get them to assent that this is a test vote upon the proposition, I have no objection.

Mr. GROSVENOR. Mr. Speaker, I do not insist that it is to be a test vote on any question; but I answer the gentleman in this way. The danger is that negligence will be attributed to us in permitting this rule to be adopted without an expression. A vote in favor of this proviso simply places this question where it is ordinarily placed by the rules of the House; simply says that we will not make an innovation upon the usual law and custom of the House in favor of this particular measure, which is a matter of political significance in the country.

Mr. CANNON of Illinois. A sufficient reply to the gentleman is this, I think—at least sufficient for myself—that the Committee on Banking and Currency is charged with the preparation of legislation not second in importance to that intrusted to any other committee of the House, unless it be the Committee on Ways and Means; and, this being the case, I think it would be proper that the committee should have the right to report at any time.

Mr. GROSVENOR. Then let it go over until the next Congress, with the suggestions, and not do it at this time.

Mr. CANNON of Illinois. Oh, for that matter, I would be willing to pass the appropriation bills for the coming fiscal year by a single resolution simply extending the appropriations of last year, and then to return home and let the country realize there is to be no change in the revenue laws.

Mr. GROSVENOR. I fear the gentleman would not find money enough in the Treasury to pay the appropriations voted by that sort of a resolution.

Mr. JOHNSON of Indiana. Mr. Speaker, inasmuch as I

have the honor to be one of the members of the Committee on Banking and Currency, and insomuch as I voted in favor of the amendment offered yesterday giving to that committee the right to report at any time, I trust I may be allowed to submit a very few remarks in reply to the gentleman from Ohio [Mr. GROSVENOR]. I do not think there is anything in the amendment adopted yesterday enlarging the powers of the Committee on Banking and Currency to warrant the belief that the committee intends to report at an early day a bill to repeal the tax on State-bank circulation, nor do I believe that the country will draw any such inference from the action of the House. It may never report such a bill.

Mr. GROSVENOR. It has already been drawn.

Mr. JOHNSON of Indiana. You might as well infer that the committee intends at an early day to report a bill allowing the national banks to issue notes up to the par value of their bonds, or that it intends to report at an early day some bill making a revision of the national-banking system, retaining the advantages of that system, to wit, a safe and uniform currency, and at the same time eliminating some of the evils of the system.

The long and the short of it, Mr. Speaker, as I understand, is that this committee has at this session been vested with the right to report at any time, because, by reason of the peculiar condition of the country and the character of the questions by which it is confronted, the committee had been raised to a position of far more importance and dignity than has usually attended it; and because, owing to the financial condition of the country, it may be called on to consider a great variety of measures and report some of them upon which the members of the committee may not divide upon mere party lines, which measures may have in view such a modification of the existing banking system as will conduce to the benefit of the whole people.

Inasmuch, therefore, as this committee will be called upon, as the country knows, to deal with any report upon a variety of measures, the public will not accept the vote of yesterday as an indication of the sentiment of the House upon the question whether or not the tax on State-bank circulation is to be repealed, but will rather accept it as an indication that this House, recognizing the variety and importance of the measures on which the committee will be called upon to act, has accorded it a privilege which in the previous history of the House has been conferred upon other committees having in charge the reporting of measures of great public interest.

Mr. REED. It is also the fact, I would suggest to the gentleman from Indiana [Mr. JOHNSON], that the gentleman who led the House during the last Congress has been transferred to the chairmanship of this committee, thus showing the importance that is attached to it. [Laughter.]

Mr. JOHNSON of Indiana. Well, Mr. Speaker, I am not going into any discussion with the distinguished gentleman from Maine on that point——

Mr. REED. It is not a matter of discussion.

Mr. JOHNSON of Indiana. Nor am I going to inquire as to the motives of the Chair in making the change. That is a question within the province of the Speaker; and I shall not undertake to invade the prerogative which under the rules is possessed by the occupant of the chair. I assume the gentleman from Maine believes in the power of the Chair.

Mr. REED. Not only in the power, but in the judiciousness of the Chair.

Mr. GROSVENOR. Mr. Speaker, I have no disposition to "smoke" anybody out or to "smoke" anybody in. The disclaimer of the gentleman from Indiana will go a long ways to disabuse the mind of the country on this question. But I want to say to him that the leading papers of the country this morning have admonished the Republican members of this House of the danger of the decision which was reached yesterday on this question. I desire now, however, to withdraw the amendment, with the consent of the House, and to restore its equilibrium to the *ante bellum* condition in which it was when I offered the amendment.

The Clerk resumed the reading.

Mr. SPRINGER. I offer the amendment which I send to the desk.

The Clerk read as follows:

Add to Rule XI the following as an additional paragraph:

60. The committees authorized to report general appropriation bills and the river and harbor bill, when reporting such bills; the Committee on Ways and Means, when reporting bills raising revenue; the Committee on Banking and Currency, when reporting bills relating to banking and currency, and the Committee on Coinage, Weights, and Measures, when reporting bills relating to coinage, may, at the time of reporting such bills, report, by order of the committee, a resolution making the bill reported a special order, not to conflict with special orders which may then exist, and fixing the time when the vote shall be taken upon the final passage of the bill. Such resolutions may be called up for consideration the same as reports from the Committee on Rules, and shall be disposed of as provided in paragraph 57 of Rule XI.

Mr. SPRINGER. The only effect of this proposition is that if adopted the committees named will have the right, when reporting bills relating to the subjects named, to report a resolution providing for the consideration of the measure and fixing a time when the final vote shall be taken, the consideration of this resolution to be subject to the same provisions as reports from the Committee on Rules. This proposition does not include a cloture; it does not interfere with any of the prerogatives of the House; it simply extends to the committees named the right to report a resolution in regard to the business which they may present, and to secure its consideration, which power is now by the rules of the House confided to the Committee on Rules.

Mr. CATCHINGS. And which has never been exercised.

Mr. SPRINGER. It was exercised in the last Congress.

Mr. TRACEY. Never.

Mr. CATCHINGS. It was never exercised during the last Congress, because there was no necessity for it, and there will be none in this.

Mr. SAYERS. Has the gentleman from Illinois [Mr. SPRINGER] any objection to striking from his amendment the provision with regard to the Committee on Appropriations?

Mr. SPRINGER. I have no objection myself, but I thought it would be proper to include that committee as well as any other.

Mr. SAYERS. The Committee on Appropriations does not ask this privilege.

Mr. OUTHWAITE. Does the Committee on Ways and Means ask it?

Mr. SPRINGER. I have not consulted with that committee. I am not the chairman of that committee.

Mr. TRACEY. The Committee on Coinage do not ask it either.

Mr. SPRINGER. Mr. Speaker, the only power given here is that proposed to be conferred on the members of the committee reporting these great measures to determine for themselves as to the order of business fixed by the House for their consideration; and when that resolution is submitted to the House it is for the House to determine whether that business will be considered or not. The whole question is left eventually to the House.

The honorable gentleman from Mississippi [Mr. CATCHINGS] says that this power has never been exercised by the Committee on Rules. It was given to the Committee on Rules in the last Congress after a protracted struggle in this body. I favored it then and I favor it now, and I also favor its extension so as to enlarge the power and extend to more members of the House that authority which is conferred on the Committee on Rules. I believe that there are measures reported by the committees of which they themselves are the best judges. I have limited the operation of this particular rule to the committees having charge of the more important business.

I have the highest respect for the Committee on Rules, and I do not know any five members of this House to whom I would more willingly prefer to submit a question involving the order of business here than the gentlemen composing that committee. I make no reflection whatever upon the committee. But I think there is a necessity that the members of these other committees, who have considered more carefully the matters before them, should be permitted to present their suggestions to the House, and submit such propositions for consideration as they may determine.

It would not interfere with legislation. It would not interfere with any existing order, but it would enable the House to do just as the House did when this called session began, bring in an order fixing the time during which the debate should be allowed to extend, fixing also the extent to which amendments should be submitted, and finally fixing a time when the vote on the question itself should take place. And the House, Mr. Speaker, never did itself more honor than it did in adopting the course pursued at the beginning of this extra session in regard to the repeal bill. And for the dignified, manly parliamentary method which was adopted and pursued in that debate, and in the conclusion of that important question, the whole country is resounding with praise for this body.

Mr. KILGORE. Will the gentleman allow me to ask him a question?

Mr. SPRINGER. Certainly.

Mr. KILGORE. I wish to ask the gentleman from Illinois if either of the committees named in that amendment have asked for this privilege; or is this a resolution presented by the gentleman from Illinois himself on his own individual motion?

Mr. SPRINGER. It is submitted on my own motion.

Mr. KILGORE. Without any consultation whatever with the other committees?

Mr. SPRINGER. Without any consultation.

Mr. KILGORE. As the chairman of the Committee on Coinage, Weights, and Measures is not present, and is deeply con-

cerned in the outcome of legislation submitted to the committee, and as he has not asked this, I am opposed to it.

Mr. SPRINGER. Mr. Speaker, I do not know that it is necessary for a member here to go to any other member in order to get his consent to bring in a proposition looking to the transaction of the public business. I am acting on my individual rights as a member here, and I do not intend to usurp any prerogative that belongs to any committee or to any other member. But I have heard the gentleman from Texas himself, and other members of this House, state that they hoped to see, and desired to have, other legislation than the repeal bill in regard to silver, and yet when a proposition is brought in here to give that committee a right to have fair consideration of legislation that they may propose, gentlemen are opposed to allowing them that privilege. I can not understand the cause of the opposition.

[Here the hammer fell.]

Mr. MCMILLIN. Mr. Speaker, second only in importance to the measures that are to come before this House are the rules by which those measures are to be considered, because it is through the rules of the House and by them that they are either to succeed or fail.

I can not agree, sir, that the proposition of the gentleman from Illinois is a proper one to be adopted by the House as its policy; and I think it becomes every one, when we are considering the nature of the rules to govern this body in its action, to do so calmly, dispassionately, and with the sole purpose of reaching that conclusion which is best for all.

Now the gentleman from Illinois spoke of the action of the House at the beginning of this session on the silver bill, and alluded to the success with which it brought to a termination the very important and exceedingly exciting question that we have just disposed of and sent over to the Senate. The gentleman was unfortunate in his illustration, for he must bear in mind that that was the voluntary action of the House, and not a report from any committee nor a cloture against dilatory motions. It was the action of the House taken as a body, without any order from a committee for cloture; without any request from a committee of the House for cloture, and was adopted in that way by the House itself, which is usually the most satisfactory way of settling such matters.

Mr. BOATNER. Will the gentleman allow me to ask him a question?

Mr. MCMILLIN. With pleasure I yield to my friend from Louisiana.

Mr. BOATNER. Would it have been possible for the House to have finally acted on that measure and sent it to the Senate under the present rules of the House, or under the proposed rules to be adopted, without a cloture resolution being reported to change the rule to that extent so as to compel action upon the measure?

Mr. MCMILLIN. I think it would, and for the best of reasons. I think I can convince my good friend from Louisiana [Mr. BOATNER] that that is correct, because the power to filibuster existed against the rule that was adopted concerning silver, and if parties had wanted to fight it in that way, they could have done so when the rule was presented.

Mr. SPRINGER. The House had not adopted any rules then.

Mr. MCMILLIN. Under general parliamentary law the filibustering could have gone on.

Mr. BOATNER. Does the gentleman understand that the dilatory motions which are embodied in the rules now proposed to be adopted are recognized by general parliamentary law as operative against the previous question?

Mr. MCMILLIN. I think dilatory motions could be interposed before the adoption of rules. It has been the practice of the House so long to entertain such motions under the rules and the rulings under them have been so persistent, that I take it any presiding officer would hesitate before he would decide that that was not the common law of parliamentary bodies in this country. To say the least of it, there were enough dilatory motions that could have been interposed to have delayed consideration.

Mr. BOATNER. Is it not clear, under our common parliamentary law, that the previous question absolutely cuts off debate and dilatory motions, and brings the body which adopts it to a direct vote on the proposition before the House?

Mr. MCMILLIN. I think, under our system, where we have had these privileged motions so long, they constitute the foundation of the parliamentary common law, if I may so express it, in this country. I think it has been decided that way generally in this country. I can not say that it has been the universal decision.

Mr. Speaker, the gentleman from Illinois [Mr. SPRINGER] has spoken about the rule concerning cloture, which was in the rules of the last House of Representatives. My views upon this question are not new to the older members of this House. I have held always, and I hold now, that if let alone 356 of the chosen representatives of 65,000,000 people, if they are able to govern the country, are able to govern themselves. They do not require guardians, and should not have them.

The House will generally govern itself better than others can govern it. Furthermore, I have never known a great and important question for which the people were anxious and struggling to be permanently defeated by filibustering in this House. Nobody else does. But when it comes to the ultimate rights of the people, when a thing is proposed which is to subvert their Government or ruthlessly rob it, then I do know that filibustering has done very important work in preventing it: and I would like those gentlemen who are so anxious to put the bit and bridle on the House now to reflect what would have been our condition if the "force bill" had not been resisted by filibustering in the Senate, during the Fifty-first Congress. What would have become of us then if your iron-clad rules had been in force? What would you have done in the Forty-fourth Congress if Speaker Blaine had not entertained dilatory motions, or had rules like this proposed?

Mr. SPRINGER. There was a majority in the Senate against the force bill.

Mr. MCMILLIN. That is a mistake. It would have passed any day a vote was reached—any hour. I know what I am talking about; dilatory motions alone defeated it. Twice our institutions have been saved in this way; and yet we are to tear down this safeguard.

Again, sir, the gentleman from Mississippi has very justly suggested that whilst the cloture rule was in the last code of rules to be put in operation by the Committee on Rules, as a matter of fact it never was put in operation during the session; and if I believed that the cloture rule was to be invoked without that consensus of a majority of the Representatives on the Democratic side of this House, which was promised in the last session, I should oppose it *in toto* here and now. It was promised then that it never should be applied except when sought by a majority of the Democrats here, and that promise was kept. I suppose that faith will be kept again.

The SPEAKER. The time of the gentleman has expired.

Mr. MCMILLIN. I would like one minute more.

Mr. MCCREARY of Kentucky. If I can be recognized I will yield to the gentleman from Tennessee [Mr. MCMILLIN].

The SPEAKER. In the absence of objection that will be done.

Mr. MCMILLIN. Now, Mr. Speaker, I happen to belong to one of the committees that is embraced in this resolution. It is the one that has the most tedious and difficult work to be performed in the Committee of the Whole. And after a very long experience there I do not hesitate to say that without any cloture, by the force of public sentiment behind us, which is a greater power than cloture and a more laudable one, and which has always proved a sufficient power in this House, we will be able to get through whatever tariff measure is proper to be adopted without the adoption of this rule. Therefore I would leave to the individual members of the House the greatest possible latitude and liberty.

While I am on the subject, as I do not wish to weary the House with persistent speaking, I do not hesitate to say that I think that another thing that is embraced in the rules as reported is of very questionable propriety, and that is the proposition concerning which my friend from Indiana [Mr. HOLMAN] addressed the House the other day, being the proposition to reduce the quorum in Committee of the Whole to 100 members. But of that we can speak when it comes up. With all due deference to my friend from Illinois [Mr. SPRINGER], I do not think his amendment is well. Cloture ought to be invoked not upon the suggestion of one member or one committee, but it ought to be the voice and action of that party in this House, as a party, which is responsible for its business, and any cloture brought in in any other way and put in operation by any other enginery will prove a curse rather than a blessing and will attach to the majority a responsibility without the power to control it.

[Here the hammer fell.]

Mr. BOATNER. Mr. Speaker, the gentleman from Tennessee [Mr. MCMILLIN] says that the power to invoke cloture or rather the power to give to a motion for the previous question the force and effect which it possesses under ordinary parliamentary law, will affix to this side of the House a responsibility for legislation without giving them the power to control it.

Mr. MCMILLIN. Possibly I did not make myself clear. If my friend will pardon me, I will say that the way that would operate would be this: The House consists of 356 members. If 80 members on the Democratic side of this House were to act with the Republicans that are on the other side, agreeing in the cloture, it would enable the Republican minority, with the assistance of the 80, to carry cloture, and so enact anything they choose, in opposition to the wishes of the majority of the Democrats, who, as a party and as individuals, are responsible for legislation.

Mr. BOATNER. I understand the gentleman's position to be that the Democratic party would be responsible for the clotures which would be ordered by Republican votes. Now, in respect to this matter, Mr. Speaker, I beg to call his attention and the attention of the House to this fact. Certainly the Democratic party would not be divided on cloture upon a measure of political importance or upon a question of politics, or a question involving Democratic principles. Certainly the Democratic side of this House could be relied upon to stand together on any question of political legislation, except silver.

In any matter of nonpolitical legislation, Mr. Speaker, they ought not to divide upon party lines. In any matter of ordinary business legislation, in matters which affect the general welfare in a business way, which affect the interests of locality and States where no political principle is involved, I apprehend, sir, that this House ought not to divide upon political lines. I do not see how it could divide upon political lines, because legislation which addresses itself to our judgment in the interest of the public ought to address itself to any Republican who is here and who desires to honestly discharge his duty. I can not see for my life wherein there is any objection to the amendment proposed by the gentleman from Illinois [Mr. SPRINGER], which merely gives the chairman of a committee, or to the committee itself when it reports a bill or report, an order of business upon it, instead of leaving it to the Committee on Rules for that purpose.

The only objection there can be is that the committee of the House and the House itself shall be under the subjection and control of the Committee on Rules. If the object and purpose of the rules is to make the legislation of the House entirely subject to the will, the opinion, and judgement of the Committee on Rules, why, then, Mr. Speaker, the rule as it is is eminently fitted to accomplish that purpose; but, if it is the purpose of the rules of the House to give to each committee of the House, or the committee named by the amendment, the right when they present their business to submit to the judgment of the House a proposition as to the time and manner when the business shall be considered, why, then, sir, it seems to me that the amendment should be adopted.

I can not imagine what objection there can be to the proposition that when the distinguished chairman of the Committee on Ways and Means [Mr. WILSON] reports his tariff bill he should submit to the House at that time a proposition for its consideration, and when the head of every one of these other committees submits his bill to the House that he should submit a proposition for its consideration.

Now, sir, gentlemen are getting extremely sensitive in the last few days about the danger of Republican coöperation. They did not seem to be so averse to it only a few days ago, when they were having the Republican side of the House expounding the Democratic platform and dictating to a large number of Democrats of this House what legislation ought to be enacted in carrying out that platform. It has only been since that legislation has gotten out of the way that this feeling of opposition to Republican coöperation has arisen. I repeat, that I see no objection to the amendment of the gentleman from Illinois, unless it be an objection put into the power of the committees and into the power of the majority of the House to control the business of the House, instead of leaving it with the Committee on Rules.

Mr. SPRINGER. Mr. Speaker, I desire to say one word in concluding the debate upon this proposition. I want to call the attention of members of this House to the fact that in our present rules we put the veto power upon legislation in the hands of five members of the House—the Committee on Rules. Those five members can absolutely put a veto upon any bill that the majority of this House may desire, or which all the other members of this House may desire to pass.

Now, there is a veto power in the President of the United States; but we have a redress as to that. If two-thirds of the members of the House are willing we can pass it over his veto. But there is a veto power in this House, under the rules, placed in the hands of the Committee on Rules; and when that committee desires to exercise that veto there is no appeal anywhere. The whole of the rest of the House can not reach a measure or pass it. Now, it seems to me that those who oppose "one-man power" would equally want to oppose "five-man power." I have a great respect for the members of that committee, and there are no five men to whom I would give that power more readily than to them; but I do believe that the power ought to be extended a little further, and that the veto power should not be confined to them.

Mr. OUTHWAITE. I would ask the gentleman whether his real purpose in this is not to give to the chairman of the Committee on Banking and Currency a greater power than to the chairman of any other committee.

Mr. SPRINGER. Not at all, sir. It has precisely the same power as any other member of this House, or any other chairman of a committee. The Committee on Banking and Currency has the power, under these rules, unless the Committee on Rules will bring in a proposition, to beat any bill that all the rest of this House may be in favor of. He has it at this time.

Now, the gentleman from Tennessee says he has never known filibustering to defeat good legislation. I call his attention to a fact that in the Fiftieth Congress, when we were considering what is known as the Mills bill, we had no power in the Committee on Rules to bring in a cloture, and we were obliged to submit to a discussion of that measure which lasted for three months. The length of that discussion prolonged the session until the 20th of October in a Presidential year, and I believe that if the Committee on Ways and Means had had the power to bring in an order such as was brought in here the other day and adopted with regard to the repeal of the Sherman law, and we had given three weeks for the discussion of the Mills bill, at the end of that discussion we would have passed it by as large a majority as we did have, and then we could have adjourned and gone home, and I believe that if we had done that we would probably have changed the result of the Presidential election and elected Mr. Cleveland President that year.

Mr. RICHARDSON of Tennessee. I want to remind the gentleman that the Mills bill passed the House early in June, and that the delay occurred not here, but at the other end of the Capitol, and that is what kept Congress here so late.

Mr. SPRINGER. But we discussed it for three months in this House.

Mr. RICHARDSON of Tennessee. But we passed it early in June.

Mr. SPRINGER. Well, we ought to have sent the bill over to the Senate in April, and we could have done it if we had had such a rule as I have suggested; but we were obliged to sit here for three months listening to that discussion and until nearly every member had exhausted himself in offering amendments. Now, I am opposed to permitting one man to obstruct legislation. We are delegated by our constituents to legislate, but when we come here the first thing we do is to give away our power and confer it upon one man.

Mr. KILGORE. Will the gentleman permit a question?

Mr. SPRINGER. And the gentleman from Texas, who now asks me to yield, has had more power under our rules than the President of the United States or the majority of this House.

Mr. KILGORE. I see the gentleman wants to have another "business" Congress, a Congress "to do business."

Mr. SPRINGER. And the gentleman from Texas wants the opposite of that, a Congress that will not do business.

Mr. KILGORE. I want one as opposite as it can be to the Fifty-first Congress. [Laughter.]

Mr. SPRINGER. Well, as between the two extremes, a business Congress such as my friend refers to and a Congress that will not do any business, I prefer a Congress which will do the business that ought to be done and the members of which, exercising their discretion as representatives of the people, will vote down improper legislation and vote up that which should become law, and I am willing to trust the people's representatives with power to do that.

Mr. HOLMAN. Mr. Speaker, as chairman of one of the committees named in the pending amendment, I wish to say that no such extraordinary power as that which is proposed in the pending amendment is necessary to enable that committee to perform its duties. I am very confident that it is not necessary to secure the prompt passage of any of the appropriation bills, and they at least should be stricken out if the amendment is to be adopted.

My friend from Illinois [Mr. SPRINGER] has denounced in strong terms the exercise of power by a minority in this House. I call his attention to the fact that if the power which he now denounces and proposes to strike down had not existed in the Forty-second Congress, it is reasonably certain that no Democratic majority would now occupy these seats. [Applause.] Had there not been a fair and impartial officer in the Speaker's chair, and had there been such a rule as is now proposed the force bill of the Forty-second Congress would have passed and become a law. None of the gentlemen I am sure who sat here day after day and night after night resisting that measure, none of them at least will ever give their sanction to a rule that will manacle and chain down the minority, such as my friend from Illinois now presents.

It is certain, Mr. Speaker, that vastly more bad measures than good measures have been beaten by the exercise, under the rules, of a fair and reasonable power by the minority. Indeed, I do not call to mind a single measure during my service here that ought to have become a law that has been defeated by motions for delay, while I can call to mind a multitude of bills which have been defeated by simple delay and which were never heard of afterwards. I am exceedingly sorry, sir, that there is a dis-

position here to force down the minority. I think that a vigorous and intelligent minority is of the highest moment in a legislative body. I do not refer to political majorities and minorities, but to those who support and those who oppose given measures of legislation. I even regret very much that some of the restrictive provisions contained in the rules as reported are to become a part of the rules of this House. I do not wish to see legislation made easy.

No wiser expression has ever been uttered on this floor than that of the gentleman from West Virginia [Mr. WILSON] yesterday, that the bane and peril of a republic is too much legislation, not too little. "The world is governed too much."

Mr. SPRINGER. The gentleman speaks of "a minority." How large a number of members, in his opinion, should there be to constitute a minority? Would five be enough?

Mr. HOLMAN. Oh, my friend refers now especially to the gentleman from Texas [Mr. KILGORE], but that gentleman was backed by a large element in this House.

Mr. DOCKERY. Yes; he was not alone.

Mr. HOLMAN. He was not alone. I have never known a single instance of a gentleman attempting to filibuster on this floor who was not backed by an intelligent body of members, who believed that his course was right. Take the case of my friend from Ohio [Mr. OUTHWAITE]. Does any gentleman condemn his course in filibustering in the last Congress on a provision in the sundry civil bill which saved two millions and a half dollars to the people?

I venture to say that not one of his constituents ever censured him and his associates for saving that $2,500,000 to the Treasury. And yet, under the rule proposed by my friend from Illinois [Mr. SPRINGER], resistance to that measure would have been impossible. I pray you, gentlemen, not to adopt rules that will break down all barriers to access to your Treasury.

Mr. SPRINGER. That depends on whether the majority of the Committee on Appropriations and of the House favored the appropriation or not.

Mr. SAYERS. That two and a half million proposition did not come from the Committee on Appropriations.

Mr. OUTHWAITE. Mr. Speaker, I ask for a vote upon the pending amendment.

The question was taken, and the amendment was rejected.

The Clerk (resuming the reading) read as follows:

RULE XII.

DELEGATES.

The Speaker shall appoint from among the Delegates one additional member on each of the following committees, viz: Coinage, Weights, and Measures, Agriculture, Military Affairs, Post-Office and Post-Roads, Public Lands, Indian Affairs, Private Land Claims, and Mines and Mining, and two on the Committee on Territories, and they shall possess in their respective committees the same powers and privileges as in the House, and may make any motion except to reconsider.

Mr. FLYNN. Mr. Speaker, I move to amend this proposed rule by striking out the words "Public Lands and Indian Affairs" in line 5 and inserting those words after the word "Territories" in line 7. The object of this amendment is to authorize the Speaker of this House, in addition to the appointment of two Delegates upon the Committee on Territories, to appoint two upon the Committee on Indian Affairs, and two upon the Committee on Public Lands. I have no fault to find with the assignments that have been given me by the Speaker. I have nothing whatever to complain of in reference to the Committee on Rules, but I think the Speaker should be empowered, under the circumstances, to make these additional appointments of Delegates upon committees.

The Delegates on this floor have no vote upon any question; and the Territories are not represented directly in the other end of the Capitol. We simply ask the conferring of this additional power upon the Speaker in order that the Territories may have just recognition. My Territory has at the present time, or within sixteen days from to-day will have, an area of 30,000 square miles. I represent to-day more than one-half of the Indians of the United States. But under the rules as now before the House the Speaker is not empowered to place me upon either of these committees having charge of these subjects.

The only legislation in which our people are especially interested goes before these three committees; but the Speaker has been powerless to recognize us to the extent of allowing us to be heard as members of the two committees embraced in my amendment; we have no vote in those committees upon any question coming before them. There is nothing partisan in this proposition; and I trust in justice to the Speaker and in fairness to the delegates from the Territories, no gentleman on this floor will object to authorizing the appointment of these two additional members upon each of the committees named—the Committee on Indian Affairs and the Committee on Public Lands.

Mr. OUTHWAITE. There are already ten committee places assigned to four Delegates, which seems to me to give them certainly their fair proportion of representation as compared with members of the House. There can certainly be no necessity for extending this representation. Delegates from the Territories can appear before any of the committees upon matters in which they are interested. I hope the amendment will not prevail.

Mr. FLYNN. Mr. Speaker, if the Speaker were authorized to give the Delegates the representation proposed in my amendment errors such as that pointed out yesterday by the gentleman from Indiana [Mr. BYNUM] could not occur. He made the statement that a committee in reporting a measure with reference to Oklahoma included within that Territory the Panhandle of Texas.

Mr. OUTHWAITE. That was before it was a Territory.

Mr. FLYNN. What objection is there, as we have no vote on this floor, to allowing us representation on these committees? We have a greater interest than any gentleman on this floor in the matters coming before those two committees.

Mr. OUTHWAITE. This Congress will probably admit two or three of the Territories as States; and then there will be ten places to be distributed between two or three Delegates.

Mr. FLYNN. But what are we to do between now and the time when we are admitted?

The question being taken on the amendment of Mr. FLYNN, it was rejected.

The Clerk read as follows:

RULE XIV.

OF DECORUM AND DEBATE.

1. When any member desires to speak or deliver any matter to the House, he shall rise and respectfully address himself to "Mr. Speaker," and, on being recognized, may address the House from any place on the floor or from the Clerk's desk, and shall confine himself to the question under debate, avoiding personality.

Mr. HEPBURN. Mr. Speaker, the Clerk has at the desk an amendment sent up by me the other day which I ask now be read.

The Clerk read as follows:

Amend Rule XIV by inserting after the word "Speaker," in line 3, the words "and shall be recognized, if in order, by the Speaker," so that the clause will read—

"When any member desires to speak or deliver any matter to the House, he shall rise and respectfully address himself to, 'Mr. Speaker,' and shall be recognized, if in order, by the Speaker, and on being recognized may address the House," etc.

Mr. HEPBURN. Mr. Speaker, the change that I propose in this rule is not a novelty. It was the rule of the House and was observed in practice until the Forty-fifth or Forty-sixth Congress. It is the rule of the Senate to-day, as gentlemen will find by turning to page 128 of our Manual. I call attention to Rule XLIV as reported by the Committee on Rules, which recognizes Jefferson's Manual as embodying general parliamentary law; and I call attention, further, to page 129 of Jefferson's Manual, the second paragraph of which reads:

When a member stands up to speak, no question is to be put, but he is to be heard unless the House overrules him.

Mr. Speaker, this rule, as I propose it should be, was the rule of this House until less than fifteen years ago. It is the rule of the Senate of the United States. It is in harmony with the general parliamentary law on this subject. Rule XIV, as reported by the committee, is the most important rule in its bearing upon the interests of individual members and their constituents to be found in the entire list reported.

It places more power in the hands of the Speaker than any other rule. It gives to the Speaker the right absolutely without question to remand any member on this floor to absolute silence during an entire Congress, except that he may be permitted to vote when his name is called or other opportunity is given. The Speaker can show the most marked favoritism—although I do not expect it to occur—toward particular members of this House. He may under this rule say to one constituency, "You shall not be heard in the preparation of legislation, in the discussion upon legislation; you shall not be heard to make a motion or an amendment or in anyway to participate in legislation until the period for voting occurs."

I do not believe this power ought to be lodged in the Speaker. I believe it is in direct violation of the spirit of the Constitution. We have the right to formulate rules for the government of this House, but they must be in harmony with the Constitution, and must be such as do not take away from any constituency its rights or from any member his equality on this floor. The rule as now reported does this.

Mr. Speaker, I want to call attention to a colloquy that occurred only a few days ago between myself and the honorable gentleman [Mr. OUTHWAITE] who has assisted in reporting these rules.

I asked this question:

As the rule is framed now is it not in the power of the Speaker to entirely disfranchise a member on this floor during an entire session except so far as casting his vote is concerned?

Mr. OUTHWAITE. If that be true——

Mr. HEPBURN. Will you answer my question?
Mr. OUTHWAITE. I intend to do so.
Mr. HEPBURN. Let me ask, further, was it not the intent of the rule now before us to put that power in the hands of the Speaker?
Mr. OUTHWAITE. No; it was not the intent of the rule. Conceding that such a state of affairs might result, there is no likelihood of its occurring. It is certainly a lesser evil than would result from several members rising together at different times during the business of the House and wrangling and struggling for precedence on the floor, as they would be encouraged to do by such a change as is proposed by the gentleman.

Now, then, think for a moment of the objection the gentleman had to the adoption of this rule. He tells us that the objection to such an amendment is that it would occasion confusion on the floor. He is in error, Mr. Speaker, I say most respectfully, because the clause that follows this one, clause 2 of the same rule, furnishes a remedy in cases of that kind if they shall arise.

[Here the hammer fell.]

Mr. PICKLER and Mr. GEAR asked that Mr. HEPBURN'S time be extended.

There was no objection.

Mr. HEPBURN. I say, Mr. Speaker, that the next clause of the rule furnishes a remedy. It provides for the emergency suggested by my friend when two or more members arise, and instead of there being the confusion that he suggests, and wrangling and struggling for the floor, the Speaker puts an end to the difficulty under this second clause by designating who shall speak.

This rule, as I propose to amend it, only gives a member the right to be heard when he is in order, and not otherwise. It stipulates that the Speaker shall recognize him if in order. It may be said, "Why, the Speaker will do that anyhow." But our observation is to the contrary. We see every day members rising here and asking to be heard, and the Speaker, perhaps, suggesting to them the inquiry, "For what purpose does the gentleman rise?" or suggesting to them when a proper motion is made, one that is entirely in order, "The gentleman is not recognized for the purpose of making a motion of that kind." This power, Mr. Speaker, ought not to exist.

I heard the honored Speaker a day or two ago declaiming against the peril of lodging in the hands of a Speaker of the House power to determine whether or not a member was sitting in his seat. Perhaps that is a great power. I am not here to discuss that now. But this rule puts it in the power of the Speaker to determine not once that a man is in his seat at some particular moment during the day, but to determine during the whole session that he is not in his seat, and gives the Speaker the power to say that his constituency shall be no more represented than though he were not in his seat or in the House during the whole session.

In my judgment, Mr. Speaker, that power ought not to be lodged in the hands of a presiding officer. I heard the honored Speaker again inveighing against investing the presiding officer with power to determine whether a motion was in its nature a dilatory motion. He tells us that no man should be invested with such a dangerous power as that, and yet this very rule gives him the power, not of determining the character of a motion, but gives him the power during the whole session of Congress to say that no motion of any kind shall be submitted by the representative of a constituency on this floor.

Why, gentlemen, you halt at this limited and circumscribed power of counting or recognizing the presence of a man here, of determining whether a motion is in its nature dilatory, and yet you give to the Speaker without hesitation, or propose to give to him, in this code of rules the power to declare practically that a member is absent during his whole term, or that he may make no motion at all during his entire membership of the House. This rule is in itself particularly burdensome to the younger members of the House. It places them at a great disadvantage. I am sure that after they have had experience of its working, after they know practically how it operates, it will be absolutely impossible to secure their consent to a rule of this kind.

As I stated before, there are a number of gentlemen on the floor who, from their deserved eminence, can always secure recognition. They are always recognized by the Chair whenever they rise to address it. But the great majority, the 300 or the 325, have no such guaranty that they will be given opportunity to perform their duties as members of this body.

I conjure you, gentlemen, not to allow this rule, as it is reported, to become the rule of the House. If the amendment I have proposed should turn out to be to the disadvantage of business, it will be easy to change it. The Committee on Rules can bring in an amendment at any time for that purpose. But if the rules as they are proposed here are adopted and fastened on us, they will remain during the Congress, and there will be no possibility of a change. They will stand as the rules of the House during your entire membership, and you will be the persons on whom the burdens of this system will mainly rest.

Mr. OUTHWAITE. Mr. Speaker, this rule which is sought to be changed has been the rule of the House for a long time; and while I have only had a limited experience here, yet during that experience I never have observed the imaginary evil which the gentleman from Iowa [Mr. HEPBURN] presents, that the Speaker will deliberately, with malice aforethought, disfranchise a member——

Mr. HEPBURN. I did not say anything of that kind.

Mr. OUTHWAITE. Well, I can not imagine any other way than that the Speaker might determine that a member should not be recognized. I can not imagine that such a thing could occur as the gentleman points out as the evil of this rule, namely, the disfranchisement of any district, unless the Speaker, with malice aforethought, determined that the Representative from that district should not be recognized when he ought to be recognized, and had business upon which he might then be recognized.

I will call the attention of members of the House to the fact that this is a system of rules by which business is sought to be transacted in an orderly way; that there must be lodged somewhere discretion as to who shall participate in business at particular times. It is recognized by the rules that the chairman of the committee having in charge a bill, or any gentleman, not the chairman of a committee, having charge of a bill, shall be recognized at certain points in the discussion as against everyone else. He must then be recognized to control the conduct of the business intrusted to his charge. This proposition is to take away from the Speaker any discretion, and to provide that he must recognize whomsoever may arise on the floor.

I have seen as many as twenty gentlemen or more upon their feet addressing the Chair at one time, seeking an opportunity to address the House or to offer motions. This amendment says the Speaker must recognize the member rising. Must he not at once exercise a discretion? I must say that it has been exercised for a long period in the past in such a manner that there has been very little complaint, if any, that the different political parties upon this floor have not received their fair share of recognition. In fact, it is the custom for the Speaker to recognize members on one side of the House and then to recognize members upon the other side of the House, and to distribute recognition thus fairly.

An objection to the rule as proposed to be amended is really not that it would be necessary to have it changed by the Committee on Rules, but that it would be inoperative from the beginning. It simply places the Speaker in an embarrassing position. When six or eight or ten gentlemen arise, which one must he recognize? Upon what rule shall he determine? He must use his discretion; and then this rule may be appealed to by some gentleman, who says, "I was on the floor first," or another, who says, "No; I was on the floor first."

Now, as to new members and beginners in Congress being in anywise subjected to peculiar embarrassment on account of the present regulation—the custom is for members, when they desire recognition, to notify the Chair that they desire to speak upon a subject, and the Chair makes a list, and that list is kept; and gentlemen, though not always recognized in the order in which their names are upon the list, yet are recognized at some time in the debate, and as soon as recognition can conveniently be given. Again, as to occasions to ask unanimous consent, gentlemen go up and ask the Chair and receive their recognitions along as opportunity comes.

As I have said before, the present rule avoids throwing the House into confusion and avoids the necessity of raising the question of precedence, of priority.

In the recent debate that we had upon the great measure just passed, the new members in this House cut quite as conspicuous a figure as the old ones. They had just as good opportunities to speak, and I am pleased to say that they handsomely availed themselves of those opportunities.

[Here the hammer fell.]

Mr. HOOKER of Mississippi. Mr. Speaker, I desire to say a word on the motion. The practice, as has been stated by the gentleman from Ohio [Mr. OUTHWAITE], has been, when a committee brings in a report or reports a bill, for the chairman of that committee to take the floor; and if the time is agreed upon for debate between the two sides he controls the time on one side and apportions it out pretty much as he wants to, and some opposing gentleman on the other side of the Chamber, if the measure is opposed, controls the time on that side.

Now, the honorable gentleman from Ohio [Mr. OUTHWAITE] says that if the amendment offered by the gentleman from Iowa [Mr. HEPBURN] is adopted and made a part of the rules it would be embarrassing for the Speaker to recognize any one particular gentleman. Why, that is a part of the Speaker's duty. That is one of the functions he has to perform, and it ought not to be avoided and evaded by keeping any list by which particular persons in the House should be recognized. This custom of keeping a list by the Speaker is, in my opinion, a bad one, and ought

to be abandoned. Every member of this House has a right to arise and address the Speaker, and instead of providing by your rules now,

if recognized by the Speaker,

it ought to be made imperatively the duty of the Speaker to recognize the man who first arises and catches his eye. Now, it is well known to the older members of this body that all debate upon any proposition introduced by a standing committee or a special committee is regulated largely by the chairman of that committee, and he peddles out the time of the House. Every member ought to be recognized when he rises. There is no difficulty in discharging this duty if the Speaker is as honest and as fair and as candid as the present incumbent of the Speaker's chair. He would then distribute the privilege of debate not alone to the committee that reports the measure, but he would recognize every man whose constituency were interested and who desired to be heard, either to speak or offer amendments.

I therefore submit that the custom that has grown up of keeping a list is not a fair one, and ought not to be any longer observed by the House; but the Speaker ought to recognize and ought to decide whether one member or the other has arisen first to address the Chair. I have witnessed scenes in this House, and the gentleman from Ohio [Mr. OUTHWAITE] has witnessed scenes, so he knows very well that the power of saying one word was a power which solely belonged to the chairman of the committee.

I shall never forget a little incident which occurred when I was a young member, a great many years ago, when my honorable friend from Pennsylvania, the greatest of the leaders of the House that has sat here in my time [Mr. Randall], introduced a particular measure. I had been here three months and had not opened my mouth, and did not know whether I should or not in the first session of Congress; but a friend went to Mr. Randall and said: "There is a new member here from the region of Mississippi, which has been referred to by some debater on this side, and I should like him to have an opportunity to speak for ten or fifteen minutes." Mr. Randall turned and looked up at me, and he had a way of closing one of his eyes whenever he was in a very scrutinizing mood, and, after looking me all over, he said: "Well, he is a new member; there is no telling what in the devil he may say, and I think he had better not speak."

And I did not speak. I never got even with him until he invited me to go to Philadelphia with a number of other gentlemen and make a speech in his behalf when he was a candidate for reëlection. He had invited several other members and one or two Senators. I had not known Mr. Randall then, but I had the honor afterwards of becoming well acquainted with him, and with being honored by being classed among his friends. He came to me and asked me to go to Philadelphia and make an address with a number of other gentlemen. That was the first time I had a chance at him. When he approached me, and I was sitting about where the gentleman from Ohio now sits, and gave me the invitation, I looked him all over from head to foot, as he had done me, and said: "Mr. Randall, I am a new member; there is no telling what the devil I may say, and I had better not speak;" but I did.

The gentleman from Ohio knows very well that under the operation of this rule as it now stands the Speaker would be clothed with absolute power, and is clothed with absolute power, to recognize or not recognize as he chooses; and it is a function which the Speaker I do not think would like to exercise, but would prefer to cast his eye over the House and see whether any member arose for the purpose of addressing the House, and whether he is in order or not, and if in order, it would be his pleasure, as just and equitable and right, to recognize the man who first rose and respectfully addressed him. I am, therefore, in favor of the amendment.

Mr. RICHARDSON of Tennessee. Mr. Speaker, I do not think the amendment proposed by the gentleman from Iowa [Mr. HEPBURN] ought to be adopted. I do not believe it would be wise to make any arbitrary rule of recognition in the House. The matter of recognition must necessarily be left to the discretion of the Speaker. Now, what would be the effect if the rules were adopted as provided by the gentleman? It has always been the custom here, under the rule, to permit a member of the committee, the chairman, or some other member of the committee who reports the measure, to take the floor in its advocacy.

The Speaker first recognizes that member to take the floor, and he has it for an hour under the rules. Now, suppose you adopt the arbitrary rule which the amendment provides; when that member has concluded his remarks the first gentleman who catches the Speaker's eye must be recognized. The custom has always obtained here for the Speaker to recognize the minority on the question. If the committee that reports the measure is divided, some member of the minority who is opposed to the measure is recognized under the customs of this House. And that is right and proper, because he comes from the committee that reported the measure and has examined the measure. But if it should turn out under the practice that the Representative on the minority of the committee reporting the measure should not be so alert as some gentleman immediately in front of the Speaker who had no connection with the question, and who was not a member of the committee—yet this gentleman who has had nothing to do with the consideration of the measure being first to address the Speaker under this arbitrary rule, the Speaker, having no discretion, not being allowed to recognize a member of the minority of the committee as opposed to the measure, would be compelled to recognize the other gentleman who had no connection with the matter, who would then have the floor for one hour, and thus the House would be taken away entirely from the consideration of the question and the argument of the question by the gentlemen who had considered it in committee. A gentleman getting the floor in opposition to a measure would have control of it, and might move the previous question before other members of the committee had had a chance to consider it.

Mr. HOOKER of Mississippi. Will the gentleman allow me to make an inquiry?

Mr. RICHARDSON of Tennessee. Yes, sir.

Mr. HOOKER of Mississippi. Do you not think that the time has come when gentlemen sitting in a remote part of the House should be recognized?

Mr. RICHARDSON of Tennessee. That is only one object——

Mr. HOOKER of Mississippi. I think it is very material.

Mr. RICHARDSON of Tennessee. Where a member sits should have nothing to do with the question.

Mr. HOOKER of Mississippi. Three or four of you gentlemen would control the whole business.

Mr. RICHARDSON of Tennessee. The gentleman will not hear me. The gentleman sitting in a remote part of the Hall, so far as that is concerned, may be the very gentleman entitled to the floor, and a gentleman who has his seat immediately in front of the Chair may be recognized who has no connection with the question at all, and yet he would have control of it for an hour.

Mr. HOOKER of Mississippi. No connection with it! Is he not a member of the House, and has not he connection with every matter that comes up here?

Mr. RICHARDSON of Tennessee. Not necessarily. The House might not desire to hear from him at that time; it might desire to hear from the member who had examined the matter and who had well considered views upon it; and yet the gentleman sitting where my friend from Mississippi now sits, in front of the Chair, would have a great advantage over the gentleman sitting in a remote corner of the Hall who had investigated the subject, and whose business it had been to do so.

Mr. BRECKINRIDGE of Arkansas. If this amendment were adopted, would it not be possible for a member in opposition to a measure under consideration during the second morning hour to get the floor and exhaust the hour without permitting the measure to be brought to a vote?

Mr. RICHARDSON of Tennessee. Unquestionably it would. Such a provision would take away from the Speaker the discretion to recognize the member in charge of a measure. If the member was not the first to address the Speaker, some other gentleman having anticipated him, the discussion of the measure would be taken away from the man who had charge of it, who was presumed to understand it, and whom the House wanted to hear.

Mr. BRECKINRIDGE of Arkansas. And a vote would be defeated entirely, under the limitation of the morning hour?

Mr. RICHARDSON of Tennessee. Certainly. Now, Mr. Speaker, this rule which it is proposed to change is not new. Gentlemen might infer from the remarks of the gentleman from Iowa [Mr. HEPBURN] that the rule is a new one, but in fact it has existed in the House, substantially in this form, from 1789. At different times attempts have been made to change it; but the House has always, I believe, refused to make the change, and has left the question of recognition in the discretion of the Speaker. In the Forty-sixth Congress the question was fully examined by a committee of the House, and a very able report was made upon it by one of the most distinguished members that ever sat in this body, Mr. Garfield of Ohio. That committee made an exhaustive examination of the question, and the conclusion at which they arrived was, I think, the only correct one, namely, that the discretion as to recognition must be lodged in the Speaker.

With fifteen or twenty men on the floor, all clamoring and con-

tending as to which one had risen first, there would be perpetual disorder and confusion; no system, no method would be possible, and the only way to have method and order and system is for the Speaker to exercise the discretion in recognizing members. I ask the clerk to read the extract which I have marked from the report of that committee in the Forty-sixth Congress, made by Mr. Garfield.

The Clerk read as follows:

With the exception of the last clause of Rule CXIII, which was adopted in 1805, these rules have remained unchanged for ninety years. In the nature of the case discretion must be lodged with the presiding officer, and no fixed and arbitrary order of recognition can be wisely provided for in advance; and the committee are of opinion that these rules should not be changed.

The practice of making a list of those who desire to speak on measures before the House or Committee of the Whole is a proper one to enable the presiding officer to know and remember the wishes of members. As to the order of recognition, he should not be bound to follow the list, but should be free to exercise a wise and just discretion in the interest of full and fair debate.

[Here the hammer fell.]

Mr. SMITH of Illinois. Mr. Speaker, I wish to say a word upon this subject. I am inclined to favor the amendment of the gentleman from Iowa; but not because I have any idea that the new members have fared badly during the discussion which went on here for about fourteen days on the silver question. [Laughter.] As a matter of fact, the very new members seem to have fared much better on that occasion than some other comparatively new members who have been here longer.

It is a practice in the House, as all of us know, that in order to secure recognition we must appeal to the presiding officer in secret and get his consent to be recognized, before we can be heard on the floor. In some instances it may be that the proper dispatch of business would require that; but what is a member sent here for? He is elected by his constituency; he is supposed to be able to represent them when he gets here. A measure is up for discussion and consideration, and his people may wish to hear his views upon that subject, or he may want to express his views, so that his vote may be understood by his people at home, or he might possibly have some views which if expressed would be of benefit to the House. And yet, if the Speaker sees fit to do so, he can, under the proposed rule offered by the committee, prevent that member or any member from being heard on that subject.

During the time I have been in Congress I have personally known of just such instances. I would myself have been glad of an opportunity to have expressed my views on the silver question when it was under discussion for two weeks here, and I even went to the Speaker of the House and asked for an opportunity to be heard; but while it was promised, the privilege was never accorded me. It is probably as well for the country and for myself that I was not heard; but still a desire was lingering in my bosom to express my views on that subject, so that my people might know my reasons for the vote I should cast when the time for voting came.

I have not the presumption, sir, to suppose that at any time or under any circumstances I would be able to influence one solitary vote on this floor, nor would I care to speak for the purpose of hearing myself talk; but I would like sometimes to be recognized and to express my views. I believe, however, as I said in the beginning, that the very new members have no right to complain of anything that has occurred at this session. They seem to have been very generally recognized. [Laughter.] Mr. Speaker, I think I shall favor the adoption of the amendment of the gentleman from Iowa, because then, if we see fit to exercise our right, we can clamor for recognition on the floor and it will not take away from the Speaker any of his prerogatives; he does not need to open the eye that is opposite to the man that is clamoring, but can confine his vision to the other side and thus we will feel that we have all had an equal chance. [Laughter.]

In that way I suppose legislation could be conducted and business transacted just as rapidly and just as efficiently as it is now. But whether I shall support this amendment very strongly or or only weakly, I desire to say that in my judgment there ought to be a little more leniency shown on the part of the presiding officer when a member desires to be heard, he having a right to be heard by virtue of his election and having duties here to discharge under his oath of office and the certificate from the authorities of his State—a right to be heard upon all subjects brought up here for discussion.

[Here the hammer fell.]

Mr. HEPBURN. Mr. Speaker, I read from the rules of the Forty-second Congress:

When any member is about to speak in debate or deliver any matter to the House, he shall rise from his seat and respectfully address himself to "Mr. Speaker."

That is all there is in those rules bearing on this question. And I understand that this was the rule down to the Forty-fifth or Forty-sixth Congress, when the words "and being recognized" were inserted. And those words, contrary to all the previous history and practice of the House of Representatives, have been construed as giving the Speaker the right arbitrarily to refuse recognition to a member who, having risen and addressed himself to the Chair, and being in order, desired to be heard.

Mr. Speaker, it is evident that some of the gentlemen who oppose my amendment are unfamiliar with the rules as here proposed. The clause which follows the one I seek to amend gives the Speaker power to determine and put an end to all the difficulties that gentlemen have thus far urged against the adoption of my amendment. In these rules, as reported, it is provided in a paragraph subsequent to that which I propose to amend, that "when two members rise the Speaker shall then determine who shall speak." If forty members rise the Speaker determines who shall have the floor. So that there can be no confusion added to the disorders of the House by reason of the amendment which I ask may be adopted.

My proposition is simply that a member rising in his place to deliver some matter to this House in the performance of the duties which he was sent here to perform "and being in order"—gentlemen, remember those words "and being in order"—shall be recognized by the Speaker. What objection is there to any member being recognized who is in order? Every difficulty gentlemen have suggested is obviated by some other rule. If in any instance the member rising should be out of order the Speaker would refuse to recognize him. This rule gives to the member simply the right to demand recognition when in order; and this every member on this floor ought to have.

I hope, Mr. Speaker, it is not necessary for me to disclaim any of the imputations which the gentleman from Ohio saw fit to put in my mouth with reference to the Speaker of this House. I have no doubt that he will construe this rule as he will the other rules of this House, in accordance with what he regards as fairness. But I do submit that the pending rule as proposed gives to the Chair a power which no man ought to have—the power to override the Constitution of the United States and to destroy the equality of constituencies represented on this floor.

[Here the hammer fell.]

The question being taken on the amendment of Mr. HEPBURN, it was rejected, there being—ayes 50, noes 85,

The Clerk read as follows:

7. While the Speaker is putting a question or addressing the House no member shall walk out of or across the Hall, nor, when a member is speaking, pass between him and the Chair; and during the session of the House no member shall wear his hat or remain by the Clerk's desk during the call of the roll or the counting of ballots, or smoke upon the floor of the House; and the Sergeant-at-Arms and Doorkeeper are charged with the strict enforcement of this clause.

Mr. MORSE. I move to amend by inserting after the words "floor of the House," in the eighth line of the paragraph just read, "neither shall any other person be allowed to smoke on the floor of the House at any time."

Mr. Speaker, this amendment which I have offered is a practical amendment, affecting the health of all the members of this House.

The amount of sickness among the members of Congress, I have observed since I have been a member of this body, is great, and the death rate among members of Congress, since I have been a member, is appalling.

Mr. Speaker, I believe this appalling circumstance is due in no small measure to foul, vile, bad air that we are asked to breathe in this Hall. Fourteen members associated with me in the Fifty-first Congress died, most of them while Congress was in session. I have not at hand the mortality of the last (Fifty-second) Congress.

The rules of this body, like its predecessors, contains the usual provision forbidding members to smoke on this floor, and that rule ought to be obeyed and enforced by the Doorkeeper, in justice to members who do not use tobacco, and there are a good many.

I have sometimes thought that a good amendment to this rule would be to add the words, "except cigars, pipes, and cigarettes." But be that as it may, my amendment goes b yond the present rule forbidding members to smoke during the sessions of the House, and proposes to reach the crowd of people who come upon this floor before the session of the House begins. Now, will somebody tell me, when our rules forbid members smoking on this floor when the House is in session, why Tom, Dick, and Harry should be permitted before the meeting of the House to fill this Hall with vile cigar, cigarette, and pipe smoke?

Now, I submit, Mr. Speaker, if it is proper to prohibit the members of this House from using this Hall as a smoking-room during the sessions of this House, it is proper to go a little further than that, and say that it shall not be used for any such purpose before the beginning of the sessions of the House. There are a good many members of this Congress, as well as its predecessors, who do not use tobacco in any form, and a smaller num-

ber to whom it is downright offensive and poisonous. The amendment which I propose goes beyond that which appears in the rules, and forbids other persons, not members of this House, to smoke upon the floor of the House at any time when it is not in session.

The situation is not as bad at this season of the year, when the doors and windows are open, as it will be in the winter season, when they are closed, and when this room is crowded with a motley crowd up to a few moments of the time for the session to begin, and many of these are smoking pipes and cigarettes and the vilest kind of tobacco, so that I have witnessed at the beginning of many of the sessions in the Fifty-first and Fifty-second Congresses that the air would be blue with this vile smoke to such an extent that you could scarcely see across the room, and this is especially offensive to our lady visitors in the galleries.

Now, all that the gentleman from North Dakota [Mr. JOHNSON] said the other day about the filthy condition of the ventilators in this House and much more is true, and has a good deal to do with the vile, bad air in this Hall. This is the first hall that I was ever conversant with where it was arranged that the fresh air and ventilation should come to us through a spittoon [laughter], for that is about what these ventilators amount to under the present practice of the House. In the name of health and decency, gentlemen ought not to expectorate in these ventilators.

It is generally conceded by medical and scientific men that disease is propagated by germs or bacteria. That is the result of scientific investigation. If that be true, what an incubating machine for bacteria this half-mile of ventilators in front of each row of seats in this Hall must be, into which many of the members expectorate. What an incubator for catarrh, consumption, and other diseases? I repeat, it is the first instance that I have ever known where the fresh air and ventilation came up through the spittoons, because that is practically what they are.

The gentleman from North Dakota [Mr. JOHNSON] says they have not been cleaned for years. We have a Committee on Ventilation and Acoustics, but I am told that that committee never meets. It is a very important committee, having much to do with the welfare and health of the members. Why, Mr. Speaker, only yesterday a member of this House told me that he had been out of health ever since he came here, and he thought it was entirely due to the smoke in this room, which he was compelled to breathe, and he asserted, further, that he would certainly not be a candidate for reëlection if he would be obliged to sit in the vile, bad atmosphere of this House.

I regret that they have not established some different arrangement—for instance, closing the top of these ventilators, so that they will not be incubating machines to propagate disease; and every sensible man must see that they are nothing more nor less than that in their present condition and use.

Mr. DALZELL. How would you get the fresh air, then, if you close these floor ventilators?

Mr. MORSE. From underneath. Get it from the sides of the step on which they are placed and not from the top of the step.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. MORSE. I ask consent, Mr. Speaker, to proceed for three minutes longer.

The SPEAKER *pro tempore*. Is there objection?

There was no objection.

Mr. MORSE. Now, Mr. Speaker, a word further on this subject.

The children of Israel, under Divine direction, established what was known as "cities of refuge." The Committee on Rules have in their wisdom established in this vast building at this end one "city of refuge" for nonsmokers by forbidding the members to smoke in this Hall.

Every other part of this vast building, except the Senate Chamber, the lobbies, the corridors, the Rotunda, the committee rooms, and every part of the building, except these Halls, are open to smokers.

And I submit, Mr. Speaker, that this "city of refuge" should be respected, and the rule in regard to smoking in this Hall should be enforced.

I have conferred with the gentleman in charge of this report, Gen. CATCHINGS, and he says that he has no objection to the amendment which I have offered, forbidding persons not members of Congress from smoking in this Hall at any time. This is a step in the right direction, will conserve the health of the members, and I trust that it will be adopted.

The importance of this amendment to the rules can not be overestimated. I submit that we who do not smoke, with all deference to those gentlemen who do, have some rights in this matter, and that our convenience and health ought to be a subject of some little consideration as well as theirs. It is a fact, Mr. Speaker, that one of my colleagues in the Fifty-first Congress, who sat in that chair just over there (indicating) told me that he would decline and did decline reëlection for the reason that the atmosphere was so vile in this Hall that he could not subject himself to the consequences of remaining in it.

I submit that this rule should be enforced, and rigidly. It is simply designed to cure an evil which all must recognize. There is no reason why we should prevent members from smoking if we are to allow the crowd of persons who fill this Hall just before the session begins to exercise that privilege of poisoning the air which we have to sit in all day. If the rules forbid members from smoking on the floor, I repeat it, sir, we should deliver ourselves from the bad atmosphere which is created by extending this privilege to the masses who throng the Hall before the session begins.

[Here the hammer fell.]

The SPEAKER *pro tempore*. The question is on agreeing to the amendment proposed by the gentleman from Massachusetts.

The question was taken; and on a division there were yeas 55, nays 51.

Mr. CARUTH. No quorum.

The SPEAKER *pro tempore*. The Chair will appoint tellers.

Mr. CATCHINGS and Mr. MORSE were appointed tellers.

Mr. CARUTH. Mr. Speaker, if the gentleman from Massachusetts applies his amendment——

[Cries of "Regular order!"]

The SPEAKER *pro tempore*. Debate is not in order.

Mr. WILSON of Washington. I wish to submit a parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. WILSON of Washington. Does the amendment place the outsiders when they get on the floor on the same level with the members?

The SPEAKER *pro tempore*. The Chair does not understand the gentleman's inquiry.

Mr. WILSON of Washington. If I understand it, by the adoption of the amendment we place outsiders who come on the floor before the session begins on an equality with the members who come on the floor after the session begins.

The SPEAKER *pro tempore*. The amendment prohibits smoking at any time on the floor.

Mr. CARUTH. I rise to a parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. CARUTH. Does this amendment apply to members of the House, or merely to outsiders?

The SPEAKER *pro tempore*. The Chair thinks that is not a parliamentary inquiry; but the amendment applies to those who are not members of the House.

Mr. CARUTH. I withdraw the point of order.

Mr. SNODGRASS. I renew it.

The SPEAKER *pro tempore*. The tellers will take their places.

Pending the count by tellers,

Mr. SNODGRASS withdrew the point of no quorum.

So the amendment was agreed to.

The Clerk, proceeding with the reading of the proposed rules, read as follows:

4. When a question is under debate no motion shall be received but to fix the day to which the house shall adjourn, to adjourn, to take a recess, to lay on the table, for the previous question (which motions shall be decided without debate), to postpone to a day certain, to refer or amend, or to postpone indefinitely, which several motions shall have precedence in the foregoing order; and no motion to postpone to a day certain, to refer, or to postpone indefinitely, being decided, shall be again allowed on the same day at the same stage of the question.

Mr. REED. I move to strike out in clause 4, in line 2, after the word "but," the words "to fix the day to which the House shall adjourn;" and in the next line the words "to take a recess."

I do not suppose it is necessary to discuss the matter. I simply desire to state to the House what my purpose is. The House has indicated in various ways, sometimes by vote and sometimes by speech, that it did not desire to filibuster. The speeches and the votes have not always coincided, however. That is, that some gentlemen have voted against filibustering, and other gentlemen have expressed their minds against it, but have voted the other way. Possibly, by a practical matter like this, we can arrange it so that the expressions of opinion and the votes may coincide; so that the language may join onto the action in some way.

Now, one of the special methods by which filibustering is carried on is by that absurd motion to fix the day to which the House shall adjourn, and the motion to take a recess. Under no general parliamentary law was the motion to take a recess ever erected into the dignity of a privileged motion, and in no assembly that I know of on earth is it a privileged motion, except in this Assembly. If we strike that out we shall take away a great deal of the fuel from the fire; and I purpose to follow it by the proposition to strike out the next clause, or such portion of it as gives these motions preference.

To the new members it may be necessary to say that the system of making privileged a motion to adjourn, to fix a time to which the House shall adjourn, and to take a recess, when alternated and amended, under our system of having the yeas and nays, constitute in themselves an absolute deadlock.

Now, if this House means anything that it has been saying about filibustering, it has got to take these motions out. If it does not mean anything by it, why let the House keep these motions in. If it means to have a system of work, this is the foundation of it. If it means to have a system of dodging responsibility, why this present system is a very good one.

The SPEAKER *pro tempore*. The question is on the amendment proposed by the gentleman from Maine [Mr. REED].

The question being taken—

The SPEAKER *pro tempore* announced that the noes seemed to have it.

On a division (demanded by Mr. REED) there were—ayes 52, noes 68.

Mr. POWERS. I submit that there is no quorum voting.

The SPEAKER *pro tempore*. The gentleman from Vermont makes the point that no quorum has voted, and the Chair will appoint as tellers the gentleman from Mississippi, Mr. CATCHINGS, and the gentleman from Maine, Mr. REED.

Mr. TRACEY. A parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. TRACEY. Would it be in order to make a motion to adjourn?

Mr. CATCHINGS. Let us have the yeas and nays.

The SPEAKER *pro tempore*. The gentleman from Mississippi demands the yeas and nays. The Chair did not understand the inquiry of the gentleman from New York [Mr. TRACEY.]

Mr. TRACEY. My inquiry is whether a motion to adjourn would be in order at present.

The SPEAKER *pro tempore*. A motion to adjourn would be in order.

Mr. TRACEY. Then, Mr. Speaker, I move that the House adjourn until Tuesday at 12 o'clock.

Mr. CATCHINGS. Oh, we de not want to adjourn, Mr. Speaker.

Mr. TRACEY. We can not get a quorum, and Monday will be a legal holiday.

The SPEAKER *pro tempore*. It is in order to move to adjourn, but the Chair thinks that a motion to adjourn until Tuesday would be beyond the constitutional limit.

Mr. REED. That is not for the Chair to decide. That is for the House to pass upon.

Mr. TRACEY. The Constitution allows us to adjourn for three days.

The SPEAKER *pro tempore*. The Chair will submit the motion, however.

Mr. TRACEY. My motion, if agreed to, would only adjourn the House for three days, even including Sunday, and, if it is not counted, it would be only two days.

Mr. DOCKERY. Why not make it Monday?

Mr. TRACEY. Because that is a legal holiday.

The SPEAKER *pro tempore*. The gentleman from New York [Mr. TRACEY] moves that the House adjourn until Tuesday next at 12 o'clock.

Mr. SPRINGER. I make the point of order that the gentleman may move that when the House adjourn it adjourn until that time, but that the motion in the form in which he makes it is not in order.

Mr. TRACEY. We are not working under any such rule. We have not adopted the rules.

The SPEAKER *pro tempore*. The Chair will hear the gentleman from Illinois [Mr. SPRINGER].

Mr. SPRINGER. That has been regarded as the parliamentary rule.

Mr. DOCKERY. I desire to add to what the gentleman from Illinois [Mr. SPRINGER] has said that we are operating under a resolution of the House which provides that the House, until otherwise ordered, shall meet each day at 12 o'clock.

Mr. CATCHINGS. Oh, let us vote the motion down.

The SPEAKER *pro tempore*. The question is on the motion of the gentleman from New York [Mr. TRACEY].

The question being taken, the SPEAKER *pro tempore* announced that the noes seemed to have it.

Mr. POWERS and Mr. REED demanded a division.

The SPEAKER *pro tempore*. The gentleman from Mississippi [Mr. CATCHINGS] has demanded the yeas and nays on the amendment of the gentleman from Maine [Mr. REED].

Mr. TRACEY. The gentleman from Vermont [Mr. POWERS] demanded a division on my motion.

The SPEAKER *pro tempore*. If the gentleman from Vermont states that he made the demand, the Chair will recognize him. The Chair did not hear him.

Mr. POWERS. I did.

The SPEAKER *pro tempore*. The question is on the motion made by the gentleman from New York [Mr. TRACEY], and upon that a division is demanded.

The House divided, and there were—ayes 45, noes 86.

So the motion of Mr. TRACEY was not agreed to.

The SPEAKER *pro tempore*. The gentleman from Mississippi [Mr. CATCHINGS] demands the yeas and nays on the amendment offered by the gentleman from Maine [Mr. REED].

The yeas and nays were ordered.

Mr. SPRINGER. What is the question now before the House?

The SPEAKER *pro tempore*. The Clerk will read the amendment offered by the gentleman from Maine.

The amendment was again read.

The question was taken; and there were—yeas 70, nays 136, not voting 147; as follows:

YEAS—70.

Van Voorhis, N. Y.	Waugh,	Wise,	

So the amendment was rejected.

The following additional pairs are announced:

Until further notice:

Mr. PIGOTT with Mr. GROSVENOR.

Mr. BLAND with Mr. DINGLEY.

Mr. CAUSEY with Mr. BROSIUS, until Tuesday next.

For the rest of the day:

Mr. BLANCHARD with Mr. HENDERSON of Illinois.

Mr. MUTCHLER with Mr. HOUK of Tennessee.

Mr. ALDERSON with Mr. WADSWORTH.

Mr. REILLY with Mr. REYBURN.

The result was then announced as above recorded.

Mr. DINGLEY. Mr. Speaker, it seems to me that there ought to be something done by this House to put a stop, in a reasonable degree, to the practice which has grown up during the past eight or ten years of filibustering by one or two or half a dozen individuals, thus effectively preventing not only a majority, but even nine-tenths of the members of this House from carrying out their will. Now, I recognize that there is on the part of a great many members a desire to interpose a reasonable delay in the transaction of any business; that good comes from that, and that objection has perhaps some weight.

The House has refused to strike out these two privileged motions; but is it not possible, now that we are on this matter, to set aside all partisan feeling and address ourselves to devising some method by which there may be a reasonable plan adopted by which the House may reach a vote on a question.

Mr. COX. Mr. Speaker, I rise to a point of order. There is no amendment pending.

Mr. DINGLEY. I proposed before concluding my remarks to offer an amendment; but I will move to strike out the last word, if the gentleman desires to be technical in the matter. Is it not possible, I say, for us to adopt some rule whereby there may be some method of reaching a vote upon a proposition that is before the House when nine-tenths of the members desire to do so? Old members of the House recognize the fact that under the rule in paragraphs 4 and 5, the paragraph we are now considering and the paragraph following, it is absolutely in the power of one gentleman in this House to prevent the other 355 members from reaching any conclusion on any bill or proposition before this House, if he is willing to proceed to the lengths of filibustering. That is made possible by the fact that the motion to adjourn and the motion to fix a day for adjournment, are made always in order, to an unlimited extent. So that all anyone has to do is to use alternately these two motions; and he may extend these by moving to amend them. My suggestion is that we amend this rule so as to place some limit upon proceedings of that kind.

Now, what objection is there to adding the two motions, to fix a day of adjournment and to take a recess, to those mentioned in the last clause of paragraph 4 of Rule XVI, thus giving some limit to dilatory motions when the House, by a large majority, desires to reach a vote? I have here an amendment which I will submit at the close of my remarks; but I do not desire to do so unless the proposition commends itself to gentlemen who wish to address themselves to the transaction of the business of the House and desire to have rules that may be reasonable. Instead of the last clause of this rule I would substitute the following:

> And no motion to postpone to a day certain, to refer, to postpone indefinitely, to take a recess—with one amendment, to fix the day of adjournment—with one amendment, shall be again allowed on the same day, at the same stage of the question.

That, as gentlemen will see, would admit all the usual parliamentary motions, one of each kind; and then if the House, by a large majority, desires to reach a vote on the question, why should not these two motions—the motion to fix a day of adjournment and the motion to take a recess—be confined to one of each at the same stage of the question?

I will offer this amendment for the purpose of bringing the House to consider the question whether it wants to stop in any way this filibustering; whether it is desired that filibustering in this House by one gentleman shall be allowed so as to prevent the House for days, and it may be even for weeks, from coming to a vote. It seems to me that when we have allowed this round of motions once we have exhausted all that ought to be allowed at the same stage of a question under consideration; and this seems to me so reasonable a provision that I do not think there ought to be any objection to it on the part of gentlemen who really desire to do business.

If we do not adopt this, or something of the kind, we are placed in the position, that whenever any gentleman desires to indulge in filibustering against a measure that measure can not pass unless the majority of the Committee on Rules will agree to report a cloture; so that the whole House is to be entirely under the control of three members of the Committee on Rules as to whether it shall have relief from any such difficulty or not. Now, I submit to gentlemen that we ought not to put ourselves in that position. I submit that after we have given reasonable opportunity for debate and one opportunity to make each of the several motions named, no repetition of those motions ought to be allowed at the same stage of the question, such repetition being obviously for a dilatory purpose. I withdraw the formal amendment, and offer that which I send to the desk to be read.

The Clerk read as follows:

> Amend by striking out the last clause in Rule XVI, commencing with the words "and no motion," and substitute the following: "And no motion to postpone to a day certain, to refer, to postpone indefinitely, to take a recess—with one amendment, to fix a day of adjournment—with one amendment, shall be again allowed on the same day at the same stage of the question.

Mr. DINGLEY. Mr. Speaker, I desire to call particularly the attention of my friends of the majority of the Committee on Rules to this proposition, and to ask them to give it careful consideration. I ask them to consider whether it is not desirable that we should go to this moderate extent, which seems to me absolutely necessary, unless we propose to put ourselves entirely at the mercy of filibusterers, or of the Committee on Rules.

Mr. CATCHINGS. Mr. Speaker, I demand the previous question on the pending proposition.

Mr. SPRINGER. Unless the gentleman from Mississippi desires to reply to the gentleman from Maine, I wish to make a few remarks.

Mr. CATCHINGS. I do not think it necessary to reply, or I would do so.

The SPEAKER *pro tempore*. Did the gentleman from Mississippi demand the previous question? The Chair was unable to hear him.

Mr. CATCHINGS. If the gentleman from Illinois [Mr. SPRINGER] desires to speak, let him speak, but I did demand the previous question.

Mr. SPRINGER. Mr. Speaker, I had hoped that my distinguished friend from Mississippi would be as willing to-day to take the advice of the gentleman from Maine as he was on yesterday, because this proposition is quite as worthy of being adopted as the other; indeed, I think there are several more reasons why this should be accepted than existed for the acceptance of the other. I am heartily in favor of this amendment. While it does not enable the House to reach a conclusion at once, it will perhaps afford an opportunity at the end of five or six or eight or ten roll calls to come to a vote.

Mr. REED. I think it would take about ten roll calls at least, under the rule proposed by my colleague [Mr. DINGLEY].

Mr. SPRINGER. I estimated it at ten.

Mr. OUTHWAITE. Well, does not the gentleman think that roll calls are sometimes as edifying as some of the speeches that we hear on this floor?

Mr. REED. The gentleman from Ohio better speak for himself. [Laughter.]

Mr. SPRINGER. I would not undertake to say as to other speeches, but I know that would not be true as to mine or as to those of the gentleman from Ohio. [Laughter.] As I have said, Mr. Speaker, I think it would take about ten roll calls to exhaust the power of filibustering left under the rule proposed by the gentleman from Maine [Mr. DINGLEY], so that it would require about a day to reach a vote.

Mr. DINGLEY. The rule applies, of course, to the legislative day.

Mr. SPRINGER. Yes; to the legislative day. I hope the amendment will be agreed to.

Mr. CATCHINGS. I hope it will not be agreed to. I ask for a vote.

The question was taken; and there were—ayes 52, noes 102.

Mr. DINGLEY. No quorum.

The SPEAKER appointed as tellers Mr. CATCHINGS and Mr. DINGLEY.

The House proceeded to divide; but before the result was announced

Mr. CATCHINGS said: I think we had better have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 70, nays 137, not voting 146; as follows:

YEAS—70.

Coombs,	Hines,	Powers,	Wright, Mass.
Cooper, Ind.	Hitt,	Randall,	
Cooper, Wis.	Hooker, N. Y.	Ray,	

So the amendment was rejected.

Mr. HAYES. The gentleman from Tennessee [Mr. ENLOE] after voting left the Hall. He desired me to state that he was paired with the gentleman from Maine [Mr. BOUTELLE], and in the event that a quorum should be present he desired his vote withdrawn.

The SPEAKER. In the absence of objection, the vote will be withdrawn.

Mr. DINGLEY. If there is a quorum without my vote, I desire to withdraw it, as I am paired.

The result of the vote was announced as above stated.

The Clerk read as follows:

A motion to fix the day to which the House shall adjourn, a motion to adjourn, and to take a recess shall always be in order, and the hour at which the House adjourns shall be entered on the Journal.

Mr. REED. I move to amend by inserting after the words "shall always be in order" the words, "except when used for dilatory purposes."

The question having been taken on the amendment—

The SPEAKER. The noes seem to have it.

Mr. REED. I call for a division.

The question being again taken, there were—ayes 56, noes 129.

Mr. REED. Is there a quorum?

The SPEAKER. There is a quorum voting.

So the amendment was rejected.

Mr. REED. I move to amend by striking out all the words of this clause down to and including the word "and," in line three.

The SPEAKER. The Clerk will read the words proposed to be struck out.

The Clerk read as follows:

A motion to fix the day to which the House shall adjourn, a motion to adjourn, and to take a recess shall always be in order, and—

The question having being taken on agreeing to the amendment—

The SPEAKER. The noes seem to have it.

Mr. REED. I call for a division.

The question being again taken, there were—ayes 51, noes 104.

Mr. REED. No quorum.

The SPEAKER. The gentleman from Maine makes the point that no quorum has voted. The Chair will order tellers, and will appoint the gentleman from Mississippi [Mr. CATCHINGS] and the gentleman from Maine [Mr. REED].

Mr. CATCHINGS. I think we may as well have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 56, nays 135, not voting 162; as follows:

YEAS—56.

Loud,	Pendleton, W. Va.	Sperry.	

So the amendment was rejected.

The following additional pair was announced:

Mr. CADMUS with Mr. WRIGHT of Pennsylvania.

The result of the vote was then announced as above recorded.

The Clerk resumed and concluded the reading of Rule XVI.

Mr. HOOKER of Mississippi. Mr. Speaker, I desire to offer a further amendment to this rule.

The SPEAKER. The Clerk will read the amendment proposed by the gentleman from Mississippi.

The Clerk read as follows:

Amend Rule XVI by adding the following as a new paragraph:

10. The objection of no single member shall prevent the House from taking up and considering any matter, but it shall require the concurrent objection of fifteen members to prevent the consideration of any measure.

Mr. HOOKER of Mississippi. I offer this amendment, Mr. Speaker, which I presume will be adopted without objection from any quarter, at least I hope so, for the purpose of curing an evil which we have all witnessed in past sessions of Congress. Those of us who were here in the last session of Congress, and the preceding session, have often witnessed the defeat of an opportunity to consider a matter in the House which the majority desired to consider, by the single objection, perhaps the captious objection, of one single member. It seems to me that no one man should be permitted to block legislation in that way and defeat the will of every other member of the House.

My object in introducing the amendment is to do away with the possibility, therefore, of a single member having that power, so that by merely interposing his objection to the consideration of a measure which requires unanimous consent he is able to defeat the will of the House itself. There are many occasions when requests have been made in the House for unanimous consent to consider a matter when a solitary objection prevented it, against the sense and judgment of the House. Now, I object to any one member having that power.

I desire also, Mr. Speaker, before the vote is taken, to amend the amendment by the insertion of the words at the beginning of it, "Where unanimous consent is requested."

In the last House, and for many Congresses before, the objection of a single member has prevented the taking up of a matter by the House, although every other member in the House might be willing to consider it. The objection of one man was more potent than the strength of the whole House outside of him. I might cite a case which took place in the last term of Congress, in which a small bill was passed in the Senate permitting the removal of a well-known officer of the Navy, who had died on the coast of Alaska, to his home, and burying him in the graveyard of his friends and relatives.

It passed the Senate unanimously and came over to the House, where it was referred to the Committee on Naval Affairs, and was reported unanimously by that committee; and yet for a long time action was prevented on that bill because under the rules as they stood, and as they will stand now if this amendment is not incorporated in the rules, the objection of a single member prevented any one from getting that bill before the House for consideration. I desire that the rules shall be amended in the form I have suggested, that where unanimous consent is requested it shall require the concurrent objection of fifteen members to prevent consideration.

Mr. HAYES. Mr. Speaker, I move to amend the amendment by striking out "fifteen" and inserting "five." It seems to me that it ought not to be left to the captiousness of one member, but fifteen might be an unwieldy body, and I therefore suggest five instead.

The SPEAKER. The Clerk will read the amendment proposed by the gentleman from Iowa to the amendment of the gentleman from Mississippi.

The Clerk read as follows:

Strike out fifteen and insert five.

Mr. WELLS. I move that the House now adjourn until Tuesday next at 12 o'clock.

Mr. HOOKER of Mississippi. Mr. Speaker, I believe the vote is first to be taken on the amendment.

Mr. WELLS. I will withdraw the motion.

The SPEAKER. The question is on agreeing to the amendment of the gentleman from Iowa, to strike out "fifteen" and insert "five."

Mr. HOOKER of Mississippi. Let the amendment as modified by myself be read.

The Clerk read as follows:

Where unanimous consent is asked, the objection of no single member shall prevent the House from taking up and considering any matter; but it shall require the concurrent objection of fifteen members to prevent the consideration of any measure.

The SPEAKER. The question now is on striking out "fifteen" in this amendment and inserting "five."

The amendment to the amendment was rejected.

Mr. HOOKER. I rise to a parliamentary inquiry. Is it in the power of the mover of a proposition to accept an amendment?

The SPEAKER. But the amendment has been voted down.

Mr. HOOKER. Then I move to reconsider the vote by which the House refused to accept the amendment of the gentleman from Iowa.

The question was taken; and on a division there were—ayes 38, noes 89.

Mr. HOOKER. No quorum.

The SPEAKER announced the appointment of Mr. CATCHINGS and Mr. HOOKER of Mississippi as tellers.

Mr. CATCHINGS. I think we had better have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 44, nays 136, not voting 174; as follows:

YEAS—44.

Babcock,	Funk,	Hulick,	Milliken,
Baker, N. H.	Gear,	Johnson, Ind.	Moon,

Henderson, Iowa	Meredith,	Sheli,	Wright, Mass.
Hendrix,	Money,	Sherman,	Wright, Pa.
Hermann,	Morgan,	Sibley,	
Hicks,	Morse,	Sickles,	

So the amendment was not agreed to.

The following additional pairs were announced:

For the rest of this day:

Mr. FITCH with Mr. TAYLOR of Tennessee.

Mr. GOLDZIER with Mr. HULL.

Mr. FELLOWS with Mr. CANNON of Illinois.

Mr. CAPEHART with Mr. HENDERSON of Iowa.

Mr. DINGLEY. I vote for the purpose of making a quorum.

Mr. GROSVENOR. I am paired, but I vote to make a quorum.

Mr. HOOKER of Mississippi. I move that the House do now adjourn.

The SPEAKER. One moment. The result of the yeas and nays has not been announced.

Mr. ENLOE. I am paired with the gentleman from Maine [Mr. BOUTELLE], but vote to make a quorum.

The result of the vote was then announced as above recorded.

Mr. CATCHINGS. I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 4 o'clock and 59 minutes p. m.) the House adjourned until to-morrow, September 2, 1893, at 12 o'clock noon.

SENATE.

SATURDAY, *September 2, 1893.*

Prayer by Rev. J. G. BUTLER, D. D., of the city of Washington.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

Mr. VILAS presented the petition of J. M. Holly and 36 other citizens of La Crosse, Wis., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. BUTLER presented a petition of the Board of Trade of Georgetown, S. C., praying for the repeal of the so-called Sherman silver law; which was ordered to lie on the table.

He also presented a petition of the Board of Trade of Columbia, S. C., praying that an appropriation be made for the improvement of the Congaree River, South Carolina; which was referred to the Committee on Commerce.

Mr. PETTIGREW. I present a memorial of the officers of the different wool-growers' associations in the State of South Dakota, remonstrating against any change in the tariff on wool, and stating that they believe that placing wools on the free list at this time will stamp out the sheep business in that State and bring disaster and ruin to their chosen calling. I move that the memorial be referred to the Committee on Finance.

The motion was agreed to.

Mr. TELLER presented a petition of the railway conductors of Colorado, praying for the free coinage of silver; which was ordered to lie on the table.

Mr. SHERMAN presented two petitions of business men and merchants of Massillon, Ohio, and of Mahanoy City, Pa., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which were ordered to lie on the table.

Mr. TURPIE presented a petition of citizens of Lima, Ind., praying for the unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

Mr. GORDON presented a petition of the Georgia Bankers' Association, praying for the establishment of a subtreasury in the State of Georgia; which was referred to the Committee on Finance.

DEFICIENCY PAYMENT OF CLERKS TO SENATORS.

Mr. WHITE of Louisiana, from the Committee to Audit and Control the Contingent Expenses of the Senate, to whom was referred the amendment submitted by Mr. DOLPH, intended to be proposed to the bill (H. R. 4) to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes, asked to be discharged from its further consideration and that it be referred to the Committee on Appropriations; which was agreed to.

WIDOW OF C. P. CRANDALL.

Mr. WHITE of Louisiana, from the Committee to Audit and Control the Contingent Expenses of the Senate, to whom was referred the resolution submitted by Mr. MITCHELL of Oregon, August 31, 1893, reported it without amendment, and it was considered by unanimous consent, and agreed to, as follows:

Resolved, That the Secretary of the Senate be, and he is hereby, authorized and directed to pay out of the miscellaneous items of the contingent fund of the Senate to Mollie Crandall, widow of C. P. Crandall, deceased, late a messenger in the employ of the Senate, an amount equal to six months' salary as such messenger; said sum to be considered as in lieu of all funeral expenses and other allowances.

BILLS INTRODUCED.

Mr. VOORHEES introduced a bill (S. 820) for the relief of the legal representatives of Nicholas J. Bigley, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. HALE introduced a bill (S. 821) for the relief of David Marshall, of the county of Hancock, in the State of Maine; which was read twice by its title, and referred to the Committee on Claims.

Mr. SHERMAN introduced a bill (S. 822) for the relief of the legal representatives of Thomas L. Young; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. POWER introduced a bill (S. 823) to authorize the Missouri River Power Company of Montana to construct a dam across the Missouri River; which was read twice by its title, and referred to the Committee on Commerce.

Mr. PETTIGREW introduced a bill (S. 824) granting settlers on certain lands in Oklahoma Territory the right to commute their homestead entries, and for other purposes; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. SHOUP introduced a bill (S. 825) to amend an act entitled "An act to provide the times and places for holding terms of the United States courts in the States of Idaho and Wyoming;" which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. PALMER introduced a joint resolution (S. R. 25), proposing an amendment to the Constitution of the United States relating to the election of Senators by the people; which was read twice by its title, and referred to the Committee on Privileges and Elections.

Mr. MITCHELL of Oregon. I introduced a similar resolution (Senate joint resolution No. 2), at the special session of the Senate in the present Congress. I desire to inquire if it is still on the table, or has it been referred?

The VICE-PRESIDENT. It is on the table, the Chair is advised.

Mr. MITCHELL of Oregon. I ask unanimous consent that it be referred, in connection with the joint resolution just introduced, to the Committee on Privileges and Elections.

The VICE-PRESIDENT. Without objection, it will be so referred.

Mr. SHERMAN. I ask that the joint resolution (S. R. 1, special session) proposing an amendment to the Constitution of the United States, introduced by me at the special executive session, be referred to the Committee on the Judiciary. It is in regard to changing the time of the meeting of Congress, and I think it ought to go to that committee.

The VICE-PRESIDENT. The joint resolution will be so referred.

PAPERS WITHDRAWN AND REFERRED.

On motion of Mr. HALE, it was

Ordered, That the papers in the case of Ambrose Simpson, introduced in the Fifty-first Congress, be withdrawn from the files of the Senate and referred to the Committee on Claims.

REPORTS OF SECRETARIES OF THE TREASURY.

Mr. HIGGINS submitted the following concurrent resolution; which was read:

Resolved by the Senate (the House of Representatives concurring therein), That the Secretary of the Senate, under the direction of the Committee on Finance,

cause to be printed and bound six thousand copies, two thousand for the use of the Senate and four thousand for the use of the House, such portions of the Annual Reports of the Secretaries of the Treasury, including the reports of Mr. Hamilton, as said committee may deem advisable, and to cause an index to be prepared for the same.

Mr. HIGGINS. I find that the reports of the Secretaries of the Treasury up to 1838 were published at that time in two volumes. The first volume, including the reports up to 1814, was first published. There has been no edition since that time. Of course the reports are out of print and can only be found on the shelves of the Library. They contain matter of the utmost importance and moment at this time, as, indeed, at all times. It strikes me that it is a *casus omissis* that the reports have not been published from time to time, so as to bring them to the present period. The resolution merely refers the matter to the Committee on Finance with authority to report as to what should be done and what portion of the reports should be published. Of course, the accompanying documents have now grown to be very voluminous, and it would be a matter of editing as to what should be included; but I think that it would be a most interesting and valuable publication.

The VICE-PRESIDENT. The concurrent resolution will be referred to the Committee on Finance.

TREATIES WITH INDIAN TRIBES IN OREGON.

Mr. MITCHELL of Oregon submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Secretary of the Interior be, and he is hereby, directed to transmit to the Senate copies of all treaties at any time heretofore made and not heretofore printed, between the United States and the tribe of Indians known as "Two-too-ten-nees" in the State of Oregon; also copies of all treaties heretofore entered into and not heretofore printed with any and all tribes of Indians located west of the Coast range of mountains and between the mouth of the Umpqua River and the line separating the States of California and Oregon, in the State of Oregon; also copies of all correspondence between Indian Agent Ben Wright and Joel Palmer, superintendent of Indian affairs for the State of Oregon; also of all correspondence between said Agent Wright and said Superintendent Palmer and the Commissioner of Indian Affairs, concerning said tribes of Indians, or any of them, and concerning said treaties or any of them.

ORDER OF BUSINESS.

The VICE-PRESIDENT. If there are no further resolutions the morning business is closed.

Mr. VOORHEES. I ask that the order of business, House bill No. 1, be temporarily laid aside, not losing its place, in order that the Senator from Oregon [Mr. DOLPH] may proceed with some remarks which he desires to submit upon another subject. I do this the more readily when I reflect that this bill has really been before the Senate but three days. It was reported last Tuesday, printed Wednesday, and we have had it three days before us. This is the last day of the week. Next week will open an era of real business, wherein I trust we shall make progress from hour to hour.

I feel warranted to-day, inasmuch as I am not advised that anybody desires to speak upon the bill, to take the course I am indicating and allow the Senator from Oregon to submit some remarks which he desires to make, after which I shall be very glad if other Senators are ready to go on. If not, I will indicate what I desire at the time.

Mr. HALE. I wish to suggest to the Senator from Indiana, in view of what he has said as to next week being a business week, whether he does not think it would be advisable, beginning either Monday or Tuesday, for the Senate to meet at 11 o'clock instead of 12. There are no committees at work and the time may as well be spent here as elsewhere. I know that the Senator, as he has expressed himself, is very desirous of pushing forward the debate, which it is proper should be elicited. If we meet at 11 o'clock, by 4 or 5 o'clock, instead of one speech using up the day, there can be two or three speeches by Senators who desire to be heard on the subject.

Mr. VOORHEES. I give notice that on Monday I shall take the sense of the Senate on the question of meeting at 11 o'clock. I give the notice now so that the Senators may consider it. I have an old-fashioned idea of the will of the majority being carried out. I do not expect to control matters except through the majority of the Senate. I give notice now that on Monday I shall ask the Senate to consider the propriety of meeting at 11 o'clock from Tuesday on. I will not ask the Senate to meet at that hour on Monday, but Monday I shall ask the Senate to consider whether we shall meet on Tuesday at 11 o'clock and proceed with the business that is before us.

Mr. HALE. I am very glad to hear the Senator give that notice.

URGENT DEFICIENCY APPROPRIATIONS.

Mr. COCKRELL. If the Senator from Oregon will yield to me for a few moments I desire to submit a report from the Committee on Appropriations. I report back from that committee the bill (H. R. 4) to provide for certain urgent deficiencies in the appropriations for the service of the Government for the fiscal year ending June 30, 1894, and for other purposes. I ask that the bill be read, and then I wish to submit certain amendments from the committee. I shall ask unanimous consent to have the bill considered after it is read.

The Secretary read the bill.

Mr. COCKRELL. The provision for recoinage of silver coins which we made for the current fiscal year was $150,000. In a special estimate made by the Secretary of the Treasury he estimates that it will take $300,000 in addition to that amount. This bill appropriates only $200,000. The other item is an additional appropriation for expenses of national currency. The appropriation for 1894 was $9,300, and the bill makes an additional appropriation of $25,000. The Secretary of the Treasury estimates $44,000. The other items of the bill are under "House of Representatives." The Senate will recall public resolution No. 19, approved March 3, 1893:

That on and after April 1, 1893, each Member and Delegate of the House of Representatives of the United States may, on the first day of every month during sessions of Congress, certify to the Clerk of the House of Representatives the amount which he has paid or agreed to pay for clerk hire necessarily employed by him in the discharge of his official and representative duties during the previous month, and the amount so certified shall be paid by the Clerk out of the contingent fund of the House on the 4th day of each month to the person or persons named in each of said certificates so filed: *Provided*, That the amount so certified and paid for clerical services rendered to each Member and Delegate shall not exceed $100 for any month during the session: *And provided further*, That the provisions of this resolution shall not apply to members who are chairmen of committees entitled under the rules to a clerk.

If the Senate will agree to the consideration of the bill, I have two amendments to propose from the committee which are absolutely necessary.

By unanimous consent the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. COCKRELL. The first amendment is, to insert after line 15 the following:

SENATE.

That any unexpended balance of the appropriation made in the legislative, executive, and judicial appropriation act for the fiscal year 1893, approved July 16, 1892, for compensation of session employés of the Senate, be, and the same is, hereby made available to pay the pages of the Senate who served from the 1st to the 15th day of April, 1893, inclusive.

I will state, in explanation of this amendment, that the appropriation for 1893 was made for the session ending on the 4th of March, and knowing that there would be a called session we provided for the payment of pages during the month of March, but made no provision for their payment during the month of April. The boys who were employed here have received no pay for the period from the 1st to the 15th of April. This simply appropriates the unexpended balance for that payment.

The amendment was agreed to.

Mr. COCKRELL. After the amendment just agreed to, I move to insert:

WAR DEPARTMENT.

Old Ford's Theater Building. For repairs to the old Ford's Theater Building, $6,000: *Provided*, That said repairs shall be made under the direction of the Chief of Engineers of the Army, and that the building shall not be occupied by clerks until it shall have been examined and pronounced safe by a board of officers to be convened by the Secretary of War.

The amendment was agreed to.

Mr. SHERMAN. Do I understand the Senator to say that an amendment has been reported from the committee increasing the amount of the appropriation for the recoinage of the small coin?

Mr. COCKRELL. No, sir; but the House provision appropriating $200,000 has been retained. It is in the first clause of the bill.

Mr. SHERMAN. I understand the committee propose to retain that amount.

Mr. COCKRELL. We simply agreed to what the House put in.

Mr. SHERMAN. That is all right. I thought the Senator was proposing to reduce the item; which would be a mistake.

Mr. COCKRELL. Oh, no. I only called attention to the fact that the House had not appropriated to the full amount of the estimate.

Mr. SHERMAN. I think it would be wise for the Senate to adopt an amendment making the appropriation necessary, because it is absolutely impossible to recoin $12,000,000 of small coins to supply what is demanded by the country with the appropriation which is proposed.

Mr. COCKRELL. This appropriation is only to keep the recoinage going on for a while. As a matter of course there will be other deficiencies.

Mr. SHERMAN. We can supply the deficiency then, I suppose, at the next session.

Mr. DOLPH. I wish to ask the Senator from Missouri if the committee has considered an amendment offered by myself on the 31st ultimo, which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate, reported back to the Senate, and referred to the Committee on Appropriations.

On the 30th of September, 1890, almost three years ago, there was reported from the Committee to Audit and Control the Contingent Expenses of the Senate a resolution, which was passed by the Senate, as follows:

Resolved, That the per diem clerks to the committees of the Senate and the clerks to Senators be retained in the service of the Senate during the coming recess, and that the Secretary of the Senate is hereby authorized and directed to pay out of the contingent fund of the Senate the per diem now allowed such clerks by law during the sessions of the Senate.

All the secretaries to Senators and clerks to committees not provided for by annual appropriations were continued in service under this resolution, and many of them, as I happen to know, borrowed money in order to pay their expenses to remain in Washington and perform their duties. The contingent fund of the Senate was found to be insufficient to pay them, and I think but one secretary out of the whole number has been paid.

Several attempts have been made to secure an appropriation for the purpose of paying these just demands against the Senate to these secretaries and clerks. On one occasion when a conference report was under discussion in the Senate, the Senator from Missouri, who has reported this bill, said:

Mr. COCKRELL. I desired the Senator in charge of the conference report to make the explanation, because I was unable as a member of the conference committee to agree to the report, for the reasons stated, that I felt that the Senate is under a moral and legal obligation to provide the funds for the payment of the clerks who were employed between the adjournment of the last session on the 1st of October and the beginning of the present session. They have performed the service and are entitled to compensation for it, and in the absence of the senior Senator from Iowa [Mr. ALLISON], I declined to agree to the conference report. I am glad the question is to be kept up in the form the conferees have placed it. I shall not, therefore, antagonize this particular report.

As I say, nearly three years have expired and, as stated by the Senator from Missouri, here is a moral and legal obligation. Many of these secretaries are actually in need of the money, and I know of more than one instance where money was borrowed in order to pay their expenses while they remained here. The Senator has done the just thing this morning by reporting in favor of providing for the payment of the pages from the 1st to the 15th of April last for services rendered, but the claim of the secretaries to Senators and clerks to committees is quite as just a claim as the claim of the pages for their fifteen days' pay, and the secretaries to Senators and clerks to committees have been kept out of their pay longer.

It occurred to me that this was a very proper place to put the amendment which I have suggested, and try the temper of the House of Representatives in regard to it. Of course, if this amendment be adopted to this bill, it will be in the control of the conferees of the House and the Senate, as is usual. But here is a bill, passed by the House of Representatives and sent to us, proposing to make an appropriation to pay the secretaries of members of the House for the present session. It appears to me that the amendment offered by me is germane to that proposition.

I ask whether the amendment I presented has been considered by the committee, whether there is any special reason why it should not be put upon this bill and sent to conference, or why it should be deferred to some other appropriation bill? I ask how the Senator feels about it?

Mr. COCKRELL. I simply repeat what I said before in regard to the matter. I have not changed my mind in reference to it, but there are numerous reasons, which it is not necessary now to consume the time of the Senate in explaining, why the provision ought not to go on the bill at this time. I shall very heartily support it when the proper time comes, and do all I can to secure its enactment into law.

I did not desire to call the full committee together and consume time, as they have all been very busy, but I have consulted with the members of the committee, and they agree with me that it is not best to place the provision suggested by the Senator from Oregon on this particular bill at this time. I say that very frankly, not that I want to evade any responsibility or any contest in regard to it, but for many reasons I do not think it is best or wisest to present the subject at present.

Mr. DOLPH. I understand the Senator from Missouri to be a very just man, and the fact that he takes the view in regard to this demand against the Senate that he does is proof of that.

I am unable to agree with him, however, just as yet to whether this is the proper place to insert the amendment I have suggested. Perhaps the Senator has some reasons which I do not understand, and I shall defer to his better judgment now, because I shall rely upon his help to secure this act of justice to these worthy persons who have been at the expense of remaining at the Capitol for two months and performing service. I desire the services of the Senator in securing their payment upon an appropriation bill, but after what he has said now publicly and what he has said to me privately in regard to the matter I shall not antagonize him by offering the amendment at this time.

I want it understood, however, that I am not the only Senator here who desires to see this claim paid. There are a good many other Senators in this body on both sides of the Chamber, I will say, who are under moral obligations to see their secretaries paid, and without desiring to be ugly or to obstruct the legislation of the Senate, I give notice that if a provision of that kind is not adopted by the Senate on some appropriation bill at this session, I shall be as ugly as I can be about the adoption of a conference report which drops the matter and throws it over for another year.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time, and passed.

EXCLUSION OF CHINESE IMMIGRATION.

Mr. DOLPH. Mr. President, what is before the Senate?

The VICE-PRESIDENT. If there be no further morning business, the Calendar under Rule VIII is in order.

Mr. VOORHEES. I ask that the regular order may be temporarily laid aside, without prejudice.

The VICE-PRESIDENT. The Senator from Indiana asks that the Calendar may be laid aside. Without objection that order will be made.

Mr. DOLPH. I am under obligations to the Senator from Indiana.

Mr. VOORHEES. Not at all.

Mr. DOLPH. I wish it understood, however, that I have stated in the Senate and stated to the Senator from Indiana, and to all other persons, that I should not ask to take up any outside measure to the prejudice of the pending financial measure if there was now any Senator who desired to occupy the time of the Senate; but, under the circumstances, I ask to take up Senate bill 745, which is now on the table, for the purpose of making some remarks upon it.

The VICE-PRESIDENT. The Senator from Oregon asks that the bill indicated by him may be taken up for the purpose of submitting remarks upon it. Is there objection? The Chair hears none.

Mr. DOLPH. I ask that the bill may be read.

The Secretary read the bill (S. 745) making an appropriation to enable the Secretary of the Treasury to enforce the Chinese exclusion acts, as follows:

Be it enacted, etc., That the sum of $500,000, or so much thereof as shall be required during the fiscal year ending June 30, 1894, be, and the same is hereby, appropriated for the enforcement of the several acts of Congress regulating and prohibiting Chinese immigration.

Mr. DOLPH. Mr. President, I have never been and am not radical on the Chinese question. Unbiased by prejudice and uninfluenced by public sentiment, I desire to submit to the Senate some observations upon the present phase of the Chinese question, with a view to correcting some current erroneous impressions concerning the so-called Geary law.

Before doing so, however, I will say that under our form of Government the powers of government are divided amongst three great departments, the executive, the legislative, and the judicial. The line of separation between the powers of these departments is distinctly defined by the Constitution, and no department can encroach upon another without a violation of that instrument and danger to our political fabric.

Congress enacts the laws; courts, upon a proper case made before them, construe Congressional enactments, and it is the duty of the Executive to enforce them. The President has no more right to violate a law of Congress than the humblest citizen of the Republic.

Congress having passed the Geary law, and the Supreme Court having affirmed its constitutionality, any refusal or deliberate neglect of those whose duty it is to enforce it, to do so is criminal.

There are few American citizens, I think, who would not now regard the unrestricted immigration of Chinese laborers to this country as a great evil and as menacing our national prosperity. With over 400,000,000 of Chinese just across the Pacific from us, struggling for existence, with increasing facilities for travel, with a demand in this country for cheap labor, with the advertisement this country receives in China from returning Chinese with a few hundred dollars of hoarded wages, which become a fortune there, if the coming of Chinese laborers had not been restricted, the annual immigration of that class of Chinese to this country would have now been enormous.

Even under our restrictive laws, with the severe penalties provided for their violation, during the last year the British steamships sailing from Chinese ports to Victoria and Vancouver, in British Columbia, have been crowded with Chinese laborers intending to enter the United States along our unprotected borders, or by personating merchants and under forged certificates.

Many have so unlawfully entered this country, and thousands have been refused permission to land and have been sent back, many of them only to renew the effort to evade our laws at some other point.

There are many reasons that render the presence in this country of the class of Chinese known as Chinese laborers undesirable. No one can rightly judge of this class of Chinese by the educated, intelligent Chinese officials and travelers or even the occasional enterprising Chinese laborers seen in the Eastern States. The vast population in China is composed of many classes. There is the educated, intelligent, and wealthy class, and there is the miserable, degraded, vicious class, who live in vice, squalor, destitution, and starvation all their lives. Of the latter class mainly are the coolies imported into this country by the Chinese Six Companies.

Their condition in this country is no better than that of slaves. They go where they are sent, and do what they are told to do by their masters. They are hired out by hundreds or thousands, as the case may require, often without being consulted. Their wages are collected by others, and they receive such portion of their earnings as they, in their servile and dependent condition, are able to secure. They crowd into small, badly ventilated buildings until their abodes become breeding places for disease, necessitating municipal regulation. The portion of a city which they occupy becomes a nuisance. Vice thrives there in its most disgusting forms, and the very air is contaminated. Gambling and opium smoking is a passion among them, and white boys and girls are inveigled into their opium joints and speedily converted into moral lepers. Not only are the male Chinese laborers virtually slaves, owned by the Six Companies, but Chinese women in this country, with very few exceptions, are used for the vilest purposes, and are everywhere a merchantable commodity.

I know from experience and observation that Chinese laborers in this country do not regard either our laws or the obligation of an oath as administered in our courts of justice as binding upon them. When a criminal charge is made by one Chinaman against another, or a civil action is brought, it is just as likely to be done for revenge or to enforce the decrees of their secret and unlawful tribunals as otherwise. The late United States District Judge Hoffman, on January 16, 1888, writing to ex-Senator Felton, then a member of the House of Representatives, and recommending the passage of a law limiting the right of Chinese laborers who had departed from this country to return, and describing the embarrassments of the Federal courts in dealing with cases arising under the Chinese exclusion laws, said:

> It is not unreasonable that when the courts have devoted so much time and the Government has incurred so much expense in investigating the validity of these claims, and the courts have been in so many cases the victims of perjury and fraud, which it is impossible to detect, we should say that we can not longer afford to occupy the time of our tribunals in these investigations, and we have a right to notify the Chinese that if the privilege is not availed of within a short and designated period, to be fixed by law, it shall be deemed to have been waived.
>
> If you could have attended court and listened to the hearing of any of these cases, you would have recognized how completely the court is at the mercy of Chinese testimony and how impossible it is to distinguish a genuine case from a fraudulent one.

The Chinese in this country maintain a government of their own, with secret tribunals, and enforce their decrees by violence and even by murder. The Chinese population in this country is a nonassimilating and disturbing element. Between it and our people there is an impassable gulf. Every reason for maintaining a protective tariff for the purpose of protecting American industries and American labor applies equally in favor of the restriction of the coming of Chinese laborers to this country.

Although the work of Chinese laborers here is done in the country, it is of little benefit to the country. The Chinese laborer does not intend to become a part of our body politic, and could not if he did. He even contracts when he sells himself to the Six Companies that if he dies in America his bones are to be removed to China. He is a mere sojourner here. He is not a consumer to any considerable extent of American products. He lives on one-fourth of the amount required to support an American laborer, and hoards his wages and sends or carries them out of the country. He lives as no American laborer can live. He works for wages which will not support an American laborer. He is everywhere, necessarily in competition with intelligent American white labor.

The future of this country will be what the men who toil with their hands make it. Free government and republican institutions are not to be preserved by leveling down in this country the price of labor and the condition of laborers to that of Chinese coolies, but by maintaining a rate of wages which will make the laboring man comfortable, intelligent and independent. The fact that Chinese labor in this country is in necessary competition with white labor is the principal reason why I favor the prohibition of the coming of Chinese laborers to our shores.

It will conduce to a better understanding of the precise question now confronting Congress if a brief history of the Chinese and Chinese restrictive legislation in this country be given.

The first treaty of peace and amity between the United States and China was negotiated by Hon. Caleb Cushing, our minister to China in 1844, and was proclaimed in April, 1846. As early as the year 1853, a Democratic senate of the State of California, presided over by a Democratic lieutenant-governor, passed resolutions reciting that the Chinese were already residents of California in considerable numbers; that trade with China would be valuable to the United States, and especially so to California, which was situated nearest to the Chinese Empire, and praying for the appointment of a United States commissioner to reside in China.

Another and more liberal treaty was negotiated with China in 1858 by James Buchanan. It substantially provided that citizens of the United States should be permitted to travel and reside in China for the purpose of commerce, trade, etc., and that if subsequently China should give to any nation greater privileges than those granted to the United States by treaty the same should inure at once to the United States, so that the United States should enjoy commercial advantages with China equal to those of the most favored nations, and in return China was to have the good offices of the United States in any controversy with foreign powers.

This treaty having been made by a Democratic Administration was claimed by the Democratic party to be one of the important achievements of the Administration.

Chinese before the execution of the Buchanan treaty resided in considerable numbers in California, Oregon, and Washington. Under our laws they could, like the citizens and subjects of all other countries, lawfully come to and reside in the United States. There was no reason why there should have been inserted in the treaty any provision securing to Chinese subjects the right they already had and exercised to come and reside in the United States.

In the year 1868 the Chinese Government adopted a new policy toward the outside world. It sent an embassy to the United States, at the head of which was the Hon. Anson Burlingame, an American citizen, to negotiate a supplemental treaty. This resulted in the treaty known as the Burlingame treaty, signed on behalf of the United States in July, 1868. This treaty was ratified without opposition, both Democratic and Republican Senators voting for it. By that treaty the rights theretofore enjoyed by the subjects of China in common with the subjects of all other foreign countries, to come to and reside in the United States, was confirmed to them. I do not understand that that provision was inserted in the treaty in pursuance of any demand on the part of China or in anticipation of any possible change of our policy toward foreigners, but it was undoubtedly copied from other treaties with foreign nations as a matter of form.

When the embassy, headed by Mr. Burlingame, reached San Francisco in 1868, a grand banquet was tendered them there, over which the then Democratic governor of California, H. H. Haight, presided, and at which many of the leading Democrats of the State sat at table with the leading Chinese merchants of San Francisco.

The number of Chinese laborers in this country continued to increase, and while their labor helped to develop the country and was beneficial to those engaged in carrying on great enterprises requiring cheap labor, it became apparent to thoughtful persons that a large influx of Chinese laborers, who took no interest in our institutions and did not assimilate with our people, who saved their earnings to be sent out of the country instead of investing them here, and who could not become citizens, was undesirable, and that Chinese laborers supplanted by cheap labor more desirable laborers, capable of becoming citizens, who contributed both by their labor and by the expenditure of their earnings in the country to build up and support home industries.

When the sentiment upon the Pacific coast in favor of the exclusion of Chinese laborers had become so strong as to force recognition by the Government, the treaty of November 17, 1880, was negotiated by which the United States was authorized to suspend the coming of Chinese laborers into the United States, but not to wholly prohibit it. It was provided in the treaty that Chinese laborers who were then in the United States should be allowed to go and come at their own free will, and should be accorded all the rights, privileges, and immunities which are accorded by this Government to the citizens and subjects of the most favored nations.

By the act of May 6, 1882, the coming of Chinese laborers to this country was suspended for a period of ten years, but by section 2 of the act it was provided that such suspension should not apply to Chinese laborers who were in the United States on the 17th of November, 1880, or who should have come into the

United States before the expiration of ninety days next after the passage of the act.

The act further provided for the issuance of certificates to departing Chinese for the purpose of identification and as evidence of their right to return. The amendatory act of 1884 also provided that Chinese laborers who were in the United States when the treaty took effect, and those who came into the United States before the expiration of ninety days after the passage of the act of May 6, 1882, should be entitled to depart from this country and to return.

As to those laborers who departed before the act of May 6, 1882, went into effect, there was no record or other official evidence of their right to return, and when they returned and sought to enter the United States they were held by the courts to be entitled to prove in court their right to land in the same manner as any other question of fact is established.

Suspension of the coming of Chinese laborers to this country, or more correctly, the prohibition of the importation of Chinese coolies by the Six Companies, injured a profitable business of those companies. In consequence, the law was systematically violated by them, and thousands of Chinese were smuggled into the country. Experience disclosed defects in the acts of 1882 and 1884, which Congress sought to remedy. For this purpose the Senate Committee on Foreign Relations during the first session of the Forty-ninth Congress reported a bill, which passed the Senate, but did not receive consideration in the House of Representatives.

Early in the first session of the Fiftieth Congress there was reported to the Senate from the same committee a similar bill, but more simple and more effective in its provisions, which was not acted upon in the Senate on account of the pendency of the treaty between the United States and China, signed March 12, 1888.

That treaty, it will be remembered, provided additional and more stringent regulations for the identification of Chinese entitled to come to and reside in the United States, and restricted the right of Chinese laborers departing from the United States to return to those who had a child, parent, or wife residing in this country, or owned $1,000 worth of property or $1,000 of collectable debts.

The certificate of the right to return was to be applied for in advance upon a sworn application, so that its truth might be verified and perjury punished. If the right to return was claimed on account of the applicant having a wife in the United States, the marriage was required to have taken place one year before the application was made and to have been followed by cohabitation.

The treaty was slightly amended in the Senate, necessitating the consent of the Chinese Government to the amendments.

Anticipating the ratification of this treaty by the Chinese Government, Congress passed the act of September 13, 1880, which, by its terms, was to take effect when the treaty was ratified. Without waiting for the ratification of the treaty the Democratic House of Representatives, in an attempt to gain some political advantage, passed and sent to the Senate the Scott exclusion bill. The political origin and character of this act is proved by the following facts: It was publicly stated at the time, and I think was never denied, that the draft of the bill was upon paper which bore evidence that it came from the Executive Mansion. It was introduced by a leader of the Democratic party. It was introduced and passed the House the same day, and, I believe, within a period of two or three hours, without discussion or an opportunity for discussion. It was evidently introduced and passed through the House with the expectation that the Senate would refuse to pass it, and it could then be said that a Democratic House had passed a stringent restriction bill and the Republican Senate had refused to pass it. Coming to the Senate under such circumstances upon the eve of a Presidential election, it was impossible that the measure should receive in the Senate the consideration it deserved. Republican Senators believed a pit had been dug for them, and determined to let those who dug it fall into it.

The President, under such circumstances, felt forced to sign the bill, although the Chinese minister afterwards insisted in his official correspondence with the Department of State that he had Mr. Bayard's assurance that the bill, if passed by Congress, should be vetoed.

This law unquestionably violated our treaty with China. Although the treaty provided that Chinese laborers lawfully in this country at the date of the treaty might go and come at their own free will, the Scott act not only provided that Chinese laborers lawfully in this country once departing should not return, but invalidated certificates already issued to Chinese laborers, some 20,000 in number.

Many Chinese laborers who had once been in this country and departed, and whose right to return had been taken away by the Scott act, and many others who had never been in this country, endeavored to get into the United States, coming in in violation of this law, some by being smuggled across the Mexican border and the Canadian border, and some by personating merchants and presenting to the customs officials forged certificates. Thousands succeeded in evading the law. The dockets of the Federal courts on the Pacific coast were crowded with Chinese cases.

The Chinese restrictive laws were about to expire. I introduced in the Senate a bill indefinitely extending all existing Chinese legislation and proposing some minor amendments which experience had shown to be necessary, which was referred to the Senate Committee on Foreign Relations. It was amended so as to continue existing laws for a period of ten years from its date and reported to the Senate and passed. The following is the Senate bill:

SECTION 1. That all laws now in force prohibiting and regulating the coming into this country of Chinese persons and persons of Chinese descent are hereby continued in force for a period of ten years from the passage of this act.

SEC. 2. That any Chinese person or person of Chinese descent, when convicted and adjudged under any of said laws to be not lawfully entitled to be or remain in the United States, shall be removed from the United States to China, unless he or they shall make it appear to the justice, judge, or commissioner before whom he or they are tried that he or they are subjects or citizens of some other country, in which case he or they shall be removed from the United States to such country: *Provided*, That in any case where such other country of which such Chinese person shall claim to be a citizen or subject shall demand any tax as a condition of the removal of such person to that country, he or she shall be removed to China.

SEC. 3. That any Chinese person or person of Chinese descent arrested under the provisions of this act shall be adjudged to be unlawfully within the United States unless such person shall establish, by affirmative proof, to the satisfaction of such justice, judge, or commissioner, his lawful right to remain in the United States.

SEC. 4. That any such Chinese personor person of Chinese descent, once convicted and adjudged to be not lawfully entitled to be or remain in the United States, and having been once removed from the United States in pursuance of such conviction, who shall be subsequently convicted for a like offense, shall be imprisoned at hard labor for a period of not exceeding six months, and thereafter removed from the United States, as hereinbefore provided.

The House instead of taking up the Senate bill and acting upon that, as was usual in such cases after a long delay, and just before the existing Chinese restrictive laws were about to expire by their own limitation, passed and sent to the Senate its own bill, the Geary bill, thus necessitating the reference of the bill in the Senate to a committee and the consideration of the measure again by the Senate.

The Senate substituted my bill, the Senate bill, for the Geary bill, and asked a conference. The conference was agreed to, and the Senator from Ohio, the Senator from Alabama, and myself were appointed conferees on the part of the Senate.

It was well known that the Senator from Ohio was opposed to any more stringent provisions than were contained in the Senate bill, if not to that bill. I found myself in this position: I believed all existing legislation prohibiting and regulating the coming of Chinese into this country would expire on the 6th of May, 1892, which date was near at hand. It was necessary that some bill should be passed and approved before that date to prevent the influx of great numbers of Chinese laborers into this country, thousands of whom were already congregated on our borders waiting for an opportunity to come in. I was compelled to yield something to secure an agreement of a majority of the Senate conferees with the House conferees, and I finally yielded to the adoption of a provision for registration.

The bill agreed upon and reported by the conference committee was substantially the Senate bill with a provision for registration drawn by me radically different from the provision in the House bill upon the subject, stripped in fact of all its harsh and burdensome features, a provision which was, in my judgment, reasonable and was no violation of our treaty with China, unless the continuation of the Scott law for ten years was such a violation, and which was calculated as much for the protection of Chinese laborers lawfully in this country as for the convenience of this Government. I know that the President so regarded it, for I talked with him upon the subject; and if he had believed the bill was a violation of our treaty obligations with China or was degrading in its requirements he would not have approved it.

I quote from some remarks I made in the Senate when the conference report was under consideration to show how I then regarded the measure:

Mr. DOLPH. I had a great many misgivings about the Scott bill. It is not necessary now to recount the circumstance under which that measure was acted upon in the Senate. I feel a good deal about that bill, as many others have expressed themselves here, that it not only violated the treaty but was a great injustice to many Chinese persons who had come to this country under the treaty and departed from it with their certificates, leaving their business and business connections here, and who were entitled to return on those certificates, which were by that act declared void, and they were kept out of the United States. How many there were of this class I do not know. I have heard it claimed that there were some thirty thousand.

Mr. JONES of Arkansas. I should like to make an inquiry. I did not understand the request of the Senator from Oregon about laying aside the regular order.

Mr. DOLPH. I suggested that, this being a privileged question, I sup-

posed the regular order would be laid aside temporarily until this question is disposed of; that is all.

Mr. CULLOM. This is a conference report.

Mr. DOLPH. This being a conference report. But the Scott bill became a law with my vote in the Senate, and the Senate has declared by a large majority vote that it will not attempt to disturb it. The bill reported by me early in the session from the Committee on Foreign Relations provided "That all laws now in force regulating the coming into this country of Chinese persons and persons of Chinese descent are hereby continued in force for a period of ten years from the passage of this act." That continues the Scott law. Even if that law should be repealed now, the injustice which was done to many of the Chinese who were out on certificates could not be remedied. The bill reported by the committee, and which was adopted as a substitute for the House bill, also provided in section 2:

"That any Chinese person or person of Chinese descent, when convicted and adjudged under any of said laws to be not lawfully entitled to be or remain in the United States, shall be removed from the United States to China, unless he or they shall make it appear to the justice, judge, or commissioner before whom he or they are tried that he or they are subjects or citizens of some other country, in which case he or they shall be removed from the United States to such country."

It then provided that if a tax or license is required of such Chinaman before he can enter such other country he shall be deported to China. The third section provided that a Chinese person arrested for being unlawfully in the country should have the affirmative to establish his right to remain. The only amendment of that section by the conference report is the insertion of the words "or the acts hereby extended;" so that the first clause of section 3 will read:

"That any Chinese person or person of Chinese descent arrested under the provisions of this act or the acts hereby extended," etc.

That was an omission in the draft of the section, and it was very properly inserted. The fourth section provided that when a Chinese person, after being convicted and deported from this country, returned and was again convicted, before he was again deported he should be punished by imprisonment for not exceeding six months. That has been amended so as to provide that any Chinese person who comes into this country in violation of the law may be punished not exceeding one year by imprisonment before he is deported, leaving it to the discretion of the court whether it shall be a month or a year, or a day or a year. The reason for that is that the punishment for a violation of the law by Chinese laborers seeking to enter now is very inadequate. It is simply that the Chinaman shall be deported from the country without cost to him, at the expense of the United States, and that he shall be taken back to China.

There may be cases, undoubtedly have been cases, and would be cases if the law is not changed, in which a Chinese person simply crosses the line, comes into the United States from Canada for the purpose of being sent back to China at the expense of the United States. It will be seen that that is a very inadequate penalty, and the committee of conference thought best to change the section so as to provide that a Chinese laborer might be imprisoned for the first violation. That is no unusual or unreasonable punishment for a wilful violation of our laws. The fact is that the violation of our laws by Chinese laborers seeking to come into the United States are all willful. They all know precisely what they are doing. They know they are violating the law and doing an unlawful act.

The only other provision which at all affects the rights of the Chinese is the provision requiring Chinese laborers to obtain certificates. The Senate will see, in the first place, that the requirement for certificates is only on the part of Chinese laborers. We have not touched the question as to who are merchants, as to what other Chinese persons are entitled to be or remain in the United States or to come into the United Stetes. We have only undertaken to provide some regulation by which the coming of Chinese laborers from the Canadian border and from the Mexican border into the United States can be prevented. We now have a right to exclude these Chinese laborers; the treaty gave us that right; we have legislated that they shall be excluded, and we find that it is impossible to exclude them with a land boundary line of 3,000 miles between the Canadian Dominion and the United States and our extended boundary line between Mexico and the United States. It is impossible to have a Government officer at every point along that line, and if existing laws are to be executed at all it is necessary to have some means of distinguishing between Chinese laborers who are lawfully here and Chinese laborers who come unlawfully into the United States.

The only difficulty in my mind about this provision has been as to how it would be received by the Chinese Government, and whether it would still further add to the dissatisfaction of the Chinese Government; but I have no question about its being within the treaty. I have no question about this provision for certificates being necessary in order to enable the United States to keep out Chinese laborers who are not entitled to come here under existing laws and under the treaty. In this provision the objectionable features of the similar provision in the House bill have been removed as far as possible. Practically this proposed amendment treats all Chinese laborers in the United States at the passage of this act or who shall apply for a certificate within a year as being rightfully, at least presumptively rightfully, in the United States, although the language of the provision is that they shall be Chinese laborers within the United States at the passage of the act, entitled to remain.

The only ground upon which any certificate could be refused would be that the officer before whom the application was made had evidence to show that the Chinese laborer had come into the United States since the passage of the act and was therefore not within the United States at the time of the passage of the act and for that reason not entitled to remain. It is not likely that any certificate would wrongfully be refused on that ground, and if it were there is no doubt at all that means could be found to secure the issuing of the certificate. We have left the minor matters to be provided for by the regulations of the Secretary of the Treasury.

I think this provision is as much in the interest of Chinese laborers in the United States to-day and entitled to remain, as it is in the interest of the United States to enable them to keep out Chinese laborers who are not entitled to come in. Any Chinese laborer now in the United States is liable to be arrested to-day on a claim that he has wrongfully come into the United States from Canada or from Mexico or from some other country, and is not entitled to remain in the United States; and he is liable to be tried on that charge before a judge or before a commissioner, and anybody maliciously or otherwise may cause his arrest and the trial of that question. But if he had a certificate duly issued in legal form he would be exempt from any interruption and annoyance of that kind. So the certificate would really be a benefit to him. It would be an evidence of his right to be in the United States and to remain in the United States, which he could carry with him at all times.

So the conference committee have inserted a provision that Chinese persons in the United States other than Chinese laborers may—not making it imperative upon them—but may apply if they choose for such certificates as evidence of their right to remain here, which shall be issued to them without charge.

Mr. GEORGE. I should like to call the attention of the Senator to the fact that this provision requires the certificate to be issued by the internal-revenue collector.

Mr. DOLPH. Or, of course, through some deputy.

Mr. GEORGE. It does not say anything about a deputy. The internal-revenue collector in the district in which I reside would live 500 miles from the Chinese person seeking the certificate.

Mr. DOLPH. The amendment requires the Secretary of the Treasury to make such regulations as will enable certificates to be issued convenient to the applicant.

Mr. GEORGE. The certificates have to be issued by the internal-revenue collector.

Mr. DOLPH. They are to be signed by him. They need not necessarily be delivered by him.

Mr. GEORGE. Why was not provision made that they may be issued by the clerk of a court?

Mr. DOLPH. That matter was discussed. I suggested putting in deputies; the conferees were opposed to that, but I secured another provision which was satisfactory to me and under which I think there will be no injustice done. As to the issuing of these certificates, in the first place I say the power to require them to be obtained is not a violation of the treaty. Some system of this kind is necessary to enable the United States to keep out those Chinese laborers not entitled to come in, to distinguish between those who are rightfully here and those who are not rightfully here; and therefore I think we are not violating the treaty by making such a provision. If I thought so, I would not vote for the bill, because I would not consent to any further legislation that I thought was a violation of the treaty.

Then I think, as I say, that it is quite as beneficial to the Chinese laborers themselves that they shall have these certificates as evidence of their right to be and remain in the United States undisturbed, as it is to the United States to enable them to prevent the coming of Chinese into this country.

The only other question is as to what provisions are necessary to secure the issuing of these certificates and to create no hardship or injustice to the Chinese laborers here. We have provided that they shall be issued without charge to the applicant. We have given the applicants one year in which to secure them. We have provided that the Secretary of the Treasury shall make such regulations as will provide for the issuing of certificates convenient to the applicants.

We have made the provision as liberal as possible. Instead of allowing one of these Chinese laborers who was in the United States at the time of the passage of the act to be brought up from spite by anybody, we provide that he may be arrested by certain officials, and instead of allowing him to be tried before any local commissioner in any county, we say he shall be brought before a United States judge, who it is presumed will not in his decision be governed by prejudice, but will undertake to do what is the proper and right thing to be done under the circumstances. Then we provide that if brought up at the expiration of a year, if he has neglected the duty of getting his certificate, and if he shall show that by reason of accident, sickness, or unavoidable cause he has not a certificate, and does show by one white witness that he was here at the time the act was passed and was entitled to a certificate, the certificate shall be issued to him. Then we provide that if he has had a certificate and is arrested, and alleges he has lost it, the case shall be delayed, and he shall have an opportunity to send and get a duplicate of it.

Mr. COKE. Will the Senator permit me to make a suggestion?

Mr. DOLPH. Certainly.

Mr. COKE. I suggest that as it requires one credible white witness the requirements will exclude from the witness box a very large number of citizens of the United States who are not white. I desire to ask if it was the intention to exclude them?

Mr. DOLPH. I think the intention of the conference committee was to provide a witness, who should not be a Chinese witness. I presume that was it; the use of the word white was accidental. It was copied from the House bill, but I do not think any harm can arise from this provision, because all the Chinese in this country are employed by white people. If they are employed as servants there will always be some white person who can identify them. If they are employed upon public works or in large bodies, then they are always connected with some Chinese company; they are registered; the company knows just who they are, what they are doing, and what wages they are receiving, and has an interest in their wages.

Mr. KENNA. I ask the Senator if the language of the bill would not exclude the colored population as witnesses?

Mr. DOLPH. I say it was not the intention to exclude colored persons, but to provide that one witness should be some other witness than another Chinese laborer.

Mr. KENNA. I do not ask if that was the intention; I ask if that is not the express meaning of the proposed statute?

Mr. DOLPH. It would exclude colored witnesses; there is no question about that.

I do not care to say anything more about this report, and I would have preferred myself the Senate bill without amendment. I have agreed to these amendments of it, because I think they are not in violation of the treaty. They are not any serious hardship upon the Chinese. The provision will really be beneficial to the Chinese laborers, giving them a certificate as evidence of their right to remain in this country.

Now, my friend from Ohio [Mr. SHERMAN] says we are introducing something new; that we are requiring something of the Chinese we do not require of people of other countries. Well, we introduced something new when we provided that Chinese laborers should be prevented from coming to this country. There was the innovation. If we should provide that Italian laborers or certain classes of Italians should not come to this country, it would probably be found necessary that we should give those who are here and were entitled to be here some evidence of their right to remain here in order that we might distinguish them from those who had not a right to come. I say the departure was when we undertook to exclude Chinese laborers, not in attempting to give them evidence of the right to remain or requiring them to procure evidence of the right to remain here in order that we may distinguish them from those who have not a right to come. We have discriminated against Chinese laborers. We have entered into a treaty that we might exclude them from the United States. We have legislated for their exclusion from the United States. Having done that, it is necessary for us to adopt some practical means to determine what Chinese laborers here are rightfully entitled to remain, and the necessity for this legislation arises from previous legislation and previous treaty stipulations.

I have not a doubt in the world that there will not be a Chinaman in the United States who will not understand within sixty days after this act is passed what is necessary. I do not believe at the end of the year there will be any Chinese laborers in the United States found without a certificate. As I said before, they come to this country by some arrangement with Chinese companies, the Six Companies. They are registered here by them; they are hired out by them; their wages are collected by them; their money is deposited with them, and their connection is such that the Chinese companies will at once see that the clients of their companies, the Chinamen who are attached to their companies, take the necessary steps to obtain the certificate.

While making the provision as liberal as possible, of course the committee were desirous that they should not make it so liberal that frauds could be practiced and those obtain certificates who are not entitled to them, and the certificates used to bring other persons into the United States.

This report is the agreement of the conference committee, and I hope it will be adopted, as but two days more remain for any legislation on the subject. I suppose on the morning of the 6th the present legislation will expire.

The act as finally passed is as follows:

An act to prohibit the coming of Chinese persons into the United States.

Be it enacted, etc., That all laws now in force prohibiting and regulating the coming into this country of Chinese persons and persons of Chinese descent are hereby continued in force for a period of ten years from the passage of this act.

SEC. 2. That any Chinese person or person of Chinese descent, when convicted or adjudged under any of said laws to be not lawfully entitled to be or remain in the United States, shall be removed from the United States to China, unless he or they shall make it appear to the justice, judge, or commissioner before whom he or they are tried that he or they are subjects or citizens of some other country, in which case he or they shall be removed from the United States to such country: *Provided*, That in any case where such other country of which such Chinese person shall claim to be a citizen or subject shall demand any tax as a condition of the removal of such person to that country, he or she shall be removed to China.

SEC. 3. That any Chinese person or person of Chinese descent arrested under the provisions of this act or the acts hereby extended shall be adjudged to be unlawfully within the United States unless such person shall establish, by affirmative proof, to the satisfaction of such justice, judge, or commissioner, his lawful right to remain in the United States.

SEC. 4. That any such Chinese person or person of Chinese descent convicted and adjudged to be not lawfully entitled to be or remain in the United States shall be imprisoned at hard labor for a period of not exceeding one year and thereafter removed from the United States, as hereinbefore provided.

SEC. 5. That after the passage of this act, on an application to any judge or court of the United States in the first instance for a writ of habeas corpus, by a Chinese person seeking to land in the United States, to whom that privilege has been denied, no bail shall be allowed, and such application shall be heard and determined promptly without unnecessary delay.

SEC. 6. And it shall be the duty of all Chinese laborers within the limits of the United States, at the time of the passage of this act, and who are entitled to remain in the United States, to apply to the collector of internal revenue of their respective districts, within one year after the passage of this act, for a certificate of residence, and any Chinese laborer, within the limits of the United States, who shall neglect, fail, or refuse to comply with the provisions of this act, or who, after one year from the passage hereof, shall be found within the jurisdiction of the United States without such certificate of residence, shall be deemed and adjudged to be unlawfully within the United States, and may be arrested by any United States customs official, collector of internal revenue or his deputies, United States marshal or his deputies, and taken before a United States judge, whose duty it shall be to order that he be deported from the United States, as hereinbefore provided, unless he shall establish clearly to the satisfaction of said judge, that by reason of accident, sickness, or other unavoidable cause, he has been unable to procure his certificate, and to the satisfaction of the court, and by at least one credible white witness, that he was a resident of the United States at the time of the passage of this act; and if, upon the hearing, it shall appear that he is so entitled to a certificate, it shall be granted upon his paying the cost. Should it appear that said Chinaman had procured a certificate which has been lost or destroyed, he shall be detained and judgment suspended a reasonable time to enable him to procure a duplicate from the officer granting it, and in such cases, the cost of said arrest and trial shall be in the discretion of the court. And any Chinese person other than a Chinese laborer, having a right to be and remain in the United States, desiring such certificate as evidence of such right may apply for and receive the same without charge.

SEC. 7. That immediately after the passage of this act, the Secretary of the Treasury shall make such rules and regulations as may be necessary for the efficient execution of this act, and shall prescribe the necessary forms and furnish the necessary blanks to enable collectors of internal revenue to issue the certificates required hereby, and make such provisions that certificates may be procured in localities convenient to the applicants, such certificates shall be issued without charge to the applicant, and shall contain the name, age, local residence, and occupation of the applicant, and such other description of the applicant as shall be prescribed by the Secretary of the Treasury, and a duplicate thereof shall be filed in the office of the collector of internal revenue for the district within which such Chinaman makes application.

SEC. 8. That any person who shall knowingly and falsely alter or substitute any name for the name written in such certificate or forge such certificate, or knowingly utter any forged or fraudulent certificate, or falsely personate any person named in such certificate, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined in a sum not exceeding $1,000 or imprisoned in the penitentiary for a term of not more than five years.

SEC. 9. The Secretary of the Treasury may authorize the payment of such compensation in the nature of fees to the collectors of internal revenue, for services performed under the provisions of this act in addition to salaries now allowed by law, as he shall deem necessary, not exceeding the sum of $1 for each certificate issued.

Approved May 5, 1892.

This act, as I have said, is radically and widely different from the bill known as the Geary bill which passed the House of Representatives. By this act and all existing laws providing for the restriction of Chinese immigration the restriction or prohibition of immigration is confined to Chinese laborers, one class of Chinese. Chinese officials, teachers, students, merchants, travelers, and in fact all other classes, may freely come to our shores.

The act as passed continues existing restrictive legislation for ten years, while the Geary bill was unlimited as to its duration. By the Geary bill it was provided that it should be

unlawful for any Chinese person or persons, whether subjects of the Chinese Empire or otherwise, as well as those who were within the limits of the United States, and who might hereafter leave the United States and attempt to return as those who had never been here, or, having been here, had departed from the United States (save and excepting only the following classes that, is to say: Such Chinese person or persons as may be duly accredited to the Government of the United States as ministers plenipotentiary or other diplomatic representatives, consuls-general, consular and commercial agents, including other officers of the Chinese or other governments traveling upon the business of that government, with their body or household servants) to come to or within, or to land at any port or place within the United States.

The class of persons who were excepted from the operations of the bill, that is diplomatic representatives, commercial agents, etc., were required by section 3 of the bill to produce their credentials, upon seeking to enter the United States, to the customs officers.

By section 7 of the bill any Chinese person found unlawfully in the United States was to be imprisoned in a penitentiary for a term not exceeding five years, and after the expiration of such term of imprisonment to be removed from the United States to the country from which he came.

By section 11 of the bill it was provided that the collector of customs of the ports where any vessel should arrive, having Chinese persons on board seeking admission to the United States, should determine who were and who were not Chinese, and his decision was only reviewable by the Secretary of the Treasury.

By section 12 of the bill it was made the duty of all Chinese persons, Chinese merchants, traders, teachers, students, and Chinese of every class in the United States at the time of the passage of the act to apply to the commissioner of internal revenue of their respective districts within one year after the passage of the act for a certificate of residence, and any Chinese person who failed or refused to do so was to be adjudged unlawfully within the United States, and to be subject to the same fines and penalties as though he had unlawfully come into the United States in the first place.

By section 13 of the act it was provided that the certificate to be obtained by the Chinese in this country at the date of the passage of the act should contain a true photographic copy of the applicant, together with his name, age, local residence, and occupation, and a duplicate of the same was to be filed in the office of the commissioner of internal revenue, and the applicant was required to pay the commissioner of internal revenue upon his application the sum of $3.

But I shall not further dwell upon the provisions of the Geary bill. I have sufficiently referred to them to show that the act as it passed was mild in comparison to that. The provision of this law requiring Chinese laborers entitled to be and remain in the United States to secure certificates was not enacted for the purpose of excluding any Chinaman entitled under previous laws to enter or to remain in this country or for the purpose of securing the deportation of any Chinese person who under such laws was entitled to remain. The sole object of the provision was the identification of Chinese laborers lawfully in this country, so that they might be distinguished from those being smuggled across our borders. I feared, knowing as I did the character of Chinese testimony, that the provision would result largely in securing certificates by those already unlawfully here, but that could not be avoided.

There was nothing degrading in the provision, and if certain gentlemen on this floor and elsewhere had not at once denounced the law as degrading and unjust to the Chinese, I have no doubt but that the provision would have been readily complied with.

China had reason to complain of the Scott exclusion act, which invalidated return certificates already issued to Chinese laborers who had been in this country and gone to China with the intention of returning, and which prevented Chinese laborers in this country and departing from again returning, but she has no reason whatever to complain of the provisions of the so-called Geary act requiring registration, a provision necessary to enable this Government to intelligently and fairly enforce previous legislation.

It is true that deportation may be a severe penalty for a refusal to comply with the Geary law and it may not be. There are undoubtedly many thousand Chinese laborers in this country who are ready to return to China and would be glad to be deported at the expense of the United States. But, however severe the penalty is, it seems it is not severe enough to secure compliance with the law.

The Chinese Six Companies appear to have preferred to have the Chinese laborers deported at the expense of the United States to permitting them to register and to obtain certificates of their right to remain, although the certificates were to be issued without charge and with as much regard to the convenience of the applicants as possible. The laborers were always ready to comply with the law. Some thousands, defying the Six Companies, did secure certificates and others were only prevented from doing so by the orders of the Six Companies. Some will say, Why should the Six Companies, the virtual owners of the Chinese laborers in this country, refuse to allow them to register and secure evidence of their right to be and remain in this country?

It is because the profits of the Six Companies have been largely

already realized upon Chinese laborers now lawfully residing in this country, and their profitable business can only be still further prosecuted by the continued unlawful importation of Chinese laborers. They know that when the Chinese lawfully in this country are once so identified that the Government can distinguish between them and those who have come into the country illegally the exclusion laws can be enforced and their profitable slave traffic will be destroyed. Hence they prefer to refuse to comply with the law, supposing that either our Government will find it impracticable to enforce it or that the Chinese Government will succeed in securing a modification of it.

There has been much absurd talk and ignorant criticism of the act of 1892. It mainly comes from members of religious organizations, many of whom show by their utterances that their information concerning the act is derived from incorrect newspaper or other statements, and not from an examination of the act itself. The ability to distinguish Chinese laborers rightfully here from those who unlawfully come into the country is as necessary for the protection of Chinese entitled to remain as for the removal of those unlawfully here. The right of the Government to prescribe necessary regulations to enable it to protect Chinese subjects lawfully in the United States and to deport those unlawfully entering is undoubted, and results from its right to restrict the coming of Chinese laborers.

All the talk on this floor and elsewhere about the disgrace of registration, in my judgment, is absurd. The seven or eight thousand Chinese laborers in this country who have complied with the law and obtained certificates have neither been disgraced nor harmed. On the contrary, they have been greatly benefited, and have the highest evidence in the form of a certificate issued by the Government that they are lawfully in this country and entitled to remain here unmolested.

In most of the States of the Union every American citizen who wants to vote must register, and by failing to do so he incurs a penalty never less than the loss of the most important right of citizenship. Such requirements are necessary to enable the Government to distinguish those entitled to exercise the elective franchise from those who are not, and no one ever claimed that such registration was degrading.

Persons wishing to marry must obtain a license. Under the internal revenue laws and the municipal laws of many of the States and municipalities, persons desiring to engage in different kinds of business must take out a license. American citizens going abroad take passports, which they carry with them in foreign countries as evidence of their citizenship. These instances might be multiplied indefinitely, where a certificate is required as evidence of a right, and no one supposes such a certificate is a badge of degradation or the requirement humiliating. The fact is the requirement of Chinese registration is a very simple, though necessary requirement.

No one need fear retaliation by China. China is not in a situation to complain or to retaliate. No one will deny that it is competent for this Government to provide such penalties as it chooses for the violation of its own laws. If Chinese laborers are deported under the act of 1892 it will be because they have deliberately and defiantly refused to comply with a reasonable law found necessary for the enforcement of Chinese restrictive legislation enacted in part in pursuance of treaty stipulations, and all of it acquiesced in by the Chinese Government. China would be clearly in the wrong to retaliate upon American citizens for the lawful punishment of her subjects in this country for the willful violation of our laws.

China is quite as much interested in maintaining commercial relations with the United States as the United States are with her. There are many thousands of Chinese merchants and other classes of Chinese subjects entitled to come to and remain in the United States now here, having large investments and profitable business enterprises dependent upon our laws for protection for their personal and property rights. Some seven or eight thousand laborers have complied with the Geary law and secured certificates and expect to remain in this country and enjoy the protection of our laws.

In view of these facts, I repeat, China is not in a position to injure or annoy American citizens in China. I regret that bad advice should have been given to the Chinese Six Companies, and that such companies, ignorantly possibly, certainly unwisely, prevented the registration of Chinese laborers, and that the necessity is forced upon this Government to enforce the law.

I did not dream when I agreed to the report of the conference committee that there would be any serious objection to complying with the law, or any failure to register. The execution of the law is entirely practicable, but it can not be fully executed in a day or a year. The ability of the courts, in addition to the transaction of other necessary business, to dispose of the cases for the deportation of Chinese brought before them, unless other provisions for the execution of the law shall be made, will measure the rapidity with which Chinese laborers without certificates can be deported.

The cost of executing the law has been greatly exaggerated. Comparatively small yearly appropriations will be sufficient for the purpose; but be the difficulties few or many, the cost small or great of executing the law, I can not see, while the Chinese Six Companies defy the law and the United States and refuse to permit Chinese laborers to register, how this Government can retain its self-respect and fail to execute the law. Notwithstanding the Six Companies have thus defied the United States and refused to comply with the law, there are those who gravely propose to repeal it. Others suggest an extension of the time for registration. To repeal a law reasonable in itself, and necessary as the provision for the registration of Chinese laborers is to enable the Government to administer the Chinese exclusion act, because a class of aliens in this country refuse to obey it, would be an extraordinary proceeding, and, in my judgment, inconsistent with national dignity.

If the Chinese Government should represent to this Government that the Chinese laborers had been prevented by the Six Companies from applying for certificates, were now desirous of complying with the law and ask an extension of time, while such a favor would not be deserved, there would be no insuperable objection to giving another opportunity for registration. As the deportation of Chinese laborers entitled to remain in the United States was not the object of the law, but a penalty only for refusal to register, an extension of time under such circumstances would not be inconsistent with the general purposes of the law.

While I believe the welfare of this country requires that the further importation of Chinese coolies into this country should be absolutely prohibited, I should have much preferred that laws for the purpose should always have been passed in pursuance of treaty stipulations. I regret that it has been thought necessary to abrogate in part a treaty by an act of Congress. Every effort to restrict the coming to this country of Chinese laborers or to get rid of those now here should not only be lawful, but should be done decently and in a manner to command the respect of the civilized world.

There is no denunciation too severe for the outrages which have been perpetrated upon unoffending Chinese in some sections of this country for the purpose of driving them out of the country. While lawfully here Chinese subjects, like the subjects of all other countries, are entitled to the full protection of our laws. The present condition of the business of the Federal courts upon the Pacific coast is scarcely less unsatisfactory on account of the Chinese restrictive laws than it would be with a determined effort upon the part of the Government to enforce the Geary law.

The dockets of the courts are already crowded with applications for habeas corpus by Chinese seeking to enter the United States, and by litigation growing out of the restrictive laws. The truth is, the Chinese question is a question which can not be avoided or trifled with. We must abandon the effort to restrict the coming of Chinese laborers to this country, and admit to the world that we are not able to keep undesirable immigration out of the country, or we must make the necessary provision for the enforcement of our laws.

Mr. WHITE of California. Mr. President, if it will not be out of order or against the desire of the Chairman of the Committee on Finance [Mr. VOORHEES], I should like to offer a few remarks suggested by the observations of the Senator from Oregon [Mr. DOLPH].

The PRESIDING OFFICER (Mr. GRAY in the Chair). The Senator from California is in order and is recognized.

Mr. WHITE of California. I had no idea whatever, Mr. President, of saying anything at this time upon the Chinese question. The subject generally is pretty well known to the Senate, and I assume that it is unnecessary to discuss its merits; but the Senator from Oregon, who seems to have been treated badly in the Senate before I came here, and who appears to have failed to obtain the engrafting of his name upon the so-called Geary act, has made certain suggestions with reference to exclusive legislation and the participancy of the Democratic party in it which call for comment.

In the first place, I do not claim to know anything definitely with reference to the history of the passage of the Geary act, except in so far as the information was made public at the time. I do know that the best feature of that act is the registration clause; I do know that the bill which the Senator himself introduced at this end of the Capitol had nothing in it with reference to registration, but later the registration clause was incorporated in the House bill. I have heard—and what the Senator says corroborates the information—that after some conference or discussion of the affair he drew the present registration clause; but he was not the father of the registration idea, because that idea had been incorporated into the original House act of Mr. Geary.

I cordially agree with the Senator as to the necessity for the passage of some measure such as that which he has presented. The appropriation of money by the Government of the United States to carry out the provisions of that law is at once our duty and commanded by self-respect. Perhaps it is not generally known that there is not sufficient money in the Treasury of the United States to do anything effective whatever with reference to the enforcement of the Geary law. As we have passed such a law—and I believe it to have been thoroughly justified—it is the duty of the Government to see that it is enforced, and that duty, Mr. President, there is no reason to assume the present Administration will not faithfully discharge.

I am familiar with the act of 1888, because the Legislature of my State by special act authorized me and two other gentlemen to defend it before the Supreme Court of the United States against the assault that was made upon it at that time, and that duty we successfully discharged.

The Senator has said that the act of 1888 was passed for political effect. Shall we represent every individual who seeks to legislate wisely and for public interest as simply struggling for political effect? I would not if I could, but were I animated by that spirit I might make the same remark as to the Senator's address here to-day.

The Democratic party has had but one record upon this Chinese subject in the halls of national legislation. The votes which have been taken from time to time upon every measure show that if the people of California and of the portions of the United States most affected by Chinese incursion had had to rely upon the Republican party they would have been disappointed, the time for action would have gone, and no remedy would have been suggested. That is the record as made here. I have not, as I said before, done anything in the way of examining the subject, though I am familiar with the general facts as to the votes, but a critical examination of every roll call taken concerning these exclusion acts will demonstrate that what I have said is correct.

Hence, when the Democratic party unitedly, solidly, and enthusiastically enacted the law of 1888 and sent it to the President, and when he signed it, they were adopting no new rule of conduct, but were proceeding upon the line of policy which they had outlined and which to them was entirely unbroken. Certainly, when we are here to-day attempting to procure legislation in the way of an appropriation to assist in carrying out that act, it is no time for a Senator representing the Republican party in this Chamber to claim any merit whatever with reference to Chinese exclusion.

Everyone, I presume, who has sought to legislate upon this topic has become educated regarding it by the experience which we have all had; we have all learned something, and we have the support to-day of the masses of the Republican organization throughout the United States, but we did not have that assistance in earlier times when we had the support of the Democratic party, upon which alone we were compelled to rely.

The enforcement of the Geary act undoubtedly is attended with expense. In the Senator's own State more money is expended for the purpose of making officers behave themselves and execute the law as it is written than anywhere else. Sixteen persons were indicted the other day by the United States grand jury in that State, and one of them was the distinguished Republican collector of customs at Portland, for crimes committed against the laws of the United States upon this subject. The effort is being made to bring them to justice and to carry out the statute as it is written.

When the time comes and upon a proper occasion I may find it advisable to say something with reference to the merits of this measure, but it seems to me that the proper line of conduct for the Senator and myself and all of us to follow is not to claim all the merit or place all the censure upon any one or upon any number of individuals, but to stand together (for we have finally succeeded in getting together upon the subject) and pass such legislation as will enable the President to carry out, as he desires to do, the terms of the Geary law, and to send the men who have openly defied this Government where they should be transmitted—home.

The Senator says the act of 1888 was a bad act, because it violated provisions of a treaty. It has been settled for years and years by the authoritative decisions of the highest courts in this country that the legislation of Congress is paramount, and that Congress has the power to enact such legislation as it sees fit, even if it be against a treaty; but if the Senator will read the message which Mr. Cleveland transmitted in 1888 when he approved of that measure, he will find within the short terms of that document all practically which has been said here with reference to the necessity of legislation; he will also find ample justification for the enactment of the bill, and also discover that it does not violate any existing treaty.

There was at the time a treaty under negotiation, but it failed of ratification; the Chinese Government itself withdrew its consent. But, if it were true that a treaty had been violated, and if the people of this country were suffering as those of us who live upon the Pacific coast knew that they were suffering, it was a matter which called for a determination of no ordinary character, and justified any legislation we might enact which would prohibit Chinamen from coming to our shores.

I trust that in the future discussions of this question it will not become necessary to inquire as to whether the authorship of the Geary act was in one man or another; but that we shall endeavor to legislate in accordance with what we deem to be right and in accordance with the necessities of the case.

Mr. DOLPH. Will the Senator from California allow me to ask him a question?

Mr. WHITE of California. Certainly.

Mr. DOLPH. Will the Senator tell me whether all the money appropriated for executing the Chinese exclusion act was expended during the last fiscal year?

Mr. WHITE of California. I have the figures here, which I will give the Senator. I made the inquiry recently. I have here the total appropriations. I have looked them up as far back as 1889.

In 1889 there were $50,000 appropriated; in 1890, $30,000; in 1891, $60,000; in 1893, $100,000; and for the fiscal year ending June 30, 1894, $50,000; making a total of $290,000, expended as follows:

In 1889, $5,388.50; in 1890, $21,000; in 1891, $49,000; in 1892, $63,000; in 1893, $77,000; and during that portion of the present fiscal year which has passed, $17,000, amounting to $232,388.50, leaving a balance of some fifty-odd thousand dollars.

Mr. DOLPH. For the year ending June 30, 1893, how much was expended?

Mr. WHITE of California. Seventy-seven thousand dollars.

Mr. DOLPH. That left $23,000 of the appropriation unexpended. Can the Senator inform me whether any Chinese have been arrested or deported from the United States under the Geary act during the two months of the present fiscal year?

Mr. WHITE of California. No, sir; and I will tell the Senator why not. The reason is obvious. The number of Chinese to be deported is so numerous that if there is a commencement made it will result in an immense expenditure, and there is not sufficient money in the Treasury for the purpose, and has not been, to justify the inauguration of such a proceeding. If the Senator will expend the efforts which he has been expending to-day in trying to establish himself as the father of something that he does not appear to be very nearly related to, in procuring the enactment of an appropriation bill, then something can be done in this direction.

Not only is it necessary to expend money for the mere passage of a Chinaman from this country to China, but there are expenditures amounting to over $5,000 a month in the way of officers and inspectors, etc., including such enforcement of the law as I have spoken of, and including the carrying out of provisions other than the deportation clause.

Mr. MITCHELL of Oregon. Will the Senator from California allow me a question?

Mr. WHITE of California. Yes, sir.

Mr. MITCHELL of Oregon. Is it not a fact that the failure to secure larger appropriations for the present fiscal year is chargeable to the Democratic House of Representatives?

Mr. WHITE of California. At that time I was not here. The Senator from Oregon was here. If I should see any disposition elsewhere to omit a provision of that kind I would bring my collateral exertions to try and accomplish a better result. I am sorry the Senator was not able to do that with success.

Moreover, when the Geary act was passed it was thought that the Chinese would register, and that therefore it would be unnecessary to make extraordinary expenditures.

Mr. DOLPH. It appears by the statement of the honorable Senator from California that while $100,000 was appropriated for the execution of the Chinese exclusion act for the fiscal year ending June 30, 1893, but $77,000 was used. Therefore $23,000 of the appropriation reverted to the Treasury.

Mr. WHITE of California. That is right.

Mr. DOLPH. That might have been expended. Notwithstanding two months of the current fiscal year have expired, and it was well known that Congress would be convened in extra session, there has not been an attempt to deport a Chinaman who has not complied with the Geary act.

On the 19th day of January, 1893, I introduced in the Senate, and had referred to the Committee on Foreign Relations and printed, the following amendment:

Amendment intended to be proposed by Mr. DOLPH to the bill (H. R

10238) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1894, and for other purposes, viz:

At page 40, under title of "Enforcement of the Chinese exclusion act," in line 11, strike out the word "fifty" and insert the words "five hundred" in lieu thereof.

January 25, 1893, I reported this amendment favorably from the Committee on Foreign Relations, and had it referred to the Committee on Appropriations. Immediately thereafter I was taken seriously ill and was upon my back until after Congress adjourned. I do not now recall what effort was made to secure the adoption of this amendment, but certainly I was not in a physical situation to even offer it in the Senate. So the Senator will see when he advises me to direct my energies to secure an appropriation that I did all that I reasonably could do in this matter.

Now, in regard to the Senator's remarks about my seeking to claim to be the author of the bill which passed the Senate, or about my being badly treated by the Senate, there is nothing in my remarks which would justify any such suggestion. As to the bill I introduced in the Senate and sent to the Committee on Foreign Relations, and reported from that committee, called up in the Senate, and had passed and sent to the other House, in the remarks I made to-day I stated distinctly that I was compelled to yield to a provision for registration in order to secure an agreement and the report of a bill which might be passed and signed before the 6th of May, 1892.

I claim no credit for having originated it, because the simple proposition I was discussing was that the final provision for registration, which, it seems, even as mild as it is, has not been complied with, was radically different, and from it were eliminated all the harsh features of a similar provision in the House bill. I do not stand here to disclaim anything I have done or to claim credit for anything I have done, or to complain on account of what I have not succeeded in doing. My proposition was embodied in the bill I introduced and reported from the Senate Committee on Foreign Relations, and I yielded to the provision which, it seems, is not now likely to be enforced, simply to obtain an agreement in the committee of conference; but I took care to draw such a provision as I believed was not incompatible with justice, not in violation of our treaty obligations, and to which no serious objection could be made.

Mr. WHITE of California. Since the Senator from Oregon called my attention to the matter I find that of the $100,000 appropriated for 1893 the salaries of officers was $36,736.57; that the expenses of officers and cost of deportation, there being about 152 Chinamen being deported under the provisions of the act, amounted to $27,287.30; that of the little registration we had the expense was $12,698.79, making a total of $76,722.66, this amount having been expended partially under the last and partially under the present Administration. I desire to say to the Senator from Oregon that if he imagines that by my remarks I discredited his efforts in the direction of Chinese exclusion he is mistaken. We know that during his career in the Senate he has uniformly and in the best of faith forwarded that good work, and I have not the least reason to doubt that he will continue to do so.

Mr. BERRY. I move that the Senate proceed to the consideration of executive business.

Mr. TELLER. I rose to say a few words, but I do not object to the motion.

Mr. BERRY. Does the Senator from Colorado desire to speak?

Mr. TELLER. I should like to say a word or two.

Mr. BERRY. I withdraw the motion.

The PRESIDING OFFICER. The motion of the Senator from Arkansas is withdrawn.

Mr. TELLER. Mr. President, I wish to have the attention of the Senator on the other side of the Chamber who speaks of a violation of the treaty. A legislative abrogation of a treaty is not a violation of the treaty, and it seems to me that in dealing with this question we should at all times keep that point distinctly in view. The violation of a treaty carries with it an implication of misconduct on the part of the government violating the treaty. An abrogation of a treaty carries no such inference. Every government reserves to itself the right, when it makes a treaty with a foreign power, to abrogate it whenever, in its judgment, it is proper to do so. While the Constitution of the United States makes a treaty the law of the land, as if it had been enacted by the legislative department of the Government acting under the Constitution, still it does not preclude Congress from abrogating the treaty whenever it sees fit.

The trouble in this case was that certain officials of the United States Government seemed to think that the statute was an improper one to enact, and thereupon they practically and virtually set aside the act of Congress. We were told early last spring that the executive department of the Government would not in anywise interfere with the action of the Chinese who had declined to register.

Now, let us see what is complained of in the act. What was the offense that we had committed? We had said that the Chinese should come to this country only under certain conditions. Does anybody deny our right to do that? Does anybody assert anywhere that a nation has not the right to determine what class of people and what citizens of a foreign nation shall come within its borders and upon what terms they shall remain? The Supreme Court of the United States have repeatedly settled the doctrine that the question of alien residence is entirely under the control of the legislative department of the Government. I think every writer for the last five hundred years on international law has, without exception, asserted that that is, the power and prerogative of a nation. We said, if you come here under certain conditions and comply with certain regulations you may remain. That was said by a certain class of people in this country to be a burdensome regulation and one that ought not to be imposed.

Mr. President, I want to inquire what has the executive department of this Government to do with determining the merit or the demerit of a statute? Having been enacted according to the methods provided for the enactment of a law, it is binding on the executive department, in my judgment, whether they approve of it or not. And so early last spring (and I do not know but that I ought, in justice to the present Administration, to say that it was about in the same condition with the Administration that went out) there seemed to be an idea that the provision put in the statute for a registration of the Chinese in this country was a very harsh and wicked provision.

Now, what was it? The Chinaman who was entitled to remain here, if he wished to remain, must go before a certain officer designated, who was always convenient. He must bring with him some citizen of the United States who knew he was living in the country at the time of the passage of the act. He must sign and register, and produce the testimony of this witness that he was entitled to remain. I believe the Treasury Department, in addition to that, did also provide—which they could do under the law—that he should have his photograph taken and present it with the registry, which should be kept for identification.

Certain distinguished lawyers in the city of New York, probably moved more by the large fee that was offered by the Six Companies than by any other motive—that being always a moving motive with the profession—concluded that this was a violation of the Constitution. It is the first time in my life, I think, that I ever heard the Constitution of the United States invoked to destroy the power of the Government over aliens. I will admit that by the law, not by the Constitution, when foreigners come here there are certain rights we are bound to respect; but that is not by virtue of the Constitution. That is the law universal which prevails everywhere among nations.

But there never was any law, written or unwritten, that I know of, which prevented a nation from saying to the individuals who came within its borders and were not citizens, "You may remain here upon such and such conditions as we prescribe." I think an instance can not be found anywhere in the history of the world where a nation ever declined to exercise that power when there was necessity for it. It has been exercised by nearly every nation in the world at some time. History is full of repeated instances where a nation has felt compelled to take action as to foreigners within its bounds.

Now, the law that governs all civilized communities would require that this should be a reasonable and humane regulation. I do not mean to say the Government has the power to declare to the Chinaman who comes here, "If you do not deport yourself within the next thirty days we will take your head off." I suppose the Government of the United States could do that, after due trial and conviction, but it would be a very wicked and cruel thing to do, and it would bring on probably difficulties with the nation whose subjects we had thus inhumanly treated. However, when the Government of the United States said to them simply, "Appear before the collector of internal revenue in the district in which you live; bring with you a citizen of the United States who knows that you were a resident of this country when this act was passed," because that is what entitled him to remain here, being here when the act was passed, there was nothing in such a provision either cruel or unusual. There was nothing in it that should create the slightest objection on the part of the Government whose subjects they were.

Mr. MITCHELL of Oregon. It was no punishment at all.

Mr. TELLER. As suggested by the Senator from Oregon, it was no punishment at all. It was a simple method of determining the fact that was provided for in the statute which made their residence here possible; that is, that they were here when the statute was passed.

As I was saying, some distinguished lawyers in New York asserted that the act of Congress was unconstitutional; that it was in conflict with some provision of the Constitution. They never pointed it out, and I have never taken the pains to read

the arguments they made before the Supreme Court, for it did not seem to me that they could be of such a character as to justify a busy man in taking very much time on that point, although the counsel were men of distinguished reputation in the profession.

Mr. GRAY. I wish to call the attention of the Senator from Colorado to the fact that Judge Field in a very able dissenting opinion seems to agree with the counsel.

Mr. TELLER. I have read the dissenting opinion. I know what the opinion of the court is and I know what the dissenting opinion is; but I was simply reaching a point to express my surprise that anybody should have thought the Government of the United States did not have ample and complete power over this subject. The Supreme Court of the United States had so declared on repeated occasions; and, if I may be pardoned, since the Senator from Delaware has alluded to one of the judges, I think that distinguished judge himself had laid down a principle which entirely justified the United States in that kind of legislation. I do not intend to criticise the minority of the court.

I only want to say that the action of the majority of the court was in strict accordance with the authorities in that court. It was in strict accordance with the unbroken and universal rule of international law as laid down by all the great law writers, Puffendorf, Vattel, Phillimore, and others. In my reading, which, though limited, has been perhaps as great as that of ordinary members of the profession, I do not know a single respectable authority that has ever assailed that doctrine. And it seems to me that position does not need any defense. I submit that a nation which can not clear its borders of a hostile and alien element is not a nation with full national prerogatives and rights.

It may be absolutely necessary on the eve of a great war between this country and some of the great powers of the world that we should with a strong hand send out of this country every man who did not swear allegiance to the Government of the United States. There are plenty of instances in history where that has been done. They should not be allowed to remain here to foment disorder and assist the invading hosts, if such things would be considered possible as to this country, which I hardly think will ever happen.

But take a small power. Take one of the little powers of Europe coming in antagonism with one of the great powers of Europe. A small percentage of their population alien to them, citizens of the invading country, would be very dangerous to them. So all governments from a time whence the memory of man runneth not to the contrary have always asserted the right to provide how and upon what conditions aliens should come in, what property they might own and what they might not own, under what conditions they should be compelled to part with their title, and when and how they should be deported, either voluntarily on their part because of the direction of the government or by force if they should decline to depart otherwise.

In this case we provided that the Chinese who were here should register. The great Six Companies, they call them in California (to which all these Chinamen owe an allegiance that no man who is not familiar with the subject can conceive of, an allegiance that the Anglo-Saxon will never yield to any power whatever, an allegiance that compels these people to do just exactly what those Six Companies declare they shall do), said to them, "Do not register," and there was such a terrorism in that command that the ordinary Chinaman did not dare to register, although I knew in some instances they really desired to register. It is said these companies hold the lives of these men in their hands when they go contrary to their edicts and their wills.

Senators ought to remember that the civilization of China is not the civilization of this country. While it is a civilization that is upon a high plane in many directions, it is upon an exceedingly low plane in another. So far as their handicraft is concerned they are a wonderful people, but there are other qualities which go to make up desirable immigrants which they do not possess. So, obeying this mandate of their superior intelligence, the Six Companies, they said "We will not sign." There is a large number of these people who are in this country who have thus put themselves in antagonism to the law. Whether they should now be deported is another question. Whether they have some excuse to give to us and say, "Now, having made a mistake as to the law, we think you ought to extend it and give us an opportunity to register hereafter," is another question.

When that comes up I shall act upon it as I think I ought. It is not up now, I understand. They could come here with a pretty fair grace and say, "Your executive officers of this country at least indicated that they had doubts upon this question." Why they should is, I repeat, beyond my comprehension; or was it because there is a feeling in certain sections of the country that the Western people have been exceedingly harsh towards the Chinaman. Is that it? Be that as it may, when that question is raised here it will be time for us to act.

Mr. President, the Senator from California arrays the Republican party on the Chinese question. I believe since I have been in the Senate it has never been a political question in such a sense of the term that either party can disclaim responsibility for the legislation if it is bad or claim any great deal of credit if it is good. So far as I am concerned I have always voted for the restriction of Chinese immigrants. I have voted for their restriction because they do not come here as citizens. They do not come here to make their homes; they do not come here to share with the American people the burdens of the state. They are not taxpayers except in a limited way. They contribute nothing to the support of schools and churches. They contribute nothing to the general prosperity of the country except as mere machines. No more do they contribute to the prosperity of the country than a machine that makes nails or screws; and they interfere with the labor of this country in a degree that nobody appreciates except those who have seen them come in contact with that labor, because it has been a fundamental principle with me that you could not put the labor of the United States by the side of servile labor and not degrade your labor.

It was that which in the first instance made me an opponent of African slave labor. I saw after I had once taken a trip through the South that the white man who labored by the side of a slave was the equal of the slave and only the equal of the slave. When you put great hordes of Chinamen in any community you bring down the laborer to their level, whatever it may be. I know that it is cheap labor. I know that it is valuable labor; that it never strikes; that it never gets up any *émeutes* of that character; that it takes what is paid it, saves it, lives on little, and eventually departs with its gains for another country. There is some advantage to the men who hire the Chinese laborers, but there is no advantage to the men who labor in having a great horde of Chinamen in this country.

So believing, I have always insisted that the right of the Government to exclude this class of people should be exercised. I am in favor of exercising it now. I have never made any excuse for my vote on this floor. I have never given a vote here because the people of California asked me to give it. I have given it because I do not believe it is fair to the laborers of the United States to put them in competition with that kind of labor, and because I believe that in all legislative matters our first duty is to the people of the United States, and not to people outside of our country.

Mr. GRAY. The hour of 2 o'clock has arrived, but I should like for a few moments to have the order of business laid aside.

Mr. BERRY. Certainly; I do not press my motion.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business.

The SECRETARY. A bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. HARRIS. I ask the unanimous consent of the Senate that the unfinished business be informally laid aside in order that the Senate may proceed with the present matter.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Tennessee? The Chair hears none, and the Senator from Delaware will proceed.

Mr. GRAY. Mr. President, I do not expect to detain the Senate more than a moment, because although interested and agreeing in the main with what has been said by the Senator from Colorado [Mr. TELLER], at least agreeing with him in his sentiment of opposition to Chinese immigration, to the impolicy of encouraging that class of immigration into this country by reason of its degrading effect upon American labor, still I have a very decided opinion that some of the recent legislation of the United States has been in the direction of a violation of its plighted faith, and a violation of such a character as seems to me to have been entirely unnecessary.

We have had for a number of years treaty relations with the Empire of China. We have seen fit to undertake the obligations imposed by such treaty relations; and we have in undertaking them pledged the faith of this mighty people to their exact performance. Now, I do not believe that this great country can violate those treaty obligations wantonly and ruthlessly without a resultant evil to the country itself. There is a way and a mode by which we can honorably rid ourselves of those obligations other than the ruthless one of disregarding them. No nation, no great nation, can afford to disregard such obligations. I believe it is true in regard to our relations with China that there has never been a time during which the recent legislation has been discussed in the Houses of Congress when we could not have

initiated by diplomacy a modification of our treaty and have accomplished all that we sought to accomplish by the legislation that has been discussed here to-day.

If that were true, surely it was our duty to ourselves, we owed it to our own self-respect as a nation, to resort to that mode of accomplishing the result.

Mr. MITCHELL of Oregon. Will the Senator from Delaware allow me?

Mr. GRAY. Certainly.

Mr. MITCHELL of Oregon. How does the Senator from Delaware reconcile his statement with the fact that after we had negotiated a treaty with China, having for its purpose the exclusion of Chinese laborers from this country and sent that treaty back to China, it was held there by the Chinese Government for months and months without acceptance, and never was accepted as a matter of fact?

Mr. GRAY. It was held for months and months by the Chinese Government, because at that very time the legislation which proposed ruthlessly and violently to set aside treaty obligations was being discussed in this or the other House.

Mr. MITCHELL of Oregon. If the Senator will examine the records he will find that the bill known as the Scott bill, which is the one to which the Senator doubtless refers, was not introduced in the House of Representatives until the treaty to which I have referred had been pending for some months.

Mr. GRAY. How many months?

Mr. MITCHELL of Oregon. Several.

Mr. GRAY. We must not impose upon the Chinese, with whom we recognize the duty of having treaty relations, the obligation of undue haste or of proceeding with more precipitation than we feel called upon to proceed ourselves in a like case. The time that had elapsed after the return of the amendment of the treaty was not more than sufficient, if it was quite sufficient, to enable them to duly discuss and bring the matter through the ordinary channels of diplomatic assent.

But I rose principally that I might enter my protest against the proposition which seemed to be asserted by the Senator from Colorado at the opening of his remarks. While I agree with him as to the policy of this country in discouraging and preventing Chinese immigration, and admire much that he has said upon that subject, I want to enter my protest against the proposition which I conceive he makes, that though it be true the legislative department of the Government can repeal a treaty and can repeal any other law binding upon its people, such a repeal can not be considered, I understood him to say, in the nature of a violation of such treaty.

The Government of the United States in all its departments is a totality to the governments of other countries with whom we have diplomatic relations. They have nothing to do with our executive department and our legislative department as a legislative department and an executive department, but what they have to do with and what they are entitled to consider is whether the Government as a totality has undertaken obligations with reference to such foreign nation and whether our Government has in any wise violated those obligations.

If we have a treaty with a foreign government which imposes obligations upon our Government and its citizens I grant that we can abrogate that treaty by legislation, but in abrogating it we may do it in such fashion as to absolutely violate the faith that this Government has pledged to the nations with whom it has such treaty relations. That is apparent. Our obligation is no less broken, whether the Legislature of the Union chooses to abrogate the obligation made by the treaty than if it had been abrogated ruthlessly by the executive department. The Government, as I said before, exists in the treaty relation as a totality. If we have promised by treaty to do a certain thing upon a condition that the other contracting party shall perform a certain thing we can, it is true, relieve our Executive from the performance of that contracted duty by legislation, but we have utterly broken our faith with the other contracting, party and the violation of our treaty obligation is none the less consummated and complete.

Mr. TELLER. Mr. President, I can not agree with the Senator from Delaware that in that which is done in accordance with law, and which the Government stipulates in every treaty that it makes—not in words, but because it is the law of all the world—that it may do, there is any moral obliquity or any misconduct to be attributed to the Government because it retires from that duty.

I do not think, with all the distinguished Senator's research and learning, he can find any law writer who will sustain him in that proposition. Every treaty made with China and every other country in the world has in it (whether it is inserted in or whether it is not, because that is the universal law of the world on that subject) a provision that if the nation through its legislative department of government sees fit to retire from it it may retire. There is a contract that while it is in force, and until we assert in some official way that we have retired from it, we will carry out the provisions of it; and if we fail to carry out certain provisions before we have abrogated it, then there is a violation of the treaty.

There is no violation of a treaty that does not carry with it a sense of misconduct. It may be that it is the omission simply to do something; it may be that it is commission; but we are bound to live up to a treaty until such time as by some proper method in this country it can be abrogated. The executive department of the Government may also abrogate a treaty, but it can be abrogated by the legislative department against the will of the Executive. In some countries that can not be done, but in this country there are two powers that may abrogate. The Executive may retire from it and the legislative department may retire from it; and in this case, in dealing with China, we have retired from it through the legislative department of the Government.

Mr. President, we never would have retired from it if there had been in the executive department of the Government a proper disposition to comply with what is the apparent wish and will of the people of our country upon this subject. There has never been, so far as I know, at any time, a condition in the executive department that was in entire harmony with the people on this subject.

Mr. MITCHELL of Oregon. Will the Senator from Colorado allow me?

Mr. TELLER. Certainly.

Mr. MITCHELL of Oregon. Is not the Senator from Colorado under a misapprehension when he says that the Executive may abrogate a treaty? It seems to me he is, and that so long as a treaty is in force it can only be abrogated either by a new treaty negotiated by the President and Senate or by an act of Congress. So long as the treaty remains in force, I think it is the sworn duty of the Executive to sustain and support it, just as a law.

Mr. TELLER. I think there are cases where the Executive may give notice that the Government of the United States retires from a treaty. That is frequently provided for. It is usually provided in the treaty how notice may be given. I would not say, there being no provision in the treaty and it being unlimited, without having examined it, what the power of the Executive is, because it is not necessary for the discussion now. Of course, the Executive could abrogate it by a new and different treaty.

The question simply is, here, has the legislative department of the Government the right to come in and abrogate, destroy, wipe out, modify, or change it? They can change it in any way they see fit. If the other side do not accept a change, of course if is not a part of the treaty. The legislative department of the Government may say that such a provision of the treaty may stand and such another provision shall not stand. Then the other country can say, "We retire from the whole of it if you retire from one portion of it."

I think I can see the very widest distinction between the violation of a treaty and the abrogation of a treaty. The point I was trying to make is, that we have the legal right, and having the legal right it must follow that the moral right goes with it. It can not be said that there is an immoral act in the abrogation of a treaty if that power is vested in us by the Constitution.

Mr. GRAY. Mr. President, I do not wish to prolong this discussion, and yet it does concern a matter of international ethics that is worth considering. I do not deny, in fact I have fully admitted, that the legislative department of the Government may abrogate a treaty, that it may repeal it just as it may repeal a law, and henceforth after such repealing act or act of abrogation has passed through both Houses of Congress and is signed by the President, it is a law and has the force of law to all the citizens of the United States, and every citizen who had a duty to perform under the abrogated treaty is relieved from the discharge of that duty. There is no doubt about that. But I am merely speaking of the attitude the Government takes as a totality, as a great municipal corporation among the nations of the world by such a legislative act.

It by such act may have put itself in a position of repudiating its treaty obligations, of discarding its undertakings, of violating its promises, and will be amenable in the forum of the world's debates to the consequences of such violation—that is what I contend for—and that those who are concerned about the maintenance of the good faith of the United States as one of the nations of the world, are not relieved from that concern, are not relieved from that anxiety that it should preserve its self-respect and its attitude as a treaty-performing nation, by the mere fact that Congress has seen fit to abrogate a treaty. That is nothing more than the doing of the Government. If we have made a promise and refuse to keep it, we have broken it, whether that be done by the legislative branch or by the executive branch, by nonfeasance or misfeasance, or whatever has resulted in the violation of that law.

International law is that code of morals which obtains among nations as individuals of the world's compact, and just as one man who is under contract relations with another may break his promise or perform it, so a country or a nation may break a promise or it may perform it, and it matters not at all by what branch of the municipal organization that wrong is accomplished. Therefore we are concerned, and doubly concerned, when we consider this matter of repealing a treaty.

I am not here to contend that it may not be necessary sometimes to repeal a provision of a treaty, but we are not relieved from responsibility in regard to our contracts with other nations as to the manner, the occasion, and the circumstances under which we do it.

Mr. WHITE of California. Mr. President, I simply desire to say a word in response to the Senator from Delaware.

I am at a loss to find anything in the act of Congress regarding which this discussion commenced—the Geary law, with the exception of the clause regarding imprisonment, which clause has been held unconstitutional by the courts—which can make that act amenable to the criticism that it is in violation of a treaty.

Mr. GRAY. I will interrupt the Senator from California, to say that, so far as my rather general remarks had any application to a particular law, they were applicable to the law of which the Senator from Colorado [Mr. TELLER] was speaking, the Scott law of 1888.

Mr. WHITE of California. Yes, sir. That law which, in the case of Chae Chan Ping *vs.* United States, the Supreme Court of he United States held was not a violation of the Constitution.

Mr. TELLER. That is the imprisonment clause.

Mr. WHITE of California. The Senators are speaking of different things. The Senator from Delaware calls my attention to the fact that his criticism was directed at the act of 1888. When I spoke of a certain feature of the Geary law having been held to be unconstitutional I referred to the opinion of Judge Ross, of the southern district of California, who held that the section of the act providing for two years' imprisonment in the penitentiary was void, because it provided for no trial, and he determined that the imprisonment was an infamous punishment within the definition in Mackin *vs.* United States (117 United States Reports, 352).

Mr. TELLER. Upon the principle that the Government of the United States was bound to treat an alien as a citizen.

Mr. WHITE of California. That is the constitutional shield; guaranteeing the right of trial by jury in offenses of that character could not be disregarded as to an alien, but was alike effectual in his case as in any other; but the provisions of the statute being separable, that is, it being within the ability of the court to say that that particular subdivision might be withdrawn and yet a complete law remain, the decision did not affect the act as a whole.

Regarding the act of 1888, the Senator from Oregon [Mr. MITCHELL] attracted the attention of the Senator from Delaware [Mr. GRAY] to the pendency of treaty negotiations, and said, I think truly, that China had virtually refused to enter into that treaty; whereupon the Senator from Delaware suggested that a nation ought to be allowed a reasonable time to consider such a matter. That is, of course, true. But I will read very briefly from a message of the President of the United States, then Mr. Cleveland, transmitted to the House of Representatives, together with the act of 1888, which he had approved. I think the position therein stated is in all respects correct. The extract is very brief:

> The admitted and paramount right and duty of every government to exclude from its borders all elements of foreign population which for any reason retard its prosperity or are detrimental to the moral and physical health of its people, must be regarded as a recognized canon of international law and intercourse. China herself has not dissented from this doctrine, but has, by the expressions to which I have referred, led us confidently to rely upon such action on her part in coöperation with us as would enforce the exclusion of Chinese laborers from our country.
>
> This coöperation has not, however, been accorded us. Thus from the unexpected and disappointing refusal of the Chinese Government to confirm the acts of its authorized agent and to carry into effect an international agreement, the main feature of which was voluntarily presented by that Government for our acceptance, and which had been the subject of long and careful deliberation, an emergency has arisen, in which the Government of the United States is called upon to act in self-defense by the exercise of its legislative power. I can not but regard the expressed demand on the part of China for a reëxamination and renewed discussion of the topics so completely covered by mutual treaty stipulations, as an indefinite postponement and practical abandonment of the objects we have in view, to which the Government of China may justly be considered as pledged.

Hence the President justified that act, and I think he defended it not only with power, but with success.

I desire to say, before closing, that as to the present law, there is nothing harsh. Eliminating the section to which I have referred, and which is virtually no longer before the country, it simply provides for a registration. In the State of California we have a registration law, and I have no doubt that the same is the case in many other States, regarding the right to vote. As a citizen, before I can exercise that franchise I must register.

In that registration there must be entered a description of my person as nearly as may be—the color of my eyes, any particular apparent physical marks, anything manifest to the vision must be entered. There is one provision of our local registration law which, perhaps, might be objected to in some quarters. If a man is bald, for instance, his baldness must be noted and entered upon that record. If any such thing as that were required of the Chinese I have no doubt that certain people in the country would become so agitated that they would demand at once the abrogation of all Chinese exclusion laws.

The registration provided by the Geary act is a plain provision, costing the Chinaman not one cent. It was not incorporated in that act to hurt the Mongolian, but was put there for his benefit. It was to enable the officers of the Government to determine who were rightfully in this country and who were not here legally.

It is a law in the interest of the Chinamen who are legitimately and properly here, and it is a regulation which, as I have said, is not so severe as the regulations which have been imposed by States upon their own citizens. It is the absolute violation on the part of Chinamen of that provision which renders it necessary for us to come here and ask for a larger appropriation to carry out the provisions of the act.

We all thought, of course, that the law would be complied with; that it was so simple; that there was so little that was onerous about it—not a cent of expense to the applicant for registration—that it would unquestionably be complied with and acted upon; but it was not. Hence the bill the Senator from Oregon has introduced ought to be passed, so as to enable the officers of the Government to carry out the law, and they are anxious to do so, and will do so, if they are given the necessary means.

Mr. GEORGE. Mr. President, I did not have the pleasure of hearing all the remarks made by the Senator from Oregon [Mr. DOLPH] in the speech he made in advocacy of his bill; but I infer, from the reply made to his speech by the Senator from California [Mr. WHITE], that some criticism has been made by the Senator from Oregon of the attitude either of the Democratic party or of Democratic officials in reference to the Geary law.

I see the Senator from Oregon is now in his seat, and if I can have the honor of his attention, I desire to call that attention to certain provisions of that law, which made me for the first time vote against any bill which has passed this body for the purpose of excluding Chinese from this country.

One of the earliest speeches which I had the honor to address to this body was in favor of the Chinese exclusion act. If my memory is not at fault—and I do not think it is—on the occasion of the passage of the first exclusion act more than two-thirds of the Republican members of this body voted against it. I voted for it. The legislation of 1890 I was unable to vote for, for the reason, among others, that there was a provision in the bill which I thought was insulting to a large majority of my constituents, a provision to which I desire to call the attention of the Senator from Oregon. I ask him why a provision was inserted in that act by the American Congress which contained, not by implication merely, not by inference merely, but by direct statement, an assertion that no one of eight million citizens of the United States was to be credited on his oath when he came to testify in relation to the exclusion of Chinamen. I will read that clause of the statute. After providing for the arrest of a Chinaman and bringing him before a United States judge, the statute provides:

> That he be deported from the United States, as hereinbefore provided, unless he shall establish clearly to the satisfaction of said judge that, by reason of accident, sickness, or other unavoidable cause, he has been unable to procure his certificate, and to the satisfaction of the court—

If the statute had stopped there it would have been no reflection upon anybody; it would have been the usual and proper statement in a statute upon a matter of that sort; but it did not stop there. It proceeded—

> and by at least one credible white witness, that he was a resident of the United States at the time of the passage of this act.

That bill was passed through this body, as most of these Chinese bills have been passed through here, under a sort of pressure. I did not hear then, and I have not heard since, any reason given why the word "white" was inserted in this statute—"by at least one credible white witness." So, however numerous, however credible, however satisfactory the evidence might be from a hundred witnesses, if there did not happen to be among them one white man, then the poor Chinaman had not made out his case.

I desire to call the attention of the Senator from Oregon to that particular provision of the statute, and to ask him what process of reasoning, what public policy demanded a provision

of that sort in a statute in a government having a constitution which makes the black man the equal, if not the superior, of the white man.

Mr. DOLPH. Mr. President, the conference report upon the so-called Geary law was considered in the Senate of the United States on the 3d day of May. That left but two days intervening between the time when the report was under consideration and the time when the existing laws restricting Chinese immigration would expire by their own limitation. It was necessary to secure an agreement of both Houses to the conference report, the engrossment of the bill, its transmission to the President of the United States, and its approval by him within those two days in order to prevent an influx of many thousands of Chinese laborers, who were already congregated upon our borders, waiting for an opportunity to come in.
